

WINDING LIST JUN 1 1922

Canadian Railway AND Marine World

GENERAL INDEX FOR 1921

ACTON BURROWS, PROPRIETOR
70 Bond St., Toronto, Canada

Items marked-with an asterisk are accompanied by maps,
portraits or other illustrations.

STEAM RAILWAY DEPARTMENT AND GENERAL MATTER.

Aerial Transportation Notes	129, 637208, 375, 440, 497, 641	Pilots on N.Y.C.R. locomotives	10, 86		
Air Brake Equipment, Facing Valve	*122	Appointments, Transportation	24, 76,	Railway cartage tariffs	292	
Air jack, portable	*631	134, 197, 253, 307, 368, 415, 476, 525, 588, 644	Association of Professional Engineers of Mani- toba	29	Railway employee protection regulations	263
Air pump cylinder boring machine	*200256256	Railway route maps and location plans	29	
Alaska railways	646	B	Rate increases, suspension refused	12	Rates on fodder for Quebec farmers' live stock	635
Alberta coal resources and production	201	Babbit melting furnace, portable	*122	Seats on locomotives for brakemen	415	
Alberta & Great Waterways Ry. Appointments	525	Baggage insurance for travellers	429	Self propelled cars	404	
Development	16, 82,	Bagotville & St. Lawrence Ry.	82	Special instruction E	37	
.....193, 241, 305, 311, 419, 528, 583, 646		Bare, H. S., C.P.R. 200 ton railway track scale	*289	Station limits, railway companies' special instructions re	18, 9, 311	
Rolling stock	372, 418	Birthdays of Transportation Men	4, 84,	Traffic orders	18, 61,	
Alberta railways	305, 311	144, 183, 240, 291, 352, 402, 481, 517, 571, 628132, 191, 251, 304, 365, 416, 477, 514, 597,	Whistle for motor cars	634	
Alberta Railways and Telephones Department	525	Blacksmith shop tools, railway	*4	Wire construction on railways	17	
Alkoma Central & Hudson Bay Ry. Finance	646	Blue signals for workmen's protection	629	Boiler regulations, railway, other than loco- motive	179	
Alkoma Eastern Ry.	625	Board of Railway Commissioners		Boiler testing apparatus, portable	*106	
Appointments	525	Appointments	415, 429, 525, 614	Boils, reclaiming a rap	*104	
Rolling Stock	*316, *372	Blue signals for workmen's protection	623	Boring machine for air pump cylinder	*100	
Alma & Jonquieres Ry.	82	Boiler regulations	179	Boring mill job	403	
American Express Co.	208, 375	Cattle pass construction, standard size	63	Brazilian railway system	405	
American Railway Association	66, 297, 367	Exchange and surcharges on international traffic	188, 306, 432, 476, 586	British Columbia Express Co.	84	
American Railway Association, Equipment Painting Section	418	Explosives, transportation of	310	British Empire Steel Corporation's railway	51	
American Railway Association, Mechanical Division		Express rate increases	108	Hurlingham Canal bridge	51	
Car, Rule for replacing ends when broken out	626	Fencing, railway companies' duties as to	626	Huronia Tunnel & Bridge Co. Develop- ment	10	
Interchange Rules	650	Flaxing rules	26410		
Standard Inside Dimensions of Box Cars	651	Freight rates decisions	531, 534, 57110		
Committee Reports	461	Freight rate increase notices	57110		
Arbitration	462	Frogs, wooden, packing for	17110		
Brake shoe and brake beam equipment	462	Fuel and fire protection on New York Cen- tral Rd.	17110		
Car construction	*457	Hand holds over car doors	17110		
Labor and material prices	459	Inspector of Safety Appliances at Calgary	17110		
Loading rules	462	Locomotive boiler explosions	36110		
Specifications and tests for materials	455	Maintenance of way flagging rules	27010		
Tank cars	456	Orders by summaries of	9, 27,10		
Train brake and signal equipment	*456	141, 199, 261, 316, 369, 417, 484, 518, 573, 6301010		
American Railway Engineering Association	428, 474	Phosphorus shipments in metal containers	59610		
American Railway Express Co.				See also Canadian Nat'l. Express Co.

Masters' and mates' certificates	163
Mechanic Marine, upkeep costs	227
Montreal dock accommodation	68
Montreal Drydocks & Ship Repairing Ltd.	288
Montreal pilotage dues	46
Montreal, Ottawa & Georgian Bay Canal Co.	231
Morse, A. H., Renaissance of the windjammer	231

N	
Naval Service Department estimates	232
Navigation aids on Great Lakes and St. Lawrence	612
Navigation regulations on Detroit River	99, 167
New York and Quebec steamship service	219
New Zealand steamship services	336
North Atlantic patrol	230
Northern Navigation Co., sale of s.s. Wauba	609
Novorossiysk, Russian port	609

O	
Officers, steamship, ocean, coast, lake and river	217
Ontario and Great Lakes	172, 229, 285, 339, 448, 503, 561, 610, 673
Owen Sound Transportation Co.	275, 503
Owners' rights in partially built ships	504

P	
Pacific Coast Association of Port Authorities	899, 618
Panama Canal—	
Chilled meat shipments	611
Operating results	104, 668
Seven years' record	611
Tolls	611
Playfair interests add to Great Lakes fleet	670
Prince Rupert, s.s., salvaging and reconditioning of	54, 106, 349
Prince Rupert Drydock & Shipbuilding plant's future	540

Q	
Quebec and New York steamship service	279
Quebec, Province of	51
106, 172, 229, 285, 337, 394, 447, 504, 561, 673	
Quebec shipping port	27
Quebec Steamship Co.'s incorporation acts	59

R	
Radiotelegraph stations on the St. Lawrence	499
Royal Mail Steam Packet Co.'s Atlantic and Pacific services	336

S	
St. Clair River, U.S. channel	501
St. John, N.B., harbor development and drydock construction	111
St. John, N.B., new Atlantic Ocean passenger depot	237
St. Lawrence channel dredges and tugs	218
St. Lawrence navigation season 1920	28
St. Lawrence steamship service	28
Safety first at Halifax shipyards	616

Canadian Railway and Marine World

January, 1921

How Sir William Van Horne Built the Cuba Railroad.

By Walter Vaughan.

After four hundred years of Spanish misrule, and a century of successive revolutions, the United States had liberated the Cuban people. Spain had finally evacuated the colony a year earlier, and the island was being administered by a military governor, General Leonard Wood, pending the institution of a stable civil government based on popular election. The eastern provinces had been devastated by incessant guerrilla warfare. The cane fields had been largely destroyed, and the cane had been overgrown with weeds and brush. Cattle raisers had lost everything, and it was difficult to find a cow or an ox. Horses were few and in wretched condition. Mining had ceased, all industries were virtually dead.

The railway system of the island comprised 1,135 miles of railway. Ninety per cent. of these radiated from Havana and were owned by English companies. There were also 965 miles of private railway lines, constructed to carry sugar cane to the mills. In what are now the three eastern provinces of Santa Clara, Camaguey, and Oriente, the largest and richest in the country, and comprising three quarters of the total area of the island, there were only a little over 100 miles of small railways. In the days of Spanish dominion every one had conceded the desirability of a line of railway which would connect Santiago de Cuba, Camaguey, and eastern Santa Clara with Havana, the seat of the island's government and the center of its commercial life. Every principle of politics and economics had demanded communication between the leading cities of the middle and eastern provinces and the western end of the island. But under Spanish rule the construction of such a railway was accepted as impossible.

Travelling in Cuba early in 1900, in company with General Russel A. Alger, the United States Secretary of War, and Hon. Elihu Root, Secretary of State, Sir William Van Horne heard them discuss the desirability, on strategical grounds, of building a railway through the eastern provinces, and also the apparently insurmountable obstacle which the Foraker Act had placed in the way of such a project being undertaken as a private enterprise. This legislation had been enacted by the U.S. Congress in order to protect the Cubans and the interim administration from exploitation by promoters and irresponsible speculators, and prohibited the granting of any franchises or concessions of any kind during U.S. occupation. About the same time he met Percival Farquhar of New York, who was the representative of a group which had obtained control of the Havana tramways. Farquhar gave him a glowing description of the interior.

Pondering over this situation, it flashed upon Sir William Van Horne that there was in all probability no law which would prevent the acquisition of parcels of land or the construction of a railway thereon by the owner. To construct a railway in small pieces in this way, without rights of expropriation or eminent

domain, and without any assurance whatever beyond his own faith that the future Cuban Government would grant the necessary charter powers, involved great risks and implied great courage. But having hit upon the plan, Van Horne did not hesitate to adopt it.

On his arrival in New York in March he immediately consulted Howard Mansfield, a lawyer of his acquaintance.

"Do you know anything of the Foraker Act?" he asked.

"I do."

"Is there anything in it to prevent an individual or a corporation owning or acquiring lands in Cuba from building a railway on various pieces of such property, taking a chance of ever being able to operate the railway as a whole?"

"No."

"Well, I'm going to form a company to do that, and want you to get out the necessary incorporation papers."

Van Horne's next step was to get the sanction and, if possible, the support of the U.S. Government, and, accompanied by General Grenville Dodge, he went to Washington to lay his plans before President McKinley. From a political point of view the project had much to commend it. The construction of the railway would not only provide immediate employment for a considerable number of the population, but it was also the first requisite for the development of Cuban resources. When completed, it would ensure the speedy transportation of troops to the eastern end of the island and to any part of the interior, and would itself be the best possible agency for the preservation of order and peace. The President expressed approval of the project, and promised to do what he could to have it protected in law before the occupation ended.

Within two months from his departure for Cuba, Van Horne was back in Montreal, as busily occupied in the organization of a new company as he had been eighteen years earlier in the building of the Canadian Pacific Ry. He shed like a garment the comparative apathy and lassitude which had characterized the last few years of his presidency of the Canadian road. With new and important creative work before him, he was once more in his element and completely happy.

"Perhaps you are right in thinking," he explained to a friend, "that I am making a mistake in putting on more harness and going into the Cuban and other enterprises, but my trip to California a year ago satisfied me that my happiness was not in the direction of taking things easy and that I would have to keep as busy as possible for the rest of my days. Perhaps, if I had knocked off ten years ago, it might have been different. All the things which I thought leisure would give me time to enjoy seemed flavorless when I got to them. I can be happy in working out schemes and in no other way."

The Cuban one is the most interesting I have ever encountered, and I am looking forward to a great deal of pleasure in carrying it through, and perhaps

profits as well—a few dozen Rembrandts and such things, which, I think, will quite fill my capacity for enjoyment."

From the moment the Cuban enterprise took shape in Van Horne's mind he regarded the building and operation of a few hundred miles of railway merely as a first step to larger and more comprehensive schemes, incorporating the Cuba Company under the laws of the State of New Jersey in April, 1900, he stated its object to be "to develop the resources of the island in all practicable ways."

He retained a vivid recollection of the checks imposed from time to time upon his plans for rapid development of the Canadian Pacific, both by the caution and conservatism of his co-directors and by the difficulty, often the impossibility, of obtaining the necessary capital. He was determined to labor under no such difficulties in his new undertaking. He would, therefore, keep in his own hands the entire control of the Cuba Company, and seek as his associates in the enterprise men who would have faith in his management and whose means were so large that they could afford to wait indefinitely for dividends, yet could be relied on to furnish any additional capital that might be required. To ensure the stock of the company being retained in such hands, he fixed the capital stock at \$8,000,000, divided into 160 shares of \$50,000 each.

He found a sufficient number of "the right kind of men" with the greatest ease. The entire capital stock was subscribed within a week, and as soon as his plans became known, he was obliged to dodge eager applicants for shares. To one of these he wrote:

"When I went down to New York with my Cuban scheme I found myself in the position of a small school boy with his pockets full of bones, and all the shares that I would not let go willingly were taken away from me. I came away striped of all but a small holding for myself. There is no chance to get any, unless the capital should be enlarged later on."

On the clear understanding that his project was one of slow, but profitable, development, he had obtained the most imposing list of subscribers ever associated in the foundation of a single commercial enterprise. It included, among others, John W. Mackay, J. J. Hill, E. J. Berwind, General Dodge, Henry Bull, Gilbert Haven, Henry M. Flagler, Levi P. Morton, Henry M. Whitney, P. A. B. Widener, Anthony Brady, W. L. Atkins, Thomas DeLain, General W. L. Thomas, W. C. Whitford, H. Walters, R. B. Angus, T. G. Shaughnessy, Sir George Drummond, C. R. Hosmer, George B. Hopkins, and Thomas F. Ryan. The aggregate wealth of this group was estimated in many hundreds of millions of dollars.

Van Horne had difficulty in personally joining Ryan, who had made a large fortune in tobacco and street railway, and who was a prominent figure in financial circles as the active force behind the Morton Trust Company, thought it "a great waste of time for Van Horne to turn his back on an empire and go chasing a rabbit for that great

constructive mind, with its decades of experience, to bury itself down in the jungle." He asked Henry M. Whitney to join with him in urging Van Horne to drop his Cuban plans and take up something else. At a dinner given by Whitney, Ryan proposed that he and his group should maintain control of the Canadian Pacific, and that Van Horne should return to it as its president and work out immense ramifications of its existing system on both sides of the international boundary. Such a scheme would give them industrial dominion over North America and Van Horne an empire to rule over.

Van Horne would not entertain this startling proposal for a moment. It was in direct conflict with the aims of the builders of the Canadian road, and his participation in it would savor of the rankest treachery. He told Ryan that the Canadians, who looked upon the Canadian Pacific as the backbone of their country, would never allow it to pass into the control of Americans. Finally, he pointed out that it would be extremely difficult, if not impossible, for any group of Americans to get control of the system, for in consequence of the policy steadfastly pursued by Lord Mount Stephen and supported by himself, the great bulk of Canadian Pacific stock was distributed among thousands of small holders, a large majority of whom were resident in England. Ryan, who was amazed to learn that the builders of the Canadian Pacific held only a few thousand shares of its stock and had profited little from their opportunities, found the last argument conclusive, and, with great reluctance, abandoned his scheme. Converted by Van Horne's magnetic persuasiveness, he agreed to join the Cuba Company and give it the support of the Morton T. Company, which was its financial backer for several years.

Van Horne's love of the Canadian Pacific Railway was the master passion of his life. He cherished its interests unwaveringly. It was his dearest offspring, the Absalom of his loins. Three years later Ryan consulted him concerning the project of a new railway from the Kootenay Valley to the Pacific Coast. His condemnation was decisive. "The Canadian Pacific Railway cannot and will not surrender that region to any other company. . . . The only commendable thing I see in this enterprise is the prospectus, which should take high rank among imaginative works."

Having established the head office of the Cuba Company in the City of New York, Van Horne sent engineers to Cuba to make a preliminary survey. With them went L. A. Hamilton, Land Commissioner of the Canadian Pacific, to investigate and report upon the natural resources along the route to be traversed. His next step was to purchase a large tract of land at Antilla, on Nipe Bay, and a little railway, the Sabanita & Moroto, which ran a distance of about 50 miles from the port of Santiago, the eastern terminus of the projected railway. Materials for the construction of the railway were ordered, and Van Horne proposed to begin building at the end of the autumn sailing season. His prospecting engineers have since returned and reported that a line some 100 miles long, the proposed route, with very few gradients and through a country of remarkably agricultural possibilities, had been surveyed between in July from Santa Clara.

The Cuban Government was not yet instituted, and the people, uncertain of

the purposes of the United States, and fearful lest they had only changed masters, suspected every form of U.S. activity. But during his visit to the island Van Horne had formed the opinion that they had a fine sense of honor and would respond to fair and courteous treatment. Before starting negotiations, therefore, for the right of way, he employed two able and influential Cubans to go through the eastern provinces and explain the good will and intentions of the company and the benefits which the community would derive from its operations. He also addressed courteous and diplomatic letters to the governors of the eastern provinces, giving detailed information of the project. Invariable and impeccable courtesy was to be the keynote of all dealings with the Cubans. He wrote to his Chief Engineer:—

"Deal with them throughout with politeness, whatever the provocation to do otherwise may be, and make no effort to antagonize the humblest individual if it can be avoided. Our engineers will give the first impression of the company to the people, and it is in the place where they are operating, and they should seek in every way to create among these people a pleasant impression. Any one unable to control his temper and who violates the rule which should be made in this regard should be promptly left and someone else sent in his place, so that the country should become impressed as quickly as possible with the desire of the Cuba Company to treat everybody with the greatest consideration and to deal with them in all matters with perfect fairness."

These methods of approach were richly rewarded. Convinced of the company's good will and of the benefits they would receive from the operation of the railway, proprietors gave the land necessary for the railway without compensation. In cases where absentee Spanish landlords were inclined to hold out for payment, their neighbors united in creating a public opinion which forced them to a similar liberality. At the close of the year Van Horne told his shareholders: "So far our rights of way have cost us nothing but the salaries and expenses of our agents." When, sometime later, President McKinley asked him how he had accomplished the purchase of the right of way and begun to build a railway without a charter, he replied:

"Mr. President, I went to them with my hat in my hand."

"I think I understand," said the President.

To his friends Van Horne explained that whenever he met a Cuban, he bowed first and he bowed last. In these early days of his company he was well served by his double nationality. U.S. officials concerned in the administration of the island had full confidence in him as being one of themselves. The Spanish officials, who looked upon him with jealousy and suspicion, trusted him as a Briton. They knew that there were no knights in the United States.

Although possession of rights of way had been easily and inexpensively acquired from private owners, difficulties were frequently experienced in obtaining a clear legal title to them. Regarding a loose system of land titles as prejudicial to all future settlement, Van Horne recommended to General Wood the introduction of the Torrens system of registration, which was used in Manitoba and other western provinces of Canada. He urged that speedy attention should be given to so fundamental a matter and that surveys of the land should be made and have the same merits established as a preparatory step to the establishment of agriculture. He also advocated the expropriation by the government of large areas held idle by absentee owners or on account of disputed ownership, and

their subdivision and resale in small parcels to those who would immediately cultivate them. This, he thought, should be followed up by taxation of land. He wrote to General Wood:

"A system of land taxation is the most effective and equitable way of securing the greatest possible utilization of lands, and affords at the same time the best safeguard against holding lands idle. In countries where land affords, moreover, the most certain and uniform revenue to the state, freedom from land taxation or from excessive taxes imposed on landowners, which you certainly do not wish to continue or promote in Cuba. The country can only be made prosperous and the greatest stability of government through the widest possible ownership of the lands by the people who cultivate them. In countries where the ownership of individuals holding real estate is greatest, conservatism prevails and insurrections are unknown."

As, with a fine instinct, he found the royal road to the favor of the Cubans and discarded the sharp and rough-and-ready methods of U.S. railway building, so he determined at all costs to avoid antagonizing the railway companies already operating on the island. Unreported as he was by legal authority, any other course would have been suicidal. Having no legal power without power to cross another railway, and he instructed his engineers to carry their line clear south of the Cuba Central Railway, running north from Placetas del Sur.

While his engineers were locating the line and his agents obtaining rights of way, Van Horne was preparing for the work of construction with all his old zest for detail. He shipped construction supplies and materials for assemblage at Santiago, Cienfuegos, and Santa Clara in advance of their use. Grading was begun at both ends of the line in November, 1900, with Spanish and Cuban laborers. The final location of the railway was on a line which, running from Santa Clara through Camaguey to the port of Santiago, would bisect the greater part of the island and cross as many of the branches running north and south, which could be constructed later. It was found necessary to follow the watershed and head the streams, which widen and deepen rapidly in their descent to the sea upon each side.

In 1901 Van Horne went again to Cuba, to see construction well started and take a look at the interior for himself. Six weeks work and travel, which included a ride from San Luis to Nipe Bay, strengthened his enthusiasm for the enterprise. Getting off his mule at a point called Palmerito one evening, his waistcoat caught on the pomel of the stock saddle, and he fell heavily to the ground on his back. Miller A. Smith, the Chief Engineer, rushed up, ejaculating:

"My God! Sir William, are you hurt?" "No," replied Van Horne, getting to his feet and dusting himself. "That is the way I always get off."

The company now had definite ownership of lands for terminals, construction bases, and several townsites, together with a fairly continuous strip for the right of way 30 miles in width and about 350 miles in length. Power to cross streams, roads, and public property was becoming a matter of pressing necessity. There were, too, a few landowners whom he could not bring to terms, and to deal with them expropriation powers were essential. A general election had been held throughout Cuba in September for the purpose of electing delegates to a convention to frame and adopt a constitution and to determine with the U.S. Government the relations to exist between that Government and the Cuban Government. The con-

vention had met in Havana in November, and was still engaged in framing the constitution.

With the difficulties of a charterless position ever in his mind, Van Horne had already drafted a general railway law for the island. General Wood had told him that he had thought of applying to Cuba the railway law of Texas. But this was, in Van Horne's opinion, distinctly inferior to the railway law of Canada, and he based his draft on the Canadian model. He spent several evenings with General Dodge over its revision and adaptation to Cuban needs and submitted it to General Wood. After careful scrutiny and a few amendments by the Interstate Commerce Commission, it was presented by General Wood to Hon. Elihu Root, Secretary of War at Washington, who pronounced it to be the best railway law ever drawn up. General Wood said:

"Sir William conducted a very large portion of the foundation work on this law, which covered everything from the local procedure necessary to make preliminary surveys to the final winding up of the affairs of a railway after its dissolution. The law covered the relations between the public and the road, and looked to the adequate protection of the railway against the public. It was so fair and evidently just to all interests that very few changes were suggested by the U.S. Interstate Commerce Commission, whose railway experts were invited to Cuba and went very thoroughly over the law."

The Cuban convention adopted a constitution for the Republic of Cuba on Feb. 21, 1901, but before that date the necessity for expropriation powers and rights to cross public property had become acute. Van Horne went twice to Washington to plead with the President, Secretary Root, Senators Platt, Aldrich, and Foraker, and others officially concerned in Cuban relations for the immediate passage of the railway law. Friction had developed, however, between the U.S. Government and the delegates to the convention, who, standing out for unequivocal independence and sovereignty of the island, were averse to incorporating in the constitution certain provisions concerning the right of intervention, coaling, and naval stations, and other matters upon which the U.S. Government was determined to insist. In these circumstances no progress could be made with the general railway law, and the Foraker Act, which prohibited the grant of public concessions or franchises, was still in effect.

Bent on carrying his project through, and stimulated, as always, by the challenge of difficulties, Van Horne evolved from his inexhaustible inventiveness a way to overcome this one. The Foraker Act said nothing about a revocable license. Might not a revocable license be granted to a builder who was willing to assume the risk of having the license modified or cancelled by the Cuban Government after the close of U.S. occupation? The railway would incontestably benefit Cuba. By securing the opinions of prominent Cubans on the questions at issue and communicating them to members of the Foreign Relations Committee of the Senate, he was actively promoting a better understanding between the representatives of the two peoples. The authorities in Washington had confidence in him, and they agreed that such a license as he described might be issued.

Encouraged by their concurrence, Van Horne went to Cuba to obtain the license from the military governor. Wishing to strengthen his case with the force of public opinion, he sent Farquhar to the island to secure petitions praying for the immediate passage of a general railway

law in order to promote the building of railways for the development of the country and to enable it to take speedy advantage of the road under construction. He devised the method of obtaining the petitions. Construction would be suddenly stopped at some crossing and every municipality along the line and the laborers thrown out of work. Farmers and merchants, as well as laborers, suffered from the interruption of the flow of U.S. dollars, and were given an object lesson of the benefits they enjoyed from the company's operations. They were glad to sign petitions which might ensure their continuance. These had effect at Havana and Washington. The U.S. Government promised to forward Van Horne's plans and the general railway law in every possible way.

Van Horne now approached General Wood, and in diplomatic fashion asked for something more than he knew he would get; namely, an unconditional permission to effect the necessary crossings. General Wood was heartily in favor of the railway, had noted the petitions from the municipalities, and was sincerely desirous of helping him; but the Foraker Act stood in the way. He could grant no concessions, but promised to give the matter his most serious consideration and see what he could do. Van Horne withdrew, and hastened to the Cuban who was General Wood's confidential adviser on such matters. He unfolded to him his idea of a revocable license, and intimated that if he and General Wood could devise nothing better, he was willing to continue construction on it. These tactics were successful. The Governor took counsel with his adviser and decided to grant the revocable license.

Construction was resumed, and continued without further interruption. Some trouble developed with the London executive of the Cuba Central Railway, which opposed Van Horne's building farther west than Sancti Spiritus, and still more strongly opposed his building into Santa Clara, where they had their terminus. He met these objections in a conciliatory manner, returned sweet and friendly answers, and intended to keep the correspondence going all through the summer until his line had advanced beyond all danger of interference.

Exercising an immediate supervision over the details of construction, Van Horne continued to press the passage of the general railway law, and to assist the U.S. administration in combating the doubts and fears of the Cuban people concerning the sincerity of the United States in fulfilling their undertakings. He first suggested to Secretary Root that the Cuban flag should fly with the U.S. flag over the naval and coaling stations which the U.S. Government planned to retain on the island. This was a small detail, but it had the effect of propitiating the Cubans and removing some of their objections to the stations.

With 4,000 men employed, as rapid progress was made in the construction of the road as was possible in an undeveloped tropical country. Streets and public highways were crossed under authority of the revocable license, which, as Van Horne widely and publicly announced, put his enterprise "under the wing of the people of Cuba." But he was unable to do this because of the opposition in the honor and justice of the Cuban people.

On Feb. 7, 1902, the general railway law was promulgated by an order of the Military Governor. Understanding that Van Horne had been instrumental in out-

lining the law and fearing that it was devised to injure their property, the order that he might buy them cheaply, the officials of the western Cuban railway received the law with suspicion. He stoutly denied such a motive to the president of one of the companies, asserting that if he had wished the collapse of the railways, the Texas law would have better served his purpose. He contended that, in basing the Cuban upon the Canadian law, he had conserved the interests of all the other companies as well as his own. The correctness of this contention was eventually conceded.

Following adoption of the general railway law, a board of railway commissioners, similar to the Canadian board, was appointed to regulate and control the traffic rates of all Cuban railways. The railways in operation were requested to frame and submit a schedule of uniform rates and classifications. They failed to do, and well intentioned officials of the Government compiled an intricate classification similar to western U.S. schedule, which was described by Van Horne as "an approximately the old Missouri classification of 'blunder and lumber.'" He assisted the commissioners in framing a new schedule, which prescribed maximum rates substantially below those of hitherto existing tariffs. This was heartily welcomed by the people, but met with vehement opposition from the established railway companies. Their directors decided to ignore it, and instructed their Cuban officials accordingly. The Military Governor intervened, and this course as defiance of the law and the Government, and threatened severe measures.

Van Horne again took a hand in the affair. He was experiencing once more the difficulty, which he had often found in his early days in Canada, of securing unity of action from and setting up harmonious relations with remote boards of directors in London. He wrote to financial friends in that city, asking them to prevail upon these boards to abandon "their supreme belief in the efficacy and fitness of the rules and instructions laid down in London" to give their Cuban officials full powers to deal with questions as they arose, or, failing this, to send out to Cuba the best and broadest minded man among them, not "one of the narrow minded, self sufficient damn fools so often sent out from London to various centers in such cases."

He fixed upon the ancient city of Camaguey, then called Puerto Principe, for the headquarters of the railway, and decided to mark the occasion by the first sod at that point with a public ceremony. The influence of the presence of a small railway running from the city to the northern coast was considerable, however, to prevent the public from attending the ceremony. The attendance was consequently small, but, unaided by his staff, resolute and determined to win the favor of the people, Van Horne organized the street parade, and every man, woman and child was present. With graceful address, he thanked the people to New America, the little daughter of Mayor Francisco, who had escorted him to the scene. On his return to New York he was hailed as a great man, with many a loyal and ardent admirer, and had an enormous audience prepared to receive him.

The street parade manifested to the Cuban people the sincerity of the American administration to carry out the Foraker Act. When he next visited the island, bringing with him the wife and the children, the people had come to realize the

benefits they would derive from the new railway, and the presentation ceremony, which took place in a flower decked patio, was a genuine festival. Some months later the tide of good feeling had risen so high that he was formally adopted by the civic authority as a "son of Camaguey."

The grading of the road was completed in March, 1902, but a labor shortage, the non-arrival of bridge material, and damage by rains delayed completion of the line. Its estimated cost was largely exceeded, and construction was handicapped by financial pressure and the need for rigorous retrenchment. On Dec. 1, 1902, the Cuba Railroad was opened for traffic. Till then it had taken ten days to travel from one end of the island to the other, now the journey could be made in a luxurious sleeping car in 24 hours. Van Horne, who had gone to Cuba for

the occasion, found himself not merely the adopted son of Camaguey, but of all the eastern provinces.

Meanwhile the government of the Republic of Cuba had been inaugurated in the preceding May and had taken over the administration of the affairs of the country. The Foraker Act had thereupon become inoperative. But by that time, while all others who wished to promote railway building in Cuba had been held back by the provisions of the act, Van Horne had substantially completed his line. The road had been built without subsidy or public aid of any kind, through a region where, despite an offer of government guarantees, the old regime had been unable to find men bold enough for the task. It was a monument to Van Horne's faith in the honor of the Cubans and in the future of their country. Furthermore, it was a monu-

ment to the Cubans' sense of honor and fair dealing. Remarkable, if not unique, in Spanish-American countries, it was built without buying any man or any one's influence. Farquhar, who had an intimate knowledge of the undertaking, said—

"The Cuban Railway was the purest big enterprise I've ever heard about in North or South America. There was not one dollar spent directly or indirectly in influencing legislation or the people. Sir William relied upon the fact that he was supplying a desirable public utility. He added that the company's interests with the community, and went ahead, laying no man. There was one time I wondered if we could stick to the rule in this respect. However, we got through, holding to our principles. It was a fine and more rare side of a business of this sort, as creditable to the Cuban people as it was to Sir William."

The foregoing, reproduced from The Century Magazine, is from the biography of Sir William Van Horne, by Walter Vaughan, since published in book form.

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

J. Abrams, Wharf Freight Agent, C.P.R., Vancouver, B.C., born at Manchester, Eng., Jan. 24, 1870.

W. U. Appleton, General Superintendent of Rolling Stock, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born at Kingston, Ont., Jan. 27, 1865.

L. E. Ayer, General Agent, Canadian National-Grand Trunk Rys., Kansas City, Mo., born at Henderson, Ia., Jan. 11, 1877.

F. X. Belanzer, ex-General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., now Traffic Manager, Fraser Companies, Ltd., Edmundston, N.B., born at Chloxydormes, Que., Jan. 20, 1876.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Rys., Montreal, born there Jan. 1, 1869.

A. Davidson, Division Freight Agent, Canadian National Rys., Vancouver, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

J. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

M. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light & Power Co., Quebec, Que., born at Cap Rouge, Que., Jan. 1, 1863.

Gordon Grant, Chief Engineer, Chief Engineer, Dominion Highways Commission, and Consulting Engineer, Railways and Canals Department, Ottawa, born at Dufftown, Scotland, Jan. 2, 1865.

G. F. Hichborn, General Traffic Manager, United States Rubber Co. formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

C. Hood, Grain Agent, C.P.R., Winnipeg, born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

H. J. Humphrey, Superintendent, Trenton Division, Ontario District, C.P.R., Toronto, born at Berrys Mills, N.B., Jan. 26, 1879.

P. A. Keeler, Treasurer, Dominion Express Co., Toronto, born near Prescott, Ont., Jan. 18, 1867.

H. G. Kelly, President, G.T.R. and G.T.P.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

W. J. Lynch, General Manager, Quebec Ry., Light, Heat and Power Co., Quebec, Que., born there, Jan. 17, 1882.

G. E. McCoy, Master Car Builder, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 8, 1886.

C. R. Mackenzie, Assistant to General Manager, Canadian National Rys., Montreal, born at Toronto, Jan. 10, 1883.

John Macrae, Locomotive Foreman, C.P.R., Swift Current, Sask., born at Springfield, Glasgow, Scotland, Jan. 30, 1879.

P. A. Macdonald, Manitoba Public Utilities Commissioner, Winnipeg, born at Gananoque, Ont., Jan. 6, 1857.

G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

George Pepall, Assistant Foreign Freight Agent, Canadian National-Grand Trunk Rys., Toronto, born at High Wycombe, Bucks, Eng., Jan. 15, 1849.

William Phillips, European Manager, Canadian National Rys., Canadian Government Merchant Marine Ltd., and Grand Trunk Pacific Ry., London, Eng., born at Toronto, Jan. 31, 1870.

W. Pratt, Manager, Dining and Parlor Cars, Hotels and News Department, Canadian National Rys., Toronto, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

Ralph M. Reade, Superintendent, City Division and Quebec County Railways, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Commercial Agent, Canadian National-Grand Trunk Rys., Sherbrooke, Que., born at Montreal, Jan. 6, 1879.

W. A. B. Russell, Division Freight Agent, Canadian National-Grand Trunk Pacific Rys., Calgary, Alta., born at Redversville, Ont., Jan. 1, 1886.

J. R. Scott, Assistant General Freight Agent, British Columbia Lines, Canadian National-Grand Trunk Pacific and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., born at Lochmaben, Scotland, Jan. 3, 1882.

A. F. Stewart, Chief Engineer, Eastern Lines, Canadian National Rys., Mon-

ton, N.B., born at West Bay, N.S., Jan., 1864.

J. G. Sullivan, ex-Chief Engineer, Western Lines, now Consulting Engineer, C.P.R., Winnipeg, born at Bushnells Basin, N.Y., Jan. 11, 1863.

Ross Thompson, ex-Chief Engineer, and Managing Director, St. John & Quebec Ry., Fredericton, N.B., now of Montreal, born at Newry, Ireland, Jan. 1, 1865.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central District, Canadian National Rys., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

Locating a Railway by Aeroplane.

According to a recent news letter of the Air Service, United States Army, locating a railway by aeroplane has been carried out by the 3rd Aero Squadron, Camp Stotsenburg, Philippine Islands, way engineer to determine which one of and one long flight has enabled a rail-three general routes will be used for the new road. It is stated that many months and thousands of dollars have been saved in the work. Instead of three parties of locating engineers being sent out to make the survey, only one will now be necessary. The new line is projected by the Manila Railroad Co. as an extension of its line from Cabanatuan, through parts of the provinces of Nueva Ecija and Nueva Vizcaya to Bayombong. The first trip was made with the Chief Engineer of the railway, passing over Mount Arayat and then following the Panganga River until the railroad line was picked up at Gapan. The river was followed from Cabanatuan on to Pantabangan and over Mt. Pangloriahan, thence to Bayombong.

New Brunswick Timber Exports. — It is reported that a British syndicate has purchased from the Imperial Government the immense quantities of lumber bought for government purposes during the war and which have been accumulating all over the province, and that shipment will commence with the opening of the winter season and proceed steadily.

The Roumanian State Railways are, according to a press dispatch, to be leased to a British syndicate, for 25 years.

A Railway Blacksmith Shop Tools.

Railway management has frequently gone on the principle that if you shave the machine shop appropriations, the men will fudge up some sort of machine to do the work. And they generally do. But almost every other kind of industrial management has learned that this is far from economical.

It has, however, developed the railway mechanic into a sort of genius for taking a couple of angle irons or channels, a few pieces of scrap steel, and an old air cylinder, and building almost any sort of machine for bending, forging, riveting or what not. This is especially true of the blacksmith shop, and a few of the many ingenious kinks and devices developed by and under Otto Schultze, Blacksmith Foreman, Chicago, Milwaukee & St. Paul shops, Tacoma, Wash., are shown herewith.

Fig. 1. Punch for Thin Hexagon Nuts.

a corresponding die. The center hole is first punched in a preliminary operation. Then the pilot on the punch ensures the nut being properly positioned on the strip of steel to rest out the blanks with but little loss of metal, as can be seen.

Fig. 2. Trimming end of Brake Lever.

A somewhat different type of punch and die, and one which has possibilities in other directions, is shown in fig. 2. This is for rounding the ends of brake levers, but can be used for any similar work. The body of the die A, has a round hole to accommodate the punch B. It is raised at the back to support the punch against the side thrust of the cut as it forces its way through the heavy metal. The die is open at the back, to allow the brake lever to be inserted, and also open beneath the lever, so that it can be forced down by the punch as it clips off the end to the proper size and shape. The lever is first punched with the hole for the clevis pin and this hole becomes a guide which en-

sures the brake lever being trimmed to the correct length.

Fig. 3 shows a die for trimming split keys for various purposes. The two pieces are cut separately and riveted to-

Fig. 3. Punching Split Keys.

gether afterward. The only feature about the die is the guide A, which takes the thrust away from the cut. This is a feature in all of the dies designed by Mr. Schultze.

Fig. 4. Supporting a Heavy Shearing Cut.

This thrust block or slide is again noticeable at A in the trimming die shown in fig. 4. This is for squaring the ends of plates 12 in. wide and $\frac{1}{8}$ in. thick. The plate is locked firmly against the raised edge B by means of the cam C and then the heavy press forces the knife D down across the end of the plate. The knife is inserted in the bolster E and can be readily renewed when necessary.

Fig. 5. Die for bending 1 Bolt.

The thrust guide ensures the knife working in a square instead of a slanting cut.

Fig. 6 is an outline of a die for forming U bolts in a bull dozer. The stock A is heated and put in position, with one end against the stop B, which is adjustable. Then the ram C forces the stock between the jaws D and E, making an

easy bend, until the center strikes the short ends of the formers at F. The continued movement of the ram swings the arms in and forms the work into a straight sided U bolt with corners just a trifle rounded. The swinging arms bend the rod much more easily and with less power, than where the stock is forced down between the straight sides of a die.

Fig. 6. Cutting off Rivet Heads.

Fig. 6 shows a simple but effective device for cutting off rivet heads in brake beams and similar pieces. The punch A has four cutting sides and is held in the ram of the press. The ring B, with a thrust piece C fastened to the outside, holds the beam while the decapitation is in process. It is a very simple device, easily adjustable for a large variety of work, and capable of continuous use over long periods, as by simply turning the punch a new cutting edge is provided.

Fig. 7. Quarter-twisting a Bar.

A fixture for twisting a quarter round or two end of a flat bar is shown in fig. 7. B consists of two pieces, the body A and the swinging arm B. The flat part of the bar is clamped at C, while the ram D forces the end into the opening at E. Such a fixture is capable of many modifications for various kinds of work.

One of the air machines mentioned is shown in outline in fig. 8. This is a spe-

cial bending press for fairly heavy car truck and similar work. A large air cylinder is mounted between heavy channels, and a suitable bed plate used to carry the bending fixture which becomes the anvil for the press. The particular work shown is to make a right angled bend near the end of a heavy flat bar, the bend to be at a given distance from a hole which has already been punched. After the bar has been heated, the hole is placed over the guide pin A, which leaves the end of the bar projecting be-

Fig. 8. Bending Press for Car Truck Work.

yond the corner of the anvil block B. Then the air is turned into the cylinder and the ram R forces the end around the square corner. The whole triangular frame is then swung on the large and substantial center C, which bears in the bedplate across the two channels. By moving this carefully and gradually, a heavy bar can be bent as desired. The corner of the anvil block B must be in the center of the center or bearing block. The triangular frame D can be made any desired shape according to the work to be done.

The machines built by Mr. Schultze, shown in figs. 9 and 10, are used in reclaiming and repairing drawheads for modern couplers. The merits of this de-

deep and with 7 in. flanges. The main uprights are steel bars, 2½ in. in diam-

Fig. 10. A combined Holder-on and Riveting Machine.

ter. The cylinder is 18 in. in diameter and the lever arms are respectively 43 and 3 in., giving a leverage of over 14 to 1, for the ram C. The ram D works on a 16 in. arm, making a considerably reduced leverage. This ram, however, is only for straightening plates and bars. The air cylinder is tied into place with two 2¼ in. bars, with a heavy recoil spring at the top. The whole press is also mounted on four coil springs on a timber base, to allow it to move with comparative freedom when the reaction from the breaking of the rivet occurs. In breaking rivets, a block A is placed on the bed of the press, and a drawhead put in position as at B, handled of course by an air hoist. The draw-head strap rests on the raised portions of the block, leaving space beneath for the drawhead casting when the rivets let go. Both rams C and D are guided in the double plate projection E, and are adjusted by screwing up or down on the threaded bar which supports and drives them. The

1¼ in. steel rivets in double shear, considerable pressure is necessary.

Adjoining this machine, and part of the same reclaiming plant, is the riveting machine shown in fig. 10, and used for putting new rivets into place and making the drawhead serviceable once more. The bed is of 12 in. channels, 7 ft. long and carries an air cylinder for the "holder-on" and a rock drill to do the riveting. The illustration shows the combination and leaves little to be said as to its operation. The ram or the holder-on is returned to position by the long spring in the bed, through the medium of the steel cable shown.—By Fred. H. Colvin, in American Machinist.

Two Sources of Brittleness in Steel Rails.

According to a review of the present status of knowledge of brittleness in steel rails, presented as a report to the American Railway Engineering Association's rail committee by M. H. Wickhorst, engineer of tests to the committee, brittleness is of three kinds, showing itself in fracture starting (1) from an area of segregated carbon and phosphorus, (2) from a minute internal crack, and (3) from a seam (narrow groove) in the bottom face of the base. Both of the first two causes are responsible for failures which originate in the head or develop when the rail is so bent as to put the head in tension. Fractures developing when the base is in tension are due to the first and third causes only. While brittleness due to segregated areas exist simultaneously in head and base of the rail, the segregation generally extends farther into the head than into the base, and therefore is more readily detected by bending with the head in tension than with base in tension. Mr. Wickhorst consequently recommends that in acceptance bend tests to determine ductility the head should be put in tension. Bend tests show the same ductility whether the drop testing machine or a hydraulic bender be used, but in the former case the impact is likely to break off the flange in case there are seams in the base, which would defeat the object of showing the actual ductility of the metal. The hydraulic bender, which always gives normal tension breaks, is therefore recommended as preferable to the drop testing machine. Segregation of carbon and phosphorus causes not only longitudinal but also transverse brittleness, the latter producing split heads when the top part of the head flows under the rolling action of wheels. The same effect may be due to large amounts of non metallic inclusions, commonly manganese sulphide.

The Canadian National Railways Association held its second annual at home at the Masonic Temple, Toronto, Nov. 30. More than 400 officials and employees located in Toronto, and their friends, attended. Mrs. H. G. Foreman, wife of the Treasurer, Canadian Northern Ry. System and Grand Trunk Pacific Ry., acting as hostess.

R. F. Richardson, General Agent, Alaska and Yukon Territory, Canadian Pacific Ry., Juneau, Alaska, writes: "I certainly appreciate Canadian Railway and Marine World."

Fig. 9. Machine for shearing rivets in Draw-heads.

sign were recognized by the U.S. Railroad Administration and used at other points. The first, fig. 9, is for shearing the heads off the two rivets in the drawhead, and as these are 1¼ in. in diameter, considerable pressure is required. The bed is made of two I beams, 20 in.

threads are coarse square in form, 32 to 12 in. or 2 2/3 per in. The fit is loose enough to be easily adjusted by hand, the ram being run down to contact with the work. Air at 100 lb. pressure is used and a heavy effective pressure built up in this way. But as there are two

Succeeding in Railway Mechanical Engineering.

Railway mechanical engineering is a special branch of mechanical engineering necessitating a college training of from four to six years. It is a profession that has a larger following in America than in any other place in the world, due to the extent of American railway systems. This means also that there is a greater future for the railway mechanical engineer in America than elsewhere. America's wealth has been made possible by her railways; her future depends largely upon them. The young man entering this field can feel that he is associating himself with a stable profession that will give him any future his ability and capacity justify. It is a field in which big deeds are possible and one in which big deeds are recognized.

The author is enabled to outline the field of railway mechanical engineering through the kind and unselfish assistance of a man who has been in the field, but too modest to be quoted. This man has been in a position to survey this field for a number of years, and what he has had to say regarding it can be taken as good, sound advice. If more young men would heed the advice of successful men in the field they contemplate entering, there would be more successes in life than there are at present.

It has been stated previously that the wealth of America has been largely developed through the agency of the railways. The prosperity of the country then depends to a very great extent upon the efficiency and economy with which its transportation systems are managed. This, in turn, depends largely upon the railway mechanical engineers who, in a way, stand guard over the largest and most perfect transportation systems in the world. The railway mechanical engineer renders service of the most valuable nature, in improving the design of cars, locomotives, etc., in the general interests of operating efficiency and economy. It is through the honest efforts of these men in the past that we have the most powerful, fastest and most efficient locomotives in the world. Few stories of industrial development and progress have more romance, more daring and more interest in them than that of the railways of America.

What must the training of a successful railway mechanical engineer be? The length of time that an engineer must spend in training varies. In the ordinary case four years of intense college training will suffice. The length of time that a man should take for education along this line depends to a great extent upon the size of the road with which he expects to follow his profession. If it is a small independent road, probably the four years training will equip him to master easily all the problems it may present. On the other hand, if he contemplates a more successful career and wishes to become connected with one of the larger railways of the country, more time must be spent in preparatory work. In fact, some of our better engineers have spent years in training, supplementing their college courses with several years spent in the shop and design room. A few have made short cuts and attained their title within a few years; but a man cannot really call himself a thoroughly trained railway mechanical engineer until he has spent some time gaining practical experience in the railway mechanical department. It is here that he gets his first really thor-

ough understanding of the construction and maintenance of the equipment. Although a few of our large colleges are fairly well equipped for the teaching of this profession, none of them are able to construct locomotives, box cars or other rolling stock; experience along this line must be gained with large locomotive manufacturers. It is also possible to gain this experience in some of the good repair shops of the railways where equipment is being continually overhauled and repaired.

The gentleman interviewed informed the writer that there have been many successful railway mechanical engineers who were self-trained. These men have proved beyond all possible doubt that there is a future for the man who cannot go to college and yet who has a desire to succeed in this particular field. The men in question possessed marked mechanical ability and this was probably their greatest asset. This, combined with the opportunity of associating with engineers and a continuance of home study, secured for these men practically as much technical knowledge as the average college graduate possesses.

The need for mathematics in this profession is about the same as in general mechanical engineering. The problems met are of the same general nature. Of course the study of higher mathematics is necessary, as there is no room for the rule-of-thumb man in this field. Too much depends upon a locomotive to have the design of its parts decided upon without calculation of the most accurate nature. If the connecting rod or crank pin of a locomotive travelling at high speeds breaks, a catastrophe generally follows in which many lives may be lost; and every railway mechanical engineer must feel the responsibility that rests with him. The writer mentions mathematics only for the benefit of the man who has decided upon training himself as he usually looks upon this as the most difficult thing he has to accomplish.

One of the most necessary qualifications for a young man entering this special field of engineering is natural engineering ability and initiative. It is not exactly a vocation for the admirer of "white shirt professions." A man entering this field has to be a worker, one who is not afraid to dirty his hands and get "messed up" out in the shop, as this is all part of the training. A locomotive is not a clean thing to play around, and during the shop experience of the engineer a certain amount of this work is essential. Second in importance to natural engineering ability, a young man must have a fair supply of determination. Of course determination is necessary for success in any field, but not of this particular brand. A man must have determination in this field in order to get "those high up" to adopt his recommendations. This requires faith and no little perseverance.

The salary of a railway mechanical engineer is a difficult thing to state definitely. It depends upon the size of the railways. Of course the larger roads have more money, require greater talent and are willing to pay for it. About the best salaries that are being paid at this time are in the neighborhood of \$6,000 a year. They range anywhere from \$2,000 to this figure. Of course, the writer does not mean to infer that \$6,000 is the absolute limit for a man of exceptional ability. The American Association of Engi-

neers recently made some very definite recommendations regarding the salaries which mechanical engineers of this type should be paid.

A word about the future of railway mechanical engineering. Of course this depends entirely upon the development and progress of our transportation systems and one who realizes how this has gone forward in the past need have no concern about its future. The railways of this country simply have to keep growing. There is a very good future for this profession, as the increasing costs will make it necessary to incorporate greater refinement in locomotive and car design. This will create a demand for men who are capable of a higher quality of engineering work than was thought necessary in the past. In other words, during the past the railways were not so much concerned with minute details of efficiency as they will be in the future. This makes the field more promising for the man with extraordinary ability and unusual training. It will call for the best there is in men with higher engineering talent.

Very few, if any, railway mechanical engineers go into business for themselves, even in a consulting practice. In fact they would not have very many people to consult them, as the big railways have engineers of their own and do not find it necessary to go outside of their own organization for advice. Most engineers consider that their first connection with a railway is only a stepping stone to something higher up. There are many positions on a railway for which an engineer is well qualified. There is the position of mechanical superintendent, superintendent of motive power and other good and remunerative positions in the operating department.

With the great importance and extent of our railway systems, the reader will probably be surprised to learn that only two or three colleges offer really worth while special courses in railway mechanical engineering. In general these courses are about as satisfactory as most of the other engineering courses. This is not saying that they are perfect by any means, and probably the next few years will see a marked improvement in the training offered along this line.

What course should the young man follow who desires to become a railway mechanical engineer and who cannot enter college? In general it can be said that there is a fair chance for any young man to become a self trained railway mechanical engineer. There is probably more success in this field than in most technical professions.

First, a position should be obtained in a railway repair shop or in the shop of one of the large locomotive manufacturers. This work will give a man the daily contact with locomotives of all types and he can get things taken apart, repaired and assembled. If he uses his eyes, his hand and a note book, the most valuable part of his education can be obtained in this manner. Aside from this, a study of general mechanical engineering should be followed. This can be followed as a night course in a local school or as a correspondence course. There is still hope for a man unable to take either one of these courses. Intensive study of the subject will eventually bring success, though it will require a considerable length of time. Ray and Frazer in *Yale in Science and America*

Canadian Railway and Marine World brought to the attention of the authorities of McGill University, Montreal; Queen's University, Kingston, Ont.; and Toronto University, the statement that "only two or three colleges offer really worth while special courses in railway mechanical engineering," and asked for comment thereon. The following has been received in reply:—

From Frank D. Adams, Ph.D., D.Sc., F.A.S., Dean of Applied Science Faculty, McGill University: "In the Faculty of Applied Science at McGill University we have six separate courses, covering different branches of engineering, one of these is a course in mechanical engineering. All of these courses are identical for the first two years, during which time the subjects fundamental to the education of every engineer are taught, such as the various branches of mathematics, physics, mechanical and freehand drawing, shopwork, etc. In the third and fourth years, the men are trained in the special branch of engineering which they elect to follow. For these courses in engineering, there are provided, not only adequate classrooms, but a complete set of laboratories and workshops. Nearly all of our men also, during their vacations, engage in the practical work of their profession, in connection with various engineering enterprises, field parties, or industrial plants. Our course was founded on the best expert advice which we could secure, which was to the effect that it is not advisable to attempt to train men in special types of mechanical engineering work, but to give every man a thorough grounding in the theory and practice of mechanical engineering, thus giving him a good general knowledge for his profession so that when he graduates he may take up the more or less specialized work which he may be called upon to do, and which he will easily pick up in the plant with which he becomes connected. This method of education we find works satisfactorily and our men, after graduation, find no difficulty in securing suitable work at once. Many of them are engaged on the great Canadian railways, and that more of them do not find employment in railway mechanical engineering is due chiefly to the fact that salaries paid by railways are not as high as those that men can secure in many industrial enterprises and in other lines of mechanical engineering."

From L. M. Arkley, M.Sc., Professor of Mechanical Engineering, Applied Science Faculty, Queen's University, Kingston, Ont.:—"We have no course in mechanical engineering at Queen's which applies directly to railway engineering. Of course a great deal of the work a man gets in mechanical engineering, such as thermodynamics, boiler design, machine design and work on power plant construction, and efficiency of operation, have a direct bearing on the question of railway engineering. While, no doubt, there would be certain advantages in having a course especially for men wishing to follow up railway mechanical engineering, the same thing could be said for many particular branches of engineering. It is perhaps better, therefore, to give the student a broad general training along mechanical engineering lines, so that when he graduates, he can, without a great deal of effort, fit into the branch of engineering in which he is interested and in which the opening offers when he is ready to fill it."

From the Faculty of Applied Science

and Engineering, Toronto University:—"We have a general course in mechanical engineering, covering four years, leading to the degree of B.Sc., but we do not specialize in railway mechanical engineering."

Straightening Bent Axle of Railway Steam Shovel.

A bent axle of a Marion railway steam shovel was straightened by a railway yard crew in the field without removing the axle from the truck. Less labor was expended on the job than probably would have been necessary in putting in a new part and the cost was under \$50.

The truck was run out from under the shovel, and the axle spotted over a tie with the bend of the axle down. Holes were excavated under the tie beneath the journal boxes and the axle securely lashed to the tie with a 1 in. car chain passed over the journal boxes close to the wheel.

Method used in taking out bend in railway steam shovel axle.

The axle was $\frac{5}{8}$ in. in diameter except for a 10 in. length in the center, which was turned down to 5 in. with a $\frac{1}{2}$ x 1 in. keyway cut into it. All the bend was in this portion and was sufficient to make a $\frac{1}{4}$ in. difference in the gauge of the wheel, as shown by the accompanying illustration, which also shows a general arrangement of the work, together with various dimensions.

The bent portion was heated to an almost white heat, with a crude oil burner, a boxing of sheet iron and wood having been built around the bent portion to confine the heat. A 15 ton jack was then placed under the axle, by means of which the bend was straightened. It was a compound bend, two applications of the jack being necessary, but only one heating being required.

Battered Ends of Rails.

W. P. Burn, Roadmaster, Northern Pacific Ry., Glendive, Mont., in replying to the question "What is the cause of rails becoming battered to such extent that it becomes necessary to remove them and saw off the ends?" says:—"I do not think that it is economical to saw off the ends of battered rails. I believe that rails which become battered are of a very soft and not good quality of metal and if they are sawed off, they become battered again, no matter what track conditions are."

I have had some 25 years experience on maintenance of way work. At one time, this division of over 400 miles had 56 lb. steel, laid in the early eighties which was taken up in the early nineties and found to be in poor condition, except flange worn on the curves. There were no battered joints or flowing of metal on the lower sides of curves. We then replaced some 200 miles of this with 66 lb. rail, which gave very poor service, and had to be changed on account of battered joints, and the flowing of metal

on the low sides of curves after 5 or 6 years use. This in turn was relaid with 85 lb. rail, which seemed to be the same class of metal as the 66 lb. rail, but battered badly at the joints and the low sides of curves flowed out to such an extent that it had to be changed out in 5 or 6 years. On a portion of the division; for about 200 miles, we took out the 50 lb. rail and relaid 72 lb. rail. When the 56 lb. rail was taken out, it was in good condition, except flange worn on curves and some rails were surface bent on account of the soft spots in the track. There was not a rail with battered ends and it did not flow on the low side of curves. The 72 lb. rail that was laid on this portion of the track gave good service for 10 or 11 years, and when taken out was in first class condition, except flange worn on the high side of curves. There were no battered joints, and the rail did not flow on the low side of curves. When the 72 lb. rail was taken up, we laid it with 90 lb. rail. This 90 lb. rail was relaid in 1910, and it does not seem to be wearing very well, flowing badly on the curves, and battered joints showing up pretty frequently. A good many of the curves had to be changed out after the rail was in five years, on account of flowing metal and battered joints. I figure that battered joints are caused by inferior quality of metal and poorly rolled.

I do not think that the rigidity of the superstructure at the joint has anything to do with the battering of the rails at the ends. My opinion is that the superstructure is not rigid enough. Rolling stock, motive power and volume of traffic has increased very materially in the last 25 years. If our heavy rail should take care of this, and my opinion is that it would if it was made of the right kind of metal, and properly made as was the lighter rail. It must be remembered too that our roadbed has been improved wonderfully during the past 25 years by the widening of banks, cuts which have been ditched out, and by ballasting several times, so that the roadbed is far longer now than it did formerly under poorer roadbed and track conditions.

Raising a Train Shed.

The Delaware, Lackawanna & Western Rd. has nearly completed raising to its original level its Hoboken, N.J., station train shed, the supporting columns of which had sunk irregularly from 5 to as much as 14 or 17 in. in places. This shed is the first ever built of the Bush type, with slots for the locomotive smoke stacks. It is 360 ft. wide and 630 ft. long, covers 14 tracks and an area of about 5 acres and weighs 18,000,000 lb. It is supported on 207 cast steel columns each set on a concrete foundation resting on 80 ft. wooden piles which had settled. The shed was raised in 4 sections by means of jacks at each column in the station to bring the roof to its proper level. The concrete platforms have also been built up and the tracks raised to their original level. The old scheme of wire glass roofing, with large sections of glass, which used to break from the vibration, has been replaced by a concrete and vault light roofing. The whole project has been carried out without delay to a traffic of 295 trains daily or without inconvenience to the 1,500,000 passengers who use the station monthly.

The Ontario Railway and Municipal Board's offices have been removed, from the Legislative Buildings, to 47 Queen's Park, Toronto.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page.

General order 319. Nov. 30.—Declaring that proper charge for milling-in-transit within Canada of grain, the product of which is re-shipped to sea is to be 100 lb. on and after Aug. 16, 1920. This order is given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

General order 320. Dec. 9.—Ordering that pasteurized cream be carried by express companies at same rates as ordinary cream. This order and the judgment on which it was based, are given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

General order 321. Dec. 2.—Ordering that all route maps and location plans approved by the Board be signed by the Board of Commissioners.

General order 322. Dec. 10.—Ordering all railway companies to withdraw Special Instruction E from their respective timetables and hereafter observe the Uniform Code of Rules for Canadian Railways approved by general order 42. The failure on which this order was based is given in full on another page.

General order 323. Dec. 14.—Approving freight tariffs for a number of railways, to become effective Jan. 1, on reduced basis prescribed by the Board's judgment of Sept. 6, and general order 319. This order is given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

General order 324. Dec. 14.—Approving passenger tariffs of a number of railways, to become effective Jan. 1, on reduced basis prescribed by the Board's judgment of Sept. 6, and general order 308. This order is given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

30321. Nov. 13.—Authorizing C.P.R. to build spur for Canadian Insulation Co., West Selkirk, Man.

30322. Nov. 13.—Authorizing Canadian National Ry. to build viaduct for revised crossing over Rivière-du-Loup, Que., at mile 103 from Quebec.

30323. Nov. 13.—Authorizing Canadian National Ry. to build spur for Mid-West Collieries, Ltd., Belleville, Ont.

30324. Nov. 13.—Extending to Dec. 31, time for completion by G.T.R. of spur for Crane Collieries, Toronto, Ont.

30325. Nov. 13.—Amending order 29,591, re Lake Erie & Northern Ry. crossing at Victoria St. and ordering that electric light be installed by Dec. 31, 1920.

30326. Nov. 13.—Authorizing Canadian National Ry. to build viaduct for revised crossing over East Yamachiche River, at mile 96 from Quebec.

30327. Nov. 15.—Authorizing C.P.R. to build spur for Dominion Sugar Co., in Lot 24, Con. 1, Chatham Twp., Ont.

30328. Nov. 15.—Authorizing C.P.R. to build spur for Congoleum Co., Montreal.

30329. Nov. 13.—Authorizing Canadian National Ry. to build spur for the estate of J. B. McCorie Westerly Branch from Eaton to Alaska, mile 115 to 148.13, Sask.

30330. Nov. 15.—Ordering Kettle Valley Ry. to build two-ten stock yard at Princeton, B.C.

30331. Nov. 17.—Authorizing Canadian National Ry. to erect and complete a crossing, approved by order 30,273, with National Transcontinental Ry. spur at mile 49.76.

30332. Nov. 17.—Authorizing C.P.R. to build spur for Winnipeg Supply & Fuel Co., Winnipeg.

30333. Nov. 17.—Relieving C.P.R. from providing further protection at crossing 2 miles west of Jellison, Ont.

30334. Nov. 11.—Dismissing application of Hattisville, Sask., for order authorizing C.P.R. to build crossing opposite Cummins St.

30335. Nov. 9.—Ordering Vancouver, Victoria & Pacific Ry. to erect and complete a crossing, approved by order 30,273, at present agent's room, etc., at Crescent, B.C., and appoint agent during June, July and August, and caretaker for remainder of each year.

30336. Nov. 9.—Authorizing Columbia River Lumber Co. to cross C.P.R. with its logging railway, at mile 52.83, Muskogee, B.C.

30337. Nov. 15.—Authorizing G.T.R. to build bridge, 35 ft. wide with $\frac{1}{2}$ ft. sidewalk on each side, carrying St. Paul St., St. Catharines, Ont., over the tracks.

30338. Nov. 17.—Dismissing application of W. T. Finch, Pembroke, Ont., for order authorizing C.P.R. to provide for the use of its Wymark-Archive Branch in the s.s. $\frac{1}{2}$ Sec. 16, Tps. 13, Range 11, west 3rd meridian.

30339. Nov. 8.—Dismissing complaint of Calgary Live Stock Exchange against charge made by the Board of Railway Commissioners for unloading and reloading live stock.

30340. Nov. 19.—Amending order 19,864 to provide that portions of C.P.R. tracks between bridge and Soo Branches by the Grand Trunk

Pacific Ry. Weyburn Branch in Sec. 20, Tps. 8, Range 14, west 2nd meridian, be protected by half-section fence, intersecting at right angles.

30341. Nov. 18.—Dismissing application of Dominion Public Works Department for order authorizing crossing crossing in lieu of existing farm crossing over Equinault & Nainaimo Rys. north of Ladysmith, B.C.

30342. Nov. 18.—Authorizing Equinault Twp. R.C. to make highway crossing over Equinault & Nainaimo Rys. at Fairview Road.

30343. Dec. 18.—Approving agreement between Bell Telephone Co. and Bond's Corner Telephone Co., Oxford County, Ont.

30344. Nov. 13.—Authorizing G.T.R. to build spur for Heworth Manufacturing Co. on Lot 1, Con. 9, Keppel Twp., Ont.

30345. Nov. 15.—Extending to Mar. 31, 1921, time within which Canadian National Ry. may build spur for J. I. Case Threshing Machine Co., Winnipeg.

30346. Nov. 15.—Ordering Canadian National Ry. to rebuild bridge over Halifax & South Western Rys. near Lunenburg, N.S.

30347. Nov. 22.—Amending order 30,282, re C.P.R. and Three Rivers Traction Co., operating over St. Maurice St. crossing, Three Rivers, Que.

30348. Nov. 15.—Ordering C.P.R. to install combined electric alarm bell and wigwag signal by Jan. 1, 1921, at crossing near east switch at Chatham, Ont.

30349. Nov. 19.—Ordering Wabash Ry. and G.T.R. to arrange for Wabash Ry. trains 2 and 3 to cross at right angles at Chatham, Ont.

30350. Nov. 22.—Extending to May 31, 1921, time within which G.T.R. may build sidings for Canadian Crushed Stone Corporation, Hamboro West Twp., Ont.

30351. Nov. 22.—Authorizing C.P.R. to extend to Independent Coal Co., Ottawa.

30352. Nov. 22.—Authorizing G.T.R. to use bridge carrying highway between Lots 150 and 151, Range 18, Edwara Division, Ontario.

30353. Nov. 22.—Relieving G.T.R. from providing further protection at second crossing east of Drumbo station, Ont.

30354. Nov. 23.—Authorizing City of Prince Rupert to build bridge over Broad Trunk Pacific Ry. at Morse Creek.

30355. Nov. 19.—Ordering Canadian National Ry. to build crossing at crossing over road by May 15, 1921, for S. Manson, Turtleford, Sask.

30356. Nov. 23.—Authorizing G.T.R. to build spur for Frank Ry. at crossing over road.

30357. Nov. 12.—Approving revised location of portion of C.P.R. London North Branch (Addition to Appendix), Toronto, Ont.

30358. Nov. 24.—Authorizing G.T.R. to build spur for Ontario Paper Co., Lot 47, Thorold Twp., Ont.

30359. Extending to May 31, 1921, time within which C.P.R. may build spurs for Cowan Co., Toronto.

30360. Nov. 22.—Ordering Grand Trunk Pacific Ry. by July 1, 1921, to fence north side of its right of way between mile 955 and 946, from connection with Canadian National Ry. fence east of Dundarud to Ernest Sidings west, Alta.

30361. Nov. 24.—Authorizing C.P.R. to build spur for Calgary Industrial Exhibition Co., Victoria Park, Calgary, Alta.

30362. Nov. 24.—Authorizing C.P.R. to build spur for Maurice P. Corp., Cap de la Madeleine, Que.

30363. Nov. 24.—Authorizing Montreal & Southern Counties Ry. to build spur for Slate Milling Corporation of Canada, Granby, Que.

30364. Nov. 24.—Authorizing Toronto, Hamilton & Buffalo Ry. to change location of its westbound main track at corner of John and Hunter Sts., Hamilton, Ont.

30365. Nov. 24.—Ordering C.P.R. to erect standard A3 station building at Blueher, Sask.

30366. Nov. 26.—Authorizing Canadian National Ry. to build spur for Alcan. Mining Co. at mile 168.6 Brazosa Subdivision, Alta.

30367. Nov. 26.—Authorizing Canadian National Ry. to build spur for the extension of spur line approved by order 30,273, between miles 47.9 and 49.76, St. Lawrence Subdivision, also spur from the line between miles 47.9 and 49.76.

30368. Nov. 26.—Approving agreement between Bell Telephone Co. and Omemee Telephone Co., Omemee, Ont., and re-scinding order 25,448.

30369. Nov. 26.—Approving plans showing power bridge by Hydro Electric Power Commission of Ontario over Toronto & Niagara Power Co. and Toronto, Niagara & Western Ry. right of way between York and Hamilton Twp., Ont.

30370. Approving new location of Canadian National Ry. station at River Hills, Sask., and re-scinding order 25,320.

30371. Nov. 26.—Approving agreement between Bell Telephone Co. and South McNaughton Telephone Co., Renfrew County, Ont., and re-scinding order 25,755.

30372. Nov. 17.—Authorizing C.P.R. to build spur for Winnipeg Fish Co., Winnipeg.

30373. Nov. 19.—Ordering Canadian National Ry. to build farm crossing for W. Dykalski, Erickson, Man.

30374. Nov. 29.—Authorizing C.P.R. to build spur for Beach Foundry Co., Ottawa, Ont.

30375. Nov. 29.—Authorizing Niagara, St. Catharines & Welland Ry. to build spur for Provincial Paper Mills Ltd., Thorold, Ont.

30376. Nov. 29.—Approving British Columbia Electric Ry. Standard Freight Mileage Tariff, Supplement 1 to C.R.C. 12.

30377. Nov. 29.—Extending to Dec. 31, 1920, time within which C.P.R. may build spur for Reliance Investment & Developing Co., Morden, Man.

30378. Nov. 24.—Ordering G.T.R. to erect suitable crossing (hydro crossing) west of Niagara Falls, Ont., and authorizing G.T.R. to improve Mr. Morrison's lands to remove trees to enter view, and rescinding orders 29,511 and 29,590.

30379. Nov. 29.—Authorizing C.P.R. to build spur for Milverton Furniture Co., Milverton, Ont.

30380. Nov. 29.—Authorizing C.P.R. to build spurs for T. Kinnear & Co., Toronto and Canada Ingot Iron Co., Guelph, Ont.

30381. Nov. 29.—Approving Chatham, Wallaceburg & Lake Erie Ry. Standard Passenger Tariff C.R.C. 42, and Standard Freight Mileage Tariff C.R.C. 11, to C.R.C. No. 25, effective Dec. 6, 1920.

30384. Nov. 29.—Ordering Free Mercantile Ltd. to cease using the name of the B.C. BLE 12088, C&O 5222S and C&O 54895, if same are not released within 48 hours from receipt of this order.

30385. Nov. 29.—Approving location and details of G.T.R. station at Fraserville, Ont.

30386. Nov. 29.—Approving location and details of Ry. to install by May 31, 1921, gates at crossing of Dufferin St., Trenton, Ont., and to protect crossing by day and night watchmen.

30387. Nov. 19.—Authorizing Canadian National Ry. to build branch from mile 23, Grenville Subdivision, to Ste. Menique, Que.

30388. Nov. 19.—Authorizing Canadian National Ry. to build branch from Rivière-du-Loup, Quebec Subdivision to Ste. Menique, Que.

30389. Nov. 30.—Authorizing C.P.R. to use bridge 1.1 over the Ottawa River at Whetsey River, Manitoba Division.

30390. Dec. 1.—Authorizing Oshawa Ry. to take certain lands in Oshawa and West Whetsey.

30391. Dec. 1.—Authorizing G.T.R. and Oshawa Ry. to erect bridge over Line Road between Oshawa and East Whetsey Twp., Ont. to connect with jointly used tracks and bridge to Oshawa, Canada.

30392. Nov. 19.—Authorizing G.T.R. to build spur for Oshawa, Ont., re-scinding order 29,972 for foreclosing.

30393. Nov. 19.—Authorizing G.T.R. to build additional track across First Ave., Oshawa.

30394. Nov. 30.—Approving Windsor, Essex & Lake Erie Ry. Standard Freight Mileage Tariff C.R.C. 349, effective Dec. 6.

30395. Dec. 1.—Extending to Feb. 1, 1921, time within which Canadian National Ry. may extend passing and elevator tracks at Craik, Sask.

30396. Dec. 2.—Authorizing Canadian National Ry. Quebec Ry. to divert highway in Lot 11, Range 2, St. Boniface Parish, Que., at mile 88.7 from Quebec.

30397. Dec. 2.—Extending to June 1, 1921, time within which Grand Trunk Pacific Ry. may complete station building at Becharof, Ont.

30398. Dec. 2.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30399. Dec. 2.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30400. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30401. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30402. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30403. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30404. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30405. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30406. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30407. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30408. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30409. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30410. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30411. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30412. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30413. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30414. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30415. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30416. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30417. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30418. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

30419. Nov. 30.—Approving location of Vancouver and District Joint Sewerage Board to connect its tracks with C.P.R. at Coquitlam.

Electric Ry. Supplement 1 to Standard Tariff of Maximum Fares, C.R.C. 8.
 30,410. Dec. 6. Authorizing Canadian Northern Pacific Ry. to use bridge over South Thompson River, in Kamloops, B.C.
 30,411. Dec. 6. Authorizing E. Morris, Chairman, Central Freight Association, Chicago, Ill., as agent for various railways, also all other railways publishing reconciling rules in international traffic, to file with Board upon one day notice supplements or tariffs containing revised reconciling rules and charges within U.S. applicable on all freight in open cars, and coal and coke in all cars.

30,412. Dec. 2. Ordering G.T.R. to install wye-way signal at Edward St., Prescott, Ont.
 30,413. Dec. 7. Authorizing C.P.R. to prosecute William Scott, for alleged rules in international of Railway Act, by false billing of intoxicating liquor.

30,414. Nov. 30. Relieving Canadian National Ry. from providing further protection at crossing of Bessie St., Emo, Ont.
 30,415. Dec. 3. Ordering C.P.R. from providing further protection at crossing of Calgary-Edmonton Trail, near Blackfalds, Alta.
 30,416. Dec. 9. Ordering that British Columbia Electric Ry. should be liable for maintenance of siding extending from its right of way in Grey municipality, B.C., to Hunting-Merritt Lumber Co.'s siding.

30,417. Dec. 2. Authorizing Grand Trunk Pacific Ry. to divert route in S. 34, 572, Tr. 39, Range 2, West 3rd meridian, mile 574, Tramping Lake rural municipality 280, Sask., and resuming order 30,297, Nov. 1920.
 30,418. Dec. 2. Declaring that for present, Canadian National Ry. crossing near mile 68, Chester Subdivision, N.S., is protected to Board's satisfaction.

30,419. Dec. 9. Ordering Canadian National Ry. by May 1921 to erect mail passenger shelter at junction of Latimer Road and C.N.R. at Port Kells, B.C.

Pilots required on New York Central Locomotives.—The New York Central Rd. applied to the Board of Railway Commissioners recently, for permission to use a step equipment instead of a pilot, on the front of locomotives on its Ottawa Division, contending that the step equipment is allowed under Interstate Commerce Commission rules, and not objected to by the public utility commissioners of any of the states through which the N.Y.C.R. operates. Assistant Chief Commissioner McLean, in giving judgment, stated that the Board was asked to allow a departure from its regulations, and to allow the substitution of a pilot depending entirely on tolerance, and that having in view Canadian conditions, and the careful consideration given before the regulations were adopted, he considered the application should not be granted.

Transportation Men as Hotel Directors. The Mount Royal Hotel Co., which is going to build a large hotel in Montreal, among its directors Brig. General McGeighen; J. K. L. Ross and Hon. W. J. Shaughnessy, Vice President, C.P.R. directorate; A. D. MacTavie, Vice President, Eastern Lines, C.P.R.; H. G. Kelley, President, G.T.R.; W. W. Butler, President, Canadian Car & Foundry Co.; Senator Lorne Webster, President, Webster Steamship Co., etc.; and J. T. Loree, General Manager, Delaware & Hudson Co.

The Canadian Welding Society was organized at a meeting at the Prest-O-Lite Co. of Canada's office, in Toronto, Dec. 16, to embrace people connected with, or interested in, electric, gas and thermit welding. An executive committee, consisting of J. N. Robinson, chairman, A. A. Stewart, secretary, and F. Borys, was appointed to act until the election of permanent officers in January.

Railway Lands Patented.—Letters patent were issued during November, 1920, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Alberta & Great Waterways Ry.	Acres.
Canadian Northern Ry.	85,119
Edmonton, Dunsmuir & British Columbia Ry.	163,000
Grand Trunk Pacific Branch Lines Co.	6,109
Total	240,228

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—An issue of \$25,000,000 of Canadian Northern Ry. 7% 20-year bonds is reported to have been placed in New York by W. A. Reid & Co., and associated brokers, and are to have been oversubscribed. The bonds are dated Dec. 1, 1920, and mature Dec. 1, 1940. They are guaranteed unconditionally as to principal and interest by the Dominion Government.

Central Vermont Ry.—The Interstate Commerce Commission is reported to have authorized the Central Vermont Ry. to issue \$1,359,016 of 5% refunding mortgage gold bonds to pay an indebtedness to the Grand Trunk Ry. Co.

Grand Trunk Ry.—A London, England, cable states that holders of G.T.R. guaranteed stock will receive a dividend in January, that some of the stock has been in existence for 36 years, and is only now on a dividend basis.

Grand Trunk Railway Construction, Betterments, Etc.

Portland, Me.—A press report states that the company is building with its own forces a wharf and wooden freight shed at Portland, Me., at an estimated cost of \$109,000. The new structure is said to be 100 x 390 ft.

Toronto Belt Line Ry.—A press report states that the G.T.R. is desirous of re-purchasing a portion of the old Belt Line Ry. from Guinness Road to Keel St., which was sold for taxes some years ago. The section mentioned is said to be also desired by the City of Toronto or the Hydro Electric Power Commission of Ontario in connection with radial railway plans.

Fraserville Station.—The Board of Railway Commissioners has approved location plan and details of a new station at Fraserville, Durham County, Ont.

London Subway.—G. A. Mountain, Chief Engineer, Board of Railway Commissioners, is said to have recommended the elevation of the tracks at Rectory St., 6 ft., and the construction of a subway there, the work to be fitted in with the general plan of grade separation. The estimated cost of the subway is \$250,000, towards which the Dominion Government is expected to provide \$15,000 from the grade separation fund. The matter was discussed by the city council's railway crossing's committee Dec. 13, when it was decided to ask the Board of Railway Commissioners to direct the subway to be built and to apportion the cost between the city, the G.T.R., and the London St. Ry.

London Division.—A press report states that estimates for betterments proposed to be undertaken during this year on London Division amount to about \$250,000, and that this includes the building of several stations.

Goderich Locomotive House.—The locomotive house at Goderich, Ont., is reported to have been considerably damaged during the heavy gales of Dec. 14.

Pontiac Signal Plant.—A press report states that an order has been given the General Railway Signal Co. for a Model 2 unit-level-type electric interlocking signal for Pontiac, Mich. (Dec., 1920, pg. 650.)

More than 500,000 barrels of apples had been shipped from Halifax, N.S., up to the beginning of Dec., 1920. During November, 125,000 barrels were shipped to the United Kingdom.

Canadian National Railways Construction, Betterments Etc.

Sydney Terminals.—The Dominion Public Works Department's Chief Engineer visited Sydney, N.S., Dec. 17, and in company with a number of city officials, inspected the site of the proposed new railway and steamship terminal.

Halifax Terminals.—A press report states that C.N.R. officials were in Halifax, N.S., Dec. 10, inspecting the south end terminals. The need for some filling and other work on the approaches was brought before them. It is reported that the brick walls at the old North St. station are likely to be torn down.

Cut Bridge, Lunenburg.—The Board of Railway Commissioners has directed the C.N.R. to rebuild the road leading to Cut bridge over the Halifax & South Western Ry., near Lunenburg, N.S., by producing the bridge tangent 50 ft. at the east and 25 ft. at the west end; and to fence the new road, the railing of the bridge to be raised to a sufficient height to comply with the Board's requirements, the bridge to be put in proper repair and replanked, if necessary, and the approaches to be covered with 6 in. of gravel. The work to be done by July 1, and the C.N.R. to bear the cost of building and maintaining the bridge.

Cut bridge is on the old Nova Scotia Central Ry. At the investigation it was stated that when the bridge was built there was an agreement with the Lunenburg municipality that the company should build the bridge and keep it in repair, but this agreement could not be traced. The Board decided that the bridge was built and had been repaired by one railway company, and that the company should pay for its building and future maintenance. The building directed in the order were made on the report of T. L. Simmons, the Board's Assistant Chief Engineer, who inspected the bridge Aug. 1, 1918.

Caruquet Branch.—A press report states that sidings will be put in at nearly every station on the branch line from Bathurst to Caruquet and Tracadie, N.B., and that it is possible that heavier rails will be laid from Gloucester Jct. to Grand Anse, at an early date.

National Transcontinental Ry. Yards, Moncton.—A press report, published in Canadian Railway and Marine World for December, stated that the N.T.R. yard at Moncton has been dismantled. We are officially advised that the N.T.R. locomotive house there is being taken down, and transferred to Chaudiere, Que., but that none of the tracks in the yard have been taken up.

Island Yard, St. John.—We are officially advised that work is in progress on an addition to the Island freight yard, to the east of Marsh Creek crossing at St. John, N.B. The work consists of 9 new tracks, varying in capacity from 59 to 64 cars each, necessitating the diversion of Marsh Creek. The track work is completed, and the stream diversion is well advanced. It is likely that other alterations will be undertaken during this year. Some of the approximate quantities of material moved in this work are:—Filling, 45,000 cu. yd.; creek diversion, 30,000 cu. yd.; ballast, 60,000 cu. yd.

St. Luc Station, Rimouski County, Que. is reported to have been totally burnt Dec. 13, owing to the explosion of an oil stove.

Quebec Viaducts.—The Board of Railway Commissioners has authorized the building of a viaduct for the revised

crossing of Riviere-du-Loup, at mile 103 from Quebec, and a viaduct for a revised crossing of East Yamachiche River, mile 99 from Quebec.

Chaudiere Jct. Coaling Plant.—A contract for the erection of a mechanical coaling plant and sand house at Chaudiere Jct., Que., has been given Williams & Wilson Ltd., Montreal.

N.T.R. and C.N.Q.R. Connections.—We are officially advised that the connection which has been built from mile 47.9 from Quebec, on the National Transcontinental Ry., is a two mile line from St. Marc, to a station of the same name on the Canadian Northern Quebec Ry. A second connection of a little over half of mile has also been built from near St. Prosper, on the C.N.Q.R., about 14 miles west of St. Marc, to the National Transcontinental Ry. The ruling gradient on both these lines is 0.4%, and the grading was light. The object of these lines is to permit the operation of trains from the C.N.Q.R. over the National Transcontinental Ry. between the points mentioned.

Montreal to National Transcontinental Ry.—The Montreal Chamber of Commerce on Dec. 2 reaffirmed its previous decision in favor of the construction of a line from Montreal to a connection with the N.T.R. and a delegation waited on Hon. C. C. Ballantyne, Minister of Marine, and Hon. P. Blondin, Postmaster General, Dec. 6, and urged its construction. The City of Quebec is opposed to the proposal.

Rinfret Jct. to Frensiere.—We are officially advised that it has been decided to postpone until the spring the construction of the projected line from mile 35.5 Lachute Subdivision, near Rinfret Jct., to mile 23 Grenville Subdivision, near Frensiere, Que., none of the tenders received recently having been accepted.

Forfar to Gananoque.—The Gananoque, Ont., Board of Trade is proposing that the line which has been surveyed from Forfar to Findlay, Ont., to give connection between the C.N.R. and the G.T.R., be deflected so as to reach Gananoque instead of Findlay.

Orient Bay Bridge.—In regard to the bridge which is being built at Orient Bay, mile 44.1 from Jellicoe, Ont., we are officially advised that the present structure is a timber trestle 1/2 mi. long, and the new bridge will consist of one half mile girder span 40 ft. long over all, carried on two wing abutments, the foundations being piled and resting on a sand and clay formation. The concrete abutments have been completed and the steel span will be erected early in the spring by Canadian Bridge Co.

Port Arthur Coal Docks.—A press report states that reconstruction of a portion of the coal docks at Port Arthur, Ont., is contemplated. The plans, it is stated, will increase the storage capacity by 100,000 tons and add considerably to the handling facilities.

Western Branch Lines.—We are officially advised that grading and track laying was done on lines in the prairie provinces during 1920 as follows:—Manitoba: St. Rose, 1.2 miles; extension, grading, 11 miles. Amaranth north, grading, 4.5 miles.

Saskatchewan:—Alaska southeasterly, no grading; track laid, 20.6 miles. Acadia valley line, grading, 4.43 miles. Eston southeasterly, grading, 5.25 miles. Humboldt-Melfort line, grading, 3.9 miles; track laid, 33.4 miles. Luck Lake line,

grading, 5 miles. Melfort northeasterly, grading, 12.8 miles. Peebles-Lampman line, grading, 1.8 miles. Swift Current extension, grading, 4.13 miles; track laid, 6.7 miles. Thunderbolt extension, grading, 5.8 miles; track laid, 8.3 miles.

Alberta:—Hanna-Medicine Hat line, grading, 5.1 miles; track laid, 10 miles. Olive northeasterly, grading, 0.4 of a mile; track laid, 23.1 miles. Onaway branch, grading, 0.5 miles; track laid, 18.1 miles. Red Deer spur, grading, 3.8 miles; track laid, 6.4 miles. Mansam, second track, grading, 3 miles; track laid, 3 miles. Jackfish branch, grading, 5.9 miles; track laid, 10 miles.

Eston to Alaska Extension.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the McKillop Westerly Branch, from Eston to Alaska, Sask., mile 115 to 148.33. This line runs from Tisdale, on the branch from Delisle southerly, running westerly about midway between the South Saskatchewan River, and the Saskatchewan-Drumheller line, with which it connects to Alaska.

Hanna-Medicine Hat Line.—A press report states that construction of a steel bridge across the Red Deer River, on the line from Hanna to Medicine Hat, Alta., will be gone on with during the year. The Board of Railway Commissioners has approved revised location of the Canadian Northern Western Ry.'s Hanna-Medicine Hat, Alta., branch from mile 116.39 to 127.63.

Leader-Paisley Line.—A press report states that track is being laid from the north end on the line from Leader to Paisley, Alta.

Edmonton Union Station.—A press report states that work will be started shortly on the construction of a union station in Edmonton, Alta., that the offices in the present building were to be vacated Dec. 31, and that the building will be torn down in the near future.

Oliver-St. Paul de Metis Branch.—The Board of Railway Commissioners has authorized the Canadian Northern Western Ry. to open for traffic the extension of the Oliver-St. Paul de Metis Branch, from Spedden to St. Paul de Metis, Alta., mile 98.5 to 120.85.

Kamloops Bridge.—The Board of Railway Commissioners has authorized the Canadian Northern Pacific Ry. to use the newly completed bridge over the South Thompson River at Kamloops, B.C.

Kamloops-Kelowna-Lumbly Branch.—A press report states that grading is practically completed on this branch from Kamloops to Kelowna and Lumbly, B.C. We are officially advised that 2.9 miles of track were laid during 1920 from Ducks to Armstrong, from Vernon to Kelowna and on the Lumbly Branch.

Vancouver Terminals.—We are officially advised that a contract has been let to the Pacific-Atlantic Construction Co. (formerly known as the Pacific Dredging Co.) to finish the sea wall at False Creek, Vancouver.

This is part of the terminal construction work, and was held up by litigation with Champion & White, owners of the adjacent water front. The contract let to the Pacific-Atlantic Construction Co. also covers the making of a fill back of the sea wall, the removal of the steel bridge from Main St., cutting down the street to the new level, and building permanent drainage culverts across the city property east of the sea wall. (Dec., 1920, p. 647.)

Suspension of Increases in Railway Rates Refused by Board of Railway Commissioners.

In the matter of the application of the Manitoba and Saskatchewan governments, et al, for an order suspending the railway rate increases, as granted by the Board of Railway Commissioners' order 308, Sept. 9, 1920; or in the alternative, that the said order be varied by reducing the increase thereby granted on railway lines west of Fort William, to 15%, which was heard at Ottawa, Nov. 22, 1920, Commissioner J. G. Rutherford, C.M.G., gave the following judgment Dec. 10, 1920:—

This is an application for a suspension of the increase in railway rates as granted by the Board's order 308, Sept. 9, 1920; or that the said order be varied by reducing the increases in railway rates on lines west of Fort William to 15%. The application is based on a judgment of the Governor in council, of Oct. 6, 1920, which referred the said order back to the Board for further consideration. The appellants were represented by H. J. Symington, K.C., for Manitoba; D'Arcy Scott for Saskatchewan, J. B. Coyne, K.C., P. G. Denison for Winnipeg Board of Trade, and G. R. Geary, K.C., for the City of Toronto, certain other interests also having counsel at the hearing. The position taken by the appellants can be best set forth by quoting from the presentation made by Mr. Symington, counsel for Manitoba, at the hearing on Nov. 22:—

"This is an application for a suspension of the increase in freight rates granted by the Board under order 308, or the alternative that the order be varied reducing the increase from Fort William west to 15%. Shortly, the facts connected with the application are as follows: On Sept. 9, 1920, the Board issued order 308, effective Sept. 13 of this year; later, an appeal was taken to the Governor in council. At the earliest possible moment and on Oct. 6, they issued a judgment. Under that judgment, to which I wish to refer, the Board's certain public policies were laid down, to which I shall ask the Board to direct some attention."

In presenting his case to the Board, Mr. Symington adduced, under 12 heads, his interpretation of the findings reached in the judgment of the Governor in council, but as his rendering of a number of these points differed very considerably from the actual text of the judgment, I do not think that any good object would be served by reproducing his version here. As a matter of fact, he devoted his attention, during the course of the hearing, to practically four points, namely:—(1) A general criticism of the methods followed by the Board in fixing fair and reasonable rates; (2) that the Board, in reaching its decision as to increase in rates, took into consideration the requirements of the Canadian National Rys.; (3) the necessity of the equalization of eastern and western rates; (4) the alleged injustice of the additional 5% imposed upon freight rates for the period between Sept. 13 and Dec. 31, 1920.

It is, I think, unnecessary to deal further with the question of the legality or otherwise of the course followed by the Governor in council in referring order 308 back to the Board. It is evident that the Governor in council, failing to find in the order anything which would justify its variation or rescission, and feeling nevertheless that, in view of the representations made by the appellants, certain of its features might be open to criticism, decided to refer it back to the Board, with the suggestion, in the sense of the word an order, that these features

should be again considered, and, if deemed necessary or advisable, be further dealt with. The record of the hearing on the appeal sustains this view, inasmuch as at the close of the discussion between the Chief Commissioner and Mr. Symington, with which the hearing opened, he later admitted the soundness of the position taken by the former, his final statement in this connection being as follows:—

"What I say is this, that on this application I am coming before this Board saying that they ought to do a thing, not that they must. I am not arguing it from a legal standpoint, I am taking the position that the Board ought to do it."

Mr. Symington, in my opinion, read into the judgment of the Governor in council, a number of objections to the Board's judgment, not in any way justified by the language of the first mentioned document. This criticism applied to his attack on the methods followed by the Board in arriving at a decision as to what constitutes fair and reasonable rates. His contention that the application of a general rate increase on a percentage basis was faulty and unfair, inasmuch as, except in regard to a few articles, specially treated, no effort was made to ascertain how the new rates would affect individual classes of goods shipped, was in no sense justified by the findings of the Governor in council. To serve his purpose in this instance, he merely took from the preamble of the judgment of the Governor in council the statement that one of the duties of the Board is "to fix fair and reasonable rates," and proceeded to hang upon this phrase an argument against a certain line of action taken by the Board, to which no reference whatever was made in the said judgment. Apart from the fact that, for the reasons above stated, this argument had no place in the case now before the Board, it is answered by the statement that the rates in force prior to the application of the railway companies had all been for many years carefully considered and adjusted to the requirements of each particular line of traffic; that the application of the railway companies was for a general percentage increase, to enable them to meet the augmented cost of operation and material; that every interest was at liberty to appear and present its case at the hearing; that a number of interests did so appear and that, of these, several received consideration. Moreover, the judgment in no way prejudices the established right of any interest, which may deem the rates affecting it unfair or unreasonable, to apply to the Board for an adjustment.

Further, eliminating the special pleading which has been so prominent a feature of the attacks on the Board's judgment in the railway rates case, and applying common sense principles, it is, I think, quite clear that one of the most important factors to be considered in reaching a decision as to what are fair and reasonable rates, is that of the ability of the railway to carry on. The fact that under the law, the railways, as public utilities, are required to have their rates approved by the Board, does not justify the view that they should therefore be compelled to do business at a loss. Further, if the rates fixed are not fair and reasonable to the railways, as well as to the public, the public will suffer, inasmuch as no railway could per-

operate on a non-paying basis can furnish either efficient service or adequate facilities for the handling of traffic.

In his second count, namely, that the Board in its judgment took into consideration the requirements of the Canadian National Rys., Mr. Symington is on better footing, inasmuch as the judgment of the Governor in council stated that this should not have been done. Here, however, there seems to be a general misunderstanding as to the real position of the Board in that connection, and particularly as to the basis of the calculations on which the findings of the Board in the railway rates case were actually arrived at. While admitting that the language used by the Chief Commissioner in his judgment might be interpreted as conveying the impression that the Board took into consideration the unfortunate financial position of the Canadian National Rys., it is scarcely necessary to point out that all the calculations as set forth in that judgment are based on the figures submitted by the Canadian Pacific Ry., and that, as a matter of fact, that company was the only criterion by which the Board could reach a conclusion as to the increase of rates which would be required to enable a properly equipped and efficiently managed railway to maintain operation on a reasonably remunerative basis. On the course followed in this connection there was no difference of opinion among the members of the Board, and it is regrettable that the Governor in council, as well as some members of the general public and of the press, attached to the language of this portion of the judgment of the Chief Commissioner a greater measure of importance than they did to the definite statement of facts and figures submitted a little further on, on which the actual findings were based.

With reference to the third point dealt with by Mr. Symington, viz., the equalization of eastern and western rates, it should not be forgotten that its intersection to the rates case was purely incidental, and that the Board would not have been justified in attempting to deal with so important a question at such short notice, even in face of the statements made by Mr. Symington at the hearing in August, which indicated that the operating rates and train tonnage were much more favorable to the railways in Western Canada than in the east. It is also well to bear in mind that the factors which first led to the establishment of these differing rates, viz., water competition, and that offered by the railway lines of the Eastern United States, have been for some years in an abnormal and unsettled condition, and that their future influence on rates in Eastern Canada is an entirely unknown and unguessable quantity.

Much has been made of the fact that the Chief Commissioner, in his judgment, stated that the rates in Western Canada averaged from 15% to 18% higher than those in the east, and that he, nevertheless, made a difference of only 5%. It should not be forgotten, however, that the disparity in favor of the east, for reasons well known and fully understood has long been recognized as an established, and, until very recently, accepted condition. Under these circumstances, therefore, the Board took

the ground that, pending future full enquiry and investigation, and until the whole question has been considered from the standpoint of things as they are, and as they are likely to be in the future, it would not be justified in going further than it did in the matter of reducing western rates. As stated at the hearing on the appeal, the Board is prepared, in compliance with the request of the Governor in council, to take up this question at once, and arrangements are in progress for the early inauguration of a full and exhaustive enquiry into all the circumstances bearing upon it, with a view to reaching, at the earliest possible date, a definite understanding as to a fair and proper basis of equalization.

The fourth point raised by Mr. Symington was that the additional 5% imposed upon freight rates for the period between Sept. 13 and Dec. 31, 1920, inflicted an unfair burden upon shippers, such shippers being largely in Western Canada. It is a matter of common knowledge that the Board's action in granting the special temporary additional rate, was taken with the view of enabling the railways to provide approximately \$29,000,000 required to meet the unexpected demands of their employees in the matter of wage increases, which as a result of the United States wage award, had been made retroactive to May 1, 1920. Without discussing the justice or otherwise of the attitude assumed by the railway employees in the matter of this wage award, the Board was faced with the alternative of a general strike if their demands were not met. In view of the then very alarming situation as regarded coal supply for the approaching winter, and the outstanding importance of ensuring the movement of the western grain crop, the Board, after carefully considering all the circumstances, and especially the fact that the expenditure would be an abnormal and temporary character, decided that it would be in the public interest to grant a slightly higher rate for the remainder of the current calendar year.

It was strongly urged in the argument in the appeal to the Governor in council that this portion of the Board's order imposed an unfair burden on western shippers, inasmuch as the period in question was coincident with the heaviest part of the grain movement from western points. The attitude of the western shipper in regard to this phase of the question is readily understandable, especially in view of the serious fall which has since taken place in the prices of grain and other farm produce.

On the other hand, the Board felt that the busiest season of the year, and the season at which the traffic on western lines most closely approximated in volume that of the east, was that during which this abnormal burden would be most easily borne and most evenly distributed. The claim advanced by Mr. Symington on behalf of the appellants that the Board had disregarded the demand of the Governor in council is not borne out by the language of the judgment on this point, which is as follows:—

"There can be no doubt that the fair distribution over all of Canada of any necessary burdens is a principle that must be strictly adhered to, and the Committee recommended that it seems to the Board practicable, in the limitation of the extra increase and if absolutely necessary its extension over a longer period, it move as far as possible the objection above set out."

There is nothing mandatory in these words, the matter being left unreservedly in the hands of the Board, which, after careful consideration, has been unable to see its way to change the terms of the

order, especially in view of the confusion which such a change would involve, and the close proximity of the date when this extra burden on the shipper will be removed.

In the judgment of the Governor in council, the only reference to passenger rates is as follows:—

"It was urged in argument, as well as very generally by the applicants, that the increase in passenger rates should be a matter of consideration before a reduction in freight rates is ordered. This is a matter, however, which seems properly a subject for the consideration of the Board, and the terms of the order are such that effect may be given to the contention, if, in the opinion of the Board, the public interest is served thereby."

At the hearing on the appeal before the Board, Mr. Symington presented as his version of the findings of the Governor in council on this point, the following:—

"That in his judgment all such railway freight rates should be decreased earlier than passenger rates."

but otherwise referred only incidentally to this phase of the question. As a matter of fact, any discussion of passenger rates which took place at the hearing on the appeal, was merely incidental to the presentation of financial statistics and estimates by the Canadian Pacific and Grand Trunk Railways, when it was developed that since the Board's order came into effect, there has been a considerable falling off in receipts from this source. While this decrease may be due in part to the general decline in business activity, it may also be in part attributable to the higher rates, and to that extent the provision of the Board's order for a reduction on Jan. 1, 1921, is justified.

In his judgment in the railway rates case, the Chief Commissioner, after referring to certain figures furnished him by the C.P.R., and which he had used for the purpose of ascertaining the extent to which the proposed increases would affect the financial position of that company, incidentally made the statement that, with the entire increase asked for in the application, viz., 40% on all freight rates and 20% on passenger rates, the C.P.R. would have an estimated surplus for the year 1921 of \$15,064,500. Although the judgment subsequently set forth that, under the rates actually allowed, subject as these were to many exceptions and time limitations, this estimated surplus, based as it was on an essentially different calculation, had absolutely no bearing on the situation, much adverse criticism, founded on this incidental statement has been directed at the Board. When the appeal in the railway rates case was before the Governor in council, the C.P.R. was required to furnish an estimate of revenue and expenditure for the year 1921, based on the increase as actually authorized by the Board's order. This statement, a copy of which signed by Mr. J. Muir, Assistant Comptroller, C.P.R., and by Alex. Macdonald, traffic expert for the appellants, was attached to the judgment of the Governor in council, indicated that for the next fiscal year (1921), the C.P.R. would, under the increased rates, as allowed by the Board's order, have a deficit of \$800,277. At the present hearing, the same company submitted a revised estimate for 1921, based on the actual operations for the first nine months of 1920 and the last three months of 1919, which indicates that with the increased rates, the C.P.R. will, in all probability, have a deficit of \$415,000. In order to further dispel the apparently widespread impression that the increased rates, as allowed by the Board's order,

will provide a large annual surplus for the railways, and as in my opinion the public is entitled to the fullest possible information on this phase of the subject, additional statements, submitted at the hearing on the appeal by the C.P.R., are herewith given in full, as follows:—

A.—Statement of revenue and expenditures for 1921 (estimated, based on same volume of traffic 1920 (\$ increased rates) and 1919 (3 months), with increased rates added to revenue)	
Revenue without increased rates—	
Freight, Eastern lines	\$61,000,000
Freight, Western lines	71,000,000
Passenger	44,000,000
Sleeping and parlor cars	4,600,000
Excess baggage	400,000
Mail	1,000,000
Express	7,000,000
All other earnings	7,628,000
	\$197,628,000
Estimate of increase in revenue due to increased rates—	
35% on Eastern lines freight, except coal and wood 24%	\$20,800,000
30% Western lines freight, except coal and wood, 24%	19,628,000
10% Passenger, 6 mos. in 1921	1,920,000
32½% Express revenue (except passenger fares)	2,100,000
50% Sleeping and parlor cars	2,300,000
20% Excess baggage	80,000
Gross revenue for 1921 based on traffic of 1920	\$446,536,000
Expenditure—	
Annual expenses to Sept. 30, 1920, taken as basis first 10 months of 1921	\$128,280,000
Estimate of expenses Oct. 1 to Dec. inclusive, assuming same operating ratio as 1919	13,154,000
Wage increase, Jan. to June, and Oct. to Dec. (allowing for smaller traffic Oct. to Dec.)	15,000,000
Increase in cost of fuel for locomotives	7,250,000
Increase in cost of fuel, other purposes	1,000,000
Misc material, allowing for three months already in, actually at higher prices	7,000,000
Ties, 1,000,000 at 15c.	70,000
Rails, 100,000 tons at 10	1,000,000
Expenditure for maintenance of way forces to pre-war basis, 131 days per mile of line	620,000
	\$209,630,000
Net revenue	\$34,870,000
Less, fixed charges and pension fund	7,400,000
	\$27,470,000
Income tax, 10%	2,400,000
	\$25,070,000
Dividends	\$1,911,000
	\$23,159,000
Estimated net deficit, 1921, with revenue based on increased rates	\$415,000
B.—Statement of revenue and expenditure for 1920 (estimated). Revenue based on increased rates from Sept. 13 to Dec. 31, 1920, as allowed by Board's order 385.	
Revenue—	
Actual gross earnings for first 10 months of 1920 were	\$121,400,000
Approximate earnings for last 2 months of 1920	11,400,000
Estimated gross earnings for balance of 1920 and for first 3 months of 1921, assuming same freight traffic and decrease of 1% in passenger rates	7,000,000
Estimate of increase in revenue due to increased rates	17,000,000
Estimate of increased passenger rates freight and express Nov. 1 to Dec. 31	7,000,000
Estimate of increased mail and immigration rates Nov. 1 to Dec. 31	17,000,000
Less: salaries	\$11,000,000
Gross surplus	\$110,400,000
Actual operating expenses Jan. to Sept. 1919	\$128,280,000
Estimated operating expenses for Oct. Nov. and Dec. based on rates for last 3 months of 1919 without added wages or material costs	11,000,000
Additional increase in cost, fuel	7,250,000
Add advance in cost, material and supplies	3,000,000
Net income	200,000

Wage award, May, June, Oct., Nov. and Dec. 1914
 Aug. and Sept. always included in operating expenses . . . \$700,000

Total expenditure (approximated) . . . \$184,046,863

Estimated net revenue for 1920 . . . 33,557,540
 Less fixed charges and pension fund . . . 11,282,700

Estimated net income . . . \$21,774,840
 Less income tax, 10½% . . . 2,286,358

Net after deduction income tax . . . \$19,488,482
 Dividends . . . 21,427,277

Estimated deficit for 1920, with revenue based on increased rates, Sept. 13 to Dec. 31 . . . \$1,938,795

C.—Statement of revenue and expenditure for 1920 (estimated), without 1½ increase in revenue due to increased rates, in force from Sept. 13 to Dec. 31.

Revenue—
 Estimate of gross revenue, as shown in statement B (including increase) . . . \$217,104,403
 Less estimate of revenue from increased rates, Sept. 13 to Dec. 31 . . . \$1,938,795
 September . . . \$1,955,000
 October . . . 5,840,000
 November (last 2 weeks) . . . 2,440,000
 Balance of year, see statement B . . . 7,857,000

Gross revenue without increased rates . . . \$198,712,403

Expenditure—
 Estimate of operating expenses as shown in statement B . . . \$184,046,863

Net revenue . . . \$13,665,000
 Less fixed charges and pension fund . . . 11,282,700

Net income . . . \$2,382,300
 Less income tax 10½% . . . 255,141

Dividend requirements . . . \$21,427,277

Estimated deficit for 1920, if increased rates had not been granted, \$18,400,118

These estimates, while worked out with the greatest provisional exactitude, are, especially in view of the business depression which is apparently at hand, liable to be seriously affected by circumstances, now entirely unforeseen, and against which it is impossible to guard. On their face value, however, they furnish a fair indication that the C.P.R. is not likely to do much more than pay its way during the coming year, and indeed it succeeds in avoiding a deficit. It will, I think, be admitted that an honestly organized and efficiently managed railway should be in a position to earn annually over and above its operating expenses and costs of maintenance, such a sum as will enable it to pay its interest and other proper charges, generally to maintain its credit and standing in the financial world. In this connection it is well to remember that as provided by the Board's order 308, the Canadian Pacific, Grand Trunk and Canadian Northern Railways are furnishing to the Board monthly statements of their operating revenues and that the Board reserves to itself the right to, at any time on notice, readjust the rates to meet conditions as they arise.

The hearing on his appeal furnished an excellent opportunity for a general review of the whole situation created by the Board's order, authorizing the increases in freight and passenger rates. While it would perhaps be too much to expect the public to accept with equanimity the heavy but unavoidable burden imposed by the order, it is a matter of some satisfaction to the Board that the further ventilation and discussion afforded by the hearing on the appeal have shown that notwithstanding the criticism to which they have been subjected, its findings cannot, on the most searching analysis, be fairly characterized as other than just and reasonable. I am of opinion that the application should be refused.

Canadian Pacific Railway Construction, Betterments, Etc.

Douglas St. Viaduct.—The St. John, N.B., City Council is reported to have approved plans for an overhead viaduct to carry street traffic over the C.P.R. crossing of Douglas Ave. at the eastern approach to the new bridge across the St. John River. The estimated cost of the work is said to be \$100,000, and the council proposes to ask the Board of Railway Commissioners to apportion the cost of the work between the C.P.R., the bridge company, the New Brunswick Power Co. and the city.

St. John River Bridge.—Representatives of St. John, N.B., shipping interests are reported to have waited on the city council Dec. 7, to ask that efforts be continued to have the height above water level of the new C.P.R. bridge increased from that of the existing bridge.

Ottawa.—A press report states that about 200 acres of farm land in the vicinity of Cyrville, near Ottawa, have been bought by the C.P.R., at an approximate cost of \$30,000, the price varying from \$50 to \$200 an acre. The company, it is said, will build a locomotive house and repair shop, etc.

Timiskaming, Que., District.—The Board of Railway Commissioners has approved location of the Interprovincial & James Bay Ry., from mile 48.2 on the main line from Kipawa to Quinze River falls, to mile 7.8 on the branch to Ville Marie, Que.

Galt Freight Shed.—The 200 ft. freight shed at Galt, Ont., has been removed 40 ft. from the former one, to provide a new right of way for the Grand River Ry.

Winnipeg River Bridge.—The Board of Railway Commissioners has authorized the use for traffic of the new bridge, 1.17, over the west branch of Winnipeg River, Kewatin Subdivision.

Manitoba Branch line.—We are officially advised that during 1920 the company has under construction an extension of the branch running northerly from Binsearch to Russell, for 5.3 miles and that 6.5 miles of track was expected to be laid by Dec. 31, 1920.

Saskatchewan Branch Lines.—We are officially advised that construction work was in progress during 1920 on the following branch lines in Saskatchewan:—Extension from Consul, on the Moose Jaw Southwesterly line, easterly, 58.5 miles. Wymark-Archive line, 25 miles.

A line from Mildred, on the Hawarden-Kerrobert line, to Empress, on the Swift Current-Bassano line, 59 miles. A line from Rosetown, where the Hawarden-Bassano line crosses the Canadian Northern Ry., southeasterly 43.2 miles; and a line from Leader, mile 94 on the Swift Current-Bassano line southeasterly 9.2 miles.

We are further officially advised that track was expected to be laid by Dec. 31 on the following branch lines of grading completed prior to the beginning of 1920, or completed during 1920 as follows:—Lanigan, on Portage la Prairie-Yorkton-Saskatoon line, northerly for 50 miles; from Consul easterly 15 miles; from Leader southeasterly 26 miles.

We are officially advised that the branch line, described in the act authorizing its building, as the Leader southeasterly line, runs from Leader, on the Swift Current-Empress-Bassano line, southeasterly, crossing into Alberta near mile 50, and turning easterly near mile 50, recrosses the Alberta-Saskatchewan boundary near mile 60 and runs almost

due east to the north shore of Bigstick Lake, mile 90. During 1919 some grading was done on the line and during 1920 a further distance of 9.2 miles in Saskatchewan, and 14.8 miles in Alberta has been graded, and 26 miles of track was laid in Saskatchewan.

In a statement made in the Saskatchewan Legislature recently by the branch line construction in the province, the Minister of Railways is reported to have given the following information in regard to the lines mentioned above:—

Consul easterly.—Grading, mile 0 to 30, completed in October; grading contract on an additional 30 miles let in August, and 8% of work completed in October.

Wymark-Archive.—Grading contract only 55% completed on 25 miles let in 1919, and work closed down in September, owing to shortage of labor.

Mildred to Empress.—Grading 55% completed on 34 mile contract let in 1919, and work closed down for season. Grading 31% complete on 25 mile contract, mile 34 to 59, let in Feb., 1920.

Rosetown southeasterly.—Grading completed on 25 miles, mile 20 to 45, let in 1919, and grading 12% completed on 20 miles, mile 45 to 65, let Feb., 1920.

Leader southeasterly.—Grading completed Oct., 1920, mile 0 to 25, and 8% of grading completed on mile 25 to 50, let August, 1920.

Alberta Branch Lines.—We are officially advised that construction was in progress on the following branch lines during 1920:—Leader, Sask., southeasterly line, 14.8 miles. Acme-Empress section of line from Langdon north, 18.8 miles. From Allawan, westerly, on Weyburn-Stirling line, 18.9 miles. We are further advised that it was expected to have 18.5 miles of track laid on the Acme-Empress line by Dec. 31, 1920.

The Board of Railway Commissioners has approved revised location plans for a portion of the extension of the Langdon North Branch, Acme to Empress, Alta., mile 29.03 to 59.94.

Acme to Drumheller.—In connection with the reported extension of the line from Acme into the Drumheller coal areas of Alberta, we are officially advised that grading is being gone on with on a line from Acme in the direction of Drumheller. It is expected that it will be completed to the latter point early next summer. It is the company's intention then, in conjunction with the Canadian National Ry., to build a joint line down the Red River valley to the mouth of Bull Pound Creek. The C.P.R. has a claim, obtained from the Dominion Parliament in 1919, for a line from the mouth of Bull Pound Creek to Duchess or Rosemary, on its Bassano-Empress line. (Dec., 1920, pg. 651.)

G.T.R. Suit Against U.S. Government.

The case of the Grand Trunk Western Ry. vs. the Secretary of the U.S. Treasury, which was heard in the District of Columbia Supreme Court, Dec. 16, is claim for \$500,000 under the guarantee provision of the Transportation Act, which gives carriers a 6% return up to Sept. 1, 1920. The U.S. Treasury ruled recently that further payments to railway companies must be withheld until complete statements are submitted by the companies of amounts due to them. It is stated that other companies have claims on a similar basis, aggregating \$400,000,000.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has ordered 2 vans to be built at its Winnipeg shops.

The G.T.R. is reported to be asking price on 175 steel underframes for refrigerator cars.

The C.P.R. is reported to have 18 locomotives under construction at its Angus shops, Montreal.

The Timiskaming & Northern Ontario Ry. has received two 8-wheel switching locomotives from Montreal Locomotive Works.

The Canadian Locomotive Co., between Nov. 15 and Dec. 15, delivered 10 six-wheel switching locomotives to Canadian National Ry.

The Reid Newfoundland Co. has, as mentioned in our last issue, ordered 5 locomotives from Baldwin Locomotive Works. They will be of the Prairie (2-6-2) type, and will be delivered about February or March.

The C.P.R., between Nov. 18 and Dec. 13, 1920, received the following rolling stock: 199 box cars, 60½ tons capacity, from Canadian Car & Foundry Co., Port William, Ont.; 87 refrigerator cars and 11 flangers from Angus shops, Montreal.

The Railway Car Manufacturers Association, New York, states that figures of output supplied by 23 car building companies during Oct. 1920, reached the highest level recorded during the first 10 months of the year, the total number delivered being 6,667.

The Railways and Canals Department, Ottawa, which received tenders to Nov. 1, 1920, for a new or second hand 4-wheel switching locomotive, for Welland Ship Canal construction work, advised us recently that no action had been taken on the tenders received.

The United States War Department's Director of Sales announced recently that 44 deconstructed locomotives, a portion of those built for the Imperial Russian Government, 100 of which had been sold to U.S. railways, would be sold at \$25,000 each.

The G.T.R., between Nov. 15 and Dec. 15, received the following rolling stock: 3 six-wheel switching locomotives from its Point St. Charles shops, Montreal; 2 eight-wheel switching locomotives from Canadian Locomotive Co., and 222 automobile cars, 80,000 lb. capacity, from American Car & Foundry Co.

The British War Mission, New York, N.Y. offered for sale by tender recently approximately 4,000 steel box cars, in knock down shape, 5 ft. gauge, lying at New Glasgow, N.S., Montreal, and Vancouver, B.C. These cars were ordered during the war for use in Russia, and delivery was held up on account of the revolution in that country.

Krupps, of Germany, are reported to have been the lowest tenderers recently for 88 electric locomotives for Java State Ry. It is suggested in an English paper that the depreciation of the mark may have enabled Krupps to put in the lower tender, but the fact that the German factory is able to take such a large contract at a reasonable price is particularly commended upon.

The G.T.R. has, a press dispatch says, built a Pacific type locomotive at its Battle Creek, Mich., shops, for passenger train service between Port Huron and Chicago. It is said to have been built entirely of miscellaneous parts and odds and ends of material, by regular

employees of the locomotive repair shop when repair work was slack. This is said to be the second one to have been built under these conditions.

Canadian Car & Foundry Co., between Nov. 15 and Dec. 15, delivered the following rolling stock:—14 baggage car frames, 13 compartment car frames from Montreal; 199 box cars from Port William, Ont., and 212 refrigerator cars from Amherst, N.S., to C.P.R.; 18 flat cars, from Amherst, N.S., to Anglo-Newfoundland Development Co.; 15 frames and bogies and 2 extra bogies, from Montreal, to Dorado Extension Ry. (South America), and 150 bogies from Montreal for South African Ry.

Canadian National Ry. rolling stock receipts to Dec. 4, 1920, on account of orders placed early in that year, were as follows:—25 Santa Fe locomotives, from Montreal Locomotive Works, order completed; 30 six-wheel switching locomotives, from Canadian Locomotive Co., order completed; 351 refrigerator cars, from Canadian Car & Foundry Co., out of an order for 600; 821 box cars, from National Steel Car Corporation, out of an order for 1,500; 18 cabooses, from Preston Car & Coach Co., out of an order for 20; and 30 cabooses built at C.N. R. Transcona shops.

Canadian Locomotive Co.'s Deliveries during 1920.

	No.	Type.	Engine weight in working order, lb.	Cylinders.
Canadian National	30	0-6-0	154,400	21x26 in.
Canadian National	15	2-8-2	280,800	27x30 in.
Ry.	10	0-8-0	247,750	26x30 in.
Grand Trunk Ry.	3	4-8-0	187,500	19x26 in.
Jamaican Government	3	4-8-0	187,500	19x26 in.
Ry.	7	4-8-0	148,300	19x26 in.
Pacific Great	3	2-8-2	210,100	22x28 in.
Eastern Ry.	4	2-8-2	258,000	25x30 in.
Timiskaming & Northern Ontario Ry.	4	4-6-2	252,500	23x28 in.

All the locomotives were equipped with brick arches and all but three 4-8-0 type, for the Jamaican Government Ry., engine weight 137,500 lb., have superheaters. Three of the Canadian National Ry. 2-8-2 type have mechanical stokers. Timiskaming & Northern Ontario Railway Locomotives.

The Timiskaming & Northern Ontario Ry., as mentioned in our last issue, has ordered 14 Pacific type (4-6-2) locomotives, equipped with superheaters and boosters, from Canadian Locomotive Co. The chief details are as follows:—

Weight on drivers	155,000 lb.
Weight on front truck	50,000 lb.
Weight on rear truck	47,500 lb.
Weight, total, of engine	252,500 lb.
Weight, total, of engine and tender	408,500 lb.
Weight, total, engine and tender	408,500 lb.
Wheel base, driving	12 ft.
Wheel base, engine and tender	32 ft. 5 in.
Heating surface, tubes	1,560 sq. ft.
Heating surface, firebox	187 sq. ft.
Heating surface, arch tubes	30 sq. ft.
Heating surface, total	1,777 sq. ft.
Superheating surface equivalent	694 sq. ft.
Driving wheels, diam.	69 in.
Driving wheels, centers	10 ft. 15 in.
Driving journals	10 x 15 in.
Cylinders, diam. and stroke	23 x 25 in.
Boiler pressure	200 lb.
Boiler pressure	200 lb.
Tubes, no. and diam.	160—24 in.
Arch tubes, no. and diam.	18—18 in.
Boiler, outside diam. at waist sheet	71 in.
Boiler, outside diam. at dome center	73 in.
Firebox, length and width	96 x 74 in.
Grate area	50 sq. ft.
Factor of adhesion	36,000 lb.

Additional tractive effort due to booster	10,700 lb.
Ratio tractive effort booster to weight on rear truck	4.5
Tender type	Water bottom, vestibule attachment
Truck type	4-wheel Commonwealth type
Cab	Vestibule type, all steel
Water capacity	4,500 imp. gall.
Coal capacity	12 tons
Tender wheels, diam.	69 in.
Tender wheels, centers	10 ft. 15 in.
Tender journals	10 x 15 in.
Boiler pressure	200 lb.
Superheater	Superheater Co.'s type B
Injectors	Ontario
Steam heat system	Canadian Gold Car Co.
Firebox door	Franklin Railway Supply Co.
Valbricks	Detroit
Water gear	Young
Reverse gear	Raconnet, type B
Headlight	Pyle National, type E2
Air brakes	Westinghouse American
Drift gear	Cardwell friction
Couplers—Tower, with Miner coupler center	ing & Lybking Co.
Buffer	Franklin Railway Supply Co.
Wheel trimmer	Franklin Railway Supply Co.
Journal boxes	McCord
Booster	Franklin Railway Supply Co.

S. B. Clement, Chief Engineer and Superintendent of Maintenance, T. & N. O. Ry., has favored Canadian Railway and Marine World with the following information as to the reasons for using the booster on these locomotives:—"The operation of boosters on passenger locomotives on the New York Central Rd. was carefully investigated, and we were favorably impressed by this recent development in locomotive design. The increased number and weight of cars used in through passenger service necessitates heavier power than that which has handled our passenger trains successfully in the past. Local traffic and physical conditions on the T. & N. O. are such that additional tractive effort is required to start and accelerate these trains at certain station stops that are on appreciable grades, and to haul them over a number of short ruling grades. To obtain the necessary tractive effort from the three driving axles of the Pacific type locomotive, it would be necessary to increase the axle loads above what I consider good practice for our rail, ballast and other track conditions. By the use of the locomotive booster, this additional tractive effort can be obtained, without increasing our present maximum axle loads, and as we only require this additional tractive effort over a short distance of track, I believe that the locomotive booster is the best solution of our problem."

"The ruling gradients on the T. & N. O. Ry. are 1 in 100 found and 1 in 100, both between North Bay and New Liskeard, 113 miles, there being several short ones from a mile to a mile and a half long. They are so short, and so much steeper than the average gradient, that I believe the locomotive booster is well adapted to furnish the additional tractive effort required to surmount them."

Loading Rules.—The American Railway Association, Mechanical Division, has issued its revised loading rules, effective Dec. 1, 1920, which have been rearranged by placing all rules governing the particular classes of loading in groups as follows: Group 1—Lumber, ties, fence posts, tank bark and similar products. Group 2—Structural material, plates, billets, castings, wheels, pipe and similar products. Group 3—Mining cars, locomotives, boiler shells, machinery, derricks and similar commodities. Group 4—Concrete culvert pipes, brick, stone, building tile and similar products. Group 5—Automobiles.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—The Premier of Alberta, on returning to Edmonton recently from a trip over the line, is reported to have said that the Government's efforts, since taking over the line in Aug., 1920, have resulted in a great improvement. New ties have been put in and some ballasting has been done, about 20 miles of the track remaining to be lifted and ballasted in 1921. The betterments already done and still in progress are being carried out by the Northern Construction Co.

Survey parties are reported to be in the field preparing the work for the 1921 season, and in endeavoring to find a better route than the one previously located, down the Athabasca hills to McMurray. The distance between the present railroad and McMurray is stated to be about 18 miles, and it is hoped to have this completed by the end of 1921.

It is said that 300,000 ties will be got out during this winter, particularly for repairs on the section from Carbondale Jet to Lac la Biche. (Nov., 1920, pg. 68.)

Columbia River Lumber Co. has been authorized by the Board of Railway Commissioners to build its logging railway across the C.P.R. at mile 52.89, Mountain Subdivision, B.C.

Dolly Varden Mines Ry.—A press report states that P. W. Racey, speaking before the Institute of Mining and Metallurgy's Vancouver Branch recently, described the Dolly Varden Mill Run, a high grade narrow gauge line, extending from the company's mines to Alice Arm. In order to carry on traffic during the winter a hard sled road had been built over it so that it could be taken down to tidewater on sleds. (June, 1920, pg. 297.)

The Dominion Atlantic Ry. has, as we officially advised, under construction a branch line from mile 39.77, Yarmouth Subdivision, near Weymouth, N.S., to the Sissiboo Pulp & Paper Co.'s dam and mill, 2.5 miles, W. Cooke, North Sydney, N.S., is the contractor. (Nov., 1920, pg. 606.)

Edmonton, Dunvegan & British Columbia Ry.—The Board of Railway Commissioners has recommended the Governor in council to sanction an agreement between the Edmonton, Dunvegan & British Columbia Ry. and the Central Canada Ry. as to the use of tracks between McLennan and Wenagami Jet, Alta.

Esquimalt & Nanaimo Ry.—Construction is reported to have been started, Dec. 2, on the substructure for the new Johnson St. bridge, Victoria, B.C. The Engineer put in a tender for the work, amounting to \$177,376, which, it is reported, was 15% less than the lowest tender from an outside contractor, and he was given the work to do. (Dec., 1920, pg. 645.)

Essex Terminal Ry.—We are officially advised that there is no foundation for a recent press report stating that the United States Steel Corporation had voted \$291,420 to build a railway from the Canadian Steel Corporation's plant at Ojibway, Ont., in connection with the Essex Terminal Ry. (Dec., 1920, pg. 645.)

Flinflon Mining District.—As stated in Canadian Railway and Marine World for Dec., 1920, the Manitoba Government has arranged with the Canadian National Ry. to have a survey made from the Hudson Bay Ry., near Pas, Man., to the Flinflon mining district. A Pas press

report states that the survey was started on Dec. 7 at mile 7 from Pas and that the route lies along a gravel ridge to Lake Athapuskow, 53 miles, and then along the north side of the lake to the Flinflon mining areas, 32 miles, a total of 85 miles. The report also states that a four mile spur line from the Hudson Bay Ry. is already built along the proposed route.

A. U.S. syndicate has an option on the Flinflon mining areas up to Mar. 31, and on whether this is exercised or not the going on with railway construction will largely depend.

Winnipeg press report of Dec. 17 states that an undertaking has practically been obtained from the Canadian National Ry. management for the operation of the railway when it is built. The suggestion is that the C.N. Ry. pay a flat rate of interest on the amount to be expended by Manitoba upon the construction of the line, under a lease for a long term of years. It is further stated that the Manitoba Government will ask the mining company to make a deposit of \$1,000,000 as a guarantee until the smelters and plant are installed at the mines to provide tonnage for the railway. (Dec., 1920, pg. 645.)

Grand Trunk Pacific Ry.—The Dominion Privy Council has granted the G.T. Pacific Branch Lines Co. letters patent for its right of way for its Alberta Coal Branch, partly within and partly without the Brazeau Division, Rocky Mountain forest reserve, 68.10 acres, for \$1. (Dec., 1920, pg. 645.)

Kettle Valley Ry.—We are officially advised that the branch of about two miles from South Penticton to Dog Lake, B.C., described in Canadian Railway and Marine World, Aug. 1920, pg. 528, and Sept., 1920, pg. 489, has been completed. The line leaves the company's main line just west of South Penticton yard and runs south to Dog Lake, through the Indian reserve in a flat country. The grading was light, about 19,000 cu. yd. The heaviest gradient is 0.8%, and there are three curves, one on leaving the main line and one turning to the dock at Dog Lake. The grading and bridging was let to P. J. Salvias, Penticton, B.C. We are further advised that a contract has been let to Joe McDonald for the erection of car docks at the north and south ends of Dog Lake, and that the work is in progress. The docks will require about 150,000 cu. ft. b.m. of timber and 17,000 lin. ft. of piling. (Dec., 1920, pg. 645.)

Mayo Valley Ry. Ltd.—The Dominion Parliament will be asked to incorporate a copy with this title to build a railway from near the junction of the Mayo and the Stewart Rivers, Yukon Territory, north following the Mayor River, Duncan Creek, Lightning Creek and Crystal Creek valleys to the McQuesten River, and thence to connect with and include the valleys of the McQuesten, Ladue and Beaver Rivers; or in the alternative from near Gordon's Landing on the Stewart River, via Janet Lake to the junction of the Mayor River and Duncan Creek; and also build branch lines. R. B. Young, Ottawa, is solicitor for applicants.

Pacific Great Eastern Ry.—An inspection trip was made at the end of Nov. 1920, as far as the Deep Creek viaduct, which has just been completed. Deep Creek is about 320 miles from Squamish,

and the line is under construction thence to Prince George, work being gone on with from both ends. It was expected to complete track laying to Quesnel from Deep Creek by Dec. 31, and it is expected to have the line finished into Prince George next autumn.

Prime Minister Oliver, in the course of his recent election campaign, is reported to have stated that it is the Government's intention to take up the question of the extension of the line from North Vancouver, now terminating at Whitewood, to Squamish, and to connect it with the line to Fort George. (Dec., 1920, pg. 645.)

Quebec & Chicougamau Ry.—A press report states that tenders will be invited in April for the construction of about 120 miles of this line from St. Felicien to Chicoutimi, Que., and for 130 miles of line from Chicoutimi to Quebec.

A map of the projected route of the line from Quebec to Lake Chicougamau has been issued. It shows a line from Quebec along the valley of the Montmorency River, and then almost due north, crossing the Malabar River to Chicoutimi, and thence across the Saguenay River, proceeding northerly and westerly and crossing the Peribouka River, to Dolbeau, where the Mistissini River will be crossed, and then on more northerly than westerly to Lake Chicougamau. The line is located from Dolbeau to St. Felicien. The line proposed to be built first is from Chicoutimi to Dolbeau, and thence to St. Felicien. (Dec., 1920, pg. 655.)

Quebec Central Ry.—We are officially advised that the company is building a line from Scotts, Beauce County, to Diamond Jet, near St. Jean Chrysostome, Levis County, Que., 19.33 miles. The contractors are J. T. and J. F. Davis, Quebec. (June, 1920, pg. 297.)

Reid Newfoundland Co.—A press report states that work on the improvements of the terminals for the railway and steamships at Port Aux Basques Nfld., is practically completed, and that work will be started on repairs to the wharf at North Sydney, N.B., in January.

The Argentina terminal project is reported to be progressing towards completion, but it is not expected to have it ready for use during this winter. Track has been laid from Argentina Jet to Argentina, 3½ miles.

The Reid Newfoundland Co.'s railway and steamships are now being operated by the Newfoundland Railway Commission. (Dec., 1920, pg. 645.)

Timiskaming & Northern Ontario Ry. The Premier of Ontario, replying to a resolution regarding unemployment, at a meeting in the Legislative Buildings, Toronto, on Dec. 15, is reported to have said it is proposed to clear the pulpwood and trees out of the right of way of the projected T. & N.O. Ry. to 25 miles north of Cochrane, and that the bush along the sides of the existing line from North Bay to Cochrane will probably be cleared up to prevent danger from fire. The Government would, he said, obtain reports within a few days as to the work. (Dec. 1920, pg. 645.)

Toronto, Hamilton & Buffalo Ry.—The Board of Railway Commissioners has authorized the company to change the alignment of its westbound main track at the corner of John and Hunter Sts., Hamilton, Ont. (Nov., 1920, pg. 607.)

The Kettle Valley Railway's Copper Mountain Branch.

The K.V.R. Co.'s Copper Mountain Branch, which has been practically completed, the first ore from the mine to the concentrator having been handled on Oct. 18, 1920, leaves the K.V.R. and Vancouver, Victoria & Eastern Ry. joint line at the west end of Princeton yard, and extends southward along the Similkameen River for 13.7 miles to the Canada

the mine is 3,170. The country is rough, miles 0 to 4 being a very steep rocky slope, with the roadbed 300 to 400 ft. higher than the river. The balance is rolling country, sloping to the river, with big points projecting out from the hillside to the river, necessitating a great deal of curvature and heavy work, all sorts of material having been encount-

Embankments are 16 ft. wide at profile grade; cuttings 20 ft. wide, with slopes according to kind of material.

The ties are standard fir and tamarac, hewn. The rails for one half the mileage are 80 lb.; for the other half 85 lb. section. Tie plates are used on curves. The ballast is gravel, from a deposit at mile 12.

Map of Portion of Kettle Valley Railway, showing Copper Mountain Branch, from Princeton to Copper Mountain.

Copper Co.'s working tunnel at Copper Mountain, with a branch, or spur, 1.6 miles long, from mile 8 on the main branch to the Canada Copper Co.'s concentrator, and side tracks at Copper Mountain and at the concentrator.

The mileage is numbered from the south end at Copper Mountain to the

ered, solid rock, boulders, hardpan, gumbo and sand. Maximum grades, of 2.2%, compensated for curvature at the rate of four one hundredths per degree of curve were used. The maximum curvature is 15 degrees. The quantities moved in grading were 1,026,000 cu. yd., of which 360,000 were solid rock.

The grading and bridge and trestle work was done by contract by W. P. Tierney; the tracklaying, ballasting and surfacing by the company's forces.

The line was built to handle the output of the Canada Copper Co.'s mines, this company having done a great deal of development work on the mountains

Profile, Kettle Valley Railway, Copper Mountain Branch, from Princeton to Copper Mountain.

main line at Princeton. At the south end of the track there is quite a town called Copper Mountain, built by the Canada Copper Co. At the concentrator, at mile 8, there is also quite a town, Allenton, built by the same company. The accompanying plan gives the location of the railway and of the two stations—Copper Mountain and Allenton.

The elevation of the track leaving Princeton yard is 2,123, and at the ore bunkers at Copper Mountain it is 3,020. The elevation of the working tunnel at

There is one bridge across the Similkameen River, at mile 13.2, consisting of one Howe truss span, 150 ft. long, and one Howe truss span, 100 ft. long, both spans on concrete foundations. There are 20 trestles, containing 2,000,000 ft. b. m. of timber. Eighteen of these trestles are on miles 0 to 4. There are four tunnels of a total length of 882 lin. ft., between mile 2.8 and 3.3. Two of them are through very hard rock and did not require lining. Two are lined throughout with timber.

It is reported that the development has shown up 12,000,000 tons of copper ore. This ore will be hauled to Allenton, 8 miles, where the Canada Copper Co. has a concentrator of 2,000 tons capacity a day, and will there be reduced to about one fifteenth of the original weight, and in the form of concentrates will be hauled to a smelter, presumably at Trail. A transmission line nearly 200 miles long, carrying electrical power from Bonington Falls to the mines, has been built by the West Kootenay Power Co.

Traffic Orders by Board of Railway Commissioners.

Charge for Milling Grain in Transit.

General order 319, Nov. 30, 1920.—Re complaint of Premier Milling Co., Portage la Prairie, Man., against increase, on Aug. 26, 1920, of charge for milling grain in transit in Canada in connection with the international movement, from 1c. to 1½c. per 100 lb. Upon its appearing that the Canadian Pacific and the Grand Trunk Pacific Railways on Oct. 25, 1920, and the Canadian National Rys. on Nov. 1, 1920, voluntarily reduced the charge for milling grain in transit in Canada to 1c. per 100 lb.; upon reading what is alleged in support of the complaint and on behalf of the Winnipeg Board of Trade and the C.P.R., and upon the report and recommendation of the Board's Chief Traffic Officer, it is declared that the proper charge for milling-in-transit, within Canada, of grain, the product of which is reshipped to the United States, was 1c. per 100 lb. on and after Aug. 26, 1920.

Express Rates on Pasteurized Cream.

General order 320, Dec. 9, 1920.—Re application of National Dairy Council of Canada, for an order requiring the carriage of pasteurized cream by express at the rates for ordinary cream. Upon hearing the application at Ottawa, Nov. 3, 1920, the applicants, the Express Traffic Association of Canada, and the Dominion and Canadian Express Companies being represented at the hearing, and what was alleged, the Board orders that pasteurized cream be carried by express companies at the same rates as ordinary cream; and that the Express Classification for Canada No. 4, and special tariffs published and filed to apply on "Cream," be amended accordingly.

Chief Commissioner Carvel gave the following judgment in this matter:—This case was heard by the Board on Nov. 3, 1920, and it seems that, in some cases, the express companies have been treating pasteurized cream as coming under the classification "Cream, condensed or otherwise manufactured or prepared," which carries the 1st class rate, whereas ordinary cream moves under the 2nd class rate; the contention being that the pasteurized cream is a preparation of some kind, which would place it in the first class. As explained to the Board, the pasteurization of cream simply means that it has been heated to about 145°, held at that temperature for about 30 minutes, and quickly reduced to a temperature below 50°. It is simply a process of exterminating, for the time being, any bacteria which might be in the article, and if it can be kept below 50° upon ice, it arrives at its destination without the presence of bacteria to any extent. It is claimed that it is the same cream as it was before the treatment, with no change in bulk or ingredients, excepting that a certain amount of bacteria has been removed therefrom. In view of these facts, which were not denied, I consider it should be carried at the same rates as ordinary cream.

Reduced Standard Passenger Fares.

General order 323, Dec. 14, 1920.—Re application of railway companies for approval of reduced standard passenger fares, to become effective Jan. 1, 1921. Whereas supplements to standard passenger tariffs have been filed by the un-dermentioned railway companies, to become effective Jan. 1, 1921, on the reduced basis prescribed by the Board's

Judgment of Sept. 6, 1920, and general order 308, Sept. 9, 1920, the Board orders that the following supplements to standard passenger tariffs be approved; the said supplements to be published in at least two consecutive weekly issues of the Canadian Gazette, preceded by the following notice:—

"The undermentioned supplements to standard passenger tariffs, effective Jan. 1, 1921, having been filed for the approval of the Board of Railway Commissioners for Canada, and having been found by the Board to be in accordance with its judgment, dated Sept. 6, 1920, and its general order 308, dated Sept. 9, 1920, and having been approved by its general order 323, dated Dec. 14, 1920, the same are hereby published."

Reduced Standard Freight Tariffs of Maximum Mileage Tolls.

General order 324, Dec. 14, 1920.—Re application of railway companies for approval of reduced standard freight tariffs of maximum mileage tolls, to become effective Jan. 1, 1921. Whereas standard freight tariffs have been filed by the un-dermentioned railway companies, to become effective Jan. 1, 1921, on the reduced basis prescribed by the Board's judgment of Sept. 6, 1920, and its general order 308, Sept. 9, 1920, the Board orders that the following standard freight tariffs of maximum tolls be approved; the rate scales of the said tariffs to be published in at least two consecutive weekly issues of the Canadian Gazette, preceded by the following notice:—

"The undermentioned standard freight tariffs have been filed for the approval of the Board of Railway Commissioners for Canada, and having been found by the Board to be in accordance with its judgment, dated Sept. 6, 1920, and its general order 308, dated Sept. 9, 1920, and having been approved by general order of the Board dated Dec. 14, 1920, the rate scales thereof are hereby published."

British Columbia Electric Railway Freight Rates.

30,376, Nov. 29, 1920.—Re application of British Columbia Electric Ry. under sec. 331 of the Railway Act, 1919, for approval of its standard freight mile-age tariff, supplement 1 to C.R.C. 132. Upon the report and recommendation of the Board's Chief Traffic Officer, it is ordered that the said tariff, to become effective Dec. 6, 1920, be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Chatham, Wallaceburg & Lake Erie Ry. Passenger Tariff.

30,382, Nov. 30, 1920.—Re application of Chatham, Wallaceburg & Lake Erie Ry., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 42. Upon reading the submissions filed in support of the application, the Board orders that the said tariff, to become effective Dec. 6, 1920, be approved; the said tariff, with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

The judgment on which this order was based is published in full, further on in this issue, under "Increases in Electric Railway Freight and Passenger Rates."

Chatham, Wallaceburg & Lake Erie Railway's Freight Tariff.

30,383, Nov. 30, 1920.—Re application of Chatham, Wallaceburg & Lake Erie Ry., under sec. 331 of the Railway Act, 1919, for approval of its standard freight mile-age tariff, supplement 1 to C.R.C. 576. Upon reading the submissions filed in support of the application, the Board orders that the said tariff, to become effective Dec. 6, 1920, be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Windsor, Essex & Lake Shore Rapid Railway's Freight Tariff.

30,392, Nov. 30, 1920.—Re application of Windsor, Essex & Lake Shore Rapid Ry., under sec. 331 of the Railway Act, 1919, for approval of its standard mile-age freight tariff, C.R.C. 269. Upon the report and recommendation of the Board's Chief Traffic Officer, and reading the submissions filed in support of the application, the Board orders that the said tariff, to become effective Dec. 6, 1920, be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

The Assistant Chief Commissioner's memorandum, on which this order was based, is given fully, in the Electric Railway Department, further on in this issue, under "Increases in Electric Railway Freight and Passenger Rates."

Demurrage During Influenza Epidemic.

30,403, Nov. 30, 1920.—Re application of Dominion Canners, Limited, for an order requiring the G.T.R. to refund demurrage which accrued during the influenza epidemic of 1918. Upon reading the submissions filed, the Board orders that the application be refused.

The judgment in this case was given by Assistant Chief Commissioner McLean, as follows:—Application is made by the Dominion Canners, Ltd., of Hamilton, Ont., respecting certain claims for refund of demurrage charges, which ac-

crued on G.T.R. lines during the influenza epidemic. The Board, on May 31, 1919, issued a notice that the special treatment given in respect of influenza conditions was to terminate on June 15, 1919. This notification at the same time set out that it did not in any way affect claims then under consideration, or claims in respect of relief under the judgment in the matter of car demurrage rules, influenza epidemic, which might be filed prior to June 15, 1919.

The situation, in brief, is that claims were filed with the G.T.R. on or about Jan. 22, 1919. Correspondence took place between the Canadian Car Demurrage Bureau and the applicant, pointing out that certain particulars were necessary. Applicant was asked to supply receipted expense bills, also to file an affidavit to the effect that the total amount of demurrage so charged was a direct result of the epidemic, or in the alternative, the affidavit to state just what proportion of the amount charged was directly attributable to this cause. The sum involved amounts to \$111. Under date of Mar. 12, 1919, applicant furnished information as to the number of men employed immediately previous to the epidemic period and also during the period of epidemic.

The judgment provides as follows:—"Applicants for relief under the Board's order, so that the question can properly be disposed of, not only as between the railway and the merchants, but as between merchants themselves, and by affidavit or declaration, giving the following particulars:—

"1. The number of men employed immediately previous to the epidemic.

"2. The number of men employed during the course of the epidemic and the time the company interested, evidence in writing, either so that all may be treated on a like basis and without discrimination, should be furnished to the Service Bureau, or with the immediate railway default in question took place.

"3. The specific auxiliary efforts made to release the cars during such period, such as by taking men when possible from other branches of the firm's activities, or securing men from outside sources, such as the services of outside carriers when available, or showing that no men were available in other branches of the applicant's business.

"4. What action, if any, was taken to stop further shipments to the plant until the epidemic had ceased.

"5. If no action was taken, to show whether, in the course of trade and having regard to dates of shipments, any such action was possible."

As the treatment given was special in its nature, it follows that rigid compliance with the regulations above quoted is absolutely essential. As pointed out, the evidence was to be supplied in writing, by affidavit or declaration, or by other evidence. The various particulars set out under nos. 1 to 5 above set out were not, for under the material filed, set out in the affidavits or declarations. The Board has before it copies of statutory declarations by G. Gibbs, of Simcoe, made June 22, 1920; by T. E. Puzey, of Simcoe, made April 5, 1920; and by O. Uptgrove, of Brantford, made April 5, 1920. These declarations set out, in the case of Gibbs, that he had charge of the unloading of tin plate at the Dominion Cannery Ltd. factory at Simcoe, and that between Oct. 29 and Nov. 20, 1918, both inclusive, there was a delay at the factory in the unloading of certain cars specified; and that the delay was caused through illness of various hands at the factory or of the respective families from Spanish influenza, which was epidemic throughout the town at that time; and it was, therefore, impossible to load cars promptly during that period. Puzey's declaration sets out that he was engaged as a shipper at the Dominion Cannery Ltd. factory at Simcoe, and in this capacity had charge of the unloading of certain railway cars at the factory during the

autumn of 1918, and that in the case of one car specifically mentioned the delay in unloading was due to influenza conditions. The declaration of Uptgrove, who was Manager of the evaporator at Simcoe during the autumn and winter of 1918-19, states that there were delays between Oct. 29 and Nov. 20, 1918, in respect of the unloading of specified cars, and that the delay was due to influenza conditions.

In the claim as filed with the Board, it is stated that—

"We would advise that our factory at Simcoe informs us that the delay in forwarding documents was due to the fact that one who should have made affidavit was not in our employ, and it took considerable time to locate him. In the meantime, they held up the balance of the information, so that it could be all placed before the carriers at one time."

Reference is made to one affidavit; it is not clear why the other declarations were delayed. The regulations as to what was required and the way in which the information was to be submitted, and the time when the information was to be submitted, are all specifically set out in the judgment above referred to. The judgment was issued as a result of some difficulties which had arisen in connection with the construction of the Board's judgment in the same matter, which issued a month previous to the judgment herein concerned; and it was with a knowledge of the difficulties which had arisen that the specific requirements, already set out, were provided for. The judgment provides for the initiation of the claim by the filing of an affidavit or declaration setting out the requisite particulars. As already set out, the declarations were not made until a considerable period had elapsed after the termination of the period set for filing of claims. The declarations were supplied to Mr. Collins on July 8, 1920. Further, the declarations as made do not follow the detailed requirements of the judgment. The whole question narrows down to this—has the applicant complied with the requirements of the judgment? It has to be held that it has not.

This judgment was concurred in by Chief Commissioner Carvell and Commissioner Boyce.

British Columbia Electric Railway Passenger Fares.

30,409. Dec. 2, 1920.—Re application of British Columbia Electric Ry. under sec. 334 of the Railway Act, 1919, for approval of supplement 1 to its standard tariff of maximum fares, C.R.C. 8. Upon the report and recommendation of the Board's Chief Traffic Officer, it is ordered that the said supplement be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Revised Reconsigning Rules.

30,411. Dec. 6, 1920.—Re application of E. Morris, Chairman, Central Freight Association, Chicago, for permission to file on one day notice certain revised reconsigning rules on all freight in open cars, and coal and coke in all cars. Upon it appearing that the Interstate Commerce Commission, by its special permission 51,143, Nov. 26, 1920, has authorized the filing of the said revised rules upon one day notice, and that there shall be uniformity of rules on international traffic, and upon the recommendation of the Board's Traffic Department, the Board orders that E. Morris, Chairman, Central Freight Association, Chicago, as agent for various railways, also all other railways publishing reconsigning rules on international traffic, be permitted to file

with the Board upon one day notice supplements or tariffs containing revised reconsigning rules and charges within the United States, applicable on all freight in open cars, and coal and coke in all cars.

Illegal Shipping of Whiskey.

30,413. Dec. 7, 1920.—Re application of C.P.R., under sec. 428 of the Railway Act, 1919, for leave to prosecute Wm. Scott, for alleged violation of the provisions of the said section. Upon being represented to the Board that on Dec. 1, 1920, Wm. Scott checked a baggage two trunks from Medicine Hat, Alta., to Yellow Grass, Sask., which upon examination were found to contain whiskey, in contravention of the provisions of sec. 428 of the Railway Act, 1919; in pursuance of the powers thereby conferred and upon reading what was alleged in support of the application, the Board orders that leave be granted the C.P.R. to prosecute the said Wm. Scott for such alleged violation.

Express Rates on Fish from Manitoba to United States.

30,446. Dec. 17, 1920.—Re consideration of express rates of fresh fish, in carloads, from Gimli, Man., to United States destinations. Upon hearing the matter at Winnipeg, Oct. 26, 1920, the Riverton Fish Co., the Express Traffic Association, the Canadian and Dominion Express Companies, and the fishing industry of Manitoba being represented at the hearing, and what was alleged, the Board orders that the express rates applicable on fresh fish, in carloads of the minimum weight of 20,000 lb. classification basis, from Riverton and Gimli, Man., to destinations in the United States, included in the present tariff, be amended as follows: (a) From Riverton so as not to exceed the rates concurrently in effect from Winnipegosis, Man. (b) From Gimli, so as not to exceed 58.33% of the difference between the rates concurrently in effect from Riverton and Selkirk, Man., added to the rates from Selkirk, Man. And it is further ordered that the schedule to give effect to this order be published and filed to come into effect on Jan. 15, 1921, or so soon thereafter as the Interstate Commerce Commission may permit.

Suspension of Rate Increases.

30,481. Dec. 23, 1920.—Re application of the Saskatchewan Board of Trade and Saskatchewan Associated Boards, Calgary Board of Trade, Winnipeg Board of Trade, Toronto Board of Trade, Toronto Board of Control, in support of western boards of trade and trade organizations, the City of Toronto and hydro municipalities, the Manitoba and Saskatchewan Governments, for an order suspending the railway rate increases as granted by general order 88, Sept. 8, 1920; or, in the alternative, varying the order by reducing the increases granted on railway lines west of Fort William to 15%. Upon hearing the applications at Ottawa, Nov. 22, 1920, the applicants, Montreal Board of Trade, Canadian Manufacturers' Association, Canadian Railway Association, Canadian Pacific Great Trunk, Toronto National & Buffalo and Canadian National Railways, Michigan Central R.R., Brotherhood of Locomotive Engineers, Department of Agriculture, Fruit Division, and the International Harvester Co. being represented at the hearing, and what was alleged, it is ordered that the applications be refused.

The Victorian, Australian, Government railways have raised their rates

Mainly About Railway People Throughout Canada.

W. R. Baker, C.V.O., formerly Secretary, C.P.R. Co., has been re-elected President, Royal Montreal Golf Club.

Aubrey Cecil Barker, whose appointment as Superintendent, Moncton Division, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B., was announced in our last issue, was born at Lacadie, Que., Aug. 5, 1878, and entered railway service Oct. 1, 1895, since when he has been, to April 1900, agent and operator at various points, Eastern Division, C.P.R.; May 1900 to Oct. 1913, dispatcher and Chief Dispatcher consecutively, Lake Superior Division, C.P.R., Chapeau, Ont.; Oct. 1913 to Oct. 1916, Inspector of Stations, Trains and Train Dispatching, Canadian Government Rys., Moncton, N.B.; Oct. 1916 to Sept. 1917, Supervisor of Telegraph and Time Service, and from Sept. 1917 to Dec. 1, 1920, also Assistant to General Superintendent, Maritime District, Canadian National Rys., Moncton.

E. W. Beatty, K.C., President, C.P.R., has presented a silver cup to the C.P.R. Amateur Athletic Association, for competition annually in a 10 mile open road race.

Adam Brown, father of Sir Geo. McLaren Brown, European General Manager, C.P.R., retired recently from the Postmastership at Hamilton, Ont., after occupying it for 30 years. Mr. Brown, who is 94 years of age, was one of the principal promoters of the Wellington, Grey & Bruce Ry., now part of the G.T.R. System. He is still a director of the Great North Western Telegraph Co.

Lafayette S. Brown, whose appointment as Assistant General Manager, Eastern Lines, Canadian National Rys., Montreal, was announced in our last issue, was born at Nelson, N.B., Oct. 19, 1864, and entered Intercolonial Ry. service Jan. 15, 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881, to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882, to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883, to Oct. 4, 1898, train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, 1898, to April 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1, 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.; Aug. 1, 1913, to June 1, 1917, Superintendent, Truro, Sydney and Oxford District, I.R.C., afterwards District 4, Intercolonial Division, Canadian Government Rys., New Glasgow, N.S.; June 1 to Sept. 17, 1917, Assistant General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.; Sept. 17, 1917, to Dec. 1918, General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.; Dec. 1918 to Dec. 3, 1920, General Superintendent, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B.

Sir Geo. Bury has been visiting his sisters, the Misses Bury, in Montreal.

Lady Cartwright, widow of Sir Richard Cartwright, and mother of A. D. Cartwright, Secretary, Board of Railway Commissioners, died at Kingston, Ont., Dec. 24, aged 84.

Wm. Ashley Cole, former Chairman of the New York State Railway Commission and at one time City Editor, New

York Herald, died Dec. 24, 1920, at West Pittston, Pa. He was born in England in 1841, moved to Canada in 1851 and went to New York City in 1860. He served throughout the Civil War.

W. Roberts Devenish, whose appointment as General Superintendent, Ontario District, Canadian National Rys., Toronto, was announced in our last issue, was born in County Tipperary, Ireland, Nov. 21, 1882, and entered transportation service in 1903, serving with the C.P.R. for eight years in various capacities in the Engineering and Maintenance of Way Departments, from rodman to Assistant Division Engineer, Lake Superior Division. He was appointed Division Engineer, Intercolonial Ry., Moncton, N.B., in Sept. 1913, and for a time prior to that he acted as Assistant Engineer with the National Transcontinental Ry. Investigating Commission. From Nov. 1915 to Aug. 31, 1916, he was Superintendent,

W. R. Devenish, C.E.,
General Superintendent, Ontario District, Canadian National Railways.

District 2, I.R.C., Campbellton, N.B.; Aug. 31, 1916, to Dec. 1, 1920, Superintendent, District 3, Intercolonial Division, Canadian Government Rys., now Moncton Division, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B.

L. V. Dube, who has been appointed Travelling Traffic Representative, Canadian National-Grand Trunk Pacific Rys., Seattle, Wash., was born at London, Eng., Oct. 20, 1873, entered railway service in Aug. 1896 at Los Angeles, Cal., and was, from Mar. 1897 to Aug. 1904, Agent, Seattle, Wash.; Aug. 1904 to May 23, 1910, Commercial Agent, Seattle, Wash.; May 23, 1910 to Dec. 21, 1916, Commercial Agent, G.T.R., G.T.P. R. and G.T.P. Coast Steamship Co., Vancouver, B.C.; Dec. 21, 1916 to Nov. 20, 1919, Division Freight Agent, Grand Trunk Pacific Ry., and latterly Commercial Agent, Canadian National-Grand Trunk

Pacific Rys., Edmonton, Alta.

Anthony C. Egan, who has been appointed General Auditor, Canadian Northern Ry. System and Grand Trunk Pacific Ry., Toronto, was born at Winnipeg, Oct. 6, 1883, and entered railway service in 1901, since when he has been, to 1904, accountant, C.P.R., Winnipeg; 1904 to 1909, in accounting department, Canadian Northern Ry., Winnipeg; 1909 to 1911, Chief Travelling Auditor, same road, Winnipeg; 1911 to Dec. 31, 1918, Auditor of Agencies, same road, Winnipeg; Jan. 1 to Jan. 13, 1919, Auditor of Agencies, same road, Toronto; Jan. 13, 1918, to Dec. 1, 1920, Assistant Comptroller, Canadian Northern Ry., Toronto.

John M. R. Fairbairn, President elect, Engineering Institute of Canada, was born at Peterborough, Ont., June 30, 1873. He graduated from the School of Practical Science, Toronto, in 1893, and until Aug. 1901, was engaged in survey and construction work, since when he has been, to Nov. 1902, Assistant Engineer, Maintenance Department, Eastern Lines, C.P.R.; Nov. 1902 to Aug. 1904, Resident Engineer, District 4, C.P.R., Ottawa; Aug. 1904 to Aug. 1905, Assistant Engineer, Chief Engineer's office, C.P.R., Montreal; Aug. 1905 to Mar. 1906, acting Division Engineer, Eastern Division, C.P.R., Montreal; Mar. 1906 to Nov. 1907, Division Engineer, Ontario Division, C.P.R., Toronto; Nov. 1907 to Oct. 1908, Division Engineer, Eastern Division, C.P.R., Montreal; Oct. 1908 to Oct. 1910, Principal Assistant Engineer, Eastern Lines, C.P.R., Montreal; Oct. 1910 to Feb. 1911, Engineer of Maintenance of Way, Eastern Lines, C.P.R., Montreal; Feb. to Sept. 1911, acting Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Sept. 1911 to July 1, 1918, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; and since July 1, 1918, Chief Engineer, C.P.R., Montreal. He will be the guest of the Engineering Institute of Canada's Ottawa branch at luncheon on Jan. 6 and will address the members.

Mrs. Grouard, who died at Ottawa, Dec. 4, was the widow of the late Mr. Justice Grouard of the Supreme Court of Canada, and mother of Major General Sir Percy Grouard, K.C.M.G., D.S.O., London, Eng., who was at one time in C.P.R. engineering service and later was engaged in railway service in Egypt and South Africa during the Boer War, and in France and Belgium for some time during the recent European war.

Grant Hall, Vice President, C.P.R., was entertained at dinner at Boston, Mass., by the New England Railroad Club, Dec. 14, and spoke on some phases of railway operation in Canada. Other speakers were:—F. L. Wanklyn, General Executive Assistant, C.P.R.; J. H. Walsh, General Manager, Quebec Central Ry.

Miss Madeleine Hall, daughter of Grant Hall, Vice President, C.P.R., was married at Montreal, Dec. 29, to Stockwell Day, of Montreal.

Frank L. Hutchinson, who has resigned as Manager in Chief of Hotels, C.P.R. Montreal, as forecast in a previous issue, was born at London, Ont., Aug. 10, 1869, and first entered C.P.R. service in 1908, since when he has been, to 1910, Manager, Chateau Frontenac, Quebec, Que.; 1911, Assistant to Manager in Chief of Hotels, C.P.R.; 1912 to 1913, Superintendent of Hotels in Alberta and British Columbia, C.P.R.; Aug. 1913 to Mar. 1915, Manager, Windsor Hotel,

Montreal; Mar. 1915 to Dec. 1920, Manager in Chief of Hotels, C.P.R. Prior to entering the C.P.R. service, he was for 4 years a member of the Montreal Stock Exchange, and for 13 years prior to that was with the Bank of Montreal. He is reported to have bought a 260 acre farm near Chemainus, B.C.

R. C. Jennings, who died at Toronto, Dec. 2, 1920, aged 78, and who was formerly in the Canadian Bank of Commerce service, was father of R. B. Jennings, Division Engineer, Canadian National Rys., Toronto.

William A. Kingsland, whose appointment as General Manager, Eastern Lines, Canadian National Rys., Montreal, was announced in our last issue, was born at New York, N.Y., Jan. 5, 1869, and entered transportation service in 1887, since when he has been, to 1889, billing clerk, Delaware, Lackawanna & Western Ry., New York; 1889 to Oct. 26, 1900, clerk, Audit Department, New York Central Rd., New York; Oct. 26, 1900 to 1904, Auditor, Great Northern Ry. of Canada, Quebec, Que.; 1904 to Sept. 10, 1915, Auditor, Canadian Northern Quebec Ry., and also from Mar. 24, 1908 to Sept. 10, 1915, Auditor, Quebec & Lake St. John Ry., Quebec, Que.; Sept. 10, 1915, to Nov. 21, 1918, General Superintendent, Canadian Northern Ry., Montreal; Nov. 21, 1918, to Dec. 1, 1920, Assistant General Manager, Eastern Lines, Canadian National Rys., Montreal.

Edward Langham, who retired recently from the position of General Purchasing Agent, Canadian National Rys., Toronto, was born in England in 1852, and entered transportation service in 1875, since when he has been, to 1877, handling material on construction, New York Central Rd., Rochester, N.Y.; 1877 to 1878, on construction of small coal roads in Pennsylvania; 1878 to 1882, handling construction and general material, Chicago, Ill.; 1882 to 1886, handling construction material, C.P.R., Winnipeg; 1886 to 1888, handling construction material, C.P.R., in Maine; 1888 to 1891, handling construction material, C.P.R., Calgary, Alta.; 1891 to 1895, handling construction material, Toronto Ry. (electric), Toronto; 1895 to 1898, Purchasing Agent, Birmingham Tramways, Birmingham, Eng.; 1898 to 1902, Material Agent, Canadian Northern Ry., Winnipeg; 1902 to Feb. 1917, Purchasing Agent, C.N.R., Winnipeg; Feb. 1917 to Dec. 1, 1920, General Purchasing Agent, Canadian National Rys., Toronto. Mr. Langham was entertained at dinner at the National Club, Toronto, on Dec. 17, when D. B. Hanna, President, C.N.R., presided, and presented him with a gold watch and chain on behalf of the C.N.R. officers and officials. Other friends outside the service gave him a wardrobe trunk, club bag and steamship rug. Mr. Langham intended to sail from Vancouver on Jan. 5, with M. H. MacLeod, Vice President, Construction, C.N.R., on the Canadian Government Merchant Marine line s.s. Canadian Highlander, but fell and received injuries which necessitated going to St. Michael's Hospital, Toronto, and his doctor would not let him undertake the journey.

Vernon L. Lawson, who has been appointed secretary to Chief Engineer, Railway and Canals Department, Ottawa, was born at Battersea, Ont., Jan. 12, 1883, and has been, from Aug. 1, 1900 to Dec. 1, 1901, clerk, Stationary Department, C.P.R., Montreal; Dec. 1, 1901 to May 31, 1903, clerk, Stationary Department, C.P.R., Montreal; June 1 to Oct. 15, 1903, stationery agent, Cana-

dian Northern Ry., Winnipeg; Nov. 1 to Nov. 30, 1903, clerk, Car Accountant's office, G.T.R., Montreal; Dec. 1, 1903 to May 31, 1906, clerk, Passenger Department, C.P.R., Montreal; June 1 to Sept. 30, 1906, accountant, O'Brien & Mulroney, railway contractors, Montreal; Oct. 1, 1906 to May 31, 1908, ticket delivery and refund clerk, C.P.R., Montreal; June 1 to Aug. 31, 1908, recorder, shop production, Canadian Car & Foundry Co., Montreal; Sept. 1, 1908 to Dec. 1, 1912, seed grain accountant, Interior Department, Ottawa; Dec. 1, 1912 to Aug. 1914, secretary, Chief Engineer's office, Railway and Canals Department, Ottawa; Aug. 1914 to Oct. 31, 1920, correspondence clerk, Interior Department, Ottawa.

G. T. Maley, who died at Western Hospital, Montreal, Dec. 30, 1920, aged 82, as the result of an accident a few weeks

John M. R. Fairbairn, Chief Engineer, Canadian Pacific Ry., and President elect, Engineering Institute of Canada.

previously, was father of Mrs. Grant Hall, wife of the Vice President, C.P.R. The funeral took place at Kempville, Ont., where he was born.

John D. McAuley, who has been appointed Soliciting Freight Agent, Canadian National-Grand Trunk Rys., Montreal, was born in Plantagenet, Ont., June 11, 1884, and entered railway service Oct. 1904, since when he has been, to Dec. 1908, in Local Freight Department, G.T.R., Montreal; Dec. 1908 to June 1911, in Freight Claims Department, G.T.R., Montreal; June 1911 to Sept. 1913, in Foreign Freight Department, G.T.R., Montreal; Sept. 1913 to Sept. 1914, City Freight Agent, Grand Trunk Pacific Ry., Vancouver, B.C.; Sept. 1914 to Mar. 1, 1916, City Freight Agent, G.T.P.R., Regina, Sask.; Mar. 1 to Dec. 21, 1916, Travelling Freight and Passenger Agent, G.T.P.R. and G.T.P.C.S. Co., Juneau, Alaska; Dec. 21, 1916 to Nov. 1920, Commercial Agent, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C.

Lorne McCutcheon, whose appointment as Foreign Freight Agent, Canadian National Rys., Vancouver, B.C., was an-

nounced in our last issue, was born there, Mar. 19, 1893, and entered railway service July 21, 1907, since when he has been, to Nov. 30, 1908, junior clerk, C.P.R., Nelson, B.C.; Dec. 1, 1908 to Oct. 25, 1909, secretary, to Superintendent, C.P.R., Nelson, B.C.; Oct. 19, 1909 to Apr. 1911, secretary to Manager, British Columbia Electric Ry., New Westminster, B.C.; May 1911 to Aug. 15, 1916, chief clerk to General Freight and Passenger Agent, B.C.E.R., New Westminster and Vancouver, B.C.; Sept. 1, 1916 to June 15, 1918, chief clerk to Division Freight Agent, Canadian Northern Ry., Vancouver; June 16, 1918 to Jan. 31, 1920, Travelling Freight Agent, Canadian National Rys., Vancouver; Feb. 1 to Oct. 18, 1920, Export and Import Freight Agent, Canadian National Rys., Vancouver.

Alexander John McDougall, District Passenger Agent, Illinois Central Rd., Birmingham, Ala., died there suddenly, Dec. 1. He was born at Waterloo, Ont., Feb. 16, 1866, and entered railway service in 1888, and was ticket agent, G.T.R., Berlin, Ont., until Mar. 1890, when he entered Illinois Central Rd. service, continuing in it until his death, as follows: Mar. 1890 to Apr. 1891, Travelling Passenger Agent, Berlin, Ont.; Apr. 1891 to July 1900, Assistant General Eastern Agent, New York; July 1900 to Jan. 1905, General Eastern Passenger Agent, New York; Jan. 1905 to Mar. 1911, Division Passenger Agent, New Orleans, La.; Mar. 1911 to Mar. 1914, District Passenger Agent, Indianapolis, Ind.; Mar. 1914 to Feb. 1918, District Passenger Agent, St. Paul, Minn.; Feb. to Sept. 1918, District Passenger Agent, Chicago, Ill.; Sept. 1918 to an. 1919, Passenger Agent, Memphis, Tenn.; Jan. 1919 to the time of his death, District Passenger Agent, Birmingham, Ala. The funeral took place Dec. 3 from his sister's house at Galt, Ont.

D. J. McKeown, insurance and real estate agent, North Bay, Ont., was found dead in his office there Dec. 26, 1920. He went to North Bay, about 30 years ago, as station agent, C.P.R.

M. H. MacLeod, Vice President, Construction, Canadian National Rys., and E. Langham, who retired from the position of General Purchasing Agent, recently, will not sail from Vancouver, by the Canadian Government Merchant Marine s.s. Canadian Highlander, early in January, for a trip to Australia and New Zealand, as stated in Canadian Railway & Marine World for December. Mr. Langham having sustained a fall which necessitated his entering a hospital, and his doctor not considering it advisable for him to undertake the proposed journey.

Harry C. Meachem, whose appointment as Import Freight Agent, Canadian National Rys., Montreal, was announced in our last issue, was born at Bradford, Ont., Aug. 1, 1863, and entered railway service Oct. 1, 1882, since when he has been, to July 1909, in various positions from junior clerk to chief clerk and Contracting Agent for the fast freight lines connected with the Grand Trunk-Great Eastern line, at Boston, Mass., and Detroit, Mich., Ontario Despatch at Chicago, Ill., Commercial Express at St. Paul, Minn., and National Despatch at Chicago, Ill.; May 1, 1910 to Oct. 15, 1912, Soliciting Freight Agent, G.T.R., Chicago, Ill.; Mar. 1, 1910 to Oct. 15, 1912, Assistant to Foreign Freight Agent, dealing with import traffic, G.T.R. Montreal.

G. A. McNicholl, Assistant General Passenger Agent, Canadian National

Rys., Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C., returned there, Nov. 30, from Montreal, where he had been to attend the funeral of his father, Jas. McNicholl, who died there, Nov. 6.

John Duncan MacNutt, whose appointment as Assistant Superintendent, Halifax Division, Maritime District, Eastern Lines, Canadian National Rys., Truro, N.S., was announced in our last issue, was born at Stewiacke, N.S., Feb. 8, 1873, and entered Intercolonial Ry. service in 1889, since when he has been, to 1890, telegraph operator, Stewiacke, N.S.; 1890 to 1891, relieving agent; 1891 to 1893, operator in dispatcher's office, Truro, N.S.; 1893 to 1896, dispatcher, Truro, N.B.; 1896 to 1898, dispatcher, Moncton, N.B.; 1898 to 1900, dispatcher, New Glasgow, N.S.; 1900 to 1904, Chief Dispatcher, Sydney, N.S.; 1904 to 1906, Chief Dispatcher, Fredericton, N.B.; 1906 to 1909, Chief Dispatcher, Newcastle, N.B.; 1909 to Mar. 15, 1917, dispatcher, and acting Chief Dispatcher, Truro, N.S.; Mar. 15, 1917, to Dec. 1, 1920, Inspector of Train Dispatching, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B.

John Millward, who died at Toronto, Dec. 4, aged 82, is said to have been fireman on the Lady Elgin, the first locomotive which ran between Toronto and Meaford, on the Northern Ry., later incorporated into the G.T.R. system.

H. H. Norman, Secretary, Grand Trunk Ry. Co., London, Eng., died there, Dec. 21. He has been in the company's service for about 50 years.

John C. O'Donnell, whose appointment as General Superintendent, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B., was announced in our last issue, was born at Cobden, Ont., Dec. 17, 1879, and entered railway service, Sept. 15, 1896, since when he has been, to Sept. 1, 1901, freight brakeman, C.P.R.; Chapleau, Ont.; Sept. 1, 1901, to May 1, 1902, freight conductor, C.P.R.; Chapleau, Ont.; June 10, 1902, to May 1, 1905, brakeman and conductor, C.P.R.; Cranbrook, B.C.; May 5 to July 2, 1905, brakeman, Canadian Northern Ry., Kamisack, Sask.; July 2, 1905, to Nov. 1, 1909, conductor, C.N.R.; Battleford, Sask.; Nov. 1, 1909, to Feb. 20, 1911, Trainmaster, C.N.R.; Dauphin, Man.; Feb. 20, 1911, to June 30, 1912, Trainmaster, C.N.R.; Winnipeg, Man.; July 1, 1912, to July 1, 1914, Trainmaster, C.N.R.; Rainy River, Ont.; July 1, 1914, to Oct. 31, 1916, Superintendent, District 3, Western Division, C.N.R.; Edmonton, Alta.; Oct. 31, 1916, to Dec. 1, 1920, Superintendent, Districts 4 and 5, Eastern Division, Canadian Northern Ry., now Manitoba Division, Central District, Canadian National Rys., Winnipeg.

R. Preston, who has been appointed Superintendent of Motive Power, Eastern Lines, C.P.R., Montreal, was born at Toronto, July 28, 1863, and entered G.T.R. service there, as machinist's apprentice, and finished his apprenticeship with the Toronto, Grey & Bruce Ry., subsequently absorbed by the C.P.R., since when he has been, from May 1894 to May 1896, locomotive foreman, C.P.R.; Havelock, Ont.; May 1896 to Aug. 1897, locomotive foreman, C.P.R., London, Ont.; Aug. 1897 to Oct. 1897, locomotive foreman, C.P.R., Smiths Falls, Ont.; 1897 to Aug. 1898, locomotive foreman, C.P.R., Montreal; Aug. 1898 to May 1901, locomotive foreman, C.P.R., Toronto; May, 1901 to Dec. 1903, Master Mechanic, Lake Superior Division, C.P.R., North Bay,

Ont.; Oct. 1903 to Feb. 1908, Master Mechanic, Ontario Division, C.P.R., Toronto; Feb., 1908 to June 21, 1909, Shop Superintendent, C.P.R., Toronto; June 21, 1909 to Oct. 1914, Master Mechanic, Central Division (now Manitoba District), C.P.R., Winnipeg; Feb. 1914 to Dec. 31, 1920, Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg.

R. A. Pyne, who has been appointed Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, was born at Toronto, April 10, 1874, and entered C.P.R. service in May 1896, as apprentice, Winnipeg; May 1896 to Dec. 1898, fitter and lathe hand, and Dec. 1898 to July 1899, gang foreman there; July 1899 to Mar. 1901, shop foreman, Winnipeg locomotive house; March 1901 to July 1902, erecting shop foreman, Winnipeg repair shop; July 1902 to Jan. 1903, general foreman, Calgary, Alta.; Jan. 1903 to Oct. 1906, locomotive foreman, Banff, Man.; Oct. 1906 to April 1907, District Master Mechanic, Moose Jaw, Sask.; April 1907 to March 1910, District Master Mechanic, Nelson, B.C.; March 1910 to Jan. 1912, Master Mechanic, Alberta Division, Calgary; Jan. 1912 to Aug. 31, 1916, Superintendent of Shops, Winnipeg; Aug. 31, 1916 to Dec. 31, 1920, Superintendent of Motive Power, Eastern Lines, Montreal.

Wilmer Herbert Sample, who has retired from the position of General Superintendent of Motive Power and Car Departments, lines east of Detroit and St. Clair Rivers, and Consulting Engineer, Motive Power and Car Departments, Grand Trunk Western Lines, Montreal, was born at Altona, N.Y., Aug. 20, 1864, and entered railway service Aug. 20, 1882, since when he has been, to 1887, fireman, Central Vermont Ry., St. Albans, Vt.; 1887 to 1890, locomotive man, Atcheson, Topeka & Santa Fe Ry., Albuquerque, N.M.; 1890 to 1901, locomotive man, Central Vermont Ry., St. Albans, Vt.; 1901 to 1906, Road Foreman of Locomotives, Central Vermont Ry., St. Albans, Vt.; 1906 to 1911, Superintendent of Motive Power and Car Department, Northern Ry. of Costa Rica (United Fruit Co.), San Jose, Costa Rica; Mar. 15, 1911 to Oct. 1914, Master Mechanic, G.T.R., Ottawa; Oct. 1914 to Oct. 1916, Master Mechanic, G.T.R., Battle Creek, Mich.; Oct. 1916 to Sept. 1, 1917, Master Mechanic, Eastern Lines, G.T.R., Montreal; Sept. 1, 1917 to Aug. 26, 1918, Superintendent of Motive Power, G.T.R., Montreal; Aug. 26 to Oct. 1918, Superintendent of Motive Power and Car Departments, Grand Trunk Western Line, Rd. (U.S.R.A.), Detroit, Mich.; Oct. 1918 to Dec. 31, 1920, General Superintendent of Motive Power and Car Departments, G.T.R., lines east of Detroit and St. Clair Rivers, and from April to Dec. 31, 1920, also Consulting Engineer, Motive Power and Car Departments, Grand Trunk Western Lines, Montreal.

John Scott, a civil engineer, who died at Winnipeg, Dec. 6, was associated with railway construction in the west, chiefly in connection with bridge building.

Lord Shagnessy, chairman, C.P.R., has given \$10,000 to a fund being raised in Montreal to build an English speaking Roman Catholic high school there.

Capt. Jesse Springett, whose appointment as Agent for Holland, C.P.R., Rotterdam, was announced in a recent issue, was born at Eastbourne, Eng., July 20, 1879, and entered transportation service at Vancouver, B.C., in 1903. He has been,

from Apr. 19, 1906, to Mar. 14, 1916, in Freight Department, C.P.R., London, Eng.; Mar. 14, 1916 to Nov. 15, 1919, in military service in Russia and Roumania, 1919, to Sept. 30, 1920, in Freight Department, C.P.R., London, Eng.

J. G. Swallow, heretofore Auditor of Revenue, Grand Trunk Pacific Ry., Winnipeg, who has been appointed Auditor of Miscellaneous Accounts, Canadian Northern Ry. System and Grand Trunk Pacific Ry., Toronto, was presented with a case of pipes, by a number of friends, of leaving Winnipeg, Dec. 14.

C. H. Temple, who has been appointed Chief of Motive Power and Rolling Stock, C.P.R., Montreal, was born there in 1862, and entered railway service in 1874, since when he has been, to 1881, office boy and apprentice, G.T.R., Belleville, Ont.; 1881 to 1886, mechanic and mechanical clerk in Mechanical Superintendent's office, G.T.R., Montreal; in 1886 he was appointed Foreman, C.P.R. shops at Yale, B.C., and subsequently, to 1902, he acted as Foreman at Kelowna, Vancouver, Revelstoke and North End, B.C.; 1902 to Jan. 1905, Master Mechanic, Pacific Division, C.P.R.; Jan. 1905 to June 1909, Master Mechanic, Central Division, C.P.R., Winnipeg; June 1909 to Oct. 1911, Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg; Oct. 1911 to Dec. 31, 1920, Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg.

H. P. Timmerman, Industrial Commissioner, U.S.R., was the guest of the Goderich, Ont., Board of Trade at dinner Dec. 8.

Carelessness in Giving Hand Signals.

The Railway Association of Canada has issued the following circular:—To member lines: In connection with accidents to employes resulting from misinterpretation of hand, lamp or flag signals, attention has been called to careless methods of certain employes in giving such signals. It is recommended to member lines that a circular should be issued to their employes in accordance with the following, and that the matter be followed up vigorously, with a view to correcting improper methods of giving hand, flag, and lamp signals:

"It has been reported that many trainmen, yardmen, switchmen, signalmen, and others, are careless in giving hand, flag and lamp signals. In some cases employes are using both arms in giving signals, which is not authorized. All concerned are advised that signals must given in strict conformity with rule 12, General Operating Rules."

The Canadian Export Paper Co.'s Traffic Department at Montreal, which is under Guy Tombs, formerly of the Canadian Northern Ry., as Traffic Manager, directs all traffic matters for that company, also Beller Canadian Paper Co., Brompton Pulp & Paper Co., Laurende Co., Price Bros. & Co., St. Maurice Paper Co., St. Maurice Valley Pulpwood Co., Eastern Pulp Co. of Canada, Maguire, Paterson & Palmer (Canada) Ltd., Canada Carbide Co., Canadian Electro-products Co., and the Menjagoes Lumber Co.

The C.P.R.'s exhibit of Canadian natural resources, which has been maintained for some years at Windsor, St. John's, and other points, has been overhauled and renovated and again thrown open to the public.

Freight and Passenger Traffic Notes.

The Grand Trunk and Wabash Rys. have been ordered by the Board of Railway Commissioners to stop Wabash trains 2 and 3, at Cayuga, Ont., until further notice.

The Edmonton, Dunvegan & British Columbia Ry.'s freight and passenger traffic offices have been moved from Jasper Ave. to the C.P.R. building in Edmonton, Alta.

The Board of Railway Commissioners has approved standard freight mileage tariff C.R.C. no. B-11 for the Western Power Co. of Canada's Stave Lake railway in British Columbia.

The Great Northern Ry. put a new time schedule in operation on Dec. 1, under which train 359, previously leaving Vancouver, B.C., at 9:30 a.m., leaves at 8 a.m., and arrive in Seattle, Wash., at 1:15, and Portland, Ore., at 8:10 p.m.

The Board of Railway Commissioners has ordered the Vancouver, Victoria & Eastern Ry. & Navigation Co. to build a station at Crescent, B.C., and to appoint an agent during June, July and August in each year, and a caretaker for the rest of the year.

The C.P.R. is reported to be arranging for running a special train through Canada to exhibit samples of French manufactures specially suitable for the Canadian market, with a view to developing trade between Canada and France. Senator Beaubien has been in France in this connection with a C.P.R. representative.

The Canadian National Rys. and Grand Trunk Pacific Ry. have changed the name of trains 1 and 2, operating between Montreal, Ottawa, Winnipeg, Saskatoon, Edmonton and Vancouver from "The National" to "Continental Limited." Trains 3 and 4, operating between Toronto and Winnipeg, are now known as "The National."

A Calgary, Alta., press dispatch of Dec. 2 said that up to that date the C.P.R. alone had handled out of Alberta about 25,000 cars of the 1920 grain crop, representing approximately 32,500,000 bush., the major portion of which was wheat. For the same month in 1915, the bumper year, 16,000 cars were dispatched, carrying 20,800,000 bush. of grain. J. H. Walsh, General Manager, Quebec Central Ry., is reported to have telegraphed the Quebec Board of Trade recently that the company had arranged with the Canadian National Rys. to receive carload freight at the Parent St. terminal, Quebec, Que., for Quebec Central Ry. points via Bridge and Carrier Jet, Q.C. Ry. existing rates to be projected.

A press report states that the question of the St. John & Quebec Ry. running rights over the C.P.R. from Westfield to St. John, N.B., are under consideration, that the Canadian National Rys., which operates the St. J. & Q. Ry. has refused to assume any responsibility for the cost of its service over the C.P.R. and that the New Brunswick Government, which owns the railway, will probably have to enter into a separate agreement with the C.P.R.

The Alberta & Great Waterways Ry. is operating a train leaving Edmonton at 9:30 on Mondays, Wednesdays and Fridays, arriving at Lac la Biche at 10:10 o'clock on the same days, and returning therefrom at 7:30 on Tuesdays, Thursdays and Saturdays, arriving in Edmonton at 17 o'clock on the same days. An occasional train is run from Lac la Biche to the end of the track, on the Clear-

water River, carrying passengers and freight.

Canadian Railway and Marine World for Oct., 1920, contained the Chief Railway Commissioners' judgment on the Railway Association of Canada's application, on behalf of its member railway companies, for an increase in freight and passenger rates, and the Board's orders issued in connection therewith. Under the terms of the orders certain reductions were to be made on Jan. 1 in the increase rates authorized to be charged. The railway companies have filed standard freight tariffs and standard passenger rates, in accordance therewith, which have been approved by the Board. The order is given on another page, under "Traffic Orders by Board of Railway Commissioners."

Steam Railway Track Laid in 1920.

Following is a preliminary tabulation showing the additional main line track laid on steam railways in Canada during 1920. In some cases the figures are exact, as work has been suspended for the winter, while in the case of the C.P.R. the length of new track given is that which was estimated to be laid by Dec. 31, 1920.

Canadian Government Rys.	Miles	Miles
Halifax-Ocean Terminal to Halifax & S. Western Ry. Jet	0.84	
Moncton cut off, mile 1.16, St. John Subdivision, to mile 3.5, Newcastle Subdivision, N.B.	2.46	104
Canadian National Rys., Eastern Division

	0.70	
Canadian National Rys., Western Lines	2.50	
Saskatchewan Melfort-Humboldt line Thunderbolt extension Jackman branch	14.00	
	10.00	
Swift Current extension Alaska Southerly	6.70	
	20.60	
Alberta Red Deer spur Hanna-Medicine Hat line Olive-St. Paul de Metis line Onaway branch	6.60	
	10.00	
	3.10	
	15.10	
Canadian Northern Pacific Ry. Vancouver Island line, mile 52.5 to 74.5	22.00	131.10
Canadian Pacific Ry. Manitoba Russell Northerly	6.00	
Saskatchewan Conrad Northerly Lanigan northerly Leader southerly branch	7.00	
Alberta Langdon northerly, A-m-Fm. pass	7.00	
Kettle Valley Ry. Comer Mountain branch A-m-Fm. to Cape M. A Mile its route	7.00	
Pacific Great Northern Ry. Deep Creek to Asquith, track, B.C.	11.10	

In addition to the above mileage of additional new main track laid, the Canadian National Rys. report having laid 11 miles of a diversion near St. Rosalie, Que., and second track on 40.76 miles as follows: Springfield Jet to Macan, N.S., 9.13 miles; Truro to Belmont, N.S., 7.02 miles; Bagot to St. Rosalie, Que., 10.94 miles; and near Munson, Alta., 3 miles. In Newfoundland, the Reid Newfoundland Co. have laid 3.5 miles of new track, from Argentea Jct. to Argentea.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine Ltd.—H. E. KANE has been appointed Port Agent, St. John, N.B., vice J. P. Doherty, whose appointment as Export Agent, Montreal, was announced in a previous issue.

Canadian National Express Co.—See "Among the Express Companies," on another page of this issue.

Canadian National Telephones.—See under "Telephone, Telegraph and Cable Matters," on another page of this issue.

Canadian National Rys.—F. F. CAREY, heretofore Assistant Master Mechanic, Campbellton, N.B., has been appointed Assistant Master Mechanic, St. Maurice Division, Quebec, Que., as reported in our last issue.

LIEUT.-COL F. F. CLARKE, D.S.O., Chief Land Surveyor, has been appointed head of the newly formed Land Survey Department, which, for the present, is attached to the Legal Department. He reports to the General Counsel. Office, Toronto.

A. DEVINE has been appointed Assistant Master Mechanic, Campbellton, N.B., vice F. F. Carey, transferred, as reported in our last issue.

L. V. DRUCE, heretofore Commercial Agent, Edmonton, Alta., has been appointed Travelling Traffic Representative, Canadian National-Grand Trunk Pacific Rys., Seattle, Wash.

GUY C. DUNN, heretofore Engineer of Construction, Grand Trunk Pacific Ry., Winnipeg, has been appointed Office Engineer, Chief Engineer's office, Eastern Lines, Canadian Northern Ry., Toronto.

A. C. EGAN, heretofore Assistant Comptroller, Canadian Northern Ry., Toronto, has been appointed General Auditor, Canadian Northern Ry., Toronto and Grand Trunk Pacific Ry., vice J. D. Morton, appointed Special Auditor. Office, Toronto.

R. M. FLETT has been appointed Equipment Supervisor, Sleeping, Dining and Parlor Car Department, his duties covering the recording of all rolling stock in this department, with full description and history, following up shopping, signing of cars on all divisions, and inspection of all new equipment received from builders. Office, Toronto.

L. A. GUTHRIE has been appointed Signal Supervisor, Central District, C. N.R., and Grand Trunk Pacific Ry. lines between Winnipeg and Watrous, Sask. Office, Winnipeg.

G. A. HARRISON, General Agent, Passenger Department, G.T.R., Portland, Me., will also act in the same capacity for C.N.R.

R. KING, heretofore relieving Superintendent, has been appointed Superintendent, Saskatoon Division, Saskatchewan District, vice W. I. Munro, transferred to Winnipeg. Office, Saskatoon.

H. L. JOHNSON, heretofore Division Engineer of Construction, Kamloops-Kelowna-Vernon-Lumby Branch, has been appointed District Engineer in charge of Construction and Surveys, Vancouver Island lines. Office, Victoria, B.C.

D. O. LEWIS, heretofore District Engineer in charge of Construction and Surveys, Vancouver Island lines, Victoria, B.C., has been appointed Assistant Engineer, Maintenance of Way Depart-

ment, Eastern Lines, Canadian Northern Ry., at Toronto.

J. D. LIFE has been appointed Assistant Staff Recorder, at Winnipeg, a branch of the Staff Record Bureau having been established for Western Lines there, where copies of the records of employees of all departments will be kept. He reports to W. L. Pinkney, Staff Recorder, Staff Record Bureau, Toronto.

J. D. McAULEY, heretofore Commercial Agent, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C., has been appointed Soliciting Freight Agent, Canadian National-Grand Trunk Rys., Montreal.

J. D. MORTON, heretofore General Auditor, Canadian Northern Ry. System, Toronto, has been appointed Special Auditor, Canadian National Rys. Office, Toronto.

W. I. MUNRO, heretofore Superintendent, Division 2, Prairie District, Saskatchewan, has been appointed Superintendent, Manitoba Division, Central District, Western Lines, vice J. C. O'Donnell, whose appointment as General Superintendent, Maritime District, Eastern Lines, Moncton, N.B., was announced in our last issue.

W. N. RIPPEY, whose appointment as Superintendent of Transportation, Maritime District, Eastern Lines, Moncton, N.B., was announced in our last issue, has had his jurisdiction extended to cover telegraphs, telephone, time service, vision and other matters, formerly under A. C. Barker, Superintendent of Telegraph and Time Service, Eastern Lines, whose appointment as Superintendent, Moncton Division, Maritime District, was announced in our last issue.

W. W. SHERIDAN has been appointed outside passenger and ticket agent, G.T.R.; passenger agent, Oshawa Ry. and agent, Canadian Express Co., and Canadian National Express Co., Oshawa, Ont., vice N. R. Duetta, resigned.

J. G. SWALWELL, heretofore Auditor of Revenue, Grand Trunk Pacific Ry., Winnipeg, has been appointed Auditor of Miscellaneous Accounts, Canadian Northern Ry. System and Grand Trunk Pacific Ry. Office, Toronto.

N. W. SWINDEN has been appointed Assistant to General Superintendent, Sleeping, Dining and Parlor Cars and News Service. Office, Toronto.

Canadian Pacific Ry.—ANDREW ALBERTON, heretofore Manager, Algonquin Hotel, St. Andrews, N.B., and Place Viger Hotel, Montreal, has been appointed General Superintendent, C.P.R. Hotels, vice F. L. Hutchinson, Manager in Chief of Hotels, resigned. Office, Montreal.

H. H. HAMILTON has been appointed Travelling Passenger Agent, St. John, N.B., vice H. R. Matthewson, whose appointment as Assistant General Agent, Passenger Department, Chicago, Ill., was announced in our last issue.

J. W. JACKSON, heretofore Locomotive Foreman, west locomotive house, Calgary, Alta., has been appointed Locomotive Foreman, Alyth locomotive house, Calgary, Alta., vice H. M. Allan, transferred.

R. PRESTON, heretofore Assistant Superintendent of Motive Power, Western Lines, Winnipeg, has been appointed Superintendent of Motive Power, Eastern Lines, vice R. A. Pyne, transferred to Winnipeg. Office, Montreal.

R. A. PYNE, heretofore Superintendent of Motive Power, Eastern Lines, Montreal, has been appointed Superintendent of Motive Power, Western Lines, vice C. H. Temple, promoted. Office, Winnipeg.

J. W. SINDALL has been appointed Locomotive Foreman, west locomotive house, Calgary, Alta., vice J. W. Jackson, transferred.

A. STURROCK, heretofore Master Mechanic, British Columbia District, Vancouver, B.C., has been appointed Assistant Superintendent of Motive Power, Western Lines, vice R. Preston, promoted. Office, Winnipeg.

C. H. TEMPLE, heretofore Superintendent of Motive Power, Western Lines, Winnipeg, has been appointed Chief of Motive Power and Rolling Stock. Office, Montreal.

Grand Trunk Ry.—T. E. DUNSMORE, heretofore on the Board of Railway Commissioners' staff at Ottawa, Ont., is reported to have been appointed private secretary to General Superintendent, Eastern Lines, G.T.R., Montreal.

J. C. GARDEN, heretofore Superintendent Motive Power, Shops, Stratford, Ont., has been appointed acting General Superintendent, Motive Power and Car Departments, lines east of Detroit and St. Clair Rivers, and Consulting Engineer, Motive Power and Car Departments, Grand Trunk Western Lines, succeeding W. H. Sample, retired. Office, Montreal.

JNO. ROBERTS, heretofore General Foreman, Erecting Shop, Stratford, Ont., has been appointed acting Superintendent, Motive Power, Shops there, vice J. C. Garden, promoted.

W. H. SAMPLE, General Superintendent of Motive Power and Car Department, is retiring from the service.

Grand Trunk Ry.-Wabash Ry.—H. W. MATTHEWS, heretofore Superintendent of Terminals, Sarnia Tunnel, Port Huron, Mich., has been appointed Joint Superintendent, St. Thomas Division, G.T.R.-Wabash Ry., vice J. C. Crombie, transferred. Office, St. Thomas, Ont.

Oshawa Ry.—H. W. SHERIDAN, outside passenger and ticket agent, G.T.R., and agent, Canadian Express Co. and Canadian National Ex. Co., Oshawa, Ont., has also been appointed passenger agent, Oshawa Ry., vice N. R. Duetta, resigned.

Railways and Canals Department.—V. L. LAWSON, heretofore correspondence clerk, Interior Department, Ottawa, and formerly in C.P.R. service, has been appointed private secretary to Chief Engineer, Railways and Canals Department, Ottawa.

Reid Newfoundland Co.—The Reid Newfoundland Government Railway Commission, which is operating this company's railway and steamships, consists of five members, Hon. W. F. Coaker, a member of the Newfoundland Government, being Chairman, and T. A. Hall, Secretary. The other three are officials of the Reid Newfoundland Co., viz, H. D. Reid, President; R. G. Reid, Vice President; and J. P. Powell, Superintendent.

Canadian Transfer Co. Ltd., incorporated under Dominion charter, has been licensed, under the Ontario Companies Act to do business in Ontario. The capital to be used in Ontario is not to exceed \$100,000. John Thomson, Toronto, is its attorney.

Sixty-Ton Hopper Bottom Cars, Canadian Pacific Railway.

Canadian Railway and Marine World for August contained a description of the 3,500 sixty-ton hopper bottom box cars which the C.P.R. is having built, the orders having been given last spring, viz., for 2,000 to Canadian Car & Foundry

231,000 to 232,499, by Canadian Car & Foundry Co.; 232,500 to 232,999 by Eastern Car Co.; 233,000 to 233,499 by Canadian Car & Foundry Co.

Since the data referred to was published we have received an outline draw-

ing, 12 ft 10 7/8 in inside (max), 8 ft Side door opening 6 ft. Axle capacity, in accordance with latest A.R.A. recommendations, is 159,000 lb. From this the tare weight of 48,300 lb is deducted, leaving a total carrying capacity of 110,700 lb. Air brakes, Westinghouse, K.C. 101.

60-Ton Hopper Bottom Box Car, C.P.R. Hopper door open.

60-Ton Hopper Bottom Box Car, C.P.R. End view

Co., which are being built at its Fort William, Ont., plant; 500 to Eastern Car Co., New Glasgow, N.S., and 1,000 to National Steel Car Corporation, Hamilton, Ont. Up to the time of our last advice, Canadian Car & Foundry Co. had only

ing and some additional photographs, illustrations from which are given on this and on pages—

Some additional information has also been furnished us as follows:—

Type of underframe, 12 in. 32.7 lb. channel cen-

Angle cock holder, Western.
Axles, A.R.A. 10 in. journal.
Rollers, Simplex.
Brake beams, Simplex.
Couplers, A.R.A. type D, 6 x 5 shank with 10

Sixty-Ton Hopper Bottom Box Car, Canadian Pacific Railway, showing main dimensions

delivered 199 cars, neither of the other car building companies having delivered any.

The serial numbers of these cars are as follows:—230,000 to 230,999, being built by National Steel Car Corporation;

ter sills, 9 in. 17.5 lb. channel side sills, 9 in. 17.5 lb. angle end sills. Length, over end sills, 40 ft. 6 in. 42 ft. 1 1/2 in. inside, 40 ft. 4 in. Width, over side sills, 8 ft. 6 in. 9 ft. 3 1/2 in. inside, 8 ft. 6 in. Height, from top of rail to top of brake mast, 11 ft. 2 1/2 in. from top of rail to top of car

60-Ton Hopper Bottom Box Car, Canadian Pacific Railway, showing main dimensions. This Sixty-Ton Hopper Bottom Box Car, Canadian Pacific Railway, is built by National Steel Car Corporation, Hamilton, Ont. It has a capacity of 110,700 lb. and is equipped with Westinghouse air brakes, Simplex rollers, and Simplex brake beams. The car is built to A.R.A. specifications and is suitable for the transport of bulk materials.

Journal boxes, McCord, 5½ x 10 in., with pinless type jld.
 Roof, single boards with outside metal roof, Murphy type X.L.A., flexible no. 2.
 Side bearings, Stucki on 500 cars, Woods on 1,500 cars.
 Truck frames, arch bar type, A.R.A. standard.
 Truck springs, A.R.A. class B.
 Uncoupling arrangement, Imperial, type B.
 Wheels, 33 in., 725 lb., cast iron, chilled tread.

Payment of Freight Charges to Canada in United States Currency.

Commissioner Hall, of the U.S. Interstate Commerce Commission, gave the following decision Nov. 17, 1920, re payment of charges on shipments to Canadian points:—These proceedings have been consolidated because they involve the same general subject matter, and will be disposed of in one report. By the schedules under suspension in no.

for such charges to other persons or corporations similarly situated. That act left common carriers free to exercise to their full extent all the rights and privileges they had under the common law, as far as these rights and privileges and the provisions of that act."

entail of others, but on the ground that they would result in the carriers receiving an overpayment for that part of the transportation which takes place in Canada to the extent of the difference in the

60-Ton Hopper Bottom Box Car, C.P.R. Hopper door closed.

60-Ton Hopper Bottom Box Car, C.P.R. Floor door in place, and hopper door closed, to receive lading. See article on page 23.

1191 and no. 1191—no. 2, issued by Agent Gomph, a rule is proposed requiring payment in U.S. currency of the rates published therein, including joint rates to points in Canada. Since the hearings the suspended portions of the schedules enumerated in our first and second supplemental orders in no. 1191, and in our order in no. 1191—no. 2, have been cancelled under permission from us. By the schedules under suspension in no. 1196, issued by Agent Leland and Agent Kelly, a rule is proposed requiring prepayment of charges on shipments into Canada. Prepayment in this country would normally and lawfully be in U.S. currency. Both proposed rules would, therefore, have the effect of requiring payment of the through charges in U.S. currency. The proposed rules are intended to protect the carriers operating in the U.S. from the present depreciation in value of Canadian currency as compared with U.S. currency of the same denomination, and to ensure their receiving in lawful money of the U.S. the full amount of their charges or divisions accruing for that part of the transportation which takes place within the U.S.

In *Gamble-Robinson Com'n v. Chicago & N. W. Ry. Co.*, 168 Fed., 161, the Circuit Court of Appeals for the Eighth Circuit said at page 164:—

"Prior to the enactment of the act of Feb. 24, 1887, to regulate commerce among the states, interstate railway traffic was regulated by the principles of the common law, and under those principles common carriers had the right to require the prepayment of charges for freight of one or more persons or corporations, and to give credit

exchange values of U.S. and Canadian money. Our jurisdiction over transportation to or from a foreign country is limited to that part of the transportation which takes place within the United States. Interstate Commerce Act, section 1, paragraph (2); *International Paper Co. v. D. & H. Co.*, 33 I. C. C., 270. We cannot, therefore, undertake to pass upon the proposed rules in so far as they affect charges for transportation beyond the borders of the U.S., but will leave their validity and propriety to be determined under the laws in force where the transportation takes place.

We find that the proposed rules have been justified in so far as they affect the charges for interstate transportation wholly within the U.S., and the charges or divisions accruing for that part of the transportation between the U.S. and a foreign country which takes place within the U.S.

It is ordered, that the order heretofore entered in this proceeding suspending the operation of said schedules be vacated

60-Ton Hopper Bottom Box Car, C.P.R. Floor door still in position, but hopper door released, for discharging outside track. See article on page 23.

Protestants object to the proposed rules, not on the ground that the carriers are not entitled to demand prepayment of their charges for such portion of the transportation as takes place in the U.S., or that the rules are unduly prejudicial to them and unduly prefer-

and set aside as of Nov. 29, 1920, and that this proceeding be discontinued.

The halibut catch in water adjacent to Prince Rupert, B.C., in Sept. 1920, totalled 1,989,785 lb., and the salmon catch 16,061,197 lb.

Mr. Crerar on Railway Debts and Freight Rates.

Hon. T. A. Crerar, M.P. for Marquette, Man., who was recently elected leader of the new National Party, heretofore the Farmers Party, in Dominion politics, is reported to have said, in speaking at Winnipeg Dec. 10:—"When we have eventually acquired the Grand Trunk Ry. as we will acquire it, the people of Canada should revalue the whole system of Government roads, taking into full account the losses that have arisen through extravagance in building, or through needless duplication of lines for which we are now responsible; put the whole thing down to a fair business basis as a business man would do under similar circumstances, charge the difference to the debt of the country, because we are responsible for it in any case, and then upon this basis, proceed to build up the national railway business of Canada."

He is also reported to have said that intimately bound up with this question is the one of freight rates. In his judgment, the recent increase in rates was a mistake. He held the Government open to severe censure for not having suspended the rates immediately, pending further hearing of the case, and added: "These freight rates cannot continue at the point they are now; they must be reduced, otherwise the business of the country will stagnate."

Rotatable Coal Hopper for Locomotives.

A rotatable coal hopper that has been invented for tenders is so planned that the coal is kept handy at the firing deck, making it an easy matter for the fireman to reach the coal, without shovelling

plate as to turn readily. In its outer wall are openings, one for each segment, through which the coal falls by gravity. As soon as the coal is emptied from the segment, the brake that controls the drum is released. Naturally the greater weight above the center of the drum makes it rotate, bringing the next loaded segment into position.

60-Ton Hopper Bottom Box Car, C.P.R. Interior, with hopper closed. See article on page 25.

Australian Railway Gauges.

Approval has been given to a proposal to give a uniform gauge of 4 ft. 8½ in. on the railways connecting the capital with the mainland Australian states from Brisbane to Perth. It is estimated that this will cost \$120,000,000, of which the Commonwealth is to contribute one-fifth, the five states concerned finding the rest on a per capital basis. The Commonwealth line from Port Augusta to Kal-

barra is 4 ft. 8½ in. gauge would be done later in piecemeal fashion. There are 22,046 miles of railway on the mainland of Australia, the proportion in the different gauges being 5 ft. 3 in., 5,149 miles; 4 ft. 8½ in., 5,881 miles; 3 ft. 6 in., 10,866 miles; under 3 ft. 6 in., 150 miles. The cost of converting to the 4 ft. 8½ in. gauge all the lines not provided for in the \$120,000,000 scheme recently adopted has not been estimated but would probably amount to \$500,000,000.

60-Ton Hopper Bottom Box Car, C.P.R. Floor section raised for grain loading. See article on page 25.

from the rear of the tender or using power apparatus. This special hopper is in the form of a great segmental tub, or drum, having a diameter that is the approximate width of the tender. This drum is inclined toward the firing deck; it is so mounted on a ball bearing center

goorlie, 1,057 miles, which is one of the main links in the connection, is already on the 4 ft. 8½ in. gauge, as are the New South Wales lines. Western Australia would have to convert 375 miles of 3 ft. 6 in. line, Victoria 200 miles of 5 ft. 3 in., and South Australia several

Saskatchewan Railway Guarantees.—In speaking on the provincial finances in the Saskatchewan Legislature, Dec. 6, Hon. C. Dunning, Provincial Treasurer, is reported to have said:—"The Canadian Northern Ry. had never defaulted in the payment of its bonds, but the Grand Trunk Pacific Ry. did, with the result that the province had to meet interest instalments amounting to \$810,000. After prolonged negotiations between the Dominion and Saskatchewan Governments, this debt had been liquidated with the exception of a small amount of interest on the money advanced by the province. There is always the present danger of default in the future, and for this reason it is necessary to renew these guarantees as coming due."

Mackenzie River Oil Fields.—In connection with discoveries of oil in the neighborhood of Fort Norman in the Mackenzie River valley, the House of Parliament is being called to consider the Mackenzie River Petroleum Bill, with all powers incidental to the production and disposal of oil and natural gas and the navigation and transportation thereof, except by rail, and in particular for the construction of a pipe line or lines for the transportation of oil and gas from near the mouth of the Rat River at its junction with Peel River, a tributary of the Mackenzie River, northwest of the Rat River valley to its junction with the Porcupine River, a tributary of the Yukon River, thence down the Porcupine River valley to the boundary between Canada and Alaska. Privilege, Thompson, Burgess & Cote, Ottawa, are solicitors for applicants.

Conversion of C.P.R. Locomotives from Oil Burners to Coal Burners.

As stated in Canadian Railway and Marine World for December, on account of the uncertainty of oil supply, the C.P.R. is converting its oil burning locomotives in British Columbia to coal burners. The following are the numbers of each type to be converted:—

No.	Type.	No.	Type.	No.	Type.
1	A-2	1	D-3	14	D-4G
6	D-5	5	D-6	19	D-9
8	G-2	8	L-2	3	L-3
16	M-4	16	N-3	31	R-3
6	U-3	4	V-1	7	S-2

Included in the above are 14 locomotives leased to the Esquimalt & Nanaimo Ry., viz., 6—D-4; 5—D-5; 3—L-3.

The locomotives mentioned above, which are in direct use by the C.P.R., are being operated between Lake Louise and Vancouver, B.C.

With the exception of 35 R-3 and 7 of the S-2 locomotives which were built as oil burners, the others mentioned above were built originally to use coal. Four of the R-3 type were converted to coal burners a few weeks ago. The work of conversion from oil burners to coal burners consists of the removal of the oil tanks, burners and fire pan bricking, and the application of ashpans, grates, front end plates, nettings, etc., as well as Franklin firedoors on the larger type of locomotives. The conversion of the locomotives used on the C.P.R. lines is being done at different points on the British Columbia District, and in the Ogden shops at Calgary. The 14 locomotives leased to the Esquimalt & Nanaimo Ry. are being converted at that company's shops, under the supervision of its Master Mechanic. We were advised Dec. 10 that 30% of those to be converted at Victoria had been completed, and that the remainder should be completed during January.

Among the Express Companies.

H. W. Sheridan, town ticket agent, G. T.R., and passenger agent, Oshawa Ry. Oshawa, Ont., has also been appointed express agent, Canadian Ex. Co., and Canadian National Ex. Co., there, vice N. R. Duetta, resigned.

The Board of Railway Commissioners passed order 30,446, Dec. 17, fixing express rates on fresh fish in car loads, from Gimli and Riverton, Man., to points in the United States. This order is given in full, on an earlier page of this issue, under "Traffic Orders by Board of Railway Commissioners."

The Board of Railway Commissioners passed order 30,447, Dec. 9, 1920, directing express companies to supply pasteurized cream at the same rates as ordinary cream. The order, and the Chief Commissioner's judgment on which it was based, are given in full, under "Traffic Orders by Board of Railway Commissioners," on an earlier page of this issue.

The Interstate Commerce Commission has, according to a Washington, D.C., press dispatch, authorized the permanent consolidation of the transportation business and properties of the Adams, American, Wells Fargo and the Southern Express Companies into the American Railway Express Co. The Commission stated that the public will be best served by one consolidated company giving all line equal rates.

Harold R. Hauch, who has been appointed Assistant Superintendent, Eastern Division, Canadian National Express

Co., Toronto, was born at Berlin (now Kitchener), Ont., Dec. 9, 1894, and entered Canadian Northern Ex. Co.'s service Apr. 3, 1913, since when he has been, to June 8, 1915, clerk, agent's office, Toronto; June 9, 1915 to May 31, 1916, clerk, Superintendent's office, Toronto; June 1 to Oct. 1, 1916, agent, Valcartier Camp, Que.; Nov. 1, 1916 to May 31, 1917, clerk, Superintendent's office, Toronto; Apr. 1 to May 31, 1917, agent, Camp Mohawk, Ont.; June 1 to Aug. 18, 1917, clerk, Superintendent's office, Toronto; Aug. 19, 1917 to Aug. 14, 1919, chief clerk to Superintendent, Toronto; Aug. 15, to Nov. 14, 1919, special representative for reorganization of express department, Halifax & South Western Ry., Halifax, N.S.; Nov. 15, 1919 to May 31, 1920, chief clerk to Superintendent, Canadian National Ex. Co., Toronto; Apr. 1 to Oct. 31, 1920, chief clerk and claim agent, Superintendent's office, Toronto.

Canadian National Express Co.

W. C. Muir, heretofore General Superintendent, has been appointed General Manager, Office, Winnipeg.

G. E. Bellerose, heretofore Traffic Supervisor, has been appointed Assistant to General Manager, Office, Winnipeg.

B. A. Latta, heretofore Travelling Agent, has been appointed Traffic Supervisor, vice G. E. Bellerose, promoted, Office, Winnipeg.

C. L. Bowles, heretofore Inspector of Agencies, has been appointed Assistant Superintendent, Western Division, Office, Winnipeg.

Harold R. Hauch, heretofore chief clerk

and Claim Agent, Superintendent's office, Eastern Division, has been appointed Assistant to Superintendent, Eastern Division, Office, Toronto.

The office at McDiarmid, Ont., was closed Nov. 22, 1920.

The company's service was extended beyond Spedden, on the Coronado Subdivision, Alta., Dec. 20, the stations being Ashmont, open; Baffin, star; and St. Paul, open. An agent has been appointed at Sunnyside, Alta., on the Sheerness Subdivision.

Additional Bridge for Montreal.—The

Montreal City Council on Dec. 13 adopted the following resolution by a vote of 11 to 7:—"That this council is in favor of the erection of an additional bridge between Montreal and the south shore, and would be pleased if this project were carried out by the competent authorities." The Mayor, in opposing the resolution, stated that if the bridge was built it would have the effect of decreasing the population of the city, and the value of property in the city, and that the project was being put forward by land speculators on the south shore.

Station Limits.—The Board of Railway Commissioners passed general order 322, Dec. 10, 1920, directing railway companies to withdraw from their respective working timetables, Special Instruction E, and to observe the Uniform Code of Rules for Canadian Railways, approved by general order 42, July 12, 1909, the necessary changes and instructions to employees to become effective June 1, 1921.

Grain in Store at Elevators.

Telegraph, Telephone and Cable Matters.

Arthur Descombes, who had been in the Great North Western Telegraph Co.'s service, as Morse operator, since June 1916, died at Quebec, Que., recently.

G. D. Perry, General Manager, Great North Western Telegraph Co., was presented with a gold mounted fountain pen, engraved with his initials, by the Toronto staff, Dec. 6, on the staff being transferred to new offices.

The Dominion Government wireless telegraph station at Triangle Island, B.C., will, it is reported, be dismantled early this year, and replaced by a new station to be erected at Bull Harbor, Hope Island, off the north of Vancouver Island. The new station will, it is stated, be of the same power as the one on Triangle Island, and will handle traffic from ships and northern stations.

The Great North Western Telegraph Co.'s General Manager, Secretary and Auditor, Treasurer, Commercial Superintendent, Traffic Superintendent, Plant Superintendent, and Superintendent of Supplies, have removed from Wellington and Scott Sts., Toronto to the World Building, Richmond St., their former offices having been added to those of the Toronto local staff.

The following representatives of Canadian and allied companies are among those who have been elected members of technical committees of the American Railway Association, Telegraph and Telephone Section:—Committee 1, construction and maintenance, outside plant, E. Kenward, Superintendent, Railway Telegraph Service, Great North Western Telegraph Co., Toronto; W. J. Rooney, Plant Superintendent, Great North Western Telegraph Co., Edmonton, Alta. Committee 2, construction and maintenance, inside plant, C. E. Davis, General Traffic Superintendent, Great North Western Telegraph Co., Toronto; T. Rodger, Superintendent of Telegraphs, Grand Trunk Ry., Montreal. Committee 3, protection against electrolysis, J. R. Larocque, Chief Inspector of Telegraphs, Grand Trunk Ry., Montreal; G. H. Mayer, Superintendent of Telegraphs, Minneapolis, St. Paul & Sault Ste. Marie Ry., Stevens Point, Mich. Committee 6, message traffic, A. P. Linnell, Traffic Supervisor of Telegraphs, Grand Trunk Ry., Montreal. Committee 10, technical training, W. E. Bell, Assistant to Manager of Telegraphs, Grand Trunk Ry., Montreal.

Canadian National Telegraphs.

The Canadian National Railways' telegraph and telephone service, on Canadian Northern Ry., eastern and western lines; Intercolonial Ry. lines west of Moncton, except Fredericton Subdivision; National Transcontinental Ry., Moncton to Winnipeg; and Quebec & Saguenay has been re-organized and merged with the Great North Western Telegraph Co., which now constitutes the C.N.R. Telegraph Department, under G. D. Perry, General Manager, and is designated Canadian National Telegraphs. The department, as re-organized, has charge of, and is responsible for, the construction and maintenance of telegraph and telephone plant and equipment. It has full charge of all staff employed in connection with operation of all telegraph services, except the following, who remain under the jurisdiction of railway superintendents, viz., train dispatchers and operators in dispatching offices, agents and operators at way stations and yard offices, also ordinary railway termi-

nals where railway business predominates. At large terminals, where the same staff handles both railway and commercial business in the same office, such staff are under the telegraph department's jurisdiction, but, where separate offices are maintained, those handling the railway work exclusively remain under the railway superintendent. Dispatchers, agents and operators remain under railway superintendents' jurisdictions are carried on railway pay rolls; all others employed in connection with telegraph and through telegraph service are carried on telegraph department pay rolls. Railway agents and operators, who also handle commercial telegraph business, receive commissions for such service from the telegraph department direct.

Special arrangements may be made whereby the telegraph department will construct and maintain local telephone systems, otherwise such systems will be looked after by the railway district electrical forces. Special arrangements may also be made whereby the telegraph department will construct and maintain automatic signal wire circuits only.

G. D. Perry, General Manager, issued the following circular Dec. 23, 1920:—Effective Jan. 1, 1921, the telegraph business at present carried on under the name of the Great North Western Telegraph Co., will be conducted in the name of Canadian National Telegraphs. Re-adjustment of our relations with the Canadian National Ry. has made it necessary to change the organization of the telegraph company, and the dsrhdrl telegraph company. The details of the new organization are as follows:—

Executive Officers:—Geo. D. Perry, General Manager; A. C. McConnell, Secretary and Auditor; D. E. Henry, Treasurer.

Commercial Department:—General Commercial Superintendent, W. G. Barber, Toronto, in charge of commercial matters throughout system.

District Commercial Superintendents: L. H. Hume, Montreal, in charge of all offices in New Brunswick and Quebec and offices in Ontario east of a line drawn from a point immediately east of Kingston to a point immediately west of Petawawa, and including all offices on the National Transcontinental Ry. from Moncton to Quebec-Ontario boundary line.

J. G. Davis, Toronto, in charge of all offices in Ontario west of a line drawn from a point immediately east of Kingston to a point immediately west of Petawawa, and extending to, but not including, Port Arthur, Ont., also all offices on the National Transcontinental Ry. from Quebec-Ontario boundary line to, but not including, Superior Jet, Ont. J. F. McTaggart, Winnipeg, in charge of Port Arthur and all offices west thereof in Ontario and all offices in Manitoba and Hudson Bay Jet, in Saskatchewan, also all offices on the National Transcontinental Ry. from and including Superior Jet, Ont., to Winnipeg, Man., and on branch line from Superior Jet to Port Arthur, Ont.

C. H. Stead, Saskatoon, in charge of all offices in Saskatchewan, excepting Hudson Bay Jet, and all offices in Alberta and British Columbia.

Traffic Department:—General Traffic Superintendent, C. E. Davies, Toronto, in charge of traffic and inside plant throughout system.

Superintendents of Railway Telegraph

Service:—E. Kenward, Toronto, lines east of Port Arthur, R. MacMillan, Winnipeg, lines west of Port Arthur.

District Traffic Superintendent:—G. H. Walters, Montreal, lines east of Port Arthur; B. S. Round, Winnipeg, lines west of Port Arthur.

Plant Department:—District Plant Superintendents—W. J. Duckworth, Toronto, in charge of outside plant east of Port Arthur; W. Girard, Winnipeg, in charge of outside plant west of, and including, Port Arthur to, and including Saskatoon; W. J. Rooney, Edmonton, in charge of outside plant west of Saskatoon.

Supply Department:—Superintendent of Supplies—Geo. Watt, Toronto.

Commercial News Department:—Superintendent of Reports—R. H. Hathaway, Toronto.

The company has a large number of competent, faithful and loyal employees, and I have no doubt they will use their best efforts towards making the National Telegraphs a great success. On account of the National system being under Government control, we will be subject to keen criticism when we are at fault, and I ask your hearty co-operation in striving for a perfect service. I shall be glad to receive suggestions from time to time, and they will have careful consideration. I wish to thank all employees for their assistance in the past in promoting the business of the Great North Western Company, and I feel sure that they will do their part in building up the new Canadian National Telegraphs.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, during Nov. 1920, and for three months ended Nov. 30, 1920 and 1919:—

	Nov. 1920	Nov. 30, 1920	Nov. 30, 1919
Canadian National Ry.	8,555	24,675	11,993
Canadian Pacific Ry.	23,164	18,364	30,890
Grand Trunk Pacific Ry.	3,388	8,110	10,074
Great Northern Ry.	14	421	413
Totals	35,384	91,570	53,370

Approval of Railway Route Maps and Location Plans: The Board of Railway Commissioners passed general order 72, Dec. 2, 1920, as follows:—Rules 167 and 170 of the Railway Act, 1919, and the question of the form of evidence of the Board's approval of route maps or location plans thereunder shall take the matter having been considered at a meeting of the Board on the 11th of the Commissioner's office, Nov. 30, 1920, at which were present the Chief Commissioner, the Assistant Chief Commissioner, the Deputy Chief Commissioner, a Commissioner, Royce and R. C. G. G. was decided that a route map and location plans approved and submitted by the Board be signed by the Chief Commissioner. The Chief Commissioner's order and the Board's decision are as follows:—

Transportation Service Ltd. has been incorporated under the Ontario Companies Act, with authorized capital of \$40,000 and office in Hamilton, Ont., to carry on among other things the business of auctioneers, brokers and forwarders, and to act as auditors and a clearing connection with transportation. The provisional directors are:—G. F. Elliott, H. Van E. Johnston, F. A. Austin and G. Austin.

Electric Railway Department

Sale of Toronto Railway Co.'s Subsidiary Companies to Hydro Electric Power Commission of Ontario and the City of Toronto.

After more than a year's negotiations, an agreement was arrived at, Dec. 3, 1920, between R. J. Fleming, General Manager, Toronto Ry., and Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, for the sale to the Commission of all the so-called Mackenzie interests in electric power, light and interurban railways in and around Toronto, except the company's street railway in Toronto. The following letter, from Mr. Fleming to Sir Adam, gives the terms in full:

"On behalf of the Toronto Railway Co., subject to the approval of the shareholders, I am authorized to make the following proposals to you: The Toronto Ry. Co. will sell to the Hydro Electric Power Commission of Ontario: All of the issued capital stock of the Toronto Power Co., of par value of \$3,000,000. All of the issued capital stock of the Toronto & York Radial Ry. Co. All of the capital stock of the Schomberg & Aurora Ry. Co., which three companies control the property commonly known as the Toronto Power Co., the Toronto-Niagara Power Co., the Electrical Development Co. of Ontario, the Toronto Electric Light Co., and the Toronto & York Radial Ry. Co.; also the Schomberg & Aurora Ry. Co.

"The sale, if made, to take effect as from Dec. 1, 1920, as of which date all taxes, insurance and other necessary adjustments are to be made. The consideration to be \$32,734,000, payable to the Toronto Ry. Co. as follows:—

"Approximately \$6,971,295 in 6% 20-year bonds of the City of Toronto, dated Dec. 1, 1920.

"Approximately \$2,375,000 of 20-year 6% bonds of the Commission, dated Dec. 1, 1920, secured by first mortgage on the properties of the Toronto & York Radial Ry. Co. outside the City of Toronto, which bonds are to be guaranteed by the Province of Ontario as to principal and interest and issued under the terms of the Hydro Radial Act.

"Approximately \$612,528 of 20-year 6% bonds of the Hydro Commission, dated Dec. 1, 1920, guaranteed as to principal and interest by the Province of Ontario.

"The assumption by the Commission of the underlying bonds and the interest and sinking funds thereon of the Toronto Power Co., as follows:

"First mortgage 5% bonds of the Electrical Development Co. of Ontario, secured by trust deed dated Mar. 1, 1903, now outstanding in the hands of the public, \$4,335,000;

"Four and a half per cent. 30-year debenture stock and bonds of the Toronto Power Co., now outstanding, amounting to \$13,558,917;

"Five per cent. mortgage bonds maturing July 1, 1924 (secured on preferred stock of Electrical Development Co.), \$4,103,200;

"Three-year 6% promissory notes of the Toronto Electric Light Co., secured by first mortgage bonds of that company on which there is due for principal \$840,000;

"Outstanding shares of Electrical Development Co. of Ontario, \$13,100;

"Total, \$22,850,217, less sinking fund

aggregating approximately \$75,040, \$22,775,177.

"Summary:—

Total purchase price	\$32,734,000
Bonds to be delivered	9,958,823
Obligations to be assumed	22,775,177

"The Toronto Power Co., subject to its bond issues above referred to, owns:

"All of the issued capital stock of the Toronto Electric Light Co.

"All except \$13,100 par value of the issued capital stock, preferred and common, of the Electrical Development Co. of Ontario.

"The last named company, subject to its bond mortgage above referred to, owns all of the stock and all of the bonds of the Toronto & Niagara Power Co.

"The Toronto Power Co. owns a debt of the Toronto Electric Light Co., a se-

whose shares are owned by the Toronto Railway Co., and will be transferred as aforesaid.

"It is understood that with respect to the Toronto Power Co., the Toronto & Niagara Power Co., the Electrical Development Co., the Toronto & York Radial Ry. Co., and the Schomberg & Aurora Ry. Co., current assets consisting of cash and bills and accounts receivable and the assets referred to in the schedule annexed hereto are to be taken out from the assets of the respective companies and are not to pass under the proposed sale. The current liabilities of the said companies accrued due up to Dec. 1, 1920, other than intercompany liabilities and those to be assumed as aforesaid, to be paid or provided for by the vendors and not to form a liability of the said company on the said date.

"The Toronto Ry. Co. being liable as guarantors in respect of the two issues of bonds of the Toronto Power Co., your Commission is to agree to indemnify and save the said company harmless under its said guarantees and to agree to enter into a direct covenant with the trustees of the said issues for the purpose of guaranteeing the bonds of the said issues and the interest and sinking fund thereon in consideration of the Toronto Ry. Co. being relieved from its guarantees in connection therewith, provided this can be arranged with the bondholders and the trustees of the said issues.

"The power supply of the Toronto Ry. to continue under the existing contract until such time as the city takes over the street railway.

"The Gas Processes, Ltd., has erected and is occupying a building in the Scott St. property of the Toronto & Niagara Power Co. and is also occupying portions of the building of the Toronto & Niagara Power Co. and the said property. It is understood that they are to be allowed to remain without rental for a reasonable time, not to exceed six months, and then to be entitled to remove their property, including the building.

"As the transaction, if consummated, will involve handing over the entire control and management of the companies in question, owing to the difficulty in transferring the actual assets, comprising the distribution system in Toronto at this time, it is understood that all transactions shown by the books of the respective companies up to Dec. 1, 1920, are to be considered as having been confirmed by the shareholders of the companies respectively, and are not to be questioned by the purchasers as shareholders or otherwise. All books, records and documents of the respective companies necessary in the opinion of G. T. Clarkson, in connection with the operations of the companies are to be handed over to the purchasers. All other books, records and documents to remain in the possession and be the property of the Toronto Railway Co.

"If the proposal is accepted, a formal agreement is to be entered into between the Toronto Ry. Co. and the Commission. It is a term of this proposal that the Ontario Legislature shall confirm the

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutchison, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gabor, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Rende, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

curity for which it holds \$3,000,000 of second mortgage bonds of the Toronto Electric Light Co.

"The Toronto Power Co., through its ownership of all of the stock of the Toronto Electric Light Co., owns the note of the Toronto & Niagara Power Co., for \$422,100, representing the balance of the purchase price for the Toronto Electric Light Co.'s property, and in addition the Toronto & Niagara Power Co. has assumed the payment of the first and second mortgage bonds of the Toronto Electric Light Co., aggregating \$4,000,000.

"The Toronto & York Radial Ry. Co. owns the radials running east, north and south from Toronto, known as the Scarborough Division, the Metropolitan Division, and the Mimico Division. It has an existing bond issue of approximately \$1,640,000, which will be discharged when the purchase is closed. The Schomberg & Aurora Ry. is owned by the company of that name, all of

sale and the terms of the formal agreement above referred to, and the issue by the City of Toronto and the Commission of the bonds forming part of the purchase price.

"I have tried to set out in the limited time available the proposals, but may have overlooked something essential within the terms of our general understanding. If so, this can be added later."

What the City of Toronto Will Acquire.

The following letter from Sir Adam Beck, to the Mayor and City Council of Toronto gives the terms agreed upon between him and the city Board of Control for the acquisition by the city of the Toronto Electric Light Co., and certain portions of the Toronto & York Radial Ry.:—"After investigation by Hydro Electric Power Commission of Ontario's engineers and accountants of the properties and businesses of the Toronto Power Co., the Electrical Development Co., the Toronto Electric Light Co., the Toronto & Niagara Power Co., the Toronto & York Radial Ry. Co., and the Schomberg & Aurora Ry. Co., and after negotiations extending over a period of more than a year with the Toronto Ry. Co., which owns or controls the same, the company has signified its willingness to dispose of Dec. 1, 1920, of the undertakings of the said companies, free from liability except certain assets and liabilities specified by the vendors to the Hydro Electric Power Commission acting for and on behalf of the municipalities comprising the Niagara system and the City of Toronto for \$32,734,000. This involves the purchase of the following properties:

"1. For and on behalf of the municipalities comprising the Niagara system:

"The Electrical Development Co.'s generating plant at Niagara Falls. The Toronto & Niagara Power Co.'s transformer stations and transmission lines and the steam plant, lands and property in Toronto, at a total price of \$32,547,705, to be paid by the assumption of the outstanding securities of the Toronto Power Co. and the Electrical Development Co., amounting to approximately \$21,935,177, and by the issue of bonds of the Hydro Electric Power Commission guaranteed by the Province of Ontario for the balance.

"2. For and on behalf of the City of Toronto:

"(a) The distribution system of the company in Toronto for \$7,226,295, and the section of the Metropolitan Division of the Toronto & York Radial Ry. Co. within the city (limited to what lies on the highway), for \$585,000, or a total of \$7,811,295, to be paid by the assumption by the city of 6% bonds against the property of the Toronto Electric Light Co. to the extent of approximately \$840,000, due \$30,000 every three months until 1922, when the balance thereof matures, and by the issue of 20-year 6% bonds of the City of Toronto for the balance; provided that the city will transfer to the Commission the right of way and the physical assets it now owns within the city on the Kingston Road to the Woodbine, and on the Lake Shore Road from the Humber to Sunnyside. Owing to the inability of the Toronto Power Co. to free the Toronto Electric Light Co.'s properties from bond mortgages given by the Toronto Power Co., the said properties must remain subject thereto until the bonds of the Toronto Power Co. are paid off, when the said properties will pass to the city; and in the meantime the right of the city to receive the properties upon payment of the

said bonds is to be confirmed by act of the Legislature.

"(b) The properties of the Toronto & York Radial Ry. Co., including the Metropolitan Division (except the section on the highway within the city limits), the Scarborough Division and the Mimico Division, for \$2,375,000 to be paid by the issue of bonds of the Hydro Electric Power Commission, secured, as provided under the Hydro Electric Railway Act, by the issue and deposit by the City of Toronto of an equivalent amount of debentures, and guaranteed by the Province of Ontario. As to these railways, it will be necessary that the agreement to be entered into should provide that the municipalities interested therein will

authorizing the city to carry out the proposals outlined in paragraph 2."

The Toronto City Council passed a by-law Dec. 8 to submit to the ratepayers at the municipal elections on Jan. 1 the question of whether they are in favor of carrying out the agreement as outlined above.

The Radial Railways' History.

The Metropolitan St. Ry. Co. of Toronto was incorporated by the Ontario Legislature in 1877 subsequent to which agreements, signed on behalf of the company by C. D. Warren, President, were entered into with the County of York, dated June 29, 1884; June 25, 1885; June 28, 1889; Dec. 17, 1889; Oct. 20, 1890, and Mar. 2, 1891. The first agreement was entered into in conformity with a bylaw passed by York County Council, June 25, 1884, which authorized the company to build a tramway on Yonge St., between the northern limits of Toronto, and the Eglinton town hall. The 1886 agreement authorized the extension of the line for a further distance of three-quarters of a mile; the 1889 agreement authorized the use of electricity for the operation of the cars, and gave permission to carry freight; the Dec 1889 agreement authorized the building of additional switches and turnouts, the 1890 agreement authorized the extension of the line to the top of York Mills hill, and the 1891 agreement authorized the company to change the gauge of the line to 4 ft. 8½ in., or to whatever gauge might be the standard for electric railways. In 1893 the Ontario Legislature passed an act changing the name of the company to the Metropolitan St. Ry. Co., and gave it power to extend its line to Lake Simcoe and to build branch lines to Markham, Newmarket and Schomberg. The act also confirmed the six agreements mentioned above under which the original sections of the line were built, and also confirmed a bylaw relating to the extension of the line from its then terminus to Richmond Hill.

The company was authorized by an amending act of 1895 to run cars or trains into Toronto on Sundays for the transportation of milk, and municipalities were given certain powers as to levying taxes on the railway. In 1897 the title of the company was changed to the Metropolitan Ry. Co. The line to be built by it was defined as being in York and Simcoe Counties, with branches to Newmarket, King, Markham, Weston, Woodbridge, Kitchener, Nobleton, Schomberg, Tottenham, Repton, Alliston, Bradford and Barrie, with lines from the latter town to Graftonwood and Orillia, the gauge to be 4 ft. 8½ in. The company was authorized to acquire the Toronto & Scarborough Ry. and it was declared that the act did not confer any right to operate a railway by electric or cable power in Toronto without the consent of the city council. Another act in 1900 authorized the company to extend its lines to Pickering, Scudville, Oshawa, and Thelma, and to acquire their lines.

The Toronto & Richmond Hill Ry. Co. Ltd. was incorporated under the provisions of 1884 to build an electric railway from Toronto to Richmond Hill. In order to aid in the construction of this line the York Township Council obtained a general act confirming the company's claim for the issue of \$30,000 of debentures, with authority to levy a special rate for the payment of interest and principal, together with authority to rescind this bylaw. Nothing appears to have been done by this company.

The Toronto & York Radial Railway's Three Divisions, Metropolitan, Mimico, and Scarborough.

be given an opportunity of voting under the Hydro Electric Railway Act to acquire their proper interest and their acceptance will proportionately reduce the amount to be now assumed by the City of Toronto.

"The Ontario Government has given its approval and has stated that it will pass such orders in council and submit such legislation as may be necessary to carry out and validate the transaction.

"After due consideration, the Commission has decided to recommend, subject to such further investigation as is thought advisable by council for the Commission, and to the preparation of a satisfactory formal agreement with the vendors, the purchase of the above properties and further recommends that the necessary bylaw be submitted to the qualified voters of the City of Toronto,

The Toronto & Scarborough Electric Ry., Light & Power Co. (Ltd.) was incorporated by Ontario letters patent Aug. 18, 1892, and obtained an act from the Legislature in 1893 which provided for a capital of \$500,000 and a bond issue of \$20,000 a mile of lines built, and confirmed agreements made with York County, East Toronto Village and York and Scarborough Townships. These agreements were signed on behalf of the company by John Hallam, Vice President. The agreement with York County authorized the company to build an electric railway on Kingston Road, and those with the other municipalities authorized it to build lines on Gerrard St., Danforth Road, Don Mills Road and other streets and roads.

The Toronto & Mimico Electric Ry. & Light Co. (Ltd.) was incorporated by letters patent, and obtained its first act from the Ontario Legislature in 1891, which authorized the construction of an electric railway on the Lake Shore Road, the development of electric power and the operation of an electric lighting plant, and of the purchase of 100 acres as a pleasure park. At this time the City of Toronto did not extend west of Dufferin St., for certain agreements with York County, dated 1890 and 1892, and annexed to a subsequent act, granted the company the right to build an electric railway on the Lake Shore Road from Dufferin St. to Roncesvalles Ave., for the balance of the period of the lease of that portion of the road to Parkdale Village, and from 1905, when the lease expired, to Dec. 1911; and the council also gave the company permission to build a line on the Lake Shore Road from Roncesvalles Ave. to the county boundary. These agreements were signed on behalf of the company by F. Barlow Cumberland, President. In 1903 the Legislature changed the name of the company to the Toronto & Mimico Ry. Co., and authorized it to extend its line from Long Branch, Port Credit, Oakville, Brantford, Burlington and Hamilton. In 1904 an agreement was entered into with Toronto Tp. Council for the extension of the line along the Lake Shore Road through the township, with the privilege of using a private right of way west of Port Credit.

The Schomberg & Aurora Ry. Co. was incorporated by the Dominion Parliament in 1896, to build a line from the G.T.R. Toronto-North Bay branch to near Schomberg, Ont., and in 1900 power was granted to extend the line southeasterly to Oshawa, and northeasterly through Shelburne to Durham. Construction was started from near Bond Lake, on the Metropolitan Ry., in the late summer of 1901, and the line was completed to Schomberg, 14.42 miles, in 1904, when it was sold to the Toronto & York Radial Ry. It was operated as a steam line until early in 1916, when it was converted into an electric line.

The Toronto & York Radial Ry. Co. was incorporated in 1898 by the Ontario Legislature and given power to acquire the property and franchises of Toronto & Scarborough Electric Ry., Light & Power Co., Toronto & Mimico Electric Ry. & Light Co., Toronto Suburban Ry. Co.; and Metropolitan Ry. Co. In 1901 the Legislature passed an act giving the T. & Y. R. Ry. Co. power to acquire the Schomberg & Aurora Ry. Co.'s line. In 1906 the Legislature passed an act in which it was recited that the properties of the companies mentioned in the act of 1898, with the exception of the Toronto Suburban Ry., had been acquired,

and the powers as to construction previously granted to the three separate lines were continued to the T. & Y. R. Ry. Co., which was also authorized to extend its line to a junction with the James Bay Ry., and to Stouffville, Whitby and Bowmanville, and an additional section declared that agreements of the three acquired companies as they effected the City of Toronto were in no way affected by the new legislation. In 1911 the Legislature passed an act in which an extension of time for the construction of the line authorized to be built by the several companies was granted; power was given to build on private rights of way, and rights of expropriation were given subject to the Ontario Railway and Municipal Board's approval.

Building of Lines.—Under the charters referred to the Toronto & Mimico Ry. built a line on the Lake Shore Road from Sunnyside, just west of the G.T.R., to Long Branch Park, 5.79 miles; the Toronto & Scarborough Ry. built a line from the Woodbine, along Kingston Road for 5.07 miles, and the Metropolitan Ry. built a line on Yonge St., from north of the C.P.R. to Newmarket, 28 miles, making a total mileage taken over by the Toronto & York Radial Ry. 38.56 miles. After the amalgamation the work of expansion was begun, and the Toronto & Mimico Ry. was extended from Long Branch to Port Credit, 3.95 miles. The agreement with the Toronto Tp. Council called for the construction of a line to the township's western boundary, and the council subsequently recovered \$1,000 as a penalty for failure to build this line. The Metropolitan Ry. was extended from Newmarket, mainly on private right of way, to Lake Simcoe, at Sutton West, 25 miles.

Under the terms of the franchises the City of Toronto acquired in 1913, from the Toronto & Mimico Ry. Co., the section of the line from Sunnyside to the Humber, the price being fixed by arbitration at \$79,245.07, and in 1914 the ratepayers authorized debentures for the amount to be issued. This section and the line being operated by the T. & Y. R. Ry. under contract for the city. Upon the completion of the G.T.R. track elevation at Sunnyside the city built an extension of the line from Sunnyside to Roncesvalles Ave., at which point passengers make connection with the city lines.

On June 25, 1914, the City of Toronto took up the tracks of the Metropolitan Ry. from the C.P.R. tracks at North Toronto to Farnham Ave., 1,220 ft., and in the next two years considerable litigation took place. The Toronto & York Radial Ry.'s Metropolitan division terminals are now at Farnham Ave., and the Toronto Ry. has been extended from its terminus south of the C.P.R. tracks to Farnham Ave.

Toronto & York Radial Ry. Statistics. The following figures are for the year ended June 30, 1919:—

Length of railways owned, 68.97 miles; under lease or contract, 3.20 miles; total operated, 72.17 miles; length of sidings, switches, etc., 9.83 miles; total mileage, 82.00.

Rolling stock and miscellaneous equipment:—49 box motor passenger cars, 3 open passenger cars; 1 official car; 1 electric locomotive; 11 baggage, work and express cars; 15 platform cars; 10 tool cars; 4 snow ploughs; 1 bonding car; 7 other highway vehicles; 9 wagons and sleighs; 7 motor trucks and 2 automobiles.

Gross earnings from operation	\$796,168.15
Operating expenses	577,422.56
Net earnings	\$218,745.59
Total charges and deductions	192,057.19
Net divisible income	\$26,688.40
Total surplus	\$264,554.17
ASSETS.	
Cost of railway	\$1,466,700.08
Cost of equipment	641,822.17
Cost of land and buildings	393,697.89
Other permanent property	3,806.84
Cash and current assets	21,691.22
Miscellaneous assets	153,120.38
Total	\$5,932,211.18

LIABILITIES.	
Common stock	\$2,000,000.00
Funded debt	1,640,000.00
Real estate mortgage	15,900.00
Current liabilities	1,974,244.54
Accrued liabilities	24,228.70
Sinking and special funds	264,554.17
Profit and loss	\$5,932,211.18

During the year 7,547,949 passengers and 47,342 tons of freight were carried.

The directors of the company are:

Sir William Mackenzie, President; Senator F. Nichols, Vice President; Sir Henry Pellatt and E. R. Wood, Toronto; Senator C. P. Baubien, Montreal; and F. W. Ross, Quebec.

The officers are:—J. C. Grace, Secretary-Treasurer; W. H. Moore, General Manager; C. J. Wilson, Assistant Manager; F. S. Livingston, Traffic Manager; C. W. Nott, Superintendent; L. P. McClelland, Superintendent, Metropolitan Division; J. F. Deadey, Superintendent, Mimico Division; Jno. Break, Superintendent, Scarborough Division; C. P. Van Norman, Resident Engineer; W. B. Boyd, Chief Electrical Engineer; G. K. Hyde, Purchasing Agent; J. B. Smith, Master Mechanic; J. H. Middlebrook, Superintendent Overhead Work.

Guelph Radial Railway's Future.

The position of the Guelph Radial Ry. in regard to the Hydro Electric Power Commission of Ontario has been the subject of considerable discussion since the appointment of J. E. Macdonald, of the Ontario Government, to enquire into the entire question of hydro electric radial railways in Ontario. In Jan. 1920, Guelph ratepayers endorsed a bylaw for the transfer of the line to the H. E. P. C. O., it being understood that the line would be a part of the Hamilton-Guelph-Elmira line, which was voted on by the municipalities interested also in January. The line was to be transferred under the bylaw as passed, but a question was raised as to whether everything was in order, the bylaws passed by the outside municipalities not including a section of to the Guelph Radial Ry. The negotiations resulted in a new agreement being framed, which was passed by the Guelph City Council, Dec. 12, and which will be voted on by the ratepayers at the January elections.

Under the new agreement the city agrees to sell and the commission agrees to purchase all the assets, undertakings and property of every kind and nature belonging to the Guelph Radial Ry., or to which the G.R. Ry. is entitled in connection with its business, free from liability; that the consideration shall be \$150,000, payable in instalments of \$11,700 in each year for 20 years in half yearly payments on May 1 and Nov. 1, the first of such half yearly payments of \$5,850 to be made on Nov. 1, 1921. The city agrees with the commission to bear the cost of acquiring, equipping, operating, maintaining, repairing, renewing and insuring the railway and its

property and works as established by the commission, and also to issue debentures for \$300,000, maturing in 50 years from

the date of issue, bearing interest at 5% per annum, payable half yearly. The debentures shall be deposited with the

Commission on the confirmation of the agreement, and to be held or disposed of from time to time by the Commission.

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—The Board of Railway Commissioners passed order 30,376, Nov. 29, 1920, approving this company's standard freight mileage tariff, supplement 1 to C.R.C. 132, to become effective Dec. 6, 1920.

The Board also passed order 30,409, Dec. 2, 1920, approving this company's supplement 1 to its standard tariff of maximum fares, C.R.C. 8.

Chatham, Wallaceburg & Lake Erie Ry.—The Board of Railway Commissioners passed order 30,303, Nov. 30, 1920, approving this company's standard freight mileage tariff, supplement 1 to C.R.C. 576, effective Dec. 6, 1920.

The Board of Railway Commissioners passed order 30,382, Nov. 30, 1920, approving this company's standard passenger tariff, C.R.C. 42, effective Dec. 6, 1920.

Assistant Chief Commissioner McLean gave the following judgment, Nov. 26, 1920: Re Chatham, Wallaceburg & Lake Erie Ry. Co.'s application, for approval of proposed standard passenger tariff, C.R.C. 42, and standard freight mileage tariff, supplement 1 to C.R.C. 576. The company applies to be permitted to put in force the percentage increases authorized by general order 308. The following summary detail for the year ended June 30, 1920, may be referred to as showing the financial position of the applicant:—

	1918.	1919.	1920.
Gross earnings	\$130,574	\$184,470	\$176,619
Operating expenses	97,590	152,971	167,579
Net revenue	\$ 32,984	\$ 31,499	\$ 8,440
Deduct:—			
Taxes	2,636	3,600	6,433
Interest on unfunded debt	2,363	4,015	3,360
Interest on funded debt	34,725	34,725	34,725
Net loss	\$ 6,742	\$ 10,841	\$ 36,078

In addition to the detail above set out, the following additional material has to be considered:—

	1918.	1919.	1920.
Other charges			
Retirements	\$ 8,746	\$ 1,025	\$ 17,791
Reduction on			
City of Chatham	2,000	2,000	2,000

With an increase of 35% in gross revenue, there has in the same period been an increase of 72% in operating expenses. The General Superintendent of the railway says in his application:—"As already advised, the Dominion Sugar Co. handles at least 75% of the total tonnage freight originating on this line, and I am assured by its Vice President that it is quite agreeable to allow us charges same as rates effective on other lines."

In the judgment of June 7, 1918, which found the application of the 15% increase justifiable in the case of this line, its operating and financial conditions were analyzed in detail. What is set out above shows the unfavorable condition in which it still stands. The judgment in question said:—"The railway company represents that it has no agreement with any municipality, which in any way limits the rates, either freight or passenger, which it may charge. It further represents that the present application does not involve an increase in the existing 5c. fare applicable in the City of Chatham."

The Board has not been notified of any change on the part of the railway in respect of the fare within the City of Chatham, and it is assumed that the application does not involve any increase therein. On consideration of the material submitted, I am of opinion that it discloses such a condition as justifies the granting of the percentage increases authorized by general order 308.

Fort William Municipal Railway, Port Arthur Civic Ry.—We are officially advised that on Sept. 1, 1920, there was put in operation on these railways an increased schedule of fares, as follows: Cash fare, 7c, or 4 tickets for 25c; pupils, 7c, cash, or 8 tickets for 25c, (these latter tickets were sold only at the offices and were valid only for going to and returning from school); children's fare, under 10 years, 3c, cash, or 10 tickets for 25c. These rates replaced the former cash fare of 5c, or 5 tickets for 25c, there being no changes in the pupils and children's fares.

On receipt of a complaint made by Port Arthur ratepayer that the Fort William and Port Arthur railways were charging higher rates than those approved by the Ontario Railway and Municipal Board, A. B. Ingram, Vice Chairman, at the request of the other members of the Board, visited Port Arthur to make an investigation. A conference was arranged with the complainant, C. A. Gordon, Mayor I. L. Matthews, B. Tourtellot, and E. J. Blaquier, Port Arthur Public Utility Commissioners, and J. G. Macdonald, Chairman of Fort William Public Utilities Commission, on Nov. 8, at which it was shown that the complaint was well founded. The excuse given by the commissioners for charging higher rates than those approved by the Board was that the latter did not provide sufficient revenue to meet operating expenses and fixed charges. As a result of the investigation, Mr. Ingram recommended that the Board issue an order, or such other instructions, as would require both systems to restore the rates previously approved by the Board. An order directing the restoration of the 5c. fare in both cities was made subsequently.

The municipalities, on receiving the order applied to the Board for the hearing of their application for power to charge increased fares, which was sent in July, 1920, and Dec. 16, 1920, was fixed for hearing the cities' representation on the matter. The municipalities were informed that pending the hearing the order above referred to was suspended. Subsequently the hearing was postponed to Dec. 20, when I. F. Hellmuth, K.C., presided in the case for the railways' argument was reserved.

The matter was discussed, a press report states, by the independent labor party, in Fort William, Nov. 30, and a resolution was passed asking for the appointment of a commission to investigate the operation of the railway. The Mayor is expected to have stated that a petition would likely be submitted to the ratepayers asking if they would favor increasing the fare to 7c.

The same press report adds that the Mayor of Port Arthur stated that the whole matter of increased fare was to be argued before the Ontario Railway

and Municipal Board on Dec. 16, that the question was whether the two cities were within the law in collecting the increased fare of 2c, and that it was proposed to continue to collect the extra fare, and in the event of the Ontario Railway and Municipal Board declaring it to be illegal, the only course open would be to apply for special legislation to authorize a 7c. fare.

Guelph Radial Ry.—Guelph City Council and Guelph Radial Ry. Co. are applying to the Ontario Legislature for an act to authorize the charging of the following fares on the railway: Single cash fares 7c, or 4 tickets for 25c; fares after 11 p.m. and before 5 a.m. to be double the ordinary maximum single fare. The present fares are 5c. cash or 6 tickets for 25c.

Hull Electric Co.—We are officially advised that the company has filed with the Board of Railway Commissioners a special local passenger tariff, effective from Dec. 6, 1920, increasing the fare between Ottawa and Aylmer from 20c to 25c. Tickets sold formerly at three for 50c., are now 11 for \$2; children's tickets sold previously at 4 for 25c. and 3 for 25c. between Ottawa and Deschenes and Aylmer, respectively, are now 15 for \$1. Sale of tickets by conductors has been discontinued and they are now sold at the company's offices and at a number of points along the line. Books of tickets are not transferable and are limited to one month from date of issue.

London St. Ry.—The London, Ont. City Council's no. 1 committee, on Dec. 2, failed to take any action on a suggestion for the submission of a bylaw to the ratepayers at the municipal elections on Jan. 1 to permit the increase of fares by reducing the number of tickets sold for 25c. to 6 and 8 respectively.

Port Arthur Civic Ry.—See Fort William Municipal Ry.

Peterboro Radial Ry.—Increased passenger fares were put in effect on Dec. 1 on this railway, which is owned by the Ontario Government and operated by the Hydro Electric Power Commission of Ontario. Following is a comparison of the new and old fares:—

	Single	Old
Adults:—		
Cash	10c	8c
Tickets, unlimited	1 for 25c	1 for 25c
Children:—		
Between 4 and 10 years	5c	4c
Under 4 years, unaccompanied	3c	2c
Under 4 years, accompanied	5c	4c
School tickets, limited	1 for 25c	1 for 25c

Waterloo Wellington Ry.—In reference to a press report stating that under the Board of Railway Commissioners' authority the fare on this line (formerly the Berlin and North York Ry.) had been increased to 10c, or 12 tickets for \$1 until March, we are officially advised that while the fare has been increased, it has been done with the approval of the municipalities, which the line is situated in, and that the increase will be operative to the end of April. The reason for the increase was that last year the wages and other direct operating costs were materially more than the receipts, and it was a question of increasing the fare or closing down for the winter. The W. W. Ry. Co. operates under an Ontario

charter and is not under the Board of Railway Commissioners' jurisdiction.

Windsor, Essex & Lake Shore Rapid Ry.—The Board of Railway Commissioners passed order 30,392, Nov. 30, as follows: Re application of Windsor, Essex & Lake Shore Rapid Ry., under sec. 331 of the Railway Act, 1919, for approval of its Standard Mileage Freight Traffic, C.R.C. 269. Upon the report and recommendation of the Board's Chief Traffic Officer, and reading the submissions filed in support of the application, the Board orders that the said tariff, to become effective Dec. 6, 1920, be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Assistant Chief Commissioner J. S. McLean addressed the following memorandum in connection with this case to the Chief Commissioner:—This company was permitted by a judgment of June 7, 1918, to apply the 15% increase on freight. It did not apply the subsequent increase provided for under Privy Council order 1863. It is now asking to apply the 40% on its existing basis, wherein the increase of P.C. 1863 is not included.

Mr. Brown's memo. of Sept. 24, 1920, on file compares the proposed standard with the rates authorized under general order 308. The following computation, based on first-class rates, compares the proposed standard of the applicant (set out as B) with the rates established under general order 308 (set out as D), and also indicates the per cent. by which B is below D:

		B expressed as per cent.	
		Rate under B.	Rate under D.
Net over 5 miles.....	12½	24	66½
5 — 10 ".....	15	24	75
10 — 15 ".....	18½	24½	79½
15 — 20 ".....	22½	26	80½
20 — 25 ".....	26	28	81½
25 — 30 ".....	28½	30½	80½
30 — 35 ".....	31½	32½	80½
35 — 40 ".....	35	45	78½

It will be noted that on the mileages 15-40 the rates resulting from applying the 40% increase to its existing base are approximately 20% below the basis as indicated in the 15% case, with the appropriate increases under P.C. 1863 and general order 308.

As was set out in the judgment of 1918, the only agreement existing between the railway and any municipality which in any way bears on the level of freight rates is as set out in sec. 7 of bylaw 1101 of the City of Windsor, which bylaw is in respect of the Windsor, Essex & Lake Shore Rapid Ry. The provision in question provides: "The company shall carry freight to and from Windsor upon the entire or any portion of its system at rates not in excess of regular steam railroad rates for similar distances and between the same places."

The apparent intention is that the steam railway rates, in the area as defined, changed as they may be from time to time, shall act as maxima. The statements on file, attached to applicant's letter of Nov. 4, shows comparison of rates as asked for between given points, and the rates as applicable between the same points, either by the Michigan Central or the Pere Marquette, according to the location of the points in question. Taking first-class rates as a basis of comparison, the proposed rates of the applicant average 73% of the rates of the Michigan Central in the case of movements common to the two lines between Leamington and Essex, Maidstone and Windsor, between Essex, Maidstone and Windsor, and between Maidstone and

Windsor. In the case of the movements common to the applicant and the Pere Marquette, the rates of the applicant on the same basis of comparison average 70% of the rates of the Pere Marquette on movements from Leamington to Ruthven, Kingsville and Walkerville (Windsor), Ruthven and Kingsville, Ruthven and Walkerville (Windsor), Kingsville and Walkerville (Windsor). Windsor is enclosed in brackets because it is the applicant's stopping place most closely adjacent to Walkerville. If comparisons are made on the basis of 5th and 10th class averages, the following detail is available for the same points:

	On 5th class.	On 10th class.
Percentage of M.C.R. rates.....	69% 76%	76% 76%
Percentage of P.M. rates.....	76% 76%	76% 76%

The first standard freight tariff of the railway was approved by the Board's order of Oct. 4, 1907. It was at that time set out that the basis was that generally applicable on the railways of Ontario and Quebec. I think that in the present instance the increase proposed should be allowed.

It may also be pointed out that for the year ended June 30, 1919, with a total revenue of \$198,565, there was a deficit, after payment of taxes and interest, of \$14,972, while for the year ended June 30, 1920, with a total revenue of \$251,266, there was a net income, after paying interest and taxes, of \$5,876. In neither of these years was any dividend paid on the capital stock, which amounts to \$750,000.

The above recommendation was concurred in by Chief Commissioner Carvell, and Commissioners Boyce and Rutherford.

Toronto Civic Railway Report.

Toronto's Works Commissioner, in an interim report on his department's work for the 11 months ended Nov. 30, 1920, gives the following information respecting Toronto Civic Ry.:—

Traffic increased steadily during 1920. Comparing the first 11 months with the same period in 1919, the following increases have occurred:—

Route.	Passengers.	Mileage.
Gerrard	39.2%	15.7%
Danforth	28.3%	39.8%
St. Clair	19.9%	7.6%
Landdowne	28.4%	9.7%
Bloor	28.6%	12.2%
Entire system	23.9%	17.6%

The passenger traffic increased from 23,587,271 passengers in 1919, to 29,234,826 in 1920, and the mileage from 1,665,997 to 1,956,813. About 100,000 revenue passengers per day are now being carried.

The following are the hourly rates of motormen and conductors:—

	From July 4, 1919, to Dec. 31, 1919	From Jan. 1, 1920, to Nov. 30, 1920
1st 3 months.....	50c.	60c.
Next 9 months.....	52½c.	65c.
2nd year and thereafter.....	60c.	65c.

If working as operators on safety cars, a differential of 5c. an hour is added. The average number of men on the staff during 1919 was 220, while 245 are employed at present.

Twenty-five safety cars, operated by one man, were received in August. They were placed in operation in the bus schedule on Gerrard St. route on Aug. 17, and in the bus schedule on Danforth Ave. route on Aug. 27. Commencing on Oct. 22, the full service on the Bloor St. route was given with these cars. The railway now operates 70 cars, the receipt of the safety cars making it possible to greatly improve the service on all routes.

A permanent double track was laid on Bloor St., between Quebec Ave. and Runnymede Road. It was opened for service on Oct. 20 and the temporary single track was removed the following week. Additional storage tracks were laid in the yards at Danforth Ave. and Bloor St. barns. During the fall, new trolley wire was strung on the whole of the St. Clair Ave. route and between Lamb and Broadview Ave. on the Danforth Ave. route.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	Oct. 1920	Oct. 1919	1920	1919
Gross	\$781,796	\$710,405	\$3,005,399	\$2,704,611

Edmonton Radial Ry.—A statement for the nine months ended Sept. 30, 1920, issued by the City of Edmonton, Alta., gives the following information as to the operation of the municipal railway:—

	1919	1920
Net deficit	\$141,397.16	\$53,823
Passengers carried	10,970,174	9,479,489

A press report states that the earnings of the railway for Oct. 1920, were \$75,726.68, and for Nov. 1920, approximately \$81,000.

Quebec Ry. Light & Power Co. — A press report states that the earnings for the three months ending Sept. 30, 1920, were \$323,798, an increase of 21.97%.

Sudbury-Copper Cliff Suburban Electric Ry. Co.—Sudbury, Ont., Town Council has, a press report states, decided not to buy the company's railway for \$190,000, at which it was offered. The matter of the sale of the line to the town had been under discussion for sometime, and it was expected that a bylaw to authorize the purchase would have been submitted to the ratepayers on Jan. 1.

A press report states that the shareholders on Dec. 6 authorized the directors to issue \$3,000,000 of 7% cumulative preference stock, and to increase the common stock to \$12,000,000, and that it is the intention to utilize the proceeds of the new issue to wipe out liabilities accumulated during the war years.

The Ontario Hydro Electric Radial Railway Enquiry.

The Commission, appointed by the Ontario Government, to investigate the system of hydro electric radial railways proposed by the Hydro Electric Power Commission of Ontario, and of which Mr. Justice Sutherland is chairman, issued the following statement Dec. 14:—

"This Commission had its first public sitting on July 28, 1920, and, after conference, concluded that its preliminary duty was to secure in written form, from the Hydro Electric Power Commission of Ontario, the proposed cost of purchase, betterments and construction of the radial railways in question, and of the estimated revenues, passenger, freight and otherwise, expected to be realized from their annual operations. Requisitions for this purpose in writing, and in somewhat general detail, were prepared and submitted, it being realized on all hands that it would take some two or three weeks to furnish these, or if they were brought up to date, some weeks longer. Pending this an adjournment was made, and meantime members of the Commission, under the guidance of Hydro Electric Power Commission officials, went over the railways in question, and the territory through which they run, so as to put themselves in a better position to appreciate the documentary and oral evidence to be given later. The material thus asked for was to a large extent furnished during September and the early part of October. It was thought that the next appropriate step was to call F. A. Gaby, Chief Engineer of the Hydro Electric Power Commission, to explain, as fully as possible, the plans, specifications and estimates thus furnished, and this took some weeks, inclusive of certain necessary adjournments from time to time to suit the convenience of members of the Commission, counsel, and the witnesses who could not devote their time continuously to the work. Mr. Gaby's preliminary evidence was completed on Oct. 26.

"A request was then made to counsel representing the Hydro Electric Power Commission, and counsel representing those questioning the propriety of the proposed purchase, as to whether they desired at this point to adduce further evidence, and neither desiring, nor offering, to do so, an adjournment was made to consider further evidence. It was thought appropriate that the evidence of Mr. Gaby should be supplemented by that of W. S. Murray, the engineering expert who had reported to the Hydro Electric Power Commission on the whole scheme on May 28, 1920. His convenience had to be consulted, and though it was expected that he could attend, he was not able to come until Nov. 22.

"In the evidence already taken, reference had been made to radial railways in the United States, from a personal inspection of which by the Commission, it was thought information could be got, important in the prosecution of their work, and a visit in the meantime was made to various cities and centers in the U.S. for this purpose. Just prior to this, it was considered advisable to secure the services of an experienced railway engineer and operating man, to whom instructions were given to make an independent study and investigation of all relevant and essential facts, to enable him to give evidence to assist in arriving at a proper conclusion. F. P. Gutelius, Vice President, Operating and Traffic Departments, Delaware & Hudson Co., was chosen. It was also decided to ask W. F.

Tye, another railway engineer, who had previously made a report on a proposed new electric railway in a part of the territory in question, to make an investigation of the whole matter with a view to giving evidence.

"It was further considered advisable that the officials from all railways, steam and electric, operating in those portions of the province, through which the railways in question would run, should be called to ascertain the business they were doing, the extent to which the public was being served by them, their annual revenues and expenditures and the like, and the nature of their business. The evidence of these officials, from the following roads, was taken: C. E. Friend, Comptroller of Finance, Canadian Northern Ry. System; G. C. Royce, General Manager, Toronto Suburban Ry.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; W. M. Neal, Assistant General Superintendent, Ontario District, C.P.R.; C. G. Bowker, General Superintendent, Ontario Lines, G.T.R.; M. W. Kirkwood, General Manager, Grand Valley and Lake Erie and Northern Ry.; G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry. In addition, W. A. Maclean, Deputy Minister of Highways, Ontario, and G. P. Parker, Superintendent, Dominion Express Co., were called. Mr. Tye was also called.

"Mr. Gutelius, after making an investigation of the documents and facts deemed by him as making an necessary, and after also making a personal inspection of the lines and territory, in company with Hydro Electric Power Commission officials, and a trip over the London & Port Stanley Ry., with and at the request of Sir Adam Beck, Chairman of the Hydro Electric Power Commission, was then called. During the giving of his evidence, his expressed his views as to the cost of purchase and construction of the proposed lines and the estimated cost of operation and revenues.

"It would seem now appropriate and desirable that we should request that those additional officials or experts who prepared the data on which the estimates were made up for the Hydro Electric Power Commission should be called, and give the members of the Commission the benefit of their evidence in the same direction. We should like, therefore, that the names of these men should be submitted, and that they should be called when and as soon as convenient.

"F. W. Coen, of Cleveland, Ohio, Vice President, General Manager and Purchasing Agent, Lake Shore Electric Ry., was also called, in view of the fact that that city has been the center of considerable electric street and radial railway operation, so that the benefit of his knowledge and experience might be had. We had also arranged that a representative of the Detroit United Ry. should attend for a similar purpose, but a day or two ago he found he could not attend, owing to meetings in which his company was interested, for the time being. Similar difficulty has arisen in securing the attendance of electric railway operating men from Boston, Indianapolis, Baltimore and Chicago, owing to engagements and meetings in connection with their business, which made it impossible for them to come at present. A further question has been considered of calling men of recognized financial experience to ascertain their views from the financial standpoint.

"It was deemed advisable to make this statement, so that the course taken and the progress made might be known."

It was announced subsequently that the Commission's next sitting will be held in Toronto, Jan. 3.

Grand River Ry. and Lake Erie & Northern Ry. Equipment Orders.

The Grand River Ry. and the Lake Erie & Northern Ry., operated under one management at Galt, Ont., have ordered 9 passenger car bodies, 6 for G.R.R. and 3 for L.E. & N.R.; 1 baggage and express car body for G.R.R., and 3 steel underframes and cabs for 60-ton electric locomotives, 2 for G.R.R. and 1 for L.E. & N.R., from Preston Car & Coach Co.; 15 quadruple equipments of motors, including control and air brake apparatus for passenger cars; 3 quadruple equipments of motors, including control and air brake apparatus for 3 60-ton electric locomotives, and also 2 complete units of 1,000 k.v.a. 1,500 volt motor generator sets for Preston substation, from Canadian Westinghouse Co.

The car bodies will be of composite construction, straight sides, monitor roof extending from vestibule to vestibule, straight platforms equipped with steam coach buffing gear, vestibule at each end of car, built of steel throughout up to the eaves, doors at each side and end of vestibule, trap doors over steps, underframes of structural steel, center and side sills continuous, side framing steel angles and T's sheeted outside with no. 11 gauge steel plate, side sash to raise, deck sash rectangular, roof covered with wood and canvas reinforced with steel carlines. The bodies will be divided into two compartments, the main compartment to extend the length of 12 windows, and to have 19 walkover and 4 stationary seats, and lavatory in the right hand end corner; the smoking compartment to extend the length of 6 windows, with 19 walkover and 4 stationary seats, with locker at right hand end corner. The general dimensions of the cars will be:

Length over platform	61 ft. 8 in.
Length over body end sills	43 ft. 4 in.
Length center to center body bolsters	41 ft. 4 in.
Width over sheeting	9 ft. 6 in.
Height under side of side sill to top of side of side plate	7 ft. 6 in.
Height under side of side sill to top of roof	9 ft. 6 in.
Height under side sill to under side of center sill	5 ft. 10 in.

The Grand River Ry. is being operated under a 600 volt current, which is being changed to 1,500 volts, as used on the Lake Erie & Northern Ry. This change necessitates the rebuilding of all overhead lines, and the re-equipping of existing rolling stock, as well as the substitution of new traction equipment, as outlined above.

The Toronto Suburban Ry. franchises for its line in the City of West Toronto will expire in September and a press report states that notice has been given that the City of Toronto will then buy these lines, but no funds have yet been provided for this purpose. These lines are owned by the Dominion Trust Co., and are operated by the Canadian National Ry. The Hydro Electric Power Commission of Ontario has been negotiating for the purchase of the whole of the T. S. Ry. Co.'s undertakings of which these lines form a part.

Saskatoon, Sask., ratepayers are reported to have voted on Dec. 17 in favor of a bylaw providing for the operation of one man cars on Saskatoon Municipal Ry.

Electric Railway Projects, Construction, Betterments, Etc.

Edmonton Radial Railway Operating Results.

Grand River Ry.—In connection with the rearrangement of the route in Galt, Ont., the C.P.R. has removed its 200 ft. freight shed 40 ft. from the original site, to provide a right of way for the electric line. (Nov., 1920, pg. 616.)

Guelph Radial Ry. Co. and **Guelph City Council** are applying to the Ontario Legislature for authority to issue \$250,000 of additional capital stock and to validate a bylaw, to be submitted to the electors Jan. 1, providing for the issue of debentures to buy additional equipment and for the betterment of the line.

Hamilton St. Ry.—We are officially advised that track has been laid on the extension of the King St. West line, from Margaret St. to Paradise Road, one mile. The line is double track and we were advised in Sept., 1920, that the length proposed to be laid was 4,773 ft. (Dec., 1920, pg. 462.)

Levis County Ry.—A press report states that the Levis, Que., Town Council decided Dec. 9 to ask the company to make repairs to the line at certain points. (Dec., 1919, pg. 670.)

London St. Ry.—We are officially advised that the company contemplates relieving some of the tracks in London, Ont. if terms as to paving can be arranged with the city council. (April, 1920, pg. 202.)

London & Port Stanley Ry.—The London City Council will apply to the Ontario Legislature, among other things, for power to issue \$257,000 of debentures to enable the London Railway Commission to pay for an electric locomotive, steam shovels, rails, car barn, freight shed and passenger station extensions, road crossings, platforms and shelters, an overhead bridge at St. Thomas, coal ferry slip and scale, and other works which are urgent and necessary. The existing debenture debt for L. & P.S. Ry. purposes is stated to be \$1,057,432.55. (Nov., 1920, pg. 616.)

Oshawa Ry.—The Board of Railway Commissioners has authorized the company to take certain lands in East Whitby Tp. and in Oshawa, Ont., and has authorized the G.T.R. and the Oshawa Ry., which is owned by the G.T.R., to build additional interchange tracks across Base Line Road, between Oshawa and East Whitby Tp. (May, 1920, pg. 257.)

Porcupine Rand Belt Line Electric Ry. A meeting of shareholders was called to be held in Toronto, Dec. 6, to receive a statement from J. H. Tighe, liquidator, as to his acts and dealings with the company's assets since his appointment as sole liquidator on Dec. 5, 1919, and to receive a report as to surface and mining rights in which the company is interested. The company decided to go into voluntary liquidation at a meeting of shareholders, held in Toronto, Dec. 5, 1919, when J. H. Tighe was appointed sole liquidator. This appointment was confirmed Aug. 1, 1920, and \$1,000 was fixed as his remuneration. The company was incorporated by the Ontario Legislature in 1912 to build electric railways in the Porcupine and contiguous mining areas of Northern Ontario. Some surveys were made, but the company's plans never reach the construction stage. (Nov., 1916, pg. 460.)

Toronto City Ry.—Toronto ratepayers will on Jan. 1 at the municipal elections vote on a bylaw to provide \$185,000 for building about 0.25 of a mile of additional line on Bloor St., from Sherbourne

to Broadview Ave.; a bylaw to provide \$31,350 for the installation of an insulated negative feeder cable on Danforth Ave. line to prevent electrolysis; and a bylaw for \$832,000 for rebuilding Gerard St. bridge, which includes the provision of a temporary trestle for street cars. (Oct., 1920, pg. 562.)

Vercheres, Chambly & Laprairie Tramways Co.—The Quebec Legislature will be asked to grant an extension of time within which the company may build the lines authorized by its act of incorporation passed in 1916, viz., on the streets in Longueuil, St. Lambert, Montreal South, Greenfield Park and Laprairie; and from Longueuil to Chambly, with branch lines in various municipalities. The company was also authorized to cross the St. Lawrence River and to enter the City of Montreal. (April, 1916, pg. 156.)

Waterloo-Wellington Ry.—We are officially advised that the company is completing a Y at Bridgeport, Ont., which was started in 1919. (June, 1920, pg. 316.)

Toronto Transportation Commission.

The Toronto City Council will, it is said, seek to obtain legislative authority to consolidate the Transportation Commission appointed under the Ontario act of 1920, with the city's Hydro Electric Commission. It is claimed that a consolidation of the two bodies would save the city approximately \$500,000 a year.

At a conference between the Transportation Commission, the Harbor Commission and the Board of Control, recently, an agreement is reported to have been reached for the joint use of poles on the city streets.

A bylaw to provide \$500,000 for motor busses by the Transportation Commission will be voted on by the ratepayers at the municipal elections on Jan. 1.

The Canadian Electric Railway Association will hold its annual meeting at Ottawa, Jan. 31 to Feb. 1. Up to the present, the membership has been confined to privately owned companies, but at the last annual meeting the constitution was revised, to provide for the addition of electric railways owned by governments and municipalities, and representatives of these lines are invited to attend, as well as electric railway supply men, for whom an associate membership class has been created. A number of papers will be read and discussed. On Jan. 31 there will be an informal dinner, and on Feb. 1 a luncheon.

Niagara, St. Catharines & Toronto Ry. A press report states that as the result of a conference of municipalities served by this line, their ratepayers will be asked at an early date to vote on a question as to whether the company's lines shall be acquired and included in the Hydro Electric Power Commission of Ontario's railway system in the Niagara peninsula.

Ontario Hydro Electric Railways, Essex Division.—A press report states that the revenue from the operation of this line, formerly Sandwich, Windsor & Amherstburg Ry., for seven months ended Oct. 31, 1920, was \$296,373, against \$225,268 for corresponding period in 1919.

Following is information as to the operation of this municipally owned line for the 10 months ended Oct. 31, 1920, with comparisons for corresponding 10 months 1919.

Service was reduced by 7,000 car miles in 1920, compared with 1919, but cost of operation increased \$97,000. The reduced service of 1920 earned \$861,000 more than that of 1919, because of increased rates. Maintenance costs increased nearly \$50,000, or 50%. The nine months deficit of \$53,823 in 1919 became \$141,379 in the corresponding nine months of 1920.

There were 65 cars in operation in 1919 and 45 in 1920. In 1919 there was a 10-minute service on the north side belt line and in 1920 a 15-minute one. On the south side belt the service was 15 minutes in 1919 and 20 minutes in 1920.

	1920.	1919.
Revenue, total	\$807,942.00	\$545,333.00
Revenue, per car mile	\$34.42	\$31.1
Expenditure, total	\$549,441.37	\$387,926.69
Expenditure, per car mile	\$32.7	\$21.9
Operating surplus, total	\$258,500.63	\$167,406.17
Operating surplus, per car mile	\$35.5	\$21.9
Total car miles	166,081.7	173,421.6
Total car hours	19,327.8	19,805.2

The final figures show a deficit of \$141,379 in 1920, against \$53,823 for 1919, but the figures showing fixed charges, etc., are not given.

Winnipeg Electric Railway Improvements Expenditures.

In April, 1918, the Winnipeg Electric Ry. and the city council entered into an agreement under which the company undertook to take steps to mitigate electrolysis, to remodel rolling stock, to make certain extensions, and to improve its service. A report presented recently at the City Hall by the company showed that during two years and a half the company expended \$1,203,879.66 for the purposes named, distributed as follows:

Remodelling cars, 87 in service and 15 in progress	\$650,911.92
Semi steel cars, 22 in service	237,922.32
Remodelling trailers, etc.	20,057.75
New car heater parts	22,113.36
Motor busses	25,349.91
Extension to Sargent Ave. line	7,614.61
Mitigation of electrolysis	238,261.10
Grounding of secondaries	815.78
Removing abandoned poles	729.91

St. John's Light & Power Co. Ltd., Newfoundland.

The St. John's Light & Power Co. Ltd. has been incorporated under the Newfoundland Companies Acts, with authorized capital of \$1,500,000, to supply electricity, to carry on any kind of manufacturing or trade, and do any other business that may be carried on in connection therewith. The provisional directors are: H. D. Reid, K. G. Reid and C. O'N. Conroy, St. John's, Nfld.

A press report, referring to the incorporation of the company, states that the Reid Newfoundland Co. has been planning for some years the extension of the St. John's street railway service over a number of other streets in the city, the provision of additional cars, and the development of additional water powers. To raise capital necessary for these extensions, bonds will have to be given on the existing street railways and electric light properties.

Proposed Purchase of Ottawa Electric Railway.

Ottawa ratepayers will at the municipal elections on Jan. 3 vote on the following question:—"Are you in favor of the city applying for legislation enabling it to borrow money, without a further vote of the electors, to acquire the property and assets of the Ottawa Electric Ry. Co. at the expiration of its franchise in 1923, under the agreement between the city and the company, at a price fixed by arbitration, as provided by the agreement?"

The decision to submit the question in this form was reached at a special meeting of the city council, Nov. 29, by a vote of 11 to 10. The discussion was lengthy, and in the course of it, Alderman Ellis, who has, whenever the matter has come up, put forward a resolution favoring the application for legislation to the effect that the city be not bound to take over the company's property upon the expiration of the franchise, and that any bylaw for taking it over should contain the price to be paid, brought forward an amendment to the effect that the ratepayers be asked if they are in favor of asking the Dominion Parliament to amend the agreement with the company so as to permit of the taking of a vote on the question of acquiring the railway after the fixing of a price by arbitration. This was defeated by 13 to 8, and after some former resolutions as to the form of the plebiscite had been rescinded, the form as above given was adopted.

In the course of the debate a lengthy statement was read by Alderman Denison in which he reviewed the history of the discussions leading up to the present position and matters affecting the valuation of the company's property.

Another special meeting of the council was held Dec. 6, at which Controller Plant moved that the ratepayers be asked the following question:—"Are you in favor of the City of Ottawa giving notice to the Ottawa Electric Ry. Co. of the city's intention to acquire the company's property and assets at the expiration of its franchise in 1923 under the terms of the agreement between the city and the railway company; and that such notice be given during the 12 months prior to the expiration of the franchise?" This was defeated by 17 to 4, after an amendment, moved by Alderman Ellis, in the same terms as that which was defeated Nov. 29, had been defeated by 13 to 8. A straight motion to reconsider the resolution of Nov. 29 was submitted by Alderman Balharne, and defeated by 12 to 10, and a notice of motion to reconsider the whole matter was withdrawn by Alderman Pinard.

The Ottawa City Council has given notice of application to the Ontario Legislature for the passing of an act amending the Ottawa City Transportation Act, by striking out the word "after" in the second line of subsection (1) of section 17 thereof, and by substituting therefor the word "without," or, in the alternative, for an act amending the said act, by providing that, notwithstanding that the city may have given the notice referred to in sec. 22 of the said act, and have proceeded to arbitration thereon, provided, it shall not be obliged to acquire and to pay for the railway and the real and personal property of the Ottawa Electric Ry. Co. in Ontario used in connection with the working thereof, unless and until a bylaw providing for the borrowing of the amount due the said company shall have been first sub-

mitted to and approved of by the electors qualified to vote on money bylaws. (The answer given by the electors upon certain plebiscite votes to be submitted to them at the annual municipal election in Jan. 1921, will determine the form in which the above legislation will be submitted.)"

The Ottawa City Passenger Ry. Co. was incorporated by a pre-Confederation statute of 1866, which was amended in 1868 by the Ontario Legislature, and by the Dominion statutes of 1892, sec. 6, the company's railway was declared to be a work for the general advantage of Canada, and it was provided that the operation of so much of the company's railway as was situated, or might in future be built in Ontario, shall be subject to the statutes of Ontario so far as operation is concerned, and so much of the line as was situated, or might be built in the Province of Quebec, shall be subject, so far as operation is concerned, to the statutes of Quebec.

The Ottawa Electric Ry. Co. was incorporated by Ontario letters patent Feb. 13, 1891, under the Joint Stock Companies Act, and the Street Railways Act, and by an agreement of Mar. 26, 1894, sold its rights and franchises to the Ottawa City Passenger Ry. Co., and provided for the amalgamation of the two companies as the Ottawa Electric Ry. Co. This agreement was ratified by the Dominion Statutes of 1894, chap 86, sec. 1, and by the Ontario Statutes of the same year, chap 76, sec. 1. These statutes also ratified the agreement entered into between the amalgamated companies for the construction and operation of an electric railway for 30 years, expiring Aug. 13, 1923. Sec. 6 of the Dominion statute amended the act relating to the Ottawa City Passenger Ry. Co. by changing its name to the Ottawa Electric Ry. Co., and section 7 declares that all the then existing lines and any lines to be built in future be works for the general advantage of Canada.

The bylaw authorizing the form of question to be asked the electors was given a third reading by the Ottawa City Council, Dec. 23. A motion to strike out the words giving the city authority to borrow the purchase money, without an additional vote of the ratepayers, was defeated by 16 to 3.

British Columbia Electric Ry. Co. Buys Western Power Co. of Canada.

As a result of negotiations which were in progress for several months, the B.C.E.R. Co. has secured control of the Western Power Co. of Canada. The B.C.E.R. Co. has unconditionally guaranteed the payment of principal and interest of \$5,000,000 par value of Western Power Co. bonds outstanding, has exercised an option to purchase a majority of the preferred stock at \$70 and the common stock at \$35.10, and has agreed to purchase the same price any additional stock which may be tendered until May 16, 1921.

The Western Power Co. of Canada's property consists of a hydro electric development at Stave Falls, a few miles from Ruskin on the C.P.R. main line, approximately some 30 or 35 miles from Vancouver. The present development consists of a plant with a capable output of 150,000,000 k.w. hours a year, but

which can be increased by the raising of the dam at Stave Falls and the installation of a fourth unit to 200,000,000 k.w. hours a year, or the equivalent of a total of 52,000 h.p. The Western Power Co. operates a standard gauge railway five miles long from Ruskin to Stave Falls, which is run by steam power and used for both freight and passenger business. The transmission system consists of 83 miles of 60,000 volt transmission line, 97 miles of 12,000 volt line, and 28 miles of underground cables. The main receiving station is at Ardley on the outskirts of Vancouver. The Stave River permits of a second development, the site of which is included in the Western Power Co.'s holdings. The location of the second development is some 3 1/2 miles below the present plant on the Stave River, and would permit the construction of a plant capable of developing some 80,000 h.p. on a 50% load factor, at an approximate cost of \$8,000,000. It is not intended, however, to proceed with this at present.

Electric Railway Track Laid in 1920.

Reports to Canadian Railway and Marine World, from electric railways throughout Canada, show that during 1920 9.70 miles of new first track were added by eight companies and three municipally owned lines. In addition to this, the Grand River Ry. revised its line in Kitchener, Ont., 1.74 miles; the Waterloo-Wellington Ry. completed a Y at Bridgeburg, Ont., which was started in 1919, and Saskatoon Municipal Ry. built 0.47 of a mile of second track on its Mayfair-University line. Following are details of new main track laid:

	Miles	Miles
British Columbia Electric Ry. Co. Hasting St. to Oxford St. King Edward Boul. to 13rd Ave.	0.248	0.020
Calgary Municipal Ry. Twentieth Ave. to 17th	0.020	0.020
Edmonton Radial Ry. Loop on Exhibition grounds Extension to Edmonton Inter-urban Ry. track	0.020	0.020
Hamilton St. Ry. Margaret St. to Paradise Rd	1.000	1.000
Montreal Tramways Co. Keller St. extension Park Ave. extension	1.111	0.971
Mississauga Electric Ry. Extension New Brunswick Power Co. Extension to East St. John Nungesser Falls Park & River Ry. Extension in Quebec, Ont. Nova Scotia Electric & Power Co. New double track, Halifax Quebec Ry. Light & Power Co. St. Charles Extension Cemetery to city limits	0.020	0.020
Toronto City Ry. Blue St. extension Winthrop Electric Ry. East Main Ave. Brydges St. extension C.P.R. cut	0.020	0.020
Total	9.700	0.020

London Street Railway Wages.—It was announced that the London Street Railway Co. has been advised that the Ontario Railway and Municipal Board has ordered the London St. Ry. to operate on Jan. 16, 1921, it agreed to pay the conductors and motormen \$2.00 an hour and up to \$2.00 if the revenue warranted. The Board did not pay an extra 10c an hour in July and August, making \$4.40 an hour in September and October, and \$4.00 for those months.

Electric Railway Notes.

Guelph Radial Ry., owned and operated by the city, has discontinued free transportation for aldermen and civic officials.

St. Thomas, Ont., ratepayers will vote on Jan. 3 on a bylaw to provide for the operation of cars on St. Thomas St. Ry. on Sundays.

Calgary, Alta., ratepayers vote on Dec. 15 defeated 2,167 to 1,635 a bylaw to capitalize \$250,000 of expenditures on Calgary Municipal Ry.

Brantford, Ont., Municipal Ry. is reported to have bought two one-man cars for \$11,000 from a Connecticut electric railway which went into a receiver's hands.

Port William Municipal Ry. is reported to have spent \$1,800 on each of the 12 cars bought in 1919, after the fire in the car barns. The cars are reported to be giving satisfactory service.

The City of Toronto has decided not to submit a bylaw to the ratepayers to authorize the raising of \$500,000 for motor busses, but to try and secure Ontario legislation to issue debentures.

Regina, Sask., ratepayers on Dec. 13 passed, by a majority of 256, a bylaw to permit the operation of one-man cars on Regina Municipal Ry. The bylaw will go before the city council for final action.

The British Columbia Electric Ry.'s Head Office Association has elected the following officers:—President, A. E. Chamberlain; Vice President, J. McNece; Treasurer, J. V. Armstrong; Secretary, E. Day.

Montreal Administrative Commission had before it Dec. 6 demands by the police union, one of them being that all arms of the service be given free transportation on street cars. The Commission replied that men using the cars when on duty, and having to pay their fares, are reimbursed by the city.

The Kitchener, Ont., Light Commissioners, who are officially advised, operate the Kitchener & Waterloo Ry. in Kitchener and Waterloo, Ont., supply power for the operation of the Wellington-Waterloo Ry., and give it running rights over the K. & W. Ry. from the corner of Victoria and Abers St. to the corner of King and Albert Sts., Kitchener, one mile.

Kitchener, Ont., ratepayers will vote on a bylaw Jan. 1 providing for the appointment of a public utilities commission to operate the several public utilities owned by the city, among which are the Kitchener & Waterloo Street Ry. It is proposed that the commission consist of the mayor, ex officio; two members to be elected by the people every two years, and two to be appointed by the city council.

London, Ont., City Council is reported to have asked the Ontario Railway and Municipal Board, which is operating the London St. Ry., for payment of approximately \$6,500, the company's share of the Rectory St. paving. The city council, it is reported, has been advised by A. B. Ingram, Vice Chairman O.R. and M.B., who has charge of the railway's operations, that the demand cannot be met at present.

The Edmonton Radial Ry. (municipal) and its electrical employees had a difference recently as to the interpretation of the agreement of April 1, 1920, which was submitted, by consent, to G. H. Van Allen, as sole arbitrator. He decided

that the men were not entitled to overtime prior to the coming into effect of the 8-hour day, and from Feb. 15 to Apr. 1, during which time a 9-hour day was in effect.

The Toronto Ry. was reported as owing the City of Toronto \$559,497.96, at Nov. 30, 1920, as unpaid percentages, the monthly amounts from June 1920 inclusive not having been paid. This matter has been under discussion for some time, the company having applied to the city for permission to withhold payments until the city takes over the street railway property on the expiry of the franchise this year.

Dominion Power & Transmission Co.'s employees, in Hamilton, Ont., are reported to be organizing an industrial council, comprising all branches of employees. It is said that the management has stated

H. A. MacLean,
Manager, Moose Jaw Electric Railway. Moose
Jaw, Sask.

the company has no objection to the men's co-operation in the formation of such an organization. A temporary committee was formed to consult with the various departments and to arrange for calling a general meeting to discuss the whole matter.

The Winnipeg Electric Ry. has bought from the Twin City Transit Co., Minneapolis, Minn., 20 passenger car bodies. These bodies have been taken to Winnipeg and the platforms rebuilt to conform to the company's standard, mounted on new trucks, motors applied, and are being placed in service as rapidly as completed. As stated in our last issue, the company has also bought 6 single truck sweepers, from McGuire-Cummings Mfg. Co., Chicago, Ill., and these are in service. These additions are to replace the 19 passenger cars, 4 single truck sweepers, etc., which were burned in April, 1920.

The British Columbia Electric Ry.'s Office Employees Association gave a Christmas entertainment Dec. 18 for their

children. Santa Claus arrived via the chimney, and, with the help of Mrs. Geo. Kidd, wife of the General Manager, distributed presents to every one of the 300 youngsters who filled the fourth floor of the head office building. There were four Christmas trees laden with presents. A fund of \$350 was raised by popular subscription from the office staff, to which the management contributed generously. Then a committee bought presents for every child whose name was obtainable. Geo. Kidd, General Manager; W. G. Murrin, Assistant General Manager, and Mrs. Murrin and several of the company's other officials took an active part in the entertainment. The evening ended with a dance for the older members of the company's family.

Mainly About Electric Railway People.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and Lady Beck, left London, Ont., Dec. 10, and sailed from New York, to spend Christmas with their daughter in England. Sir Adam is expected back during January.

R. A. Brown, Superintendent, Calgary Municipal Ry., addressed the Calgary, Alta., Board of Trade, Dec. 10, dealing with the history and operation of the line from its inception.

D. K. Lewis, formerly Electrical Engineer, Fort Dodge, Des Moines & Southern Rd., Boone, Iowa, has been appointed Electrical Engineer, Winnipeg Electric Ry.

Sir William Mackenzie, President, Toronto Ry., who left Toronto early in November for England, returned at the end of December.

Henry A. MacLean, whose appointment as Manager, Moose Jaw Electric Ry., Moose Jaw, Sask., was announced in our last issue, was born in Middlesex County, Ont., Jan. 20, 1871. He was from 1900 to 1901, Assistant Superintendent, F. Bissell Co., Toledo, Ohio; 1901 to 1904, Master Mechanic, M.A. Piggett & Sons, contractors on construction, Guelph & Goderich Ry., Hamilton, Ont.; 1904 to 1907, Chief Engineer, Southwestern Traction Co., London, Ont.; 1907 to 1914, City Engineer, Sarnia, Ont.; 1914 to 1918, Engineer, H. Mueller Mfg. Co., Sarnia, Ont.; and during the war, engaged at the Imperial Munitions Board's chemical plant, Trenham, Ont.; 1918 to 1920, in private practice as consulting engineer, Sarnia, Ont.

T. H. McCauley has resigned his position as General Manager, New Brunswick Power Co., St. John, N.B., as reported in our last issue, but not then confirmed. Up to the date of our last advice, no one had been appointed to succeed him.

F. Morrison Morse, a director and Secretary of Winnipeg Electric Ry. Co., returned to Winnipeg in December, after spending some time in Europe.

Philip Pocock, formerly Vice Chairman, London Public Utilities Commission, and a member of the London Railway Commission, returned recently to London, Ont., after a trip to Europe.

Lt. Col. G. C. Rovere, General Manager, Toronto Suburban Ry., has been elected President of the Toronto Militia Officers Indoor Baseball League.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., addressed the Quebec Rotary Club on Dec. 1 on electric power and railway development in the Province of Quebec.

Marine Department

General Shipbuilding Matters Throughout Canada.

A. Berquist, Victoria, B.C., who took over a quantity of the shipbuilding material and plant, owned formerly by the Foundation Co. of British Columbia, is reported to be arranging to build three sailing ships, 125, 90 and 75 ft., respectively.

B.C. Marine Engineers and Shipbuilders Ltd., Vancouver, B.C.—The auxiliary powered schooner which this company is building for the Hudson's Bay Co., and which was expected to be launched early in Nov. 1920, and to be ready for sea by the end of that month, will not, we are officially advised, be ready until some time in the spring, owing to the non delivery of the engines, ordered in England.

Dominion Shipbuilding & Repair Co., Toronto.—See under "Dominion Shipbuilding & Repair Co.'s affairs," on another page of this issue.

Halifax Shipyards Ltd., Halifax, N.S., held its annual meeting at Montreal Dec. 14. A press report credits President H. B. Smith with stating that the year's operations had been satisfactory, the net result showing a substantial surplus, with the outlook for the coming year of a most promising nature. The s.s. Canadian Mariner, built Dec. 18, for Canadian Government Merchant Marine, a ship of 8,390 d.w. tons carrying capacity, had been built, launched and delivered during the period covered in the report. This ship conformed to the highest classification of Lloyds, and a sister ship would leave the ways at Halifax Dec. 18, when Sir Robert Borden would act as sponsor. Two other ships of 10,500 tons capacity each, were in course of construction, and it was anticipated that delivery would be made by June next. In addition, the company has a large volume of repair work on hand, the latest being extensive operations on the s.s. South American. Mr. Smith is also reported as saying that the company has in prospect orders for the construction of five large oil tankers, the booking of which is almost consummated. This work would be sufficient to keep the Halifax yards, as well as those of the Davie Shipbuilding & Repair Co., at Lauzon, Que., and the Tidewater Shipyards Ltd., at Three Rivers, Que., busy during 1921. Altogether, Mr. Smith reported the outlook bright; 2,000 men being employed at Halifax, and he regarded the future with optimism.

The following are the officers and directors for this year:—H. B. Smith, President; J. F. M. Stewart, and M. J. Haney, Vice Presidents; Fred. Pearson, R. M. Wolvin, J. W. Norcross, F. S. Isard, W. E. Burke and J. Norris.

Harbour Marine Co., Victoria, B.C.—A press report states that the company is negotiating with interests said to be backed by the Peruvian Government, for the construction of 4 steel tank steamships, of approximately 8,000 d.w. tons each. C. J. V. Spratt, President, Harbour Marine Co., is reported to have stated that he had been in Seattle, Wash., to look into the matter, and while he would not make any definite statement, it was estimated that the contract might be secured.

We were officially advised Dec. 13, that

there was little foundation for the report, and that, at that date, no such orders had been received by the company.

Midland Shipbuilding Co., Midland, Ont., launched the s.s. Gleneloa early in December, for Great Lakes Transportation Co., Midland. She is of the lake type, with raised quarter deck, to British Corporation's requirements for lake and ocean service. Her dimensions are:—length over all 259 ft., length between perpendiculars 246 ft., breadth moulded 42½ ft., depth moulded 21 ft. She is equipped with triple expansion engines, with cylinders 18, 30 and 56 in. diam. by 42 in. stroke, 1,000 i.h.p., rebuilt by Great Lakes Foundry & Machine Co., Midland, and supplied with steam by 2 Scotch

A meeting of trades and labor unions associated with the shipbuilding industry was held at Montreal in December, to discuss its position, and the desirability of sending a strong deputation to the Dominion Government to ask for relief for the unemployment situation. Suggestions were made that the Government should build some passenger and freight steamships, and also some ice-breaking steamships.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., is reported to be contemplating the building of a steel schooner for the fishing trade.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The ship of approximately 3,000 d.w. tons being built by this company for private owners, mentioned in our Nov. 1920 issue, is a steel, bulk, canal sized, freight steamship of the single deck, poop and forecastle type, of the following dimensions:—length over all 259 ft., breadth moulded 42½ ft., depth moulded 21 ft. She will be equipped with triple expansion engines with cylinders 20, 30 and 56 in. diam. by 42 in. stroke, supplied with steam by two Scotch marine boilers, fitted with oil burning apparatus, 14½ in. diam. by 11 ft. long, at 190 lb. She will be classified under British Corporation regulations, and will have a speed of 1½ knots an hour. The keel was laid Oct. 20, 1920, and we were officially advised recently that it has not been decided whether the launching will take place about the middle of January or during March or April.

Three Rivers Shipyards Ltd., Three Rivers, Que.—In connection with the claim of the French Government against the company for the possession of the five wooden steamships, Rouxville, Bouchonville, Brumath, Cattenon and Bournay, reference to which was made in our last issue, Mr. Justice Maclellan, sitting as a special judge in bankruptcy at Montreal, gave judgment, Dec. 1, ordering that the ships be handed over to the French Government by the liquidator on payment by the Government of \$114,280, representing the balance of the amount owing on the ships so far as contracts had gone.

It was further ordered that out of the sum named, sufficient be taken to satisfy claims of some 25 creditors who have put securities on the ships, the balance to be handed over to the executive liquidators of the National Shipbuilding Corporation and Three Rivers Shipyards Ltd. These steps, as mentioned in our last issue, have been demanded by the Canadian government in the name of Three Rivers Shipyards Ltd. (liquidation), a notice of which we are advised that they have been removed to Quebec, and that the finishing work will be carried out at the Basin. It is expected that this will be completed by the spring when they will be dispatched to French ports where, after receiving necessary adjustments, they will be placed in constant service.

Foreign Orders.—It is reported from Montreal that shipping interests in Yugoslavia are desirous of having some ship built in Canada. It is said that these required a size between 2,000 and 15,000 tons.

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Lt. Col. G. F. Murphy, C.M.G., President, Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; F. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Kerstone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

boilers 13 ft. diam. by 11 ft. long at 180 lb., built by John Inglis Co., Toronto. She will have a speed of about 10 knots an hour under full load. The keel was laid Mar. 1, 1920.

Montreal.—A Montreal press report states that plans have almost matured, whereby a large shipbuilding and ship repairing plant will be erected on the south shore of the St. Lawrence River close to St. Lambert. It is stated that ground has been acquired, and that it will be possible for ships to drop anchor and large tonnage to come up the river to go on the stocks. Those at the head of the project are said to be well known in shipbuilding and shipping circles in Montreal, and to have an option on a fully equipped plant, which it is proposed to remove from its present location to the south shore. It is said to be the intention to proceed with the erection of a number of workmen's homes in the neighborhood of the proposed plant, and in calling for employees, to give preference to returned soldiers.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launching of Steamships.—Since Canadian Railway and Marine World for December was issued, we have been advised of the launchings of the following steel cargo steamships for Canadian Government Merchant Marine:—

Nov. 27, s.s. Canadian Leader; Marine Department contract 53; builder's yard no. 80; approximately 8,390 d.w. tons; Canadian Vickers Ltd., Montreal, Que.

Dec. 18, s.s. Canadian Explorer; Marine Department contract 22; builder's

trated in this issue. It consists of a red cross, bordered with white, on a blue ground, with a white circle in the center of the cross, on which is a maple leaf in natural colors.

Officers of Steamships.—In addition to the officers of steamships, whose appointments have been mentioned in previous issues, the following captains and chief engineers have been appointed:—Canadian Beaver, R. Cook, chief engineer; Canadian Farmer, Capt. J. F. Sharp, vice

Spence, chief engineer; Canadian Squatter, Capt. E. Randell, transferred from Canadian Sealer; Canadian Trapper, Capt. W. Larmour, transferred from Canadian Farmer, vice Capt. J. D. MacKenzie, transferred; Canadian Voyager, P. McKinnon, chief engineer; Canadian Winner, T. F. Anderson, chief engineer; J. A. McKee, Capt. J. Lintlop, vice Capt. J. F. Smeltzer, transferred; Sheba, Capt. J. F. Smeltzer, transferred from J. A. McKee, vice Capt. McGregor Fraser, transferred.

West Indian Services.—The C.G.M.M. announces that the s.s. Canadian Fisher will inaugurate about the end of January a service between St. John and Nassau (Bahamas), Kingston (Jamaica), and Belize (British Honduras). Certain of the steamships of this line have two spare rooms and also a dining room and smoking room for the accommodation of a small number of passengers.

Australian Trade.—It is announced that a steamship service will be inaugurated this month between St. John, N. B., and Australian ports, via the Panama Canal, the first sailing being by the s.s. Canadian Planter about Jan. 29, and it is expected that sailings will take place monthly thereafter, Montreal being the summer port.

General Business.—Montreal press dispatch, Dec. 17.—Despite the world slump in ocean freights, the Canadian Government Merchant Marine continues to keep about 50 freighters at sea. Latest reports indicate that the C. G. M. M. is cutting successfully into the United States carrying trade. The s.s. Canadian Conqueror has secured a U.S. cargo at New York under the nose of the U.S. Shipping Board, which has over 80 ships lying idle in U.S. ports. The Canadian

New House Flag, Canadian Government Merchant Marine Ltd.

yard no. 2; approximately 8,390 d.w. tons; Halifax Shipyards Ltd., Halifax, N.S.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Nov. 27, s.s. Canadian Mariner; Marine Department contract 21; builder's yard no. 1; approximately 8,390 d.w. tons; Halifax Shipyards Ltd., Halifax, N.S. She was loaded with grain at St. John, and sailed thence, Dec. 8, for Genoa, Italy.

Nov. 29, s.s. Canadian Winner; Marine Department contract 29; builder's yard no. 1; approximately 8,390 d.w. tons; Harbour Marine Co., Victoria, B.C. She loaded a general cargo at Vancouver for Sydney and Melbourne, Australia, and Auckland, New Zealand.

Dec. 15, s.s. Canadian Highlander; Marine Department contract 55; builder's yard no. 103; approximately 8,390 d.w. tons, Wallace Shipbuilding & Drydock Co., North Vancouver, B.C. She is expected to sail from Vancouver Jan. 5 for Auckland, New Zealand, and Sydney and Melbourne, Australia, with a cargo of general merchandise and a deck load of lumber.

Dec. 18, s.s. Canadian Sapper; Marine Department contract 59; builder's yard no. 8; approximately 2,800 d.w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S. She sailed for Halifax, Dec. 19.

House Flag.—The original house flag designed for Canadian Government Merchant Marine ships was 12 x 6 ft., and consisted of a Greek cross, with a ball 18 in. diameter in the center, both being blue on a white ground, with an anchor in yellow on the central ball. In the upper right hand corner of the flag was a representation of a beaver. Owing to some objections to the general design it was decided to adopt a new type and the design of flag entirely, and one of the pennant type has been designed as illus-

Capt. W. Larmour, transferred; Canadian Fisher, E. Sutherland, chief engineer; Canadian Forester, A. Cunningham, chief engineer; Canadian Hunter, T. Cubitt, chief engineer; Canadian Mariner, Capt. A. L. Starratt, transferred from Canadian Ranger; Canadian Observer, Capt. A. Purvis, vice Capt. D. M. Dickson, transferred; Canadian Rancher,

Steel cargo steamship Canadian Rover; approximately 3,890 d.w. tons; built for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., Collingwood, Ont.

Capt. D. M. Dickson, transferred from Canadian Observer, vice Capt. H. T. M. Watkins; Canadian Ranger, Capt. J. D. MacKenzie, transferred from Canadian Trapper, vice Capt. A. L. Starratt, transferred; Canadian Recruit, Capt. J. Slater; Canadian Rover, Capt. J. Ridley; Canadian Sapper, Capt. McGregor Fraser, transferred from Sheba; W. T. Westbury, chief engineer; Canadian Sealer, Capt. J. A. Hiltz, vice Capt. E. Randell, transferred; Canadian Sower, G. M.

Trooper will take a cargo of coal from Baltimore to Antofagasta, Chile, and return with nitre to another U.S. port.

Towage Claim.—The Bathurst Lumber Co.'s claim against Canadian Government Merchant Marine Ltd., for services rendered by its tugs Betty D. and Nipisiquit, in towing the s.s. Canadian Rancher from a stranded position, in July, 1920, is reported to have been settled satisfactorily by an arbitration board, consisting of Capt. Neil Hall, Halifax, N.S.;

Capt. A. J. Mulcahy, for Bathurst Lumber Co., and C. T. Workman, Halifax, N.S., of the London Salvage Association, for Canadian Government Merchant Marine.

Canadian Vickers Ltd. launched the steel cargo steamship Canadian Leader; Marine Department contract 53; builder's yard no. 80; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, Nov. 27, the christening being performed by Mrs. W. G. Ross, wife of the President, Montreal Harbor Commissioners. The ship is 413 ft. long over all, has a beam of 52 ft., and is 31 ft. deep. Her draft, when loaded with 8,390 tons of cargo, will be 25½ ft. She will have triple expansion engines, and three Scotch boilers, fitted with forced draft. The cargo winches and windlass are thoroughly up to date and with the steering gear, were made by Canadian Vickers Ltd. The steering from the navigation bridge will be by a tele-motor, and there will be hand steering gear on the poop deck. There will be the usual complete equipment of mechanical engine room and steering telegraphs and wireless apparatus. The engine room

partments contracts 48 and 49; builder's yard nos. 10 and 11, for Canadian Government Merchant Marine, which were under construction by this company, when it went into liquidation recently, are, under an arrangement made by the Marine Department, to be completed at the company's plant in Toronto, by the Collingwood Shipbuilding Co., on a cost plus basis. The work, which has been started, under the direction of the Collingwood Shipbuilding Co.'s Managing Director, J. S. Leitch, is in direct charge of that company's Superintendent, John Dalrymple, the intention being to have the ships ready for delivery in the spring. The boilers, which were being built by John Inglis Co., Toronto, will be completed by it, and that company will also complete the engines, work on which had been started by the Dominion Shipbuilding & Repair Co.

See also under Dominion Shipbuilding & Repair Co.'s affairs on another page of this issue.

Halifax Shipyards Ltd., Halifax, N.S., delivered the steel cargo steamship Canadian Mariner; Marine Department contract 21; builder's yard no. 1; approxi-

men who were removing the blocks crouched down when the hull began to move and escape uninjured. She is a sister ship of the s.s. Canadian Mariner, which was launched Sept. 4, and is of the 2 deck, poop, bridge and forecastle type.

Work is reported to be proceeding satisfactorily on the s.s. Canadian Cruiser and s.s. Canadian Constructor, Marine Department contracts 38 and 39; builder's yard nos. 3 and 4 respectively, each approximately 10,500 d.w. tons, the keels of which were laid Oct. 2 and 6, 1919. These are the largest ships to be built under Dominion shipbuilding programme, now approaching completion.

Harbour Marine Co., Victoria, B.C.—The steel cargo steamship Canadian Winner; Marine Department contract 29; builder's yard no. 1; approximately 8,390 d.w. tons; built by this company for Canadian Government Merchant Marine, made her trial trips Nov. 25. The builders advise that the average speed was 13.66 knots and the highest speed 14.45 knots. She was delivered to the Marine Department Nov. 27, transferred to Canadian Government Merchant Marine, and loaded, at Vancouver, with a general cargo, for Sydney and Melbourne, Australia, and Auckland, New Zealand.

The Harbour Marine Co. advised us Dec. 13, that the s.s. Canadian Traveler; Marine Department contract 30; builder's yard no. 2; approximately 8,390 d.w. tons, was being finished at the Victoria Machinery Depot Co.'s plant, and that no date had then been fixed for her delivery.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., delivered the steel cargo steamship Canadian Sapper; Marine Department contract 59; builder's yard no. 8, approximately 2,800 d.w. tons, to the Marine Department, Dec. 18, 1920, and she sailed for Halifax, N.S., Dec. 19.

Port Arthur Shipbuilding Co., Port Arthur, Ont., as stated in Canadian Railway and Marine World for December, launched the steel cargo steamship Canadian Harvester; Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons; for Canadian Government Merchant Marine, Nov. 20. This ship will be completed at Port Arthur, during the winter, and will be delivered to the Marine Department, for transfer to Canadian Government Merchant Marine, when navigation opens next spring.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—As stated in Canadian Railway and Marine World for December, when this company suspended operations early in November it had under construction two steel cargo steamships of approximately 8,100 d.w. tons each for Canadian Government Merchant Marine Ltd., viz., Canadian Raper and Canadian Thrasher; Marine Department contracts 42 and 43; builder's yard nos. 1 and 2. We were officially advised Dec. 11 that the Dominion Government had decided to pay the wages of the company's employees who were due when it stopped work, and that the Marine Department had asked tenders from the representative shipbuilders on the Pacific coast for finishing the two ships at Prince Rupert, that no time limit had been set for the tenders, but that it was expected that work would be resumed early in January. British Columbia press reports state that tenders have been sent to Mr. J. Coughlan & Sons, Vancouver, and Wallace Dry Dock & Shipbuilding Co., North Vancouver, B.C.

A Prince Rupert press dispatch says

Steel cargo steamship Canadian Mariner, approximately 8,390 d.w. tons, built for Canadian Government Merchant Marine by Halifax Shipyards Ltd.

equipment will be very complete, including the contrafo system of condensing, and a full equipment of pumps and other auxiliaries. The ship will be fitted with refrigerating machinery for carrying refrigerated cargo in no. 3 'tween decks, which will be insulated. The accommodation for officers and crew will be very complete and, as previously stated in Canadian Railway and Marine World, there will be two staterooms and a small smoking room for passengers.

Canadian Vickers Ltd. delivered the steel cargo steamship Canadian Commander; Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons, to the Marine Department Dec. 21. She will not be transferred to Canadian Government Merchant Marine for operation until the spring.

Collingwood Shipbuilding Co., Collingwood, Ont.—See under Dominion Shipbuilding & Repair Co.

Dominion Shipbuilding & Repair Co., Toronto.—Two ships, Canadian Pathfinder and Canadian Engineer; Marine De-

partment 8,290 d.w. tons; to the Marine Department, Nov. 27, 1920. She was transferred to Canadian Government Merchant Marine, loaded with grain at St. John, N.B., and sailed thence, Dec. 8, for Genoa, Italy. The Canadian Mariner is the first steel ship built in Halifax.

Halifax Shipyards Ltd. fixed the launching of the steel cargo steamship Canadian Explorer; Marine Department contract 22; builder's yard no. 2; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, Dec. 18, and Sir Robert Borden was there to christen her, accompanied by the Minister of Marine and the Minister of Public Works. A press dispatch says that when some of the blocks were removed a rope broke and the hull slid into the water ahead of time and was carried across to the Dartmouth side of the harbor, the tugs not being ready to guide her. As the hull touched the water a sailor on board broke the bottle of champagne suspended over the bow. Several work-

that H. A. Butt, who has been acting as Government inspector, on the two ships referred to above, has been instructed to prepare an estimate of the cost of completing them, and also states that about 75% of the work on them has been done.

Tidewater Shipbuilders Ltd., Three Rivers, Que.—As stated in Canadian Railway and Marine World for December, two steel cargo steamships Canadian Fisher and Canadian Forester; Marine Department contracts 15 and 16; builder's yard nos. 7 and 8; approximately 5,100 d.w. tons each, were completed at Three Rivers, with the exception of the interior fittings for the passenger accommodation. The Canadian Fisher left

Three Rivers, Nov. 13, under her own steam, for Halifax, and the Canadian Forester left Nov. 24 for the same destination, where the interior fittings will be completed. It is reported that they will be ready for delivery to the Marine Department about Jan. 5 and 15 respectively, that the Canadian Fisher will go on her maiden voyage to the Bahamas, Jamaica and British Honduras before the end of January, and that the Canadian Forester will follow the same route about three weeks later.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—A press report states that the steel cargo steamship Canadian Highlander; Marine Depart-

ment contract 55; builder's yard no. 103; approximately 8,350 d.w. tons, underwent her trial trip in the Gulf of Georgia early in December, that a speed of 14.34 knots was obtained, during half a gale, and that the average for the trip was over 13 knots. The engines were built by the Wallace Shipbuilding & Drydock Co. and the boilers and oil burning apparatus by Vulcan Iron Works. The Canadian Highlander is the first of five of the Canadian Government's Maritime Marine ships to be equipped for oil burning and can easily be converted for coal burning. She will use coal on her initial trip to Australia and New Zealand, on which she will start early in January.

The Dominion Shipbuilding and Repair Co's Affairs.

The first report issued by the interim liquidator, Osler Wade, F.C.A., on the company's affairs, was published in full in Canadian Railway and Marine World for Oct. 1920. Mr. Wade, who has since been appointed liquidator, issued the following report Dec. 14:—

At the meeting of creditors, held on Sept. 2, 1920, for the appointment of a permanent liquidator, a committee of four creditors was appointed to advise upon matters of importance and to assist the liquidator in closing up the affairs of the estate. The members of this committee are:—Wm. Inglis, of Jno. Inglis Co., Toronto; A. E. Gilverson, of Rice Lewis & Sons, Toronto; E. L. Cousins, of Toronto Harbor Commission; P. Payette, of P. Payette Co., Penetang, Ont. At a meeting of this committee on Sept. 7, 1920, the question of reorganization was abandoned. The committee was of the unanimous opinion that nothing should be done in the way of disposing of the plant until the Dominion Government had an opportunity of completing its ships, in order that its damage claim might be reduced to a minimum.

The question of the ownership of the two hulls being erected for the Dominion Government was referred to the court, for a direction, and judgment was delivered Sept. 22, 1920. This judgment reflected a compromise in connection with a number of important contentions, and held that the Government was entitled to the hulls proper, and the engines belonging thereto, and that all other material, ordered for, allotted to, but not actually in the hulls, was the property of the liquidator. Considerable delay has followed, but this appears to have been unavoidable, as the representatives of the Government were obliged to call for tenders, and then followed a mass of details, but I am pleased to report that all documents have now been executed and the details were settled yesterday (Dec. 13), with the result that the plant will open up tomorrow (Dec. 15) in order that the work may proceed. The fact that the Collingwood Shipbuilding Co. secured the contract is sufficient guarantee that rapid progress will be made from now on, and it is estimated the ships will be completed by June, 1921. The arrangement made between the liquidator and the Government will be particularly advantageous to both parties, as a considerable quantity of supplies on hand were ordered for the purposes of the Government hulls, and this will be turned over by the liquidator and realized upon by the estate at the present market values. As far as this particular portion of the assets is concerned, this will overcome some of the customary shrinkage in liquidation. The Government has also ar-

ranged to assume such of the sub-contracts for these hulls, nos. 10 and 11, as are found, upon investigation, to be in order, and thereby relieve the estate from the responsibility of such claims. There is a further factor in that the unusual number of unemployed workmen at present has, like in other commodities, the effect about a reduction in prices. This will be reflected in a reduction of claim for damages to be filed against the estate on the completion of the ships.

While these negotiations were under way, efforts have been made to dispose of such of the material on hand as would not be required for the purposes of the Government ships, and this has succeeded to a considerable extent. It will be noted, however, that the proceeds of such sales and all other material is the property of the Standard Bank under its general securities, and under the liquidator's bond, which was executed to raise the amount necessary to pay the arrears of wages at the time of the winding up order, and that until the bank's claim of some \$200,000 is satisfied there will be no surplus for the other creditors.

Attention is called to the fact that an action has been commenced against Christopher Hannevig, of New York, for the recovery of the balance due by him to the estate. This is approximately \$500,000, and included in the item, accounts receivable, in the statement of affairs. I am informed by counsel that legal proceedings in the United States have not as yet been started in our Canadian courts, and that a delay of many months will follow before the case comes up for trial.

Negotiations are under way with Jos. P. Day, of New York, an agent for the sale of industrial sites, with the object of having the plant listed for sale.

It is not possible to form any estimate of what the estate will finally pay. This all depends upon the amount realized from any sale and the claim against Mr. Hannevig. If the latter is realized, there should be no difficulty for the estate to pay in full. From this it will be observed that in so far as any realization or distribution is concerned, matters will be at a standstill until next midsummer, or until the Government ships are completed. If a sale is not made in the interim, there will be no prospects of a dividend before the fall of 1921.

Mr. Wade also issued the following statement to the press:—The Dominion Government has taken a magnanimous position in accepting a tender providing for the completion of the Government hulls at the Dominion Shipbuilding & Repair Co.'s yards in the hope of helping out the unemployed situation in Toronto, for the reason that efficiency on

shipyard work in the winter is very low. Notwithstanding this, misrepresentations, demands and threats, have been made, which, it seems reasonable to assume, will be taken advantage of by the Dominion authorities to turn down any further requests to improve the labor situation in Toronto. The company's records define that labor assisted in the wrecking of the Dominion Shipbuilding & Repair Co. This was pointed out to the labor interests' leaders some months before the failure took place. I refer to the conference of several days before the Minister of Labor at Ottawa about two or more years ago, and I further refer to the failure of two Toronto shipyards. It is easy to understand how the present decision in business follows a refusal on the part of the public to purchase at inflated values. When orders are not available, factories close down, and men are thrown out of work. With these facts to consider, it is difficult to understand how labor can justify a demand for wages equal to the peak paid at the time of inflation. This method of negotiations does not usually get very far. Naturally, when a few hundred men are wanted, somebody is going to be disappointed, when a few thousand are looking for work. The mistake that has been made is the failure of labor leaders to face the facts and explain them to the individual man. If this is not faced in an effort to build up an industry that has been broken, then it is plain there will be no success for a few hundred men in this city. The particulars of costs per ton disclosed by this company's records on hulls laid down to July 31, 1920, are interesting:—

	Labor.	Material.
1918	\$40	\$76
1919	49	116
1920	49	116

On the last hull in 1920 labor cost \$73 a ton and material \$94. It is quite apparent from these figures that labor was continually increasing, while the cost of material was decreasing from the peak of 1919. Further, very substantial reductions have taken place in material since the company passed out of business. The question of labor to complete these ships is not supreme, but must be considered equally with the position of the creditors, the contractors and the Government, in proportions of one-quarter each, and labor must not consider that the Government is free to pay any wages that it may consider fit, through its contractors, for the reason that the estate cannot be used as a charitable institution with that end in view. Any such payments would reflect back upon the creditors, in which case the court would have to interfere to protect their interests.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized by order in council to place orders for and which orders are to be carried out. The figures given are not preceded by an asterisk, show the approximate total deadweight capacities as determined after the ships have been completed. The other figures are preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

Where the total price does not agree with the finally ascertained deadweight ton multiplied by the price per ton the extra amount is for changes from specifications, additional equipment, accommodation.

The following constructions are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; h.k., kyle type; p. poop; b. bridge; f.e.t.e., forecastle.

The United States Shipping Board Scandal.

From the Literary Digest, New York, N.Y.

The most disheartening document that has come out of the aftermath of the war, in the opinion of not a few editorial observers, is the sordid story of greed, graft, and incompetence under cover of the U.S. Shipping Board and Emergency Fleet Corporation, as set forth in the Fisher-Richardson report to a Congressional investigating committee. It is a story of alleged mismanagement, waste, graft, bribery, padded pay-rolls, and systematic looting of the public treasury by minor officials and employees of the Board, involving a loss of millions of dollars to the taxpayers. The Detroit Journal calls these charges a bitter blow to U.S. patriotism, and declares, in fact, that "Prussian spies did far less damage to the U.S. cause than did the corrupt agents of the Emergency Fleet Corporation." "The disloyalty among German-American newspapers during the war," it adds, "compares with this disloyalty of native born Americans, who, with their greed, as door-mat thieves combine with house breaking." And the Minneapolis Tribune reminds us that "one of the most heinous crimes that can be charged against an individual or a corporation is that it was false to a public trust in time of war perils." "Evidently the biggest part of a war bill is the high cost of graft," cynically remarks the Cincinnati Enquirer, and the New York Herald, after reading this recital of "thefts by minor officials, graft by middlemen, and plain waste all along the line," exclaims: "This is one of the reasons why the U.S. Government today owes in round numbers twenty-four billions of dollars, and has an interest charge on its debts of about a billion dollars a year. It is one of the reasons why the U.S. people have a tax bill of four billions a year."

Conscious of a peculiar poignancy in the fact that scandal should smirch our efforts to answer the world's desperate cry for shipping to meet the challenge of the German submarines, the Omaha Bee remarks: "Not only did U.S. shipyards present the strangely mixed spectacle of producing sorely needed vessels in record time and providing bomb proof employment for a lot of fellows who might otherwise have been in the trenches, but they also afforded a remarkable composition of the shrewdest of organization and efficient management, and the most reckless of waste, extravagance, and incompetence." In addition to exposing "an unsavory mess," notes the Providence Journal, the investigators' report makes it appear that "the abuses that are here uncovered in retrospect are still being continued in the routine operations of our great new merchant fleet. Because the Shipping Board is a going concern charged with the administration of U.S. property whose value runs into billions, the Baltimore News reminds us, "its programme didn't slip into the past with airplane manufacture and government operation of the railways, and any charges against it are of the utmost public concern." "The country will not be satisfied until either these charges are disproved or the full responsibility for mismanagement is placed where it belongs," declares the Kansas City Star. "It is not on record that any one was ever punished for the embalmbed beef scandal of the Spanish American war," remarks the Brooklyn Citizen. But it

adds: "We are living today in sterner times, and no government can afford to deal leniently with the traitorous scoundrels who use the time of its greatest peril to rob it."

High officials of the Shipping Board are whole-heartedly co-operating with Congress in its effort to get at the facts in this matter. Admiral W. S. Benson, Chairman of the Board, promises to use all his authority to see that none of the guilty escapes; and his aide, Commander A. B. Clements, frankly told Representative Walsh's investigating committee that 4,000 persons, at salaries totaling \$8,000,000 a year, are now engaged in an attempt to straighten the tangle of building accounts of the Emergency Fleet Corporation. He told the committee that in rough numbers 10,000 men are now employed by the Board, and that the annual pay roll is approximately \$19,000,000. Nearly 1,200 ships are being operated for the Board; and under the present system of accounting, he said, there is no way of knowing whether they are operated at a profit or a loss. He declared, however, that "there is noth-

The Spigot and the Bung Hole.
From the New York Evening Post.

ing corrupt in the transactions of the U.S. Shipping Board," and explained that the abuses alleged in the report are "a result of what might be called, for want of a better term, amateurishness." He also reminded the committee that the Board, organized in haste to meet a desperate emergency, lost its most efficient and capable personnel after the signing of the armistice, just as it was perfecting its organization and operation.

Assuring the public that it will be given every facility for getting the facts and placing the responsibility, Admiral Benson reminds us that "in an organization spending more than three billion dollars, where, as the largest steamship operator in the world, millions of dollars are expended from day to day, it would be humanly impossible to prevent all wrong doing or to do business without suffering financial losses from time to time." He says further: "There is no effort on our part to shirk whatever responsibility we have assumed. We have insisted that at all times the records are open to the public. Every facility is offered to those who desire information. As a former naval officer who shipped 48 years ago to serve his country, I believe my fellow countrymen can depend upon it that no wrong doer will escape if

his wrong doing is called to my attention. Not only have I insisted upon the closest watch upon all matters, but I have followed the work of the Shipping Board in every port of the world with the one thought in mind that we are now reaching that crucial moment which spells either the success or failure of a permanent merchant marine."

While the press is unanimous in its insistence upon the truth, the whole truth and nothing but the truth in this vital matter, many papers remind us that the task undertaken by the Shipping Board, that of producing from mine and forest a huge fleet of 10,000,000 tons, was perhaps the biggest job that ever fell to a government organization in any country. "Fair minded men will, of course, make a large allowance for the enormous pressure under which the work of the Board had to be done, as well as the inevitable lack of experience at the outset of many of the supervisors who had to be employed," remarks the Brooklyn Citizen. "It is not probable that any evil dealing will be traceable to the men 'higher up,'" says the Boston Herald. "We must charge off the loss which the Shipping Board has entailed as a part of the cost of winning the war," remarks the New York Commercial. "Public concern over the possible lapses of the Board will be tempered by the memory of its achievements under circumstances trying and critical," predicts the Cleveland Plain Dealer. The Albany Knickerbocker Press offers the consoling remark that after the investigation is over and the guilty have been punished, "the people will still have the ships." And on this point it quotes President-elect Harding as follows: "One of the great problems of the incoming administration will be to appoint to practical use for America the great merchant marine built since the war. The record of the Shipping Board was one continual fiasco from beginning to end. When the war ended we should have been in a position to establish shipping lines to every part of the globe. I promise you that one of the first acts of the incoming administration will be to unfurl the flag again on all the seas of the world."

Reminding us that in 1914 only 10% of our imports and exports was carried in U.S. vessels, while as a result of the Shipping Board's activities "today we carry about 45%," the St. Louis Globe-Democrat remarks: "The Shipping Board is a permanent arm of the Government. It will have great tasks and great responsibilities in the future. We are emerging from the comparative chaos of a colossal war, and it is essential that we take stock of our condition before setting forward. We have developed a merchant marine worthy of our place in the world. Its magnitude and its service must be maintained. But we must find out what has been wrongly done in order to avoid these mistakes in the future. We must find out by retracing our steps wherein we have erred. We must find out the weaknesses of the organization, the defects in its structure and in its methods, as they may be revealed by investigation. The fixing of responsibility for wrong, and the punishment of any offences of a character demanding punishment, should be but incidental to the process. The primary purpose should be constructive. It will avail us little to

probe into the work of the past if we do not learn and apply the lessons learned from the errors that are discovered in the enquiry."

The public should make two necessary distinctions in reading the sorry tale of the Shipping Board as brought out before the Walsh Committee, says the New York Evening Post: "It should distinguish between Shipping Board history before the armistice and since the armistice. It should distinguish between graft and incompetence. The blunders committed during our active participation in the war include the wooden ship programme, the construction of an excessive number of small steel ships on the Great Lakes, and the policy of allocation and operation. These mistakes arose principally from incompetence and defects in organization and are to a considerable degree excusable on the score of war haste and war confusion.

"The post-armistice blunders are far less excusable, and here again the fundamental evil has been inefficiency rather than the graft which has been the accompaniment of dereliction. Incompetence on the Shipping Board has been shown, in the first place, in the miserably poor management. But more than that, it has been shown in a lack of clear understanding of the entire problem of our shipping as related to the general world situation and to a lack of courage in shaping policy to shipping conditions. The Board has dawdled along and hoped for the best at times when it should have boldly cut our losses. The policy adopted with regard to cancellation of shipbuilding contracts should have been far more drastic than it has been. The Board should have compensated the builders and should have gone to Congress with a frank statement of the necessity of taking a great loss rather than continuing the construction of ships in large quantities. Still more difficult is it to characterize strongly enough the blunder of the Board in its sales policy. In the spring of 1919, when the British Shipping Controller was selling off Britain's war built tonnage for \$22 a dead-weight ton, equivalent at that time to approximately \$100 a ton, our Shipping Board kept asking from \$200 to \$225 a ton for similar vessels. Then, as the shipping market grew weaker, the Board reduced its offering prices gradually but always at a considerable distance behind the market. As a result very few ships have been sold. Some were disposed of on an instalment basis, which is now breaking down. New U.S. owners, in many cases, have now bought their ships at impossible prices and are facing bankruptcy."

Congress, it will be recalled, ordered the present investigation by a vote of 287 to 0, and appointed for this purpose a committee headed by Representative Joseph Walsh (Rep., Massachusetts). The first evidence laid before it was the 100 page report of two investigators, A. M. Fisher and J. F. Richardson, who have been working in the Washington and New York offices of the Shipping Board for many months. Some of the outstanding features of this report are thus summarized editorially in the Philadelphia Public Ledger: "Defective steel forgings for Shipping Board vessels were fixed up to pass the official test in the following way: The test required that a hole 1 in. in diameter was bored into each forging to determine the quality of the steel. Inferior forgings were 'doctored' by having good steel plugs, 2 in. in diameter and 6 in. deep, inserted

in them in such fashion as to conceal the fraud. Then the test hole was bored into these high class plugs, 'with the result that the forging was passed by the inspectors and accepted for use in a vessel of the Shipping Board.' . . . Mr. Richardson said that it was due to these defective forgings that many shafts on Shipping Board vessels were found defective, and it is a common occurrence for a ship to lose its propellers at sea. He asserted that this was an accident that happened almost every day. These ships would have been very dependable, wouldn't they, in getting away from murderous U boats if the war had continued and the lives of our boys must have been trusted to the ability of their propellers to stand the strain? Mr. Richardson further deposed that the Shipping Board is still doing business with the concern which played this deadly trick. . . .

"How could all this possibly go on? In a wild riot of graft, men's morals give way. There was, of course, direct bribery. Mr. Richardson said that it was no common thing to find that the men were being made to corrupt employees of the Shipping Board. Outright bribes were offered to timekeepers and checkers; gifts of shares of stock in the contracting companies and offers of better positions were made; 'gifts of whisky are commonly tendered.' Then there was a more brutal method sometimes employed. 'Good men were heckled, insulted, and even frightened off the work when they would not prove susceptible to corruption.' The report is even more definite. It remarks with sinister humor that 'it was a comparatively easy matter to drop 'accidentally' bar or wrench into a ship's hold when a 'straight' timekeeper or inspector was standing unaided."

"It is no wonder that astonishing and incredible acts of fraud, theft, and sabotage could be successfully put over. Indeed, as one reads the sickening record, it seems as if there was a general scramble for the property of the country, and mighty few guardians on hand to protect it. Officials were put on guard who had no qualifications for the duty. An auditor was employed whose only bookkeeping experience had been gained while looking after a set of books for a bartender in a Texas village. The system of payment adopted by the Shipping Board encouraged padding of the pay rolls, which resulted, in one case, in a man being put on the salary list who was a house detective for the United States. Unskilled labor was rated and paid as skilled, and the contractors got their swollen percentage of profit on the larger salaries.

The amounts and methods of plain graft would appear exaggerated in a muck raking novel. Ships were over-ordered; and then, when they naturally did not burn all the coal on their voyage, they, nevertheless, pretended to take on a full supply again, leaving the surplus not needed with the coal company. The swag was divided. A steward, finding that his predecessor had left considerable food on board, promptly threw it into the sea, in order that he might get his commission on the purchase of a complete new supply. And all the while the families of taxpayers are now paying for this waste were stinting themselves at home because food was so dear!

"But what's the use? The story steadily approaches a crescendo. 'The expenditure of millions of dollars was left in the hands of masters, chief engineers,

and stewards.' In many cases, it was asserted, the supplies are purchased from brokers, who add a profit of from 25 to 40%, give gratuities to masters and stewards in the form of 'free launches, free automobiles, free liquor, free entertainment, etc., and charge them with the price of supplies. And the climax comes when Mr. Richardson testifies that these conditions not only existed more than a year ago, but that 'they are becoming worse every day.'"

Other witnesses called before the committee testified to such items as a bill for \$623,000 paid twice over by the Board by 'mistake'; a bill for \$161 for putting a hinge worth 83c on the door of a ship's galley; fresh water worth 90c a ton sold to Shipping Board vessels for \$25 a ton; asbestos cloth valued at \$1.10 a pound sold to the Shipping Board for \$1.60 a pound, causing a loss to the Board of \$1,000,000 in one year; overpayments running into tens of millions on claims submitted by foreign shipping firms; and profits running as high as 750% made by certain firms at the Shipping Board's expense.

According to M. J. Gillen, who was J. B. Payne's executive assistant when the latter was chairman of the Shipping Board, that organization "had no records to show how much money it had taken in during the war and how much was expended. Another witness, J. T. Meehan, Deputy Chief of the Board's Division of Investigation, told the committee that 2,400 fraud cases were now under investigation, many of which, he believed, would result in criminal prosecutions. "We don't want to press the petty cases until we are in a position to get the big fish," he said, explaining further that he opposed accepting restitution from many firms on the basis that eventually we will be in a position to institute prosecutions and obtain convictions." "We have one case up for trial soon," he added, "which may go to the Supreme Court, and which, if decided in our favor, will enable us to go after many of the offenders."

Detroit River Navigation Regulations.

The regulations for the navigation of the Lower Detroit River, published in a previous issue, have been promulgated, as required by law, and must be adhered to by masters navigating those waters. Incidents have occurred where these regulations have not been complied with, and the Marine Department gives notice that any cases occurring in future will be dealt with promptly, and steps taken to improve the river. The following attention is specially drawn to the fact that the regulations for preventing collisions, made by the proper authority and duly promulgated, have full force of law, and that the owner, master or person in charge of a ship omitting to obey any of the provisions incurs the penalty fixed by the Canada Shipping Act.

Canadian Steamship Damage Claim in New York.—A judgment was given Dec. 7, in the U.S. District Court, New York, declaring that Gustav Williams and Wigmore, New York, charterers of the freight steamship Lord Dufferin, owned by Canada Steamship Lines, Montreal, have a right to sue the Cunard Steamship Co. for \$1,700,000, for loss of cargo and of the use of the ship, when the Lord Dufferin was damaged by collision with the Cunard Line's ss. Aquitania, in New York harbor, Feb. 28, 1919. It is stated that Canada Steamship Lines, as owning the ship, will also sue for \$1,000,000 damage sustained.

Vancouver Harbor Development Work.

As stated previously in Canadian Railway and Marine World, the Ballantyne pier, which is being built under the Vancouver Harbor Commissioners' direction, at an expenditure of some \$5,000,000, will be of concrete, 1,200 ft. long and 341 ft. wide, with double deck reinforced concrete freight sheds. Contract 1, for dredging and filling in the site, was awarded early last summer to Grant and Macdonald, the amount of the contract being stated as \$513,121.50. We were advised recently that the dredging was proceeding satisfactorily, that the lighter material had been removed, that drilling operations on the sandstone rock cutting were under way, and that approximately 75,000 cu. yd. of filling had been completed.

The Dominion Government passed an order in council Sept. 29, authorizing the Harbor Commissioners to let a contract for building a superstructure for the pier, 1,200 ft. long on the east side, 1,070 ft. long on the west side, and 341 ft. wide; a shore quay 850 ft. long by 350 ft. wide; and four 2 story steel and concrete transit sheds of the following dimensions,—three sheds, 500 x 110 ft., and one shed, 400 x 110 ft., with steel doors and windows with steel sash and glazed with

application covering terminal railway construction between the existing Government wharf and the new Ballantyne pier, and the C.P.R. has been directed to proceed with the work of construction.

The next improvement to be undertaken will be the construction of car ferry terminals on the north shore, to take care of railway traffic until rail connection can be established via the Second Narrows route.

Offices have been built at the Dominion Government Wharf for the Canadian National Ry., which have leased the entire wharf for a year; repairs to the wharf have been completed and a second depressed track has been built adjoining No. 2 shed. The commissioners are considering the question of lumber assembly and coal handling wharves, the Minister of Marine having promised a lumber assembly wharf for the near future.

No new mechanical equipment was added to the port last autumn.

Other work to be undertaken includes the widening and deepening of the First Narrows and diverting and controlling Capilano Creek; damming and locking the Second Narrows, to improve the entrance to the Inner Harbor, to provide for the reclamation of some 3,000 acres

Exchange on Ocean Freight Charges.

The Trade and Commerce Department's Weekly Bulletin says:—Most of the steamship lines running from Canadian ports to British ports have been charging for freight in United States funds. The British importers who had to pay the freight charges considered it extraordinary that Canadian steamship lines running from Canadian ports should expect payment in U.S. dollars. The Trade and Commerce Department's Commercial Intelligence Branch brought the complaints of the British importers to the attention of the great transportation companies. The C.P.R.'s General Foreign Freight Agent took the matter up with the steamship lines and on Dec. 4 wrote the Commercial Intelligence Branch as follows:—"You will remember you drew attention to the fact that the Canadian steamship lines were demanding payment on 'collect' freights in United Kingdom on the basis of the New York-London rate of exchange. The Canadian steamship lines operating in the United Kingdom trade have informed me that freight for British ports may now go forward 'collect' at the demand rate of exchange Montreal on London on the date vessel enters at the customs house

Ballantyne Pier, Vancouver Harbor B.C.

See opposite page for other portion of illustration.

wired glass; together with the necessary paved roads and railway tracks to properly equip the pier and shore quay. The freight shed gross floor area will be 394,500 sq. ft., and the length of trackage 8,000 ft. The contract for these works has been let to Northern Construction Co. Ltd. and J. W. Stewart, its total amount being close to \$4,500,000. The work will be in direct charge of the contractors' Chief Engineer, Wm. Small. It is expected that no. 1 contract, for the dredging and rock excavation, will be sufficiently advanced to enable an actual start to be made on the superstructure early this year, and it is expected that the whole contract will be completed within two years.

A public booming ground, capable of holding 4,000,000 f.b.m. of logs, has been established on the north shore, Mission No. 1, Indian Reserve.

The plans include a terminal railway to serve the entire water front, except possibly the C.P.R. Burrard Inlet terminals, and four miles have been completed. The system is to be operated by the commissioners, who are negotiating for the linking up of Industrial Island and the Dominion Government wharf. The Board of Railway Commissioners has approved the harbor commissioners' ap-

plication covering terminal railway construction between the existing Government wharf and the new Ballantyne pier, and the C.P.R. has been directed to proceed with the work of construction.

The illustrations on this page and the one opposite are made from a perspective sketch of the pier from the northeast, for which Canadian Railway and Marine World is indebted to the Consulting Engineer, A. D. Swan, M.I.C.E., Montreal.

The Association of Pacific Coast Port Authorities will hold its 1921 convention at Vancouver, B.C., on a date yet to be settled. The President is Lieut.-Col. G. H. Kirkpatrick, Chairman, Vancouver Harbor Commissioners, and the Secretary is S. McClay, one of the Vancouver Harbor Commissioners.

The Montreal, Ottawa & Georgian Bay Canal Co. will apply at the Dominion Parliament's next session for an extension of time for the commencement and completion of the canals which it is authorized to build between Montreal and Georgian Bay.

at the port of loading." The Canadian Government Merchant Marine was asked what its custom was in respect to exchange on freight rates and replied:—"When the rate of exchange became such a live question for Canadian exporters, we faced the subject, and after consideration it was decided by our management that so far as Canadian Government Merchant Marine business was concerned, we would adopt the policy of collecting freight on Canadian exports in Canadian dollars and have adhered to that policy ever since."

Shipbuilding in Great Britain. — The condition of shipbuilding in Great Britain generally and on the Clyde in particular is giving rise to considerable uneasiness, owing to the labor situation and the demands of certain sections of employers for increase in wages in face of admittedly necessary reduction in costs of shipbuilding. British press reports indicate that in spite of the lower prices of materials there, wages are much higher, and shipyards where ships are under repair are unable to give necessary time guaranties. Continental countries have been under bidding British companies for ship repairs recently, and large repair orders have been lost to Great Britain.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

British Columbia, Vancouver Island.—With reference to uncharted rocks in Quatsino Sound, the following corrected information as to position is available: (1) half a mile 112 deg. from Pender Point and 900 ft. off shore, depth 5 ft.; (2) 500 ft. 154 deg. from south point of Single Island, rock dries at 5 ft.

Burrard Inlet.—The Naval Service Department's Hydrographic Survey has made a resurvey of First Narrows, Vancouver harbor, and sweeping operations have shown that Parthia shoal has a least depth of 27 ft. instead of 29 ft. as formerly advised, and that there are other spots, northward of the shoal, with approximately the same depth. Deep draft ships are therefore advised to keep to the southward of Parthia shoal when using the entrance. A black spar buoy will be established, without further notice, on the south extreme of the shoal, and the red spar buoy at First Narrows will be moved northward to the 5 fathom line. A chart showing the result of this survey will be published shortly, but in the meantime a blue print copy may be obtained from the British Columbia Hy-

drographic Survey, Victoria, B.C.

Nanaimo Harbor.—On or about Jan. 1, 1921, the character of buoys will be changed as follows: Entrance buoy 1, from a platform buoy to a black spar buoy; South channel buoy 3, from a platform buoy to a black spar buoy; Middle bank buoy 4, from a platform buoy to a red spar buoy; Carpenter Rock buoy 5, from a platform buoy to a black spar buoy.

New Brunswick, Chaleur Bay.—On the reopening of navigation in 1921 the color of the light at Bon Ami Point, Restigouche River, will be changed from white to red.

Nova Scotia, Bay of Fundy.—The fixed red light on shore at Inner end of wharf at Spencer Island was changed about Nov. 15 to a fixed white light, and a fog bell is to be established on the outer end of the wharf. The bell will be operated by machinery on top of box on steel frame, and will give one stroke every 6 sec.

Cape Breton Island.—The fixed red light on the west extreme of the south-east bar in Sydney harbor will be replaced by an occulting white acetylene gas light, automatically occulted at short intervals.

Cape Breton Island.—The installation

depth of 9 ft.

Ontario, Lake Erie.—Mariners are cautioned that large pieces of floating wreckage are reported about 7 miles from Middle Ground light, in Pelee Passage.

Lake Ontario.—A chart of the eastern part of Lake Ontario, from Kingston to False Dicks, no. 64, has been published by the Hydrographic Survey, Naval Service Department. Price 15c.

Quebec, Gulf of St. Lawrence.—The fixed red catoptric light on the outer end of the Government wharf, Great Fox River, will be replaced, without further notice, by a fixed red light, shown from an anchor lens lantern.

River St. Lawrence.—Range lights have been established in the ship channel between Quebec and Montreal, at Ste. Anne de la Parade, the front light being on the flat, that dries at low water, about 2½ miles above Grondines upper range front light, and consisting of a white, square, reinforced concrete tower with sloping sides, surmounted by a square concrete watchroom and lantern, at an elevation of 30 ft. showing a fixed white catoptric light; the back light being on Ile a la Batture, 4,700 ft. from the front light, and consisting of a square steel skeleton tower, with sloping sides, surmounted by an enclosed wooden watch-

United States, Lake St. Clair.—A gauge buoy has been established in the St. Clair Flats canal, marking end of shoal on the line of the center pier, about 1800 ft. from the southerly end of the pier.

The buoy is steel cylindrical, painted red and black horizontal stripes, showing an occulting white light every 20 sec., at an elevation of 11 ft., and will be maintained until the local government.

United States, Juan de Fuca Strait.—The color of the light at the buoy on the north side, in 4½ fathoms, is changed from red to white.

New Zealand Steamship Services.—A New Zealand parliamentary committee, which has been investigating shipping prospects, has reported that rates quoted by privately owned ships for passenger service are unreasonably high, and recommended the establishment of a line which would be independent of the existing companies. Government support is advocated. The Premier, during a debate in the House of Representatives, said that the Government would consider during the recess, the best means to secure a reduction in freight.

The Salvaging and Repairing of the s. s. Canadian Recruit.

The steel cargo steamship *Canadian Recruit*, 3,964 d.w. tons, which was built for Canadian Government Merchant Marine by Collingwood Shipbuilding Co., and delivered June 7, 1919, went ashore on Vache Reef, near the mouth of the

was installed, as the time that the tide allowed to pump out the ship was very brief.

The problem presented aft was extremely difficult. The use of heavy lifting draft, even if there had been any

ship to the other, that the compressed air had forced the water out of, down to the bottom of the trunks. This meant that the decks were never under greater pressure than the hydrostatic pressure required to expel the amount of water that it was decided necessary to eject from the hull. The great advantage of this method was that as the ship came to the surface this condition was maintained, i.e., that the square of the hatch trunk remained as an immense safety valve, and as the hydrostatic pressure changed as the ship neared the surface, the pressure of the compressed air was reduced automatically by this tremendous safety valve. The decks were also subjected, at their weakest point, i.e., abreast of the hatches, to the least possible strain by leaving the hatches open, and having only, as a lever arm, the space from the side of the ship to the edge of the hatch.

The ship was refloated July 17, 1920, and towed to Tadoussac Bay and thence to Lauzon, Que., and subsequently to Montreal, where she was re-conditioned by Fraser Brace Shipyards Ltd., the work including a complete overhaul and renewal where necessary. Practically the whole of the bottom plating, floors, etc., and a considerable portion of the side plating were replaced, and new deck winches, derricks and gear were supplied. The accommodation for passengers and the officers and crew was practically renewed. A complete new cast steel stern post and rudder were fitted, and the main engines, boilers, propellers, shafting and auxiliaries thoroughly overhauled, the total cost being about \$300,000.

The salvaging operations were under the direction of Lieut. Commander W. W. Wotherspoon, Vice President, Canadian Salvage Association.

Additional illustrations are given on pg. 49.

Tyne Shipbuilding. — The number of ships of every description launched from the river Tyne during Oct. 1920 was six, their estimated registered tonnage being

Position of *s.s. Canadian Recruit*, on Vache Reef, April, 1920.

Saguenay River, Dec. 20, 1919. She remained upright for some months, but on the break up of the ice early last spring she was shifted and had a list of 18 degrees to port.

The Canadian Salvage Association Ltd. undertook the salvaging of the ship. The work was somewhat intricate, as the after end of the ship presented a problem of deep lifting, i.e., there was 29 ft. of water on deck at the after end of hatch 4 on the port side at low water, and the forward end was stranded in very shoal water. In addition to these difficulties, the work was complicated by the shoal waters surrounding the ship and from heavy and swift tides, and to

available in Canada of the type employed by the British Admiralty, would have been extremely difficult, on account of the situation of the ship. The cofferdamming, or platforming, of the ship and the pumping out of the after compartment (even if it were certain that no bottom damage existed), was impossible, owing to the tremendous pressure on decks and bulkheads, owing to the many feet of water that were on the after deck (41 ft. low water). The use of compressed air was determined on, and a novel method was adopted. The use of air tight hatch trunks was decided on. The trunks consisted of a square steel structure, that dropped in the hatches,

Placing Hatch Trunks in position, for salvaging *s.s. Canadian Recruit*.

the eastward of an exposure to the whole Gulf of St. Lawrence.

The forward portion of the ship, including the machinery spaces, was deemed possible to be repaired, as to the bottom damage, by divers and pumped out. A number of injuries had to be repaired by the divers, and a large pumping plant

fitted at the top with a collar, with an air tight joint that was secured to the top of the coaming. By this method compressed air was trapped between the hatch trunks and the sides of the ship, and, in a compartment treated by this method, an area existed from bulkhead to bulkhead, and from one side of the

12,470, compared with 4 ships of 12,535 estimated registered tonnage during Oct. 1919. From Jan. 1 to Oct. 31, 1920, 68 ships were launched, their estimated registered tonnage being 182,607, compared with 70 ships of 132,683 estimated registered tonnage during corresponding period of 1919.

Canadian Canal Statistics.

The canal statistics for the calendar year 1919 have been issued by the Dominion Bureau of Statistics, Transportation Division, for the first time. They were collected and compiled formerly by the Railways and Canals Department's Statistical Branch. By order in council under the Statistics Act, passed Aug. 29, 1919, the work of the branch was transferred to the Dominion Bureau of Statistics, and by arrangement with the Railways and Canals Department, the data collected by the canal statistical officers are now forwarded to the Bureau. The report, which was in process of compilation at the time of the above transfer, has been completed along the lines followed in previous years.

Complete data are given for all the Canadian canals, with regard to number of ships passed through, their registered tonnage, description, nationality, and passengers and cargoes carried. The report also includes certain data for the United States canal at Sault Ste. Marie. As no tolls are charged by either the Canadian or U.S. canals at Sault Ste. Marie, ships use both freely, and the statistics of one would not be complete without those of the other.

The movement of Canadian grain from the head of Lake Superior is one of the most important items of Canadian inland water traffic, and more elaborate statistics have therefore been compiled on it than on other items. The large decrease from 1918 of 8,888,353 tons was all in U.S. freight, which was 10,384,707 tons less than 1918, while Canadian freight increased 1,496,354 tons. The decline in U.S. freight was practically all in the Sault Ste. Marie canal returns and in coal and iron ore. The decrease for that canal in iron ore was 8,211,866 tons, and in coal 861,473 tons, whilst variations in other commodities gave a total net decrease of 8,775,626 tons.

Coal shipments were light all season, dropping in June to about one-third those of June, 1918, and declining until in October they were only about one-eighth those of the previous year. Iron ore shipments held up to the 1918 figures for May, June and July, but dropped off in August, and continued light till the close

of the Atlantic Ocean. The down registered tonnage of U.S. steamships on the Welland Canal exceeded the up tonnage by 367,376 tons, and on the St. Lawrence Canal by 319,531 tons, the movement in this direction being steady throughout the season.

Compressed air plant on barge, for salvaging s.s. Canadian Recruit.

Marine Public Works Contracts Awarded.

The Dominion Public Works Department has awarded the following contracts:—

Thessalon, Ont., reconstruction of part of superstructure of wharf, Geo. P. Sandie, Thessalon, Oct. 16, 1920, schedule of prices.

1920, schedule of prices.

Three Fathom Harbor, N.S., reconstruction and repairing of portion of shore protection, Naugle and Hiltz, Lawrencetown, N.S., Oct. 26, 1920, \$6,079.20.

Seaforth, N.S., repairs to breakwater, A. W. Girroir and W. F. MacKinnon, Antigonish, N.S., Oct. 26, 1920, schedule of prices.

Bass River, N.S., construction of wharf, Naugle and Hiltz, Lawrencetown, N.S., Oct. 26, 1920, schedule of prices.

Rondeau, Ont., sheet pile wharf, Wm. Bermingham, Kingston, Ont., Nov. 1, 1920, schedule of prices.

Hollecurn, West Vancouver, B.C., wharf and repairs to crib and dredging, Wm. Greenlees, Vancouver, Nov. 2, 1920, schedule of prices.

Cap St. Ignace, Que., repairs to public wharf, E. Caron & Frère, L'Islet, Que., Nov. 4, 1920, schedule of prices.

Bayfield, Ont., reconstruction of south half of south pier, Weston Bros., Bayfield, Nov. 9, 1920, schedule of prices.

Port Lorne, N.S., repairs to breakwater, Denton & Condon, Digby, N.S., Nov. 10, 1920, schedule of prices.

Port Maitland, N.S., addition to east breakwater, Denton & Condon, Digby, N.S., Nov. 10, 1920, schedule of prices.

Rondeau, Ont., reconstruction of portion of superstructure of western pier, Border Cities Construction Co., Windsor, Ont., Nov. 22, 1920, schedule of prices.

The Johnson Wharf Co. Ltd., Vancouver, has given up business, having sold its property to the C.P.R. The wharf was built by the Johnson Wharf Co. on the foreshore owned by the C.P.R., and leased for 20 years, on condition that should the C.P.R. require the foreshore for its own purposes, a notice of six months could be given for a cancellation of the lease, and the structures erected on the land could be taken over by the C.P.R. That company, having started the construction of Pier B.C., was deprived of the use of its No. 1 shed, and it was found necessary to cancel the lease of the foreshore to the Johnson Wharf Co., and the property was taken over Nov. 7, 1920. The wharf is 670 x 100 ft., and has some office buildings. The C.P.R. has renamed this wharf, Pier II, and is using it for berthing its smaller

S.s. Canadian Recruit coming to the surface, by application of compressed air.

S.s. Canadian Recruit's deck clear of water

of navigation. These decreases were due to the general shortage of coal and to labor troubles in U.S. steel plants. Strikes occurred at many of these plants on Sept. 22, and it was the end of November before they were in operation.

As a result of lack of cargoes on the Great Lakes, and of better conditions on the ocean routes, many U.S. steamships were taken off the Great Lakes and sent

Lord's Cove, Deer Island, N.H., construction of wharf, F. L. Boon and G. S. Macdonald, South Devon, N.B., Oct. 20, 1920, schedule of prices.

Praeger, B.C., floating wharf, F. Cogge and H. P. Leake, Praeger, Oct. 22, 1920, \$7,940.

West Chezzetoonk, N.S., repairs to breakwater, A. W. Girroir and W. F. MacKinnon, Antigonish, N.S., Oct. 26,

trans-Pacific ships, some of its northern coast steamships, and for any tramp steamships which may have cargo to deliver to the C.P.R. It is, like the company's other wharves, under the control of the wharf agent.

The Hudson's Bay Co.'s ships will not, according to a London press cablegram, be transferred to Canadian registry, for the present, at least.

Canadian Pacific Ocean Services' s.s. Montrose Launched.

The s.s. Montrose was launched for Canadian Pacific Ocean Services' Atlantic service, by Fairfield Shipbuilding & Engineering Co., Govan, Glasgow, Scotland, Dec. 14. Her dimensions are,—length between perpendiculars 566 ft., breadth 70 ft., depth 31½ ft.; tonnage 16,200. She is of the two class type, and will have accommodation for 520 cabin and 1,550 third class passengers. She is being built to the requirements of the highest class of Lloyd's Registry, under special survey, classed A 100 A1. She has a modified cruiser stern specially adapted to the lines of the ship, which, it is claimed, will add strength to the after end, protect the propellers and steering gear, increase the passenger deck accommodation, and reduce vibration to a minimum. There are two funnels, and two pole masts will be rigged as a fore and aft schooner. The most modern systems of heating, lighting and ventilation will be installed, together with electrically equipped mechanical appliances, steering control, wireless telegraphy, Sperry gyro compass, and an emergency 30 ft. motor boat, in addition to the maximum requirements for lifeboats.

The cabin dining room will be on the upper deck to ensure the least possible sense of motion, and will have seating accommodation for over 500. The lounge, writing room and card room will be on the promenade deck, also the drawing room, smoking room and children's room. A gymnasium will be arranged on the bridge deck, where there will also be a dark room for photographers. The third class passenger accommodation will include lounges and smoking rooms forward and aft on the bridge and shelter decks, and a large dining room of three compartments on the upper deck aft, with ample dining space on the shelter deck forward. The third class cabins will be arranged for 2, 4 and 6 passengers.

Wreck Commissioner's Enquiries and Judgments.

An enquiry has been held and judgment delivered in connection with the following casualty:—

Stranding of s.s. Prince Rupert.

Held at Vancouver, B.C., Nov. 15 to 18, 1920, before Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capts. John Park and Gerald Bridge, as nautical assessors, into the stranding of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, on the eastern side of Graham Reach, about 3 miles north of Swanson Bay, B.C., Sept. 29, 1920. When Canadian Railway and Marine World's December issue went to press, the report of the judgment had not been received, but the result of the court's finding was mentioned. Following is the judgment in full:—The court, having carefully enquired into the circumstances which led to the casualty, is unanimous in arriving at the conclusion that the primary cause was due to the fact that when the master, Capt. Duncan MacKenzie, ordered the course to be changed from n. 54 w. to n. 56 w., a few moments before the stranding, the helm was put to port instead of to starboard. The evidence and the chart clearly show that the shore line in the vicinity of where the vessel stranded is almost a straight line, and in view of the angle in which the vessel struck, after sighting the land right ahead, and taking into consideration the part of the vessel which first came into contact, there can be little doubt that the Prince Rupert was considerably off her course. The court therefore finds both the master and the mate, Roderick MacKenzie, in default. Neither of them appeared to take the slightest intelligent interest to satisfy himself that the ship was accurately steered on the various courses steered when altered, nor did they realize that the ship had been swinging under port helm for some time, until they suddenly saw the land, close to

the right, ahead, at which moment the ship, going at a speed in the conditions of the thick weather then prevailing, rendered it impossible to stop within the limits of observation, with the result that she struck and was extensively damaged. The court therefore suspends certificate no. 3607 of the master for four months from September 29, 1920, and certificate no. 7055 of the mate for two months from date of this investigation, such suspensions to expire on Jan. 29, and Jan. 18, 1921, respectively.

Tank Steamships to Carry Molasses from Barbados to Canada.

The Trade and Commerce Department's Weekly Bulletin says:—Barbados molasses is of exceptionally fine quality and large quantities are imported into Canada. It has been the custom up to the present to import Barbados molasses into Canada in barrels and puncheons, which is a very expensive method of handling it. The Pure Cane Molasses Co. of Canada, Ltd., recently had built the first molasses tank steamship to carry molasses from the tropics in bulk. This steamship has in itself huge tanks of enamelled steel in which the syrup will be brought from the West Indies to St. John, N.B., and Montreal. At these points the company has enamelled steel receiving tanks into which the syrup is pumped from the ship. The tanks in Montreal will store 880,000 gall. of molasses and those at St. John 660,000 gall. The first ship to be put into this trade is the Julius Kessler, built this year, and is of a size which will permit her to use the canals and at the same time is constructed to cross the ocean if necessary. In Barbados and St. Kitts the Pure Cane Molasses of Canada, Ltd., is erecting large receiving tank stations where the molasses will be stored until it can be brought to Canada. By handling the product in this manner it is expected to reduce the cost to a minimum.

Ships Registered in Canada During September, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

No.	Name	Port of Registry	Where and when built	Length	Breadth	Depth	Gross Tons	Reg. Tons	Engines, Etc., h.p.	Owners or managing owners

Atlantic and Pacific Ocean.

Canadian Pacific Ocean Services, by arrangement with the Canadian Marconi Co., is now supplying Canadian news service on board its Atlantic ships. The company has, for several years, supplied wireless bulletins on its ships, but the news was sent through U.S. agencies.

The port of Montreal was closed for general ocean passenger and freight traffic, Dec. 6, with the sailing of Elder Dempster Co.'s s.s. Benguela for west and south African ports. The s.s. Lake Gatun, one of the U.S. Shipping Board's ships, built on the Great Lake, left later in the day with coal for New York.

The Anchor-Donaldson Line reports a general increase in passenger traffic for 1920, over that of 1919. The figures given are:—

	1920.	1919.
Westbound	2,567	1,518
Eastbound	8,178	372
Cabin	2,324	2,121
Steerage	2,301	1,440

Canada Steamship Lines has been appointed Agent for the Admiral Line, operating on the Pacific coast between Puget Sound, Oregon, California, Alaska, Mexico, Central America, and the Orient, as well as intercoastal excursions between New York and Seattle, Wash., calling at Havana, Panama Canal, Los Angeles and San Francisco.

The s.s. Mount Berwyn, operated by the Societe Generale de Transports Maritimes a Vapeur, which sailed from Vancouver, B.C., Nov. 30, is making a call at Kingston, Jamaica, and ships of this line, of which B. W. Greer & Sons are Vancouver agents, will make regular calls there, with the view of building up a trade between the West Indies and the Pacific coast.

Struthers & Dixon Inc., Seattle Wash., which is operating U.S. Shipping Board's steamships in the Oriental service, will, it is said, include a call at Vancouver, B.C., as occasion offers, and it is stated that John Galt has been appointed agent there. Eight steamships are being operated from Puget Sound ports to Japan, China and Manila. The four, which, it is said, will make the Vancouver call are: West Ison, West Ivis, West Jena and West Jessup.

The International Mercantile Marine Co., which operated winter pleasure cruises from New York to the West Indies and South America prior to the war, has resumed the various services. During the first three months of the year the White Star and American Lines will run a series of trips to the West Indies, Windward Islands, Panama Canal and South America, calling at different points of interest. The ships to be utilized include the Megantic of the White Star Line, ordinarily on the St. Lawrence route, and the New York and St. Paul of the American Line.

The Cunard Line's s.s. Samaria, launched at Birkenhead, Eng., at the end of November, is the fourth ship which has been launched in England for the company since the war, and is said to be the largest built on the Mersey. Like the other ships, the Samaria will use fuel oil. She is of about 21,000 gross tons. Accommodation is provided for 336 first class, 340 second class, and 1,824 third class passengers. The equipment includes wireless telegraph, submarine signalling outfit, and gyroscopic compass. The other three ships, Scythia, Albania and Tyrrhenia, as well as the Samaria, are to be operated in the New York ser-

vice, and it is stated that the first two, at least, will call at Halifax, N.S.

Maritime Provinces and Newfoundland.

The schooner Quaco Queen, owned in Parrsboro, N.S., is reported to have been seriously damaged in a collision with the Japanese s.s. Bainku Maru, in the Gulf of Mexico. She was taken to the nearest port, where an examination was undertaken with the view of deciding as to the feasibility of making temporary or complete repairs.

The Newfoundland Railway Commission, which is handling betterments, etc., on the Reid Newfoundland Ry., is reported to have decided to extend its work to include harbor improvement and extension at St. John's.

The steam tug Katharine K., purchased recently by the St. John Drydock & Shipbuilding Co. from Quinlan, Robertson & Co., Quebec, arrived at St. John, from Quebec, early in December, having sailed by the St. Lawrence, the Erie Canal, Hudson River via New York, Boston and Portland.

The Newfoundland Government has entered into an agreement with the St. Lawrence Timber Pulp & Steamship Co. Ltd. for the erection of lumber, pulp and paper mills at different points in the Bonne Bay district of Newfoundland, and for the operation of steamships, etc., in connection therewith.

Canada Steamship Lines will, it is stated, operate a direct steamship service between St. John, N.B., and St. John's, Nfld., during the winter, provided docking facilities can be arranged on the eastern side of St. John harbor. This service, it is stated, will really be a continuation of the summer service given by the company between Montreal and St. John's, calling for two sailings a month.

The Crystal Stream Steamship Co.'s s.s. D. J. Purdy ran aground on the bar at the mouth of the Nashwaak River, in St. John River, towards the end of November, and the passengers were removed in tugs and landed at Fredericton, N. B. The owners claim that the stranding was due to failure of Canadian National Ry. operators to have the draw bridge opened, thus making it necessary for the ship to anchor in the stream, from which she was blown by gales on to the bar. It is reported that an action for damages will be entered against the C.N.R.

Province of Quebec.

The mail steamboat Jeanne d'Arc, owned by C. Leboeuf, Montpelier, Que., and operated between Montreal and Valleyfield, sank at her wharf at Valleyfield, at the end of November. It was intended to raise her before the ice formed in the river.

Canada Steamship Lines' s.s. Mapleheath, which sank in St. Gabriel lock, Lachine Canal, Dec. 8, after running aground to her own anchor, and cutting a hole in her keel, was raised Dec. 9, and docked at Montreal. After discharging her cargo of coal she was taken to Kingston, where she will be overhauled during the winter.

The C. G. S. Montcalm sailed from Quebec, Dec. 12, with freight and supplies for points on the north shore of the St. Lawrence as far east as Clarke City. This will probably be the last trip to the north shore points before the ice forms. On this trip the Montcalm also accompanied the s.s. Keyingham to the mouth of the river.

The s.s. R. R. Call, owned by Capt. F. J. Allard Carleton, Que., and operated between Carleton, Dalhousie, Miramichi and Campbellton, N.B., was burned at Carleton recently. She was built at Chatham, N.B., in 1904, and was screw driven by engine of 8 h.p. Her dimensions were,—length 53.6 ft., breadth 13 ft., depth 5.3 ft.; tonnage 23 gross, 16 net. She was valued at \$5,000.

An action of La Cie. des Bains du Nord against the owners of the s.s. St. Louis for \$1,562.99, for work done and necessary disbursements in connection with the ship between April and Aug. 1920 at Amos, Que., was dismissed Dec. 6 in the Montreal Admiralty Court. The judgment stated that when the action was commenced, the ship was not in the court's arrest, so that it could not have jurisdiction over a claim for building, equipping or repairing, under sec. 4 of the Admiralty Court Act, 1861. It was settled law that a claim for the supply of necessities did not give a maritime lien on a ship. The question of jurisdiction could have been raised immediately after an appearance, and this would have saved expense for all parties, and the action was dismissed with costs up to and including the appearance on the motion to dismiss for want of jurisdiction, and as to all other proceedings in the action, each party to pay his own costs.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November, 1920.

Articles	Canada	U. S.	Canada	U. S.	Total
Lumber	1,000,000	1,000,000	1,000,000	1,000,000	4,000,000

Ontario and the Great Lakes.

The motor ship *Schoolcraft*, owned by Manley Chew, Midland, Ont., while en route from Kingston to Montreal, Dec. 3, took fire and was destroyed, the crew escaping in safety. She was built at Trenton, Mich., in 1884, and was screw driven, by internal combustion engine of 80 h.p. Her dimensions were,—length 185.6 ft., breadth 34 ft., depth 14.2 ft.; tonnage 972 gross, 690 net.

The s.s. *South American*, owned by the South American Steamship Co., a subsidiary of the American Metal Transport Co., New York, which went ashore on the Gaspe coast, in the Gulf of St. Lawrence, as mentioned in our last issue, was refloated about the end of November and proceeded to Halifax, N.S., where she was docked by Halifax Shipyards Ltd., for examination and repairs.

A Kingston press dispatch states that the owner of Duck Islands has arranged to install a wireless telephone apparatus on the islands, so that communication may be had with Cape Vincent, etc., in case of emergency. There have been numerous wrecks in this neighborhood, which is generally considered a dangerous spot in bad weather, and recently the crew of the coal barge *Randall*, which was wrecked in the vicinity, were on the island for eight days, without being able to communicate with any place for aid.

The U.S. lake built s.s. *Chippewa*, owned by Independent Steamship Co., Cleveland, Ohio, and which had been berthed for the winter at Quebec, was badly damaged by fire at the Louise dock, Dec. 2. She was built at Detroit, Mich., and launched in 1901. In 1920, while laying down the St. Lawrence River, she developed a cracked cylinder, and about the end of November put into Quebec for repairs. On account of being late in the season, it was decided to keep her there for the winter, and the crew was paid off, the officers remaining in charge of the ship.

J. F. Sowards, Kingston, Ont., has bought the s.s. *Maple Grove* from Canada Steamship Lines, as reported in a previous issue, and has had her name changed to *Jeddah*. She was originally named *Cherokee*, was built at Marine City in 1889, and underwent considerable repairs in 1913. She has an oak hull, and is of the well deck type, with diagonal strapping on the frames, steel arches, and with bow sheathed for operating in ice. Her dimensions are, length 20 ft., breadth 32 ft., depth 14 ft.; tonnage, 1,177 gross, 636 net. She is equipped with fore and aft compound engine, with cylinders 25 and 50 in. diam. by 40 in. stroke, 575 i.h.p. at 86 r.p.m., and supplied with steam by a firebox boiler 11 ft. 4 in. diam. by 16 ft. long at 124 lb.

British Columbia and Pacific Coast.

The Vancouver Harbor Commissioners' engineering department is reported to be preparing plans for a coal bunkering plant to be erected on the water front. The estimated cost, including machinery, is \$20,000.

The C.P.R. has placed its s.s. *Tees* on the route between Vancouver and Swanson Bay, leaving Vancouver on Wednesdays, and Swanson Bay on Saturdays, making calls at Powell River, Campbell River, Beaver Cove, Alert Bay, Port Hardy and Ocean Falls.

The C.P.R. winter schedule on the Alaska route went into effect Dec. 10, between Victoria, Seattle, Vancouver and Skagway, making two trips a month, with calls at Alert Bay, Prince Rupert, Ketchikan, Wrangell and Juneau at times subject to tidal and weather conditions.

The Grand Trunk Pacific Coast Steamship Co. has placed the s.s. *Prince John* on the route from Vancouver to Prince Rupert, Swanson Bay and Ocean Falls, until further notice. The call previously made at Beaver Cove has been eliminated and a call at Swanson Bay substituted.

The Japanese s.s. *Oridono Maru* loaded a cargo of herring at Barclay Sound, on the west coast of Vancouver Island, recently. This is said to be the first time that a deep sea ship has called at this port for 35 years, previous shipments of fish having been taken to Victoria and Vancouver for transfer to deep sea ships.

Work on the construction of the drydock at Burrard Inlet, Vancouver, for which J. Coughlan & Sons Ltd. has been granted a subsidy, full particulars of which were given in *Canadian Railway and Marine World* for December, has been completed, and the excavation work in hand.

The Vancouver Board of Trade is considering the establishment of a shipping exchange, to be in direct touch at all times with Pacific Coast ports and shipping, to receive stock reports and shipping intelligence, and to keep local shipping interests acquainted with weather conditions along the coast, for the use of tug owners, coast shipping, etc.

The B. W. B. Navigation Co.'s s.s. *Prospective*, which was salvaged recently by the Vancouver Dredging & Salvage Co., after having a large hole torn in her hull, and her rudder post carried away, has been taken to Wallace Shipbuilding & Drydock Co.'s plant, North Vancouver, where repairs will be made. She was owned formerly by Progressive Steamboat Co., Vancouver.

A questionnaire sent by the Vancouver Board of Trade to local shipping interests is reported to have resulted in a unanimous expression of opinion that Ripple Rock, Seymour Narrows, is a serious menace to navigation, and that its removal is urgently needed. The rock is about 300 yards long, with a least depth of two fathoms at the north end, and four fathoms at the south end. Dangerous swirls and overfalls are said to occur in its vicinity when the current is running strong, and it is considered a dangerous spot for ships navigating Seymour Narrows.

The New England Fish Co. is reported to have decided to operate the motor ship *Warrington* in fish service between Vancouver and Alaskan points. The *Warrington* was built at Dockton, Wash., in 1914, and was equipped as a steamship for operation in the passenger trade on Puget Sound. On the death of her owner, about three years ago, she was sold to the Union Steamship Co. of British Columbia, and was tied up at Vancouver. On the construction of the Union Steamship Co.'s s.s. *Capilano* last year, the *Warrington's* machinery was transferred to the new ship, and the wooden hull sold to Seattle, Wash., interests, and equipped with semi-Diesel engines.

The Union Steamship Co. of British Columbia has purchased the business hitherto carried on by the Terminal Steam Navigation Co., Vancouver, together with the property concerned. The Terminal Steam Navigation Co. owned the steamships *Ballena* and *Rowena*, but the former ship was practically destroyed by fire at Vancouver, Nov. 13, as mentioned in our last issue. These ships were operated to Howe Sound, making the terminus of the Pacific Great Eastern Ry. to connect with its trains, and also serving the copper mine at Britannia Beach, and the tourist resort at Bowen Island, owned by the company. This latter property consists of about 1,000 acres of farm lands, with farm buildings, hotel, summer camping sites, etc. The Union Steamship Co. intends to develop the property and to extend the transportation business by the addition of a steamship. In the meantime the s.s. *Capilano* is being run on the route.

The Nova Scotia Transportation Co.'s s.s. *Loquesnoy*, against which the claim of the liquidator of the Dominion Shipbuilding & Repairing Co., Toronto, for \$100,000, was sustained recently, is tied up in England. Osler Wade, F.C.A., as liquidator of the shipbuilding company, has been appointed receiver for 64 shares in the ship, against which there is a bond issue of \$258,000, as well as liabilities of \$132,000.

Esquimalt Drydock.—A press dispatch states that the Dominion Public Works Department has accepted the tender of P. Lyall & Sons Construction Co. Ltd., Montreal, for building a drydock at Skinner Cove, Esquimalt, B.C., a short distance from the present Government drydock there. The contract price is stated as approximately \$4,300,000. Complete particulars of the work to be done by the contractor were given in *Canadian Railway and Marine World* for Oct. 1920, pg. 576.

Ships Added to and Deducted From the Canadian Register During September, 1920.

Toronto Harbor Contracts, Litigation, Etc.

Early in December a writ was issued by Lt.-Col. Boyd Magee, of Toronto, against the Canadian Stewart Co., claiming \$95,000, under an alleged agreement, in connection with a contract awarded the company by the Toronto Harbor Commission, for dredging in Toronto harbor. In addition to this, an application was made to the Registrar in Bankruptcy, and an order issued appointing a receiver, to prevent, according to the claim, any possible transfer of assets to the parent company. An injunction was also obtained restraining the payment by the Harbor Commissioners to the company of some \$60,000. The Canadian Stewart Co., Dec. 3, applied to set aside the receivership order, and to dissolve the injunction, showing that it had approximately \$1,250,000 of assets in Canada, and other contracts to carry through. The company claimed that the receivership order had been obtained without it having had any notice, and if such notice had been received, it was most probable that the order would not have been granted.

The plaintiff's claim is based on a letter from J. G. Stewart, Vice President, Canadian Stewart Co., agreeing that plaintiff be paid \$100,000 for services in connection with the contract in question, in quarterly instalments, in proportion as payments are received from the Toronto Harbor Commission for work done. It also provided that plaintiff be engaged as advisory engineer at \$500 a month, for five years from the signing of the contract, unless the contract be terminated for any cause before that time. It was also agreed that should the contract require the contractor to do more than 31,000,000 cu. yd. of dredging and filling, the plaintiff be paid an additional 100,000 cu. yd., or if a better price could be obtained for such extra work, and it be not more expensive to carry out, he be paid all that could be obtained over 18½c. a cu. yd.

A contract was awarded in Sept. 1913, the dredging to consist of the removal of approximately 20,000,000 cu. yd. of material, 70% of which was stated to be sand and gravel, and 30% sand, silt and clay, at 19½c. a cu. yd. Two 24 in. hydraulic dredges and named Cyclone and Tornado respectively were then employed on the work. Owing to conditions brought about by the war, the work was not proceeded with as rapidly as was anticipated in 1912, and the Commissioners thought it advisable, in view of the situation, both financially and otherwise, to confine their efforts entirely to the reclamation of industrial and commercial properties. In 1918 one of the dredges, the Tornado, was taken off the work, under agreement with the Commission, and used at Norfolk, Va., in connection with U.S. Government war work. It is now owned by the St. John Shipbuilding & Dry Dock Co. and is being used on the Courtney Bay development work at St. John, N.B.

The contract with the Canadian Stewart Co. was slightly amended in 1917-18, due to changes in regard to the work, and an additional 10,000,000 cu. yd. at 15c. a yd. was undertaken.

The material dredged by the contractor is approximately 18,000,000 cu. yd. The Commissioners have considerable other work in view, in addition to that contracted for, and on completion it will approximate 22,000,000 cu. yd. over and above the 18,000,000 already mentioned. Under the Stewart contract, it was in-

tended to pump approximately 3,333,333 cu. yd. a year for six years, and when one of the dredges was taken off the work, about 11,000,000 cu. yd. had been pumped. The contractors, on the signing of the contract, made a cash deposit of 5%, based on the value of the contract, which deposit amounted to \$197,500, half of which was returned to the contractors when one of the dredges was removed, over half of the work having been accomplished. On the acquisition of the dredge Cyclone and the taking over of the balance of the contract by the Commissioners, at the commencement of December, the balance of the deposit was returned, together with the bond for the fulfilment of the contract.

The dredge Cyclone, as has already been mentioned, has been loaned to the Hydro Electric Power Commission of Ontario for work in connection with the Chippewa power development scheme, and it was set up in Chippewa Creek, where dredging operations were expected to commence during December. The dredge is to be returned to Toronto by Sept. 15 next.

The Canadian Stewart Co. had another contract for work in Toronto harbor, which was awarded by the Public Works Department in Sept. 1913, covering work on the eastern and western breakwaters, the ship channel, marginal way, etc., the total being stated as about \$5,400,000. This was cancelled after a certain amount of work had been done, there being a dispute as to the quality of part of it, and a new contract was let to Roger Miller & Sons.

Conversion of C.P.R. British Columbia Coast Steamships to Burn Coal.

As stated in Canadian Railway and Marine World for Dec. 1920, the C.P.R. has decided to convert its British Columbia Coast Steamships to use coal for fuel instead of oil. The following circular was issued Nov. 19 by J. W. Troup, Manager, B.C. Coast Service; H. W. Brodie, General Passenger Agent, B.C. District, and J. G. McNab, Division Freight Agent, B.C. Coast Service: "Owing to the existing shortage of fuel oil we are unable to obtain further supply and it is necessary to at once reconvert the oil burning steamships of the fleet to coal burners. We regret to announce that in order to carry out this work, service by s.s. Charming on the Nanaimo-Union-Comox and Vancouver-Powell River-Comox Bay routes will have to be temporarily discontinued following trip leaving Vancouver Nov. 24 and Union Bay and Powell River on Nov. 25. Service to Prince Rupert is also to be discontinued effective with trip of s.s. Princess Beatrice sailing from Vancouver on Nov. 17 and from Prince Rupert on Nov. 20. Effective with sailing from Vancouver Dec. 1, s.s. Tees will be operated between Vancouver and Swanson Bay, making same intermediate ports of call now made by Princess Beatrice. The company greatly regrets any inconvenience which these cancellations and changes in service may cause shippers and the travelling public generally, but the situation is one which is altogether beyond the company's control. Every effort will be made to complete necessary sailing so as to resume service at the earliest possible date."

Mainly About Marine People.

Hon. C. C. Hallantyne, Minister of Marine and Fisheries, and of the Naval Service, and Mrs. Hallantyne, went to Halifax, N.S., in December, to welcome the naval ships given to Canada by Great Britain and also to be present at the launching of the s.s. Canadian Explorer by Halifax Shipyard Ltd.

M. P. Fennell, Jr., Secretary, Montreal Harbor Commissioners, is reported to have left for Europe to look into food storage facilities, expecting to return at the end of February.

John Galt, at one time with the Union Steamship Co. of British Columbia, and until recently owner of the s.s. Trader, is reported to have been appointed Agent at Vancouver, B.C., of Struthers & Dixon Inc., Seattle Wash., managing the U.S. Shipping Board's Oriental steamship service.

E. G. Hamel, Assistant Secretary, Quebec Harbor Commission, was found dead in his office, Dec. 11, as the result of a revolver wound, believed to have been self inflicted. It was stated that he had been worried over domestic troubles.

Ralph T. Holcomb, of Hall & Holcomb, coal merchants, etc., Ottawa, died there suddenly, Dec. 1, aged 51, of apoplexy. He was also a director and Secretary-Treasurer of Empress Navigation Co. Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, was one of the pall bearers at the funeral. Mr. Holcomb's partner, J. H. Hall, died about two months before.

Capt. Hugh S. Kane, formerly master of Head Line s.s. Melmore Head, has been appointed Marine Superintendent, for McLean Kennedy Ltd., steamship agents, Montreal. He will attend to the Head Line services to Belfast, Dublin and the European continent, the Houston Line services to South America, India and the Far East, and any outside tonnage that may be consigned to McLean Kennedy Ltd. as agents. During the winter his headquarters are at St. John, N.B., and in the summer he will be at Montreal.

Lt. Col. G. H. Kirkpatrick, who has been elected President, Pacific Port Association, was born at Kingston, Ont., Nov. 5, 1875, and was educated at Upper Canada College, Toronto, Royal Military College Kingston, and Queen's University, Kingston. He practised as a mining engineer in British Columbia and Africa, operating for some years in British Somaliland, in developing natural resources for a British company. He took part in the South African war and in the recent great war, and on returning from France in 1919 was appointed President, Vancouver Harbor Commissioners.

W. L. Mackenzie, heretofore Chief Draftsman, engine department, Dominion Shipbuilding & Repair Co., Toronto, has been appointed, under the Marine and Fisheries Department, as Steamship Inspector (General) at Collingwood, Ont., to act in the special capacity of Inspector of Boilers and Machinery, and Inspector of Hulls and Equipment.

R. Wilson Reford, President, Robt. Reford Co., and Mrs. Reford gave a large reception in Montreal recently for Prime Minister Meighen and Mrs. Meighen.

R. M. Wolvin and Mrs. Wolvin left Montreal about the middle of December, and sailed from New York for England.

Salvaging the s.s. Prince Rupert at Swanson Bay, B.C.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., wrote Canadian Railway and Marine World from Swanson Bay, B.C., Dec. 11, as follows: "I reached here yesterday morning for a further inspection of the work and to be present during the process of floating the ship, which is expected to be commenced in the course of two or three days from now. The work of preparing the ship for the actual pumping operations has been going along without interruption or retarding accident since it was commenced. The construction of the cofferdam has been a very tedious and slow job, as it was all under the water. Six of the most expert divers on the Pacific coast have been constantly engaged in the work, under the supervision of the most experienced and skilful wreckers in this part of the world. The raising of the Prince Rupert must be classed, if successfully accomplished, which we have no doubt it will be, as a most difficult salvage operation. The cofferdam is built on the ship, and around it; in other words, the sides of the ship are built up to such an extent as to place them above the water level at low tide. Owing to the slope of the bottom on which he ship rests, a height of 56 ft. above the shade deck line is necessary at the stern, which tapers away to practically nothing forward. The uprights of this cofferdam are 8 x 10's of the necessary lengths, some 68 and 70 ft. long. These are bolted to the ship's side and planked up on the outside with 2 x 12's, all cracks and crevices being covered over with heavy canvas. To sustain the tremendous pressure which it will be subjected to, some heavy cross and stay braces have been fitted, measuring 12 x 12 and of a length to carry from one side to the other of the cofferdam at frequent intervals to give it the necessary strength.

"The damage to the ship's bottom, which caused the disaster in the first place, was stopped up temporarily as soon as possible. All apertures which would let water in have been closely stopped and planked off, and thwartship bulkheads have been placed in the interior of the ship so that the flow of water can be controlled at will. Fortunately, a careful survey of the bottom, inside where the ship is now lying, reveals a shelf nearly level with not more than 40 ft. of water at high tide. The plan will be, when pumping operations are commenced and the ship leaves the bottom, before taking too much water up of letting her swing her over to this shelf level, then heave her around again, which will leave a considerable portion of the cofferdam out of the water, the object being to allow as much as possible of the cofferdam to be cut away, thereby relieving the ship of this tremendous top weight, which would materially affect her stability if she were floated too rapidly, the weight of this superstructure being about 150 tons.

"Very powerful pumps have been located at various parts of the ship and so arranged so that the deeper set ones can be called into use as soon as the water recedes and they are accessible. The four pumps which will do the preliminary work have a discharging capacity of 2,400 tons an hour. Steam will be supplied by the wrecking steamship, *Algerine*, which will be attached alongside. All the difficulties likely to be encountered, as far as can be foreseen, have been carefully considered and the plans for this operation have been very deliberate-

ly prepared after a great deal of thought and study of the conditions attending the case. It is expected that the work will be so far completed that pumping operations can be commenced Sunday or Monday night (Dec. 12 or 13) at the latest, as the night tides serve better than those in daylight. Having once definitely got control of the ship, the rest, of course, will be easy. She will be drained dry, floated off the ledge previously spoken of and taken to Prince Rupert, where her cargo, which is still aboard, will be discharged; she will be put on the dock for preliminary survey, a report of the damage made; specifications for repairs drawn up, tenders called for, and a contract awarded. No further estimate of the cost of repairs has been made other than the original one, more can be told when the tenders are received."

While the divers were working below the water, two of them came across the box at the foot of the flag staff, and decided to raise the flag to the mast head, while they were about 100 ft. below the surface.

A press report from Victoria, Dec. 15, stated that the ship had been refloated that day, and later proceeded under her own steam to Prince Rupert.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships, and the ports at which they have been berthed for the winter, of which Canadian Railway and Marine World has been advised:—

Canada Atlantic Transit Co., Montreal. Arthur Orr, Kearsarge, Chicago, Ill.

Canada Steamship Lines Ltd., Montreal. A. F. McKinstry, Glenclabin, Glenmont, Collingwood, Ont.; Advance, Alert, Brighton, Brookdale, Cataract, City of Hamilton, City of Ottawa, Escort, George T. Davis, Hamilton, Hilda, Island Reed, J. R. Edwards, Jeremiah Godfrey, Joyland, McNaughton, Mapleboro, Maplegrange, Maplehurst, Melvin Bacon, Minnie E. Orton, Nadine, Simla, Windsor, Dalhousie, Ont.; Collingwood, Martian, Midland King, Valcantier, Goderich, Ont.; Outland, Hamilton, Ont.; Atikokan, Thunder Bay, Halifax, N.S.; Arabian, Beaver-ton, Belleville, Cobourg, D. G. Thomson, Edmonton, H. F. Bronson, India, McVittie, Mammie, Maplegreen, Maplegrange, Maplegreen, Mapleheath, Maplehill, Mapleton, Mary P. Hall, Montreal, R. G. A. Weaver, Rickarton, Vinmount, Kingston, Ont.; E. B. Foster, Emperor, J. H. G. Hagarty, Kenora, Midland Prince, W. D.

Matthews, W. Grant Morden, Westmont, Midland, Ont.; Maplebranch, Maplebrook, Winona, Sarnia, Ont.; Sir Trevor Dawson, Stadacona, Buffalo, N.Y.; Sarnian, Cleveland, Ohio.

Canadian Pacific Car & Passenger Transfer Co., Prescott, Ont.—Charles Lyon, Prescott, Ont.

Canadian Pacific Ry., British Columbia Lake and River Service.—Kootenay Lake—Kokanee, Nesokoin, and Ymir, Nelson, B.C.; Hosmer, Mayie and Valhalla, Procter, B.C.; Kuskanook, Kaslo, B.C.; Slokan Lake—Sandon and Slokan, Slokan, B.C.; Arrow Lakes—Bonington, Nakusp, B.C.; Columbia, West Robson, B.C.; Minto, Arrowhead, B.C.; Okanagan Lake—Castlegar, Kelowna, Naramata, and Okanagan, Okanagan Landing, B.C.; Skamoose, Penticton, B.C.

Canadian Pacific Ry., Great Lakes Steamship Service.—Alberta, Assiniboia, Athabasca, Keewatin and Manitoba, Port McNicoll, Ont.

Crystal Stream Steamship Co., St. John, N.B.—D. J. Purdy and Majestic, Indianton, St. John, N.B.

Huntsville, Lake of Days & Lake Simcoe Navigation Co., Huntsville, Ont.; Algonquin, Ramona, and Phoenix, Huntsville, Ont.; Iroquois and Mohawk Belle, Portage, Ont.

Imperial Oil Ltd., Toronto—Glen Allan, Halifax, N.S.; Imperial, Icolotte, Iocoma, and barge 41, Sarnia, Ont.

Lake Erie Navigation Co., Walkerville, Ont.—Marquette and Bessemer No. 1, Conneaut Harbor, Ohio.

Marquette & Bessemer Dock & Navigation Co., Walkerville, Ont.—Marquette and Bessemer No. 2, Conneaut Harbor, Ohio. Will be operated as long as ice conditions will permit.

Newcastle Steamboat Co., Newcastle, N.B.—Max Aitken, Chatham, N.B.

North Bay & French River Navigation Co., North Bay, Ont.—Northern Belle, North Bay, Ont.

Ottawa Transportation Co., Ottawa, Ont.—Dolphin, Florence, Hall, Harris, Ottawa, Scotsman, and Sir Hector, Hull, Que.

Pembroke Transportation Co., Pembroke, Ont.—Oiseau, Pembroke, Ont.

Prescott & Ogdensburg Ferry Co., Prescott, Ont.—Ferdinand, and Miss Vanderberg, Prescott, Ont.

J. F. Soward, Kingston, Ont.—Jeddah, Jeska, Jex, and Shanly, Kingston, Ont.

Sparrow Lake Steamer Line, Sparrow Lake, Ont.—Glympe, Port Stanton, Ont.

Toronto, Hamilton & Buffalo Navigation Co., Hamilton, Ont.—Maitland No. 1, Ashtabula, Ohio.

Webster Steamship Co., Montreal.—Colin W., Eric, and Richard W., Bickerville Pier, Montreal; Howard W. and Stuart W., Inner Louise Basin, Quebec, Que.

Grain Shipped from Fort William and Port Arthur.

The following table, prepared by the Dominion Bureau of Statistics, Internal Trade Division, shows the bushels of each kind of grain of the 1920 crop, shipped from Fort William and Port Arthur, Ont., from Sept. 1 to the close of lake navigation, 1920:—

	Wheat.	Bus.	Bus.	Bus.	Bus.
	Outs.	Barley.	Flax.	Rye.	
Canadian ships, 235 cargoes	39,489,492-29	6,413,781-10	2,967,081-06	624,407-34	583,191-26
U.S. ships, 214 cargoes	46,039,943-29	705,284-00	631,514-31	729,375-12	831,177-27
Total, 449 cargoes	85,528,385-40	7,119,065-10	3,598,595-39	1,353,782-46	1,414,368-53
To Canadian ports	28,202,480-40	6,413,781-10	2,967,081-06	533,186-30	482,502-10
To U.S. ports	57,325,905-00	705,284-00	631,514-31	820,296-16	931,666-43
Total	85,528,385-40	7,119,065-10	3,598,595-39	1,353,782-46	1,414,368-53
Same period 1919	52,362,883-50	9,145,176-61	3,676,987-45	1,319,710-14	1,060,327-80
Same period 1918	50,571,281-90	8,732,202-31	3,732,202-31	646,140-46	106,474-64
Same period 1917	57,006,992-10	7,551,098-28	2,870,000-00	1,841,375-21	63,583-17

In addition to the above, 6,983,005 lb. of sample mixed grain, and 67,200 tons of elevator screenings were shipped.

United States Shipping and Shipbuilding Notes.

The Superintendent of the U.S. Naval Observatory is reported to have stated that many repairs to navigation compasses were made necessary during the past year, owing to the instruments being broken open for the alcohol they contained.

The U.S. Lighthouse Service report for year ended June 30, 1920, states that the number of aids to navigation, including lighthouses, lightships, buoys and beacons, maintained by the Service, was 16,324, there having been increases of 256 during the year.

The U.S. Commissioner of Navigation's report for the year ended June 30, 1920, states that the total U.S. registered, enrolled, and licensed tonnage on that date was 16,324,024 gross tons, three times the tonnage in 1844 of Germany, which forms place as second maritime power the U.S. now holds.

The U.S. Bureau of Navigation has issued a summary of reports of shipyards, showing that on Nov. 1, 1920, private U.S. shipyards were building or under contract to build for private ship-owners 334 steel ships of 1,206,486 gross tons, compared with 330 ships of 1,236,327 gross tons on Oct. 1, 1920.

A course in naval architecture has been inaugurated at Lehigh University along lines widely different from other university courses. The main feature which differentiates this course from others offered elsewhere is said to be the introduction of a substantial amount of economics and business administration subjects.

The U.S. Steamboat Inspection Service report for the year ended June 30, 1920, states that the force inspected and certificated 8,053 ships with a total gross tonnage of 15,621,390, of which 7,736 were domestic ships of total gross tonnage of 12,741,807, and 315 were foreign passenger steamships with total gross tonnage of 2,879,592.

The U.S. Commerce Department announces that ships built in the U.S. and officially numbered by Bureau of Navigation during Nov. 1920 aggregated 119, of 213,966 gross tons. During 12 months ended Nov. 30, 1920, the output of ships in the U.S. was 1,845, of 2,977,886 gross tons, compared with 2,367 of 4,247,436 gross tons during 12 months ended Nov. 30, 1919.

The U.S. National Merchant Marine Association announces that changes in present policy of ship operation may be considered by the U.S. Shipping Board in the near future. Admiral Benson has stated that the present allocation system, under which the Board bears operating expenses and pays a fixed commission for handling ships, cannot be continued indefinitely, especially with constant losses. As a substitute, the Board will take up a bare boat charter plan, under which it will seek to place its ships with charterers who will pay a reasonable sum per month, assuming operating expenses and retain whatever profits they make.

Admiral Benson, Chairman, U.S. Shipping Board, made public a message to all seafarers of the merchant marine, in which he draws attention to the reduction in ocean freight movement and makes an appeal for a spirit of co-operation under present conditions, so that foreign competition may be successfully met. He urges masters and chief engineers, port captains and port engineers

"to take the utmost interest in the operation and proper repair of the vessels in their charge," to keep their ships in seaworthy condition, to effect quick turnaround, to reduce the cost of repairs, and avoid overtime. He reminds them that without such increase in efficiency an increasing number of ships must be tied up.

The U.S. \$200,000,000 wooden ship programme seems to be in danger of complete collapse. The U.S. Shipping Board attempted recently to dispose of 310 of these ships, but only four bids, totalling \$116,500 were received for ships which had cost more than \$2,000,000. There are now nearly 400 wooden and composite ships on the U.S. Government's hands. Many of them have never been to sea, while others are laid up as practically unseizable. There is so little prospect of a sale being effected in connection with 50 empty hulls which are tied up in one harbor that the Government has not troubled to invite bids, and it is even mooted that the ships may have to be broken up in order to save the accumulation of harbor charges. From a commercial point of view these wooden ships in the main have never "made good," and in view of the large number of steel ships that have been launched since the cessation of hostilities there is little, if any, likelihood now that the wooden ships will prove to be a desirable acquisition.

One of the 7,500 ton reinforced concrete tankers built for the United States Shipping Board has been sold and several of the smaller ships have been under lease and the larger ones are for sale. The ship sold is the Latham, which was built at Mobile and it has been bought by the American Fuel Oil Transportation Co. for \$700,000. Of the 10 ships built at the Polaris was wrecked last winter off Penobscot Bay in Maine, and a contract has been entered into with Aeronautical Equipment, Inc. of New York, City, on a "No cure, no pay" basis to salvage the ship. It is reported that the salvage operations are proceeding successfully. The Selma, a 7,500 ton ship, built at Mobile, ran on the breaker at Tangier early last summer. It has been dragged off and towed up to Galveston for repairs, which are under way. The Cape Fear was sunk on Oct. 29, 1920, in Narragansett Bay. By the original contract for concrete ships by the Shipping Board there have been completed six 7,500 ton ships, three 3,500 ton ships, and two 3,000 ton ships. Contracts for three of the original nine 7,500 ton ships were cancelled and the ships left half completed on the ways.

Detroit River Construction Co. Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital, and office at Windsor, Ont., to build docks, wharves, dockyards, bridges, etc., to carry on a general towing and wrecking business, and to own and operate ships. The provisional directors are: G. D. Wickett, A. St. Pierre and W. D. Roach, Windsor, Ont.

The Merchant Shipping Bill introduced in the British House of Commons recently by Mr. Sexton, M.P., proposes to introduce a light load line; to introduce the sea service a compulsory 24-hour service; to amend the Merchant Shipping Act in what it describes as "very important particulars," as well as by "minor amendments."

The 1920 St. Lawrence Navigation Season.

The Montreal Harbor Commissioners' statistics for the St. Lawrence navigation season of 1920 show that 636 trans-Atlantic steamships entered the port, against 702 in 1919, the tonnage for 1920 being 2,920,319, against 2,641,636 for 1919, included in the total for 1919 were 229 ships built on the Great Lakes for the U.S. Shipping Board, and which, while taking cargoes from the lakes, were merely passing to the ocean. During 1920 there were only 12% of the ships which called at Montreal. If these are deducted in each year, the figures are: 1920, 518 ships, 1,797,664 tons; 1919, 473 ships, 1,657,083 tons. Of the 1920 tonnage entering the port, 460 ships, 1,581,499 tons were British; 120 ships, 223,855 tons were U.S., the remainder being made up of Italian, French, Norwegian, Greek and South American ships.

River and Gulf communication between Montreal and the Maritime Provinces included 25 ships of 11,210 tons, the drop in number and tonnage as compared with previous years being occasioned chiefly by the absence of coal ships, which were engaged on war service, and were not relinquished to complete their charters until well on into the year.

Inland navigation to Montreal showed 4,403 ships of 4,287,714 tons, compared with 7,499 ships and 4,357,774 tons for 1919.

The first ocean steamship to arrive by the St. Lawrence in 1920 was on Apr. 25, and the last ship to leave the port was on Dec. 11.

British Empire Steel Corporation and the Shipbuilding Companies.

Montreal press dispatch, Dec. 5. In connection with the British Empire Steel Corporation it is considered probable on the local street that there will be a material modification of the original plans of the promoters. According to present arrangements, the British Empire Steel Corporation will be comprised of the Dominion Steel Corporation, Nova Scotia Steel & Coal Co., Halifax Shipyards Ltd. and Acadia Coal Mining Co., the control of which is held by Scotia. This will leave out Collingwood Shipbuilding Co. and subsidiaries, Port Arthur Shipbuilding Co., Davie Shipbuilding & Repairing Co., Maritime Naval Construction Co., Forges and Steelworks Ltd., Century Coal Co., Canada Steamship Lines and subsidiaries. While it is believed Canada Steamship Lines will not be included in the merger, it is understood that there is a close working arrangement with the corporation, and do the bulk of the Maritime shipping. No time has yet been fixed for the new development to be completed, but the information is regarded as reliable.

Editor's Note.—Canadian Railway and Marine World states that the time when that Port Arthur Shipbuilding Co. was not yet included in the merger.

Investigations into Shipping Casualties.—A Montreal press report of Dec. 11 says it is stated in shipping circles there that the Marine Department is intended to hold no further enquiries into shipwrecked ships while in Canadian waters, unless asked for by the owners of the ships involved or by the shipping agents. We are sorry to say that the report is incorrect.

Great Lakes Levels.

The U. S. Lake Survey reports stages of the Great Lakes in feet above mean sea level for Nov. 1920, as follows:—Superior, 602.48; Michigan and Huron, 580.30; St. Clair, 574.87; Erie, 571.95; Ontario, 245.23.

Lake Superior was 0.20 ft. lower than October, 0.03 ft. higher than a year ago, 0.04 ft. below the average November stage of the last 10 years, 1.03 ft. below the high stage of Nov. 1900, and 0.98 ft. above the low stage of Nov. 1879.

Lakes Michigan and Huron were 0.25 ft. lower than October, 0.12 ft. lower than a year ago, 0.02 ft. above the average November stage of the last 10 years, 2.62 ft. below the high stage of Nov. 1876, and 1.12 ft. above the low stage of Nov. 1895. During the last 10 years the November level has averaged 0.2 ft. lower than the October level, and 0.2 ft. higher than the December level.

Lake Erie was 0.10 ft. lower than October, 0.27 ft. lower than a year ago, 0.08 ft. above the average November stage of the last 10 years, 1.72 ft. below the high stage of Nov. 1861, and 1.25 ft. above the low stage of Nov. 1895. During the last 10 years the November level has averaged 0.3 ft. lower than the October level, and 0.1 ft. higher than the December level.

Lake Ontario was 0.06 ft. lower than October, 0.88 ft. lower than a year ago, 0.41 ft. lower than the average November stage of the last 10 years, 2.59 ft. below the high stage of November 1861, and 1.82 ft. above the low stage of Nov. 1895. During the last 10 years the November level has averaged 0.2 ft. lower than the October level, and 0.2 ft. higher than the December level.

Steel Plate Prices.—Ottawa press dispatch, Dec. 17.—Negotiations are in progress for a reduction in the contract price with the Dominion Iron & Steel Co. for steel plates supplied the Dominion Government from the Sydney, N.S., plant. The contract calls for 50,000 tons a year. The present price is around \$3.65 per 100 lb., which is a reduction from the original. A further cut is proposed in view of the much lower rate prevailing in the market. Negotiations to this end are about concluded between the Marine Department and the company.

Clyde shipbuilding has a set-back in October compared with the three immediately preceding months. In fact, with the exception of March, the tonnage was the lowest recorded in any month of last year. In all, 13 ships, aggregating 27,586 tons, were launched, bringing the aggregate for the 10 months of the year up to 1,000,000 tons.

Transportation Conventions in 1921.

The names of persons given below are those of the secretaries, unless otherwise mentioned:—
Jan. 25 to 27.—American Wood Preservers' Association, San Francisco, Cal.; P. J. Angier, Baltimore & Ohio Rd., Baltimore, Md.

Jan. 27, 28.—National Association of Railroad Tool Producers, San Francisco, Cal.; E. E. Pershall, 729 Security Bldg., St. Louis, Mo.

Jan. 31, Feb. 1.—Canadian Electric Railway Association, Ottawa, Ont.; A. Eastman, 70 Bond St., Toronto.

Mar. 15 to 17.—American Railway Association, Division 4, Engineering, Chicago, Ill.; E. H. Frick, 431 South Dearborn, Chicago, Ill.

May 11.—Railway Accounting Officers' Association, Atlantic City, N.J.; E. R. Woodson, 1,116 Woodward Bldg., Washington, D.C.

May.—International Railway Fuel Association, Chicago, Ill.; J. G. Crawford, 702 East 51st St., Chicago, Ill.

June 15 to 22.—American Railway Association, Division 5, Mechanical, Atlantic City, N.J.; V.

R. Hawthorne, 481 South Dearborn St., Chicago, Ill.

June 20.—American Association of Freight Agents; R. O. Wells, Illinois Central Rd., Chicago, Ill.

June 20.—American Train Dispatchers' Association, Kansas City, Mo.; C. L. Darling, Northern Pacific Ry., Spokane, Wash.

Aug. 24 to 28.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothchild, Union Station, Kansas City, Mo.

Sept. 20 to 22.—Roadmaster's Association of Way Association, Chicago, Ill.; P. J. McAndrews, Chicago & North Western Ry., Sterling

Painters' Association, Buffalo, N.Y.; E. E. Martin, Union Pacific Rd., Kansas City, Mo.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter and that we will not assume any responsibility to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken under any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Crain's Market Data Book and Directory of Class, Trade and Technical Papers, about to be issued, will, the publisher states, list all business publications in the United States and Canada, giving circulations, rates, type page sizes, closing dates, etc., and a market analysis of each trade, profession and industry. The volume, bound in cloth and containing nearly 500 pages, is published by G. D. Crain, Jr., 417 South Dearborn St., Chicago; price \$5. Orders in advance of publication are being accepted at \$3.75.

Locomotive Superheater Co., New York, advises that the Coast Steamship Co.'s s.s. Cuba has been equipped with its fire tube superheaters, giving 200 degrees of superheat at the throttle. The Cuba was formerly the Powhatan, built in 1899, and sunk in a collision a few years ago off Hampton Roads, being submerged for nearly a year. She is a steel freight and passenger ship, operating between Jacksonville, Fla., and Havana, Cuba, her net tonnage being 6,420. She is equipped with 3,000 shaft h.p. General Electric turbo electric drive.

Locomotive Superheater Co., New York, N.Y., writes: "The splendid performance of Ellerman & Bucknall's s.s. Kandahar, which has been operating since 1913, has attracted considerable attention recently. This ship is of 10,750

d.w. tonnage, equipped with triple expansion engines, h.p. 25½ in., m.p. 43½ in., l.p. 76 in., stroke 51 in., developing 3,200 i.h.p. at a speed of 12 knots. She is fitted with three single end Scotch boilers with forced draft, and with fire tube superheaters delivering 200° at the main engine throttle. She burns about 42½ tons of coal per 24 hours, or about 1.24 lb. per i.h.p. hour for all purposes."

Metal & Thermit Corporation, New York, N.Y., has opened a branch office at 141 Milk Street, Boston. Enquiries addressed there will have the attention of the New England District Manager, R. L. Browne. Orders, however, should continue to be addressed to the general office at 120 Broadway, New York.

O. E. Falls, who has had many years of experience in charge of foundry and Thermit welding work at Norfolk Navy Yard, Portsmouth, Va., has entered the Metal & Thermit Corporation's service. He obtained his earlier foundry experience from positions held at the Norfolk & Western Ry. shops, Roanoke, Va.; Richmond Locomotive Works, Richmond, Va.; Pennsylvania Engineering Works, Newcastle, Pa.; Franklin Air Compressor Works, Franklin, Pa., and Seaboard Air Line Ry. shops, Portsmouth, Va.

Metal & Thermit Corporation has issued a small Thermit Railway Instruction Book, No. 41, prepared for use by men actually performing Thermit welding railway repairs. It has also issued the following:—Thermit Welding Pamphlet 17, for mill and foundry repairs. 3rd edition. Thermit Carbonize Metals and Alloy, pamphlet 29, 4th edition; and Thermit Rail Welding pamphlet 39, revised edition.

Taylor & Arnold Engineering Co. Ltd. A. M. Tirbunt, who was the company's Vice President, at Winnipeg, for the last seven years, and who is Vice President of the Manitoba Steel Foundries Ltd., has removed to Montreal, on his appointment as Vice President and General Manager, Taylor & Arnold Engineering Co. Godwin Shenton, formerly Vice President and Managing Director, has resigned to go into other business.

Whiting Foundry Equipment Co., Harvey, Ill., advises that its consolidation with the American Foundry Equipment Co., New York, N.Y., announced recently, has not been consummated, and that the two companies will continue separately as heretofore.

Concrete Lining of Connaught Tunnel, Canadian Pacific Railway.

The construction, on the C.P.R., at Glacier, B.C., of the Connaught tunnel, a double track bore about five miles long, which was opened for traffic, Dec. 6, 1916, reduced the elevation of the line from 4,340 ft., on the original line over Rogers Pass, 3,787 ft., shortened the rail line by 4.3 miles, eliminated $4\frac{1}{2}$ miles of snow sheds, and cut out curvature to the amount of seven complete circles, at a cost of about \$5,500,000, established a record for quick construction, work hav-

worked out. The camp provides accommodation for a force up to 200 men, and is intended to furnish as complete and comfortable quarters as are possible under the severe winter conditions in the mountains. One of the accompanying illustrations shows a portion of the camp, which was built to comply with all government requirements, and which comprises bungalows for small groups of men, separate quarters for families, bath house, laundry, community dining

k.w. nominal capacity of electric generating units, furnishes light and power for all operations both inside and out of the tunnel. The current is led at 2,200 volts a.c. through the pioneer tunnel which was used in constructing the main tunnel and which lies parallel to it 50 ft. away. This current is lowered to 550 and 110 volts for power and light respectively, soon after entering the main tunnel, and is so distributed through the area where concreting operations are go-

Portion of Construction Camp, for Concrete Lining of Connaught Tunnel, C.P.R.

ing been started on the main bore Jan. 15, 1914, and work being prosecuted from both ends. The headings met, and passage through the tunnel was effected, Dec. 15, 1915. The difficult, but less spectacular, task of lining the tunnel with concrete is now being done. Something over 3 cu. yd. a running foot are estimated to be required. Traffic through the tunnel is going on without interruption, one track being reserved exclusively for freight and passenger trains, and the other for the lining work.

As the work is located in the heart of the Selkirk Range of Mountains and far from all ordinary sources of supplies and labor, it follows that the living accommodation for the men, the construction plant and equipment, the storage of materials and all similar operating details have had to be carefully and thoroughly

room, kitchen and storehouse, in all about 60 buildings. The houses are provided with water and electric light.

With an average snow fall of 40 ft. during the winter, it was quite necessary to provide a considerable amount of storage sheds, both to protect materials from dampness and to be able to find them at all once the heavy snows began. Another of the illustrations shows the facilities under construction for storing gravel, which comprise a timber bunker of 5,000 yd. capacity into which gravel is dumped direct from car set on a high line, and from which it is conveyed into the bins of the concrete mixer cars which are placed on the low level. Steam pipes are installed to keep the gravel from freezing.

An electric power plant with coal burning locomotive type boilers, and 400

ing on. Outlets every 10 ft. permit the attachment of the light apparatus used in the working zones, while the line is tapped wherever needed for the operation of the concrete pumping equipment.

The heaviest of the ingredients is the concrete mixer and all packing material, which, with the necessary materials for sand, gravel and cement, is composed of two heavy pit flat cars, carried together and run into the tunnel at a speed, by a crawling locomotive. These cars are emptied under the force to be mixed, and converted to the pump cars, and the concrete, after the usual mixing, is shot by air, at about 80 ft. pressure, into the forms. The cars carrying enough material for one batch of 300 turned out, before going past the encasing. The form and Hawk-Knox concrete t.p.s. with steel and concrete

and steel plates. There are six of them, intended to be blown in rotation, so that, in general, one or two forms are being blown, two or three are being filled, one is being collapsed, and one is being re-erected, all the time. These forms are

tunnel roof, the placing of lagging be-operation of large ventilating fans at the hind the false forms, the placing of re-west portal. The smoke chart for Mar. enforcing rods, the side swiping of rock 1920 shown herewith gives an idea of points, and all other work preliminary smoke conditions, and it may be said to the placing of the steel form and the that that month was not one of extreme-blowing of concrete. It will be apparent

Smoke Chart, Connaught Tunnel, C.P.R., for March 1920.
Clear intervals of less than 10 minutes are disregarded.

Timber Bunker, for Storing Gravel for Concrete Lining of Connaught Tunnel, C.P.R.

mounted on wheels, clear of all traffic, and after collapsing the whole form is rolled forward to its new position. A movable platform, of light steel and timber, precedes each Blaw form, and provides for the handling of all preliminary work, which includes false forms where the tunnel section is overbroken, the hanging of the false forms to the

A 1% grade against westbound traffic extends practically the entire length of the tunnel. Many of the trains westbound are double headed and work steam hard during the passage through the tunnel. The smoke, while not dangerous, is at times extremely thick, and under certain weather conditions hangs for a long time in the tunnel, despite the

that, even with a high degree of artificial illumination, productive working time in the tunnel is seriously cut into. Under certain conditions, when extra sections of trains are running, it is extremely difficult to get work straightened away before it is again stopped by smoke from another train.

The work is being done under the di-

rection of the C.P.R.'s Western Lines Engineering Department, W. A. James being Assistant Chief Engineer; Frank Lee, Engineer, Maintenance of Way; and H. Rindal, District Engineer. The Syd-

ney E. Junkins Co. Ltd., of Winnipeg and Vancouver, has the contract for the lining work.

Articles describing the original construction of the tunnel, many of them il-

lustrated, appeared in Canadian Railway and Marine World for April, Oct. and Nov. 1913; Jan., June, Oct. and Dec. 1914; Jan. and Feb. 1915; May 1916, and Dec. 1917.

Railway Companies' Special Instructions re Station Limits Cancelled by Board of Railway Commissioners.

As stated in Canadian Railway and Marine World for January, the Board of Railway Commissioners passed general order 322, Dec. 10, 1920, directing railway companies to withdraw from their respective working timetables, Special Instruction E, and to observe the Uniform Code of Rules for Canadian Railways approved by general order 42, July 12, 1909, the necessary changes and instructions to employees to become effective June 1, 1921. This order was based on a judgment given by Commissioner Boyce as follows:—

Complaint is made to the Board that what is called "Special Instruction E," as at present contained in the C.P.R. working timetables, should be discontinued as illegal, and not in accordance with, nor a part of, the authorized general train and interlocking rules prepared and authorized under the appropriate provisions of the Railway Act. The complaint is of long standing, and since 1913 has been before the Board for hearing on three occasions. One of the original protests made to the Board, dating back to Nov. 1913, may be referred to for particularity, as follows:—

We, the Members of the Brotherhood of Locomotive Engineers, Division No. 1, hereby endorse the action taken by Bro. Lawrence, our representative, in opposing rules E and F, in the C.P.R. timetable on eastern and western lines, and strongly protest against any rules that have for their object any changing of the system of train control that is contained in the Standard Code of Rules approved by the Governor in council.

The above is a sample of a great many similar protests received from different divisions of the Brotherhood of Locomotive Firemen and Engineers throughout Canada. Special instruction E complained of, reads as follows:—

"The outer main track switches of passing tracks will be considered 'station limits,' and main track may be used inside of such limits by keeping clear of first and second class trains. All trains, except first and second class trains, must, unless otherwise directed, approach and pass through such limits, prepared to stop, unless the main track is seen to be clear. Trains occupying or using the main track outside of station limits must be protected, unless train order or schedule, confer the right to use main track. During foggy, smoky or stormy weather, protection per rule 90 must, in addition, be maintained to ensure absolute safety."

This special instruction was first issued by the C.P.R.'s Assistant General Manager and appeared in the company's timetables on June 27, 1907. A similar instruction appears in the working timetables of the Canadian National Rys., which were represented at the hearing. Special instruction F, which reads as follows:—

"Where there are no yard limit boards, the outer main track switches of passing tracks, unless otherwise directed, will be considered yard limits within the meaning of rule 93."

first appeared in the C.P.R. timetable 6, of the Western Division, June 5, 1910. By the Board's order 108, dated Aug. 11, 1913, the C.P.R. was directed to withdraw rule E and observe uniform rules regarding yard limits.

Neither special instruction E nor special instruction F were ever incorporated into the general train and interlocking rules, nor did they in any way ever receive ratification or approval by order of this Board, or by the Governor Gen-

eral in council, as it is contended by the complainants is essential under the Railway Act to make them valid and legal operating rules.

It was contended by the complainants and very exhaustively and ably argued, that special instruction E, which is now used on the entire C.P.R. system, and is also applied on the Canadian National Rys., including what is known as the Intercolonial System, was not only illegal, in that it was an operating rule requiring the approval as above, but that it was unsafe in operation, as regards the public and the employees of the railways concerned, and has resulted in accidents; that it conflicts with certain rules 93, 90, 551 and 552, and with definitions in terms of the general train and interlocking rules duly sanctioned under the Railway Act.

The railway company, with equal force, urged upon the Board that the instruction which had been in force since 1907, had, by practical application and operation, been found to be the safest plan of operation under the circumstances intended to be provided against, and that the accidents referred to by complainants had, in the majority of cases, not been caused by the application of the instruction, but by the non-observance of the instruction, and that the safety of the public and of the employees of the railway and the most efficient operation had been best attained as a result of operating under the instruction since 1907, and that to modify or change the plan of operation mentioned in instruction E would be to create a danger which hitherto operations thereunder had avoided, and the railway company asked that should the Board be of opinion that special instruction E is open to the objection that it lacks approval and ratification in the form required under the Railway Act, the Board shall issue an order, under the provisions of sec. 287 of the Act, authorizing the company to continue the present method which the company submits, has been demonstrated, upon the evidence, to be an eminently safe and proper one.

That which is called, and promulgated to its employees as, instruction E appears only in the company's working timetable as an "instruction," and does not appear in the book of operating rules approved under the Railway Act, then it is necessary to consider the contentions of the railway company that the instruction was not one requiring to be approved under the provisions of the Railway Act in order to attain legality. The operation provided by instruction E may be, as is contended by the railway company, an eminently safe and proper one. It was contended that it provided the safest and most proper method of operation of the character provided for in the instruction, but yet, if the instruction is, in fact, a rule or regulation of the character contemplated under secs. 290 et seq. of the Railway Act it can only become effective as a legal rule on complying with the requirements of the Act as regards approbation. To designate that as an

instruction which is, in fact, an operating rule of general application, would be an evasion of the sections referred to. To permit such a practice to continue would be to disregard the Board's duty, imposed by sec. 288 of the Railway Act, to endeavor to provide for uniformity of rules for the operation and running of trains, and might expose the public and the employees of the railway, to the danger resulting from any system of operation, of general application on any railway, not governed by, and, perhaps, inconsistent with, the operating rules approved according to law.

Sec. 290 of the Railway Act is as follows:—

"The company may, subject to the provisions and restrictions in this and to the special act contained, and subject to any orders or regulations of the Board made under secs. 287 and 288, make bylaws, rules or regulations respecting:—
(a) the mode by which, and the speed at which any rolling stock used on the railway is to be moved;
(b) the hours of arrival and departure of trains;

(c) the loading and unloading of cars, and the weights which they are respectively to carry;
(d) the receipt and delivery of traffic;

(e) the smoking of tobacco, expectorating, and the commission of any nuisance in or upon trains, stations, or other premises occupied by the company;

(f) the travelling upon, or the using or working of the railway;

(g) the employment and conduct of the officers and employees of the company, and, (h) the due management of the affairs of the company."

Sec. 292 provides that

"All bylaws, rules and regulations, whether made by the directors or the company, shall be reduced to writing, and shall be signed by the person or persons presiding at the meeting at which they are adopted, have affixed thereto the common seal of the company, and be kept in the office of the company."

Sec. 293 provides that

"(1) All such bylaws, rules and regulations, except such as relate to tolls, and such as are of a private or domestic nature, and do not affect the public generally, shall be submitted to the Governor in council for approval."

Upon a report from this Board (s2) the Governor in council may sanction such bylaws.

"(s3) No such bylaw, rule or regulation shall have any force or effect without such sanction or after such sanction has been recorded."

Sec. 294 provides that

"Such bylaws, rules and regulations, when so approved, shall be binding upon the company, and shall be sufficient to justify all persons acting thereunder."

Reference was made to the general train and interlocking rules which were approved by the Board's order 7, now general order 42, July 12, 1909, adopted by bylaw 96, passed by the C.P.R. Board of Directors on Mar. 14, 1910, and approved by the Governor General in council. These rules, it was contended by complainants, are the rules, and the only rules, of general application, which govern, and legally can be intended to govern, "the using or working of the railway." By reference to the memorandum on page 3 of these working rules, legalized under the Railway Act, it will be seen that there is a memorandum, signed by the Vice President of the railway company, which contains the following intimations:—

"The rules herein set forth govern the movements operated by the Canadian Pacific Railway Co. They take effect June 1, 1910, superseding all previous rules and instructions inconsistent therewith. Special instructions may be issued by proper authority."

There was also filed a copy of a working timetable of the company, such as is placed in the hands of its operating men, and in this working timetable, and under the head of "Special Instructions," is to be found instruction E, which is complained of. All other instructions, except instruction E, contained under the head of "Special Instructions" in this timetable are of minor importance and are "special" with regard to special conditions therein referred to.

It is contended that this special instruction E is inconsistent with rule 99 of the general train and interlocking rules, approved as above, as follows:

"When a train stops or is delayed on the main track under circumstances in which it may be overtaken by another train, the flagman must go back immediately with stop signals, a sufficient distance from the train to ensure full protection at least."

"In day time, if there is no down grade toward train within one mile of its rear, (40 telegraph poles) of its rear of 2,000 yards (40 telegraph poles) from an approaching train, 500 yards, 10 telegraph poles, and other times and places, if there is no down grade forward train, within one mile of its rear, 1,200 yards (24 telegraph poles) from an approaching train."

"If there is a down grade toward train, within one mile of its rear, 1,800 yards, 36 telegraph poles."

"The flagman must, after going back a sufficient distance from the train to ensure full protection, take up his position in such a place as to have an unobstructed view of him from an approaching train of, if possible, 500 yards (10 telegraph poles), first placed two torpedoes, not more than 200 or less than 100 ft. apart on the rail on the same side as the engineer of an approaching train, 100 yards (2 telegraph poles) beyond such position. The flagman must remain in such position until recalled or relieved."

"If recalled before another train arrives he must, at night, or when weather or other conditions obscure day signals, or when snow ploughs or other dangers may be running on the main track, the two torpedoes, leave a fuse burning red at the point he returns from and at such other points as he returns as may be necessary to ensure full protection."

"The front of a train must be protected in the same way when necessary by the front brakeman, or if there be none, by the fireman."

"Flagmen must always, on the approach of a train, display stop signals. If not already done, place two torpedoes on the rail as before described, and then return 100 yards (2 telegraph poles) nearer the protection."

"Flagmen must keep be equipped for day time with a red flag and four torpedoes, and at night, and when weather or other conditions obscure day signals, with a red light, a white light, and four torpedoes, three red fuses and a supply of matches."

"A train should not stop between stations at a place where the view from following trains is obstructed."

Under the provisions of instruction E if a train stops, or is delayed, on the main track, within the boundaries defined by special instruction as "station limits," it appears clearly that the intention of the company is that the provisions of special instruction E shall control the operation as against the provisions of rule 99; i.e., that a rule, no. 99, duly approved under the Railway Act, shall, under certain conditions, be superseded by an instruction in the timetable. The railway company states that this is not the case, that rule 99 is self contained, but it do not so read it, because it provides for a contingency of a train being stopped or delayed on the main track. If it be stopped or delayed on the main track, outside of what are called or said to be considered "station limits," under special instruction E, the method of operation provided by rule 99 will be employed under the general rules, but under special instruction E the main track within the boundaries considered therein as "station limits" may be used inside of such limits, by keeping clear of first and second class trains, thereby abrogating, to that extent, the application of the provisions of rule 99 as against other than first or second class trains within that portion of the railway which is to be considered under special instruction E as "station limits." It cannot be

said, giving to this so-called "instruction," the broadest possible interpretation, that it is free from the charge of interference, or confusion with, the provisions of rule 99, as regards the special conditions mentioned in special instruction E. The same contention is made with regard to rule 93, which is as follows:

"Within yards defined by yard limit boards, the main track may be used, keeping clear of first and second class trains."

"The main track must not be so used within yard limits until it is known that all sections of overlie first and second class trains have arrived."

"All trains, except first and second class trains, must, unless otherwise directed, approach and pass through yard limits prepared to stop, unless the main track is seen or known to be clear."

"Yellow lights must be attached to the yard limit boards to be kept lighted from sunset to sunrise."

Here "yard limits" are referred to as being defined by yard limit boards, and the main track may be used under the rule, provided first and second class trains are not in the yard. The contention is that the regulation contained in special instruction E conflicts with rule 93 in its operation, in that, under special instruction E the outer main track switches of passing tracks are to be considered "station limits" (not yard limits), and under the conditions mentioned in that instruction the main track inside of such limits may be used, but as rule 93 is an approved rule, as is also rule 99, there is force in the contention that the provisions of rule 99 co-ordinate with the operation contemplated by rule 93 as part of a general legally approved operating system governing the railway.

Rules 551 and 552 are as follows:—
Rule 551: "When a station protection signal indicating 'stop' must stop before passing it, and may proceed with extreme caution, sending a flagman ahead, to see that there is no obstruction, and expecting to find a train moving in either direction."

Rule 552: "When the signals of trains protected by such a signal must also send out a flagman, as an additional protection of the train, if the condition of the track, location of the train, with regard to grades or curves, makes it necessary for the absolute protection of the train."

It is urged, as has been pointed out under the operation provided for by the so-called special instruction E, the outer main track switches or passing tracks will be considered "station limits" and within such limits the main track may be used under the conditions and restrictions in the instructions specified, but here is a rule (551) providing that a station protection signal within the station limits must indicate a stop, and that a train finding such a station protection signal indicating "stop," must stop before passing it, sending a flagman ahead, if necessary, for complete protection. To my mind the operation of this rule is not altogether free from the objection that its clarity and exactness is interfered with, as observed, by the existence of the special instruction E, which applies generally throughout the whole system.

It would appear that to give effect to what is contained in special instruction E, if it is to be applied as a general operating rule, the main track switches of passing tracks are, for the purpose of operating under the instruction, to be considered as "station limits," i.e., that these main track switches are to be regarded as "fixed signals," indicating the boundary of station limits within which operation is to be carried on under instruction E. It is contended, and I think with force, that a switch stand is not a "fixed signal" within the meaning of the approved rules as "A signal of fixed location indicating a condition affecting the movement of a train." In operating under special instruction E, the outer main track switches must be considered

as "fixed signals," which, in my opinion, and having regard to the approved rules governing switch signals, are different regulations from those relating to "fixed signals." This operation is very similar to that which was in issue in *Palmer v. C.P.R. Co.*, reported at 24 C.R.C. 390, the decision in which was affirmed by the Supreme Court of Canada, 24 C.R.C. 399, and where it was held that a switch stand is not a "fixed signal," within the meaning of the railway regulations, and is governed by different rules; an engineer is not guilty of negligence in passing a red light on a switch stand, although compelled by the railway rules to stop where such is shown as a signal other than on a switch stand.

Open as it is to the objections as to inconsistency with the published and legalized operating rules governing the movement of trains, and while it is not necessary to decide upon the evidence, on the facts before us, as to whether there is, in fact, an interference by instruction E with any of the general operating rules so ratified, there are, in my opinion, in special instruction E, provisions applicable to and governing to some extent, the general operating and working of trains over the whole system of the C.P.R., and of the other railways operating under the same method, and that because it makes provisions applicable to the working of trains over the whole railway systems using it, and does not provide only for particular and inconsequential operations, I am of opinion that instruction E is a "regulation" governing the using or working of the railway within the meaning of sec. 290 (f) of the Railway Act, and as such, to establish its legality, must comply with the sections of the Railway Act, which I have indicated, including the sanction of the Governor General in council.

The question raised is very similar to that which was an issue in *Fralick v. G.T.R.*, 43 S.C.R. 494, and I feel constrained to adopt the reasoning and opinions of Justices Groulx and Anglin in that case, that what is contained in that instruction in that case is, in this, was, in fact, a regulation, and was not a valid regulation, or a legal regulation, until made so under the provisions of the Railway Act. At the same time I would point out that the so called instruction referred to in the judgment in *Fralick v. G.T.R.* (supra) was less general in the scope of its character, and in the extent of its operation, than is special instruction E now under consideration.

Mr. Flintoft, for the C.P.R., contended that should the Board hold that special instruction E is a regulation necessitating the statutory approval referred to, the Board should make an order under sec. 287 of the Railway Act. Being of the opinion, as expressed above, that the so-called special instruction E is a regulation requiring the statutory sanction referred to, I would point out that the provisions of sec. 293 (3) require that no such bylaw, rule, or regulation, shall have any force or effect without such sanction, or after such sanction has been rescinded under sec. 294, "that such regulations, when so approved shall be observed by all persons, and shall be sufficient to justify all persons acting thereunder." Now, sec. 287 referred to by Mr. Flintoft, provides that the Board may make orders and regulations

"(1) Generally providing for the protection of property, and the comfort of the public, and of the employees of the company, in the running and operating of trains, and the use of the use of engines, by the company or on or in connection with the railway."

It seems to be clear that what is contemplated by the subsection above quoted is that the Board may make general provisions for protection of property and the protection, safety, accommodation, and comfort of the public, and of the employees of the company, in the running and operating of trains, and the speed thereof, or the use of engines, by the company on or in connection with the railway, but gives no power, nor do I see that it contemplates the giving of any power, nor can I presume that his Board can obtain thereunder any power of providing for the method of running and operating trains. That power can only be derived, in my opinion, by the operation of sec. 290 et seq. and subject to the performance of the statutory restrictions and with the approval therein provided for. I am, therefore, of opinion that it is not within the Board's power, under sec. 287 of the Railway Act, or any other section, to make that a regulation which is not made so under sec. 290 et seq.

The special instruction complained of has been in force, and the railway has been operated under it for a great many years, and the submissions indicate that though open to strenuous objection by a part, at least, of the employees of the railway operating under it, it has been, it is said, operated with success, and is still in general use throughout the entire system. Under sec. 288 it is the duty of the Board to endeavor to provide for uniformity of rules for the operation and running of trains, and it is important in the interests of such uniformity that if such an operating provision as contained in special instruction E is necessary, or desirable, for the safe and efficient operation of the railway, it should be made a regulation as soon as possible, not only upon the Canadian Pacific, Canadian National, and any other railways now using it, but consistently with that uniformity of operating rules which it is the duty of the Board to ensure, as far as practicable, upon every other railway operating under the jurisdiction of this Board, and any rules, now in force, which may be inconsistent with it, so modified as to remove that danger. I recognize, however, that a change from one system of operation, however it may have grown up, cannot immediately be made, having regard to the safety of the public and of the employees of the railways involved. I would, therefore, in the order to be made by the Board, insert that the elimination of special instruction E, as now in the timetables of the railways concerned, shall not take effect until June 1, 1921, by which time the railway companies concerned will have been able to make all necessary changes in order to bring the operation under the general rules approved under the Railway Act, if, in compliance with the act, such a rule is decided, by statutory authority, to be a proper one to receive approval in statutory form. An order will, therefore, go, requiring the C.P.R., and all other railway companies under the Board's jurisdiction, to withdraw special instruction E from their respective working timetables, and hereafter observe the uniform code of rules for Canadian railways, approved by order 7,563, now general order 42, dated July 12, 1909, the necessary changes and instructions to employees to become effective on June 1, 1921.

This judgment was concurred in by Chief Commissioner McNeill, Assistant Chief Commissioner McLennan, Deputy Chief Commissioner Nantel and Com-

missioner Rutherford.

The Board on Dec. 10 passed general order 322 requiring all railway companies subject to the Board's jurisdiction to withdraw special instruction E from their respective working timetables, and here-

Track Section Prize Competition on Canadian Pacific Railway, Eastern Lines.

For the past eight years an annual track section prize competition has been carried out on the C.P.R. Eastern Lines, which has aroused a healthy spirit of rivalry and keen competition among the section forces of the different divisions and districts. Sixty-three prizes are awarded in the competition, as follows:—A General Manager's prize to the foreman having done the best season's work on Eastern Lines. Four general superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of the winner of the General Manager's prize. Fourteen division superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of winners of higher prizes. Forty-four roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency, and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section men. Switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grade, alignment, drainage, and character of roadbed being considered—wins the first prize.

The number of hours of regular labor and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves and ditching done, etc. The amount of track handled, right of way, spikes and bolts, is fairly uniform on all sections, so that the condition with respect to these items at the end of the season is unusually a criterion of the amount and quality of the work done thereon throughout the season. Where special conditions affect such work they are taken into consideration. Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize.

Towards the end of the season, on each of the 44 roadmasters' territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and resident engineer, who select the best one on each district, and the division superintendent, and division engineer. All divisions of a district are covered by these two officers, and the section select-

ed after they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the General Manager, the Engineer of Maintenance of Way, the Assistant Engineer of Maintenance of Way, and district officials.

Following is a list of the successful section foremen for 1920:—General Manager's prize, \$100—S. McCarthy, Chalk River, Sec. 2, North Bay S'd., Sudbury Division, Algoma District.

New Brunswick District, General Superintendent's prize, \$50—J. Meulendyk, Sec. 2, Moosehead S'd., Brownville Div. Brownville Division, Superintendent's prize, \$25—C. Lamontagne, Sec. 17, Moosehead S'd. Roadmasters' prizes, \$10 each—H. Taylor, Sec. 8, Shore Line S'd.; W. Tracey, Sec. 11, St. John S'd.; V. Newman, Sec. 7, Mattawamkeag S'd.; E. Gagnon, Sec. 18, Moosehead S'd.

Woodstock Division, Superintendent's prize, \$25—F. W. Richardson, Sec. 1, St. Andrews S'd. Roadmasters' prizes, \$10 each—S. R. McCrum, Sec. 2, St. Andrews S'd.; F. Dickinson, Sec. 11, Shogomoc S'd.; J. St. Peter, Sec. 6, Edmundston S'd.

Quebec District, General Superintendent's prize, \$50—E. Brown, Sec. 6, Newport S'd., Farnham Div. Farnham Division, Superintendent's prize, \$25—E. Demeules, Sec. 10, Adirondack S'd. Roadmasters' prizes, \$10 each—C. Trangley, Sec. 8, Megantic S'd.; D. Chabot, Sec. 5, Adirondack S'd.; E. Besette, Sec. 1, Newport S'd.; J. Thompson, Sec. 3, St. Guillaume S'd.

Montreal Terminals Division, Superintendent's prize, \$25—A. Belec, Sec. 3, Roadmasters' prize, \$10—D. Lavoie, Sec. 6.

Laurentian Division, Superintendent's prize, \$25—X. Crete, Sec. 13, Trois Rivières S'd. (West). Roadmasters' prizes, \$10 each—N. Langlois, Sec. 21, Trois Rivières S'd. (East); A. Pillard, Sec. 4, St. Agathe S'd.; A. Paquette, Sec. 7, Lacchute S'd.

Ottawa Division, Superintendent's prize, \$25—H. Hano, Sec. 11, M. & O. S'd. Roadmasters' prizes, \$10 each—A. Seignin, Sec. 10, M. & O. S'd.; T. A. Kelly, Sec. 8, Waltham S'd.; A. Martineau, Sec. 11, Maniwaki S'd.

Smiths Falls Division, Superintendent's prize, \$25—A. Scheer, Sec. 12, Chalk River S'd. Roadmasters' prizes, \$10 each—P. Laper, Sec. 11, Wawarona S'd.; A. Logan, Sec. 11, Chalk River S'd.; H. Foster, Sec. 2, Carleton Place S'd.

Ontario District, General Superintendent's prize, \$50—G. Young, Sec. 4, Oshawa S'd., Trenton Div.

Trenton Division, Superintendent's prize, \$25—W. Hannah, Sec. 14, Belleville S'd. Roadmasters' prizes, \$10 each—W. Lillie, Sec. 6, Havelock S'd.; L. Linton, Sec. 13, Peterboro S'd.; V. Adair, Sec. 7, Port Maitland S'd.; C. McCallough, Sec. 10, Kingston S'd.; T. Whittell, Sec. 11, Belleville S'd.; G. Pickell, Sec. 1, Oshawa S'd.

London Division, Superintendent's prize, \$25—D. Ramsey, Sec. 10, Galt S'd. Roadmasters' prizes, \$10 each—A. Fairbanks, Sec. 4, Windsor S'd.; P. Laur.

Sec. 16, Galt S'd.; J. Bishop, Sec. 16, H. & G. S'd.; F. Skinner, Sec. 14, St. T. & Pt. B. S'd.

Bruce Division, Superintendent's prize, \$25—J. Courtney, Sec. 8, MacTier S'd. Roadmasters' prizes, \$10 each—J. Telford, Sec. 14, O. & W. S'd.; J. McMiner, Sec. 10, MacTier S'd.; J. Hissop, Sec. 2, Teeswater S'd.

Toronto Terminals, Superintendent's prize, \$25—R. Gollinger, Sec. 15, Hamil-

ton Terminals. Roadmaster's prize, \$10—F. Tuckley, Sec. 14, Galt S'd.

Algoma District, General Superintendent's prize, \$50—M. Cetchuk, Sec. 2, Parry Sound S'd., Sudbury Div.

Sudbury Division, Superintendent's prize, \$25—T. A. Hall, Sec. 15, Thessalon S'd. Roadmasters' prizes, \$10 each—J. Whyatt, Sec. 12, North Bay S'd.; W. Evans, Sec. 6, Cartier S'd.; A. Bouillon, Sec. 17, Thessalon S'd.; T. Penfold, Sec.

6, Parry Sound S'd.

Chapleau Division, Superintendent's prize, \$25—M. Pikarchuk, Sec. 8, White River S'd. Roadmasters' prizes, \$10 each—M. Hakkinen, Sec. 24, Nemegos S'd.; R. Beaupre, Sec. 14, White River S'd.

Schreiber Division, Superintendent's prize, \$25—T. Michaud, Sec. 6, Heron Bay S'd. Roadmasters' prizes, \$10 each—J. Didych, Sec. 22, Heron Bay S'd.; G. Person, Sec. 21, Nipigon S'd.

Piston Ring Work in a Railway Shop.

The accompanying illustrations show some methods employed in machining piston valve rings and piston rings in a railway shop in the west. Fig. 1 shows a piston valve complete and also illustrates the bushing or liner in which the valve operates. The rings are shown in double offset form, though for some classes of piston valves the rings are made with single offset. The other illustrations show some of the tool equipment for machining both single and double offset rings.

Fig. 1. The Piston Valve and Sleeve.

The turning and cutting off of the rings is accomplished in a Libby turret lathe, the turning being done as shown in fig. 2. Here a casting, long enough for 12 rings, is gripped in the chuck jaws, and a roughing cut taken with a tool held in the turret block on the cross slide of the machine. This turret also carries the set of 12 cutting off tools shown in the illustration. The barrel or sleeve casting from which the rings are to be cut is turned to 1/16 in. over size in the rough cut, the metal removed on a side being about 1/4 in. The feed for turning is 1/32 in. per revolution. This 1/16 in. is the amount left for finishing and compression and spring in the ring

when finished. That is, after the rings are cut off in the turret lathe, as described later in this article, they are put into a form or jig which is bored 1/32 in. above size and here an arbor is put in, with plates for clamping the rings for finish turning after they have been slipped out of form. As the form is 1/32 in. above size and as the rings are placed therein when they are themselves 1/16 in. above size, there is a compression of 1/32 in. required to put them into the form or jig. Consequently when the

rings are finish turned they still have 1/32 in. spring for actual operation.

Now to return to the ring cutting off operation. In fig. 3 the cross slide turret is shown with the 12 tools withdrawn from the ring casting, and a special turret toolhead carrying cutters for operating up the face and interior of the outer ring. The process is first to feed the cutting off tools part way through the casting wall, then withdraw the tools, reset 1/16 in. to the side by adjusting the cross slide carriage, then feed the multiple cut off tools in again, thus forming the offset at one side of the rings. The metal at the inside of the ring casting still holds the whole sleeve casting

intact and the outer face of the ring is machined before it is cut off from the casting.

In fig. 3 the facing and boring tools in the head on the main turret are shown. The facing tool acts as a recessing device to bore out the face of the ring to the depth required for the offset on that face of the ring. This tool is carried by an auxiliary slide and toolholder seen at the front of the special toolhead of the main turret. A better view of this auxiliary device is obtained from fig. 4. It consists of a body attached to the main toolhead and in this a slide is operated by a handwheel and screw to feed the tool parallel to the axis of the work. There is a stop block or thickness gauge at A which allows the tool to be fed into the ring to face out the recess to exact depth. The tool is then withdrawn, and the boring tool on the main head of the turret is fed in to bore out the interior of the ring and thus sever it from the sleeve casting. The operations of facing each successive ring from the inside is thus continued until the 12 rings in the casting are finished. The thickness of the rings, as determined by the operation of the multiple cutting off tools in the carriage block, is held accurately to dimension by snap gauges giving a limit of 0.001 in.

The boring out of the rings requires the removal of about 1/4 in. of metal on each side, this being done in one cut. The speed of the work, while the cutting off tools are operating, is eight revolutions a minute, or a surface speed of about 26 ft. a minute. This enables the series of tools to operate without chatter, and leaves a smooth surface where the tools are run in the second time for facing down to the shouldered offset. The original casting for the 12 rings is 13 in. long and only 1 in. of metal is lost in the grip for the chuck jaws.

The facing of large piston rings in a vertical boring mill is shown by fig. 5. A quick acting chuck is used on the work securely while a facing tool is fed across the surface. The chuck consists of a set of four jaws which serve to hold the ring from the interior and force it against four properly located stops secured in the slots of the table. The interior jaws are really similar to the planer "toes" commonly used when thin work is to be held to the planer table. They are in the form of short pointed rods, at a slight angle to the horizontal, and when set up against the inside of the work they tend to hold the latter down securely to the table. The four "toes" are actuated by four straight jaws which are forced outwardly by a flat disc with a beveled edge. This disc is drawn down to set out the jaws, by the binder handle operating on a screw at the top. The outer ends of the flat jaws are also beveled slightly inwardly, so that they always hold the rear ends

of the "toes" from lifting. The facing tool is forged and ground to present a slightly angular edge to the work surface and thus produces a smooth even cut when fed across the ring face.

The methods shown are in use at the Southern Pacific Rd. shops at Sacramento, California.

The foregoing article, by Frank A.

Fig. 2. Turning the Barrel from which the Rings are cut.

Stanley, is reproduced from American Machinist, to which we are indebted for the photographs and drawings from which the illustrations were made.

Additional illustrations appear on pg. 64.

Steel Rail Weight Increases. — The Pennsylvania Rd. has replaced 100 lb. rails in main line tracks, by 125 and 130 lb. rails on 44% of the main line trackage in the New York, Philadelphia, Baltimore, Maryland and Middle divisions and at the Philadelphia terminal. The total main line trackage in these divisions is 1,612 miles and the replacements with heavy rails now covers 705.1 miles. The 130 lb. rails have been used on heavy grades and curves, where the strain is greatest. The Pennsylvania Rd. started using 60 lb. rails in 1875, in 1894 70 lb., in 1886 75 lb., in 1887 85 lb., and in 1892 100 lb.

British Railway Managements. — A London, Eng., press cablegram states that the Railway Companies' Association, in its reply to the Government's proposals for future organization of transport undertakings in Great Britain, says it will strenuously oppose any suggestion that "workers elected by the workers" should be appointed to boards of management, discounting the question of the advantage resulting from the association of workers in the consideration of certain operating problems.

Canadian National Rys. and Marine Association. — An association of officials and employees of the Canadian National Rys. has been formed in Montreal, on lines similar to the one in Toronto. The first meeting on Dec. 12 was addressed by G. Stephen, Freight Traffic Manager, Toronto; A. T. Weldon, Assistant Freight Traffic Manager, Montreal; R. E. Perry, Assistant General Freight Agent, Montreal; and C. Grassley, representing the Toronto Association.

Standard Size for Cattle Pass Construction.

The Board of Railway Commissioners passed general order 325 Dec. 20, 1920, as follows:—Re the question of the adoption of a standard size for cattle pass construction. Upon reading what has

which dimensions are hereby required to be adopted as a standard for cattle pass construction, unless otherwise ordered by the Board, where, upon application, it is shown that special conditions call for a departure from such standard.

Chicago Railway Electrification. — The Illinois Central Rd. has taken another step toward electrifying its Chicago terminal and suburban lines by the appointment of a board of engineers to consider the different systems and prepare general plans. The board is composed of A. S. Baldwin, Vice President, Illinois Central Rd.; D. J. Brumley, Chief Engineer, Chicago terminals; Bion J. Arnold, consulting engineer; George Gibbs, consulting engineer; Cary T. Hutchinson, consulting engineer; W. M. Vandersluis, Signal Engineer. Under the ordinance of July 21, 1919, work must be commenced by 1922.

Leaside Transportation Co. Ltd. has been incorporated under the Ontario Companies Acts with authorized capital of \$50,000 and office in Toronto, to carry on the business of general carriers, railway and forwarding agents, transfer and express agents, to operate motor busses, motor trucks and other vehicles for carrying passengers and goods for hire. The provisional directors are:—J. G. Smith, H. Gallimore, and J. N. Mulholland, Toronto.

Railway Officials' Congratulations. — E. W. Beatty, K.C., President; A. D. MacTier, Vice President, Eastern Lines; J. M. R. Fairbairn, Chief Engineer; and

Fig. 3. Gang and Turret Tools in position.

been filed in this matter on behalf of the railway companies, the reports of the Board's Chief and Assistant Chief Engineers; and in pursuance of the powers conferred upon it by secs. 272 and 287 of the Railway Act, 1919, and of all other powers possessed by the Board in that behalf, the Board orders that all cattle passes hereafter constructed by railway companies within the legislative authority of the Parliament of Canada be at least 5 ft. wide and 6 ft. high.

G. H. Ham, of the headquarters staff, C.P.R., also Sir Geo. Bury, ex-Vice President, C.P.R., were among those who telegraphed from Montreal, to Thos. L. Church, on his election as Mayor of Toronto for the seventh year.

The Canadian National Rys. Amateur Athletic Association has been formed at Winnipeg. A. E. Warren, General Manager, Western Lines, was present at the organization meeting and promised the management's support.

The Everyday Duties of a Roadmaster.

By R. E. Keough, Assistant Engineer, Maintenance of Way, Eastern Lines, Canadian Pacific Railway.

The roadmaster is a railway official in charge of the maintenance of a subdivision of roadway and track, varying in length from 75 to 200 or more miles, according to the traffic or physical conditions. This is subdivided into track sections, which usually vary from 6 to 10 miles, that are under direct charge of

through the slack season, entirely according to their ability. Section laborers were known as first, second, and third men, and so on. During the busy season, whenever necessary for a man to lose a day or two he was first obliged to secure a substitute in order to hold his place while away. With men of this

was a disciplinarian of the highest power. With always good men waiting to step ahead, foremen were easily replaced should their work in any way prove unsatisfactory. Almost every foreman was an expert on track, in at least one or more branches of the work, and took great pride in keeping the better section. Of late years, however, the roadmaster finds it necessary to show tact in handling the class of men he has been called on to use during the past several years. He must act as an instructor to the inexperienced foremen he is compelled to accept. Just now, however, we seem to be experiencing a change for the better, owing to more plentiful labor, better wages and working conditions.

While the roadmaster is supposed to be purely a maintenance man, he is such only where roadbed is old and well ballasted. After construction, the track is turned over to the maintenance of way department, with the expectation that construction days are over. This is usually erroneous, as it is generally found that construction as practised on this continent is only well commenced when the maintenance of way department takes charge. Sufficient attention is not given to proper drainage to cuts, or crowning and setting of fills. The present practice of hurried construction work calls mostly for machine work, such as train filling from steam shovels or heavy blasting, all of which tend to lower the cost of construction.

Soundings may be made to determine the depth of muskegs, but aside from this no such accuracy is used in building roadbed as is followed in bridge construction. The construction engineer merely hopes to see the earth's crust stand up under the heavy wheel loads. Although it does this to everyone's satisfaction, in the majority of cases there are, however, numerous instances where the roadbed is found to be anything but desirable. There are places which cause much worry to the roadmaster and maintenance engineer. If they are ever en-

Fig. 4. Auxiliary Facing Tool in Turret. See page 63.

the section foreman. He uses extra gangs to take care of the extra work which arises, such as relaying rail, ballasting, etc. His payroll for labor also varies according to the importance of the subdivision, but often runs up to \$250,000 yearly. He is entrusted with the safe and economical handling of large quantities of material, such as rail, ties, ballast, frogs, switches and crossing frog. The roadmaster, or supervisor as he is termed on some roads, reports to the operating superintendent or engineering department officials. He is selected either directly from the track force where he has obtained his experience for the position from actual work done as a section hand, foreman of a section, or later as foreman of larger extra gangs in charge of more important work: or, starting as an apprentice at the work, with the expectation of working into the official positions as quickly as he can absorb sufficient knowledge. The roadmaster of today, however, is usually found to be the man who started out early in life as a track laborer, and formed a liking for the work. He must have shown interest in the various classes of the work, and quickly surpassed the ordinary laborer, who shows no further interest than that of putting in his time and doing only the minimum amount to satisfy the foreman.

At the time when most of our present roadmasters started work on a section, good men were more plentiful than they have been in the past several years, and regular section men were retained

kind at hand everywhere the selection of foremen was made easy. A laborer, after a few years, was given a trial at relieving foreman, and, if he made good, was considered for a regular position. The extra gang foreman was selected by

Fig. 5. Facing Piston Rings in a Boring Mill. See page 63.

the roadmaster from the most promising section foremen. The fellow who succeeded in standing out ahead of the others, or always endeavoring to do the job a little better than the other fellow, is the man who usually found plenty of room ahead and is the man now usually found in roadmaster positions.

In early day railroading, the roadmaster

tirely cured it is only after long years of constant work. Ideal construction would mean that such places would be broken down and the bottom found, when the grading was being done, rather than allowing it to do so gradually under several years of operation and maintenance. It is, however, certain that the greater portion of our present roadways would

not have been built had permanent roadway construction been demanded at the time, owing to the considered extra cost necessitated.

Offentimes cuts are taken out or fills made which are scarcely passable even for light construction equipment, and will in no degree cope with the heavy traffic which is to follow. Lines have frequently been built and ballasted, but inspected while "frozen in," and pronounced satisfactory and all-wards the same road is found to be impossible. I merely mention this to show how poor construction is reflected to maintenance. The roadmaster is often whipped over the back for rough track made by such conditions as these, and where money is available he must see to it that these early day defects are corrected, either gradually or otherwise.

Although improper construction shows up in any part of the country, it is perhaps more pronounced in the northern portion, where frost enters deeply into the roadbed, causing excessive heaving, or in the gulf states, where rainfall is heavy during the winter. This is one of the hardest jobs a roadmaster has to combat. Heaving spoils must be carefully marked, so as to have them "dug out" during the summer. Much care is needed when digging in order to avoid going too deeply, which will cause a hole that will ride as badly as the high spot did before.

It is usually found that roadbeds contain enough moisture, in a climate similar to this, to cause heaving by frost to a certain degree. It is only the irregularity of heaving that gives us trouble. This is often noticed where we originally had open pit cinder guards, which were later filled up with clean ballast or cinders, which do not permit the track above them to heave correspondingly to the track approaching them. The result is we have shimmed track at such points, even on our oldest lines.

When making an inspection with a roadmaster some time ago, he called my attention to two cattle guards which he had treated while foreman of that section several years before. He had, with two men, in one day, dug out all the ballast from two old pit guards, and had back filled them with clay up even with the clay found in the adjoining roadbed. He then applied a depth of ballast similar to the track at either side. The result was entirely satisfactory. It is found that these places have never given trouble since. There are still many such places which can be corrected on our roads, equally as easily, by observing trackmen who are given the money and labor to do the work.

Since heavier power and wheel loads have come into use, lightly ballasted roadbeds have been broken down in many cases, and the work has not entirely beyond temporary repair of the trackmen. I have in mind track over a bad clay tableland, where the ballast has been pounded into the roadbed many feet in depth, forming great pockets under each rail, resulting in a cross section similar to the letter W. Although this line is well ballasted, with more being applied frequently, good track is not to be had, and, owing to the flatness of surrounding country, drainage cannot be had without heavy machine ditching. Relief may be given by literally burying the roadbed at such places under a heavy coating of cinders, burnt clay, or other porous material, which will absorb the rainwater and thus prevent it from entering the roadbed.

Although usually we find such trouble

confined to cuts, we also frequently find fills which have been built with a top dressing of impervious clay, which has become knocked by ballast. Such places, on high fills on being tapped, have expelled large quantities of water by draining several feet longitudinally along the roadbed. Best results are found for such places by prohibiting water from first entering the roadbed, either by tile or French drain, or, as mentioned above, a heavy coating of porous material over roadbed. We have many such places in western Ontario, but they are more easily cured than where there is no chance for drainage. It is, therefore, necessary that the roadmaster be a close observer in order to see all that is taking place on his subdivision. In the most northern states metal-cattle guards are sometimes used, as well as wooden ones, both of which are laid in over winter. The roadmaster soon notices the track does not stay as low under metal guards as it does with the wooden ones, owing to the steel guard permitting frost to enter easily, allowing track to heave a corresponding amount under them. He will also find that he can often save considerable shimming and rough riding track, by putting a temporary door over culverts which are close to the surface, and where it is found the frost goes up from the culverts, as well as down from the top of ballast, causing double heaving.

Another big problem for the roadmaster which has grown in magnitude since the universal adoption of heavier wheel loads and air brakes, is rail creeping. There is naturally a considerable amount of rail ahead of where, but generally the brakes cause the rail to slide ahead, much the same as when one tries stopping quickly on a hall runner. Although rail anchors are provided, and almost universally used, as a preventive for this, the roadmaster on the busier main line one way tracks finds that, even when anchors are used, they are at best only a partial effective in holding rail and it is up to him to study each and every local condition on his subdivision, in order to provide surplus expansion at certain points where his observations have taught him the rail is given to bunching. His total expansion allowance per mile certainly must tally with that given by his table of expansion. Unless this found is carefully practised it will be found impossible to retain even fair track and avoid future maintenance trouble on the heavier traffic main lines of this country.

The curving of rails is a live subject, and one which has been handled with perhaps less regularity than is generally supposed by most of those not immediately connected with the work. We frequently notice angular looking joints on the inner side of curves, and on enquiry learn that this is due to the fact that these rails were not curved when laid. Close scrutiny will prove that the rail was very likely laid with excessive expansion on the curve and that the joint bolts were badly neglected at one time or another. These two factors, taken together, allow rail ends to tend to straighten out and appear kinky. It is found that, even at the sharpest curves, curving need not be done throughout the full length of a rail, nor will they show signs of joint kinking if a slight set is given each rail close to each end with a jim crow. This will care for even negligible joint bolts or excessive expansion, as well as if curved throughout the entire length of the rail.

You will not see kinky looking switches on the more observing roadmasters' ter-

ritory. In fact, under normal conditions, a switch should be the last to go out of line, as there are at this point four rails instead of two, as well as heavy timber, which make for better conditions. Such defects are the result of improper attention given to expansion on rail approaching the switch, or bunching of rail at this point, which has been neglected through ignorance or shortage of labor. The roadmaster who studies his conditions will know that frogs of all kinds, when used on high speed tracks, will wear and ride better where gauge is kept snug. This is more important when frogs are located on inner rail of curves. With good close gauge, the wheel flanges are directed through the flange way provided for them, instead of being allowed to pound the frog to pieces by striking the wing rails sharp blows while passing.

"Sun kinks," often described as acts of God, and considered to be beyond the power of man to prevent, should, in the opinion of the writer, be put up to the roadmaster in the majority of cases. Practically every one is due to sheer neglect. The conditions leading up to trouble of this sort should have been discovered long before and corrected by him. They will be found to be the result of either improperly laid rail, or the bunching of it, due to insufficient anchoring, etc. The bunching usually occurs in moderately cool weather while joints are open. It naturally follows, therefore, that the majority of "sun kinks" show up on the first warm days of spring, when ballast is mellow and its cleavage to the tie is reduced. On down grades, or one way tracks, all such troubles can be further greatly reduced by insisting on surfacing and tie renewals being done up grade, or in the opposite direction to the traffic.

With a good class of foreman the roadmaster's duties are reduced, but it is usually found he always has a few men who require a lot of his time checking up their work.

Under normal conditions, a roadmaster should work with the express purpose of maintaining his subdivision from a maintenance viewpoint, rather than follow the reconstruction idea of tearing up the line every few years, knowing that new rail, new ties, or new ballast will improve his subdivision and allow him credit for good track without considering the cost. Operating officials sometimes praise a piece of track without first consulting the cost data. Where this is done the roadmaster naturally finds no incentive to keep the expenses where they should be, but he is often given to extraneous work unless held in check by his superior officers. Take, for instance, tie renewals. This is a very large item, and one which causes equally as much comment from our management as rough riding track. Usually the curving of ties is left to the foremen in charge of track, supervised by the roadmaster and other local officers. It is here we see the extra expense shown to a high degree. With so many different viewpoints from the various foremen in charge we often see poor judgment used. It is almost entirely up to the roadmaster to see that his foremen use uniform judgment in handling this important item, and therefore he too must be out there, confirming the conditions the ties must be in before they should be removed.

With the native ties of this country, especially jack pine or hemlock, it is invariably found the upper surface of the ties above the ballast line is the first to decay. This, although being an unfortunate fact, is so far as track bearing is concerned, of-

ten provides an excuse for good ties being removed some two or more years before they should be. Track men also are given to following the lines of least resistance. We often find renewals of ties made by bunching, or in pairs. This naturally saves extra digging, but also allows numerous good ties to be renewed long before their time, merely because they are adjoining a rotten or worn out one. This is a subject too important to be left to the track foreman's judgment alone, but one which should concern every official connected with the railway. By adopting some uniform method to be followed it may be checked by every official interested in maintenance.

There are but two methods practised for tie renewing. One is known as "out of face" method, where all ties are removed in a stretch for a given distance each year, and the other or more prevalent practice, as well as the more abused method, is the one known as "single tie renewals." These two methods were freely discussed at the American Railway Engineering Association some six or more years ago, and although there were ardent advocates for the continuous renewal method, the single tie one met with most favor. The latter is the method followed by the C.P.R. and is with us everything the name implies. We do not allow more than one new tie in a place, except for inaccessible places, such as at road crossings or in certain places in yards. We also follow the same method for switch tie renewals, and while a few of the more extravagant foremen were at first reluctant, our roadmasters knew this would give them more uniformly strong track, as well as be an assistance to them in supervising this class of work, due to the fact that every official is checking this with equal interest.

Many other important subjects might be mentioned and discussed in a paper of this sort, but time does not permit. The all important subject "Line and surface" would alone furnish material for an evening discussion among maintenance men. So would insulated joints, non slotting of joints, labor saving devices, piece work applied to maintenance, ballasting, switch lay outs and numerous other phases of the work.

In conclusion, it seems trite to mention that the roadmaster's ability may easily be summed up by results shown. He should, however, be given considerable leeway for working out local problems in a way better adapted to them than those laid down by a set of general instructions.

The foregoing paper was read before the Canadian Railway Club, in Montreal, recently.

First Aid Contests.—The competitions of first aid teams under the auspices of the St. John's Ambulance Association in Canada have been reported upon by Col. C. A. Hodgetts, C.M.G., M.D. In the Wallace Nesbitt rosewater dish competition the G.T.R. station team, Stratford, Ont., secured first place and the G.T.R. shop team, Montreal, second place, and in the Montizambert cup competition the G.T.R. station team, Stratford, was second. The winning team was entertained at dinner Jan. 14, by officers and men of the Stratford Division, when the trophy was presented by Dr. C. A. Hodgetts and Lieut.-Col. R. J. Birdwhistle, representing the Association, and received by W. S. Robb, Vice President, on behalf of the team.

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received 7 Mikado locomotives from Canadian Locomotive Co.

The Eastern Car Co., during 1920, delivered 1,150 coal cars, and 302 box cars, 40 tons capacity, to Canadian National Rys.

The C.P.R., between Dec. 14, 1920, and Jan. 14, received 2 dining cars, 90 refrigerator cars and 8 single track steel snow ploughs, from its Angus shops, Montreal; and 453 steel frame box cars from Canadian Car & Foundry Co., Fort William, Ont.

The G.T.R. has received 3 switching locomotives from its Montreal shops, 680 automobile cars, 80,000 lb. capacity, from American Car & Foundry Co., St. Louis, Mo., and 399 automobile car, 80,000 lb. capacity, from American Car & Foundry Co., Madison, Ill.

The Toronto Globe says:—"The requirements of Canada for electrical equipment and for railway rolling stock constitute one of the bright spots in the industrial field. . . Canadian car builders have a promising outlook for the year. There is admittedly a serious shortage of rolling stock on all Canadian railways, and although financial conditions and the hope of lower prices may delay the placing of orders, such a policy of waiting cannot be of great duration."

Canadian National Rys., between Dec. 2, 1920, and Jan. 8, 1921, received the following additions to rolling stock:—5 Mikado (2-8-2) locomotives, out of an order for 15, from Canadian Locomotive Co.; 224 box cars, out of an order for 1,500, and leaving 405 to deliver, from National Steel Car Corporation; 200 refrigerator cars, out of an order for 250, and leaving 50 to deliver, from Canadian Car & Foundry Co.; 411 box cars out of an order for 500, and 6 steel snow ploughs, completing an order, from Eastern Car Co.; and 2 cabooses, completing an order for 20, from Preston Car & Coach Co.

The Rio Grande de Sul State Rys. have ordered 20 Mikado (2-8-2) locomotives from Montreal Locomotive Works. Following are the chief details:—

Gauge	39 1/2 in.	80,000 lb.
Weight on truck	13,000 lb.	17,000 lb.
Weight on trailer	17,000 lb.	114,000 lb.
Weight of tender	76,000 lb.	25 ft. 3 in.
Wheel base, driving	11 ft. 3 in.	18 x 22 in.
Cylinders, diam. and stroke	18 x 22 in.	42 in.
Driving wheels, diam.	36 in.	740 m.m. (29 1/2 in.)
Trailing wheels, diam.	36 in.	700 m.m. (27 1/2 in.)
Engine truck wheels	36 in.	170 lb.
Boiler pressure	180 lb.	52 in.
Boiler diam., first ring	52 in.	72 1/2 in.
Firebox, length	72 1/2 in.	14-5 1/2 in.
Tubes, no. and diam.	90-2 in.	675 sq. ft.
Heating surface, tubes	675 sq. ft.	284 sq. ft.
Heating surface, flues	284 sq. ft.	1,050 sq. ft.
Heating surface, total	1,050 sq. ft.	285 sq. ft.
Grate area	285 sq. ft.	212 sq. ft.
Tractive power	20,900 hp.	5-58
Factor of adhesion	5-58	Superheater
Superheater	Superheater Co.'s type A	Also screw gear
Reverse gear	Also screw gear	Steel channels
Tender frame	Steel channels	740 m.m. (29 1/2 in.)
Tender truck wheel dia.	740 m.m. (29 1/2 in.)	40 ft.
Tender journal	40 ft.	U shape
Tank	U shape	18 cub. met.
Water capacity	18 cub. met.	19 cub. met.
Fuel capacity	19 cub. met.	

A German engineering firm has secured the contract for 40 locomotives for a British Dominion. Some of the leading British engineering firms were invited to compete, but their best price was \$680,-

000 against the German price of \$400,000. Moreover, the German firms offered speedy delivery, whereas British engineers said they could not guarantee delivery owing to labor conditions. This is one of the important engineering contracts wrested from Great Britain by the Germans since the armistice.

Montreal Locomotive Co.'s Deliveries.

We are advised that deliveries were made during 1920, as follows:—

Boos & Co.	No.	Type	Cylinders.
Canadian National	3	9-4 1/2	11 x 16 in.
Rys.	32	4-6-2	23 1/2 x 28 in.
Canadian National	10	4-6-2	24 x 28 in.
Rys.	25	2-10-2	26 x 82 in.
Canadian Pacific Ry.	1	2-8-2	25 1/2 x 32 in.
Canadian Central Ry.	16	2-8-2	21 1/2 x 24 in.
Halifax Shipyards	1	0-4-0	14 x 22 in.
Haydon Corporation	1	0-4-0	11 x 16 in.
Haydon American	1	2-6-0	15 x 29 in.
Kopaska Co.	1	0-4-0	14 x 22 in.
Lor Supply Co.	1	0-4-0	14 x 22 in.
Hummer	25	2-8-0	21 x 28 in.
Singer Mfr. Co.	1	0-4-0	14 x 22 in.
Sorocabana Ry.	8	2-4-2	19 x 29 in.
Sorocabana Ry.	4	4-6-2	18 x 20 in.
Timiskaming & North- ern Ontario Ry.	2	0-8-0	23 x 28 in.

Reid Newfoundland Railway Operating Results.

A St. John's, Nfld., paper states that an agreement was made in the summer of 1920 between the Reid Newfoundland Co. and the Newfoundland Government under which the Government undertook to assume the full cost of the operation of the railway from July 1, 1920, to June 30, 1921, the Reid Newfoundland Co. agreeing to contribute not exceeding \$100,000 towards any deficiency that might occur. The paper says that the loss in operating the line for the year ended June 30, 1920, was \$638,000, and that it would have been considerably more but for the fact that the operation of the cross country line was suspended for the greater part of the winter owing to the snow blockade in the Topsails area. The loss for the year ended June 30, 1919, was \$645,549.02, and the paper, after referring to the present operating conditions, expresses the opinion that the deficit for the year ending June 30, 1921, will exceed \$1,000,000.

Traffic Conference.—Some 60 traffic officers of the Canadian National Rys. and the G.T.R. from throughout Canada and many United States points met in Toronto, Jan. 19 and 20, to discuss improvement of services and increasing of passenger travel. They were addressed, among others, by C. A. Hayes and J. E. Dalgymple, Vice Presidents in charge of traffic, N.C.R. and G.T.R. respectively, and by G. T. Bell and H. H. McLean, Passenger Traffic Managers, G.T.R. and C.N.R. respectively.

American Railroad Association.—At the annual meeting of directors in New York, N.Y., Jan. 6, Daniel Willard, President, Baltimore & Ohio Rd., was elected chairman of the board. Other officers are: President, R. H. Ashton; Vice President, W. B. Eyster, President, Central Rd. of New Jersey, and Hale Holden, President, Chicago, Burlington & Quincy Ry.; General Secretary and Treasurer, J. E. Fairbanks.

Fifty-Ton Single Track Coaling Stations, Canadian Pacific Railway.

A number of small capacity coaling stations have been built on the C.P.R. at intermediate points, so that locomotives delayed by adverse weather or other conditions may be recoaled between terminals. The accompanying cross section shows the general outline and construction quite clearly. The structure consists of an elevated coal pocket, sup-

por and necessary machinery are housed in the roof of the structure; provision being made for stopping motor on either side of the coal car at track level.

Where electric power is not available, a gasoline engine is used, and the house is located at ground level. The capacity of the plant is 50 to 60 tons, and this, with the storage in the hopper, allows

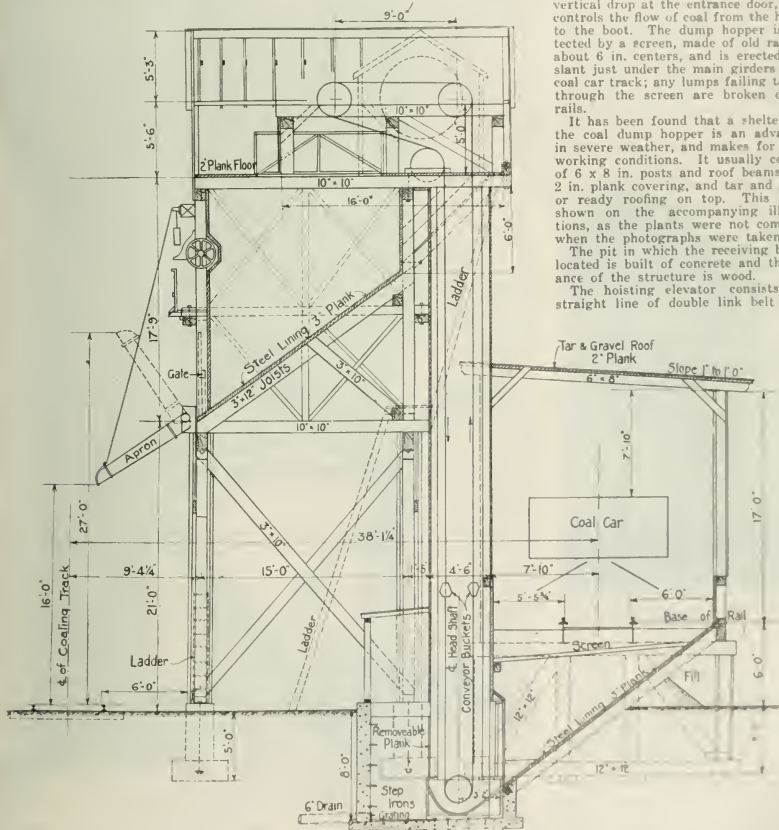

coal moving to the boot under adverse weather conditions. It was found that a hopper large enough to take a full car, would require too much height and depth to get a steady flow of coal, and was too costly to be considered for this size of plant.

As a further aid to feeding coal to the boot, the sides of the hopper are given a vertical drop at the entrance door, which controls the flow of coal from the hopper to the boot. The dump hopper is protected by a screen, made of old rails, at about 6 in. centers, and is erected on a slant just under the main girders of the coal car track; any lumps failing to pass through the screen are broken on the rails.

It has been found that a shelter over the coal dump hopper is an advantage in severe weather, and makes for better working conditions. It usually consists of 6 x 8 in. posts and roof beams, with 2 in. plank covering, and tar and gravel or ready roofing on top. This is not shown on the accompanying illustrations, as the plants were not completed when the photographs were taken.

The pit in which the receiving boot is located is built of concrete and the balance of the structure is wood.

The hoisting elevator consists of a straight line of double link belt chain,

Cross section, Single Track Coaling Plant, for Intermediate Points, Canadian Pacific Railway

ported on wooden bents, with a coal dump hopper in the rear, and an elevator for the coal conveyor in the center. The coal brought by cars is discharged into the dump hopper, runs by gravity to the receiving boot, where it is picked up by buckets operating on endless chains, and conveyed to the coal pocket above.

Where electric power is available, a motor is used for hoisting, and the mo-

tor for two car loads of coal being on hand for emergencies. A 4 in. h.p. motor or engine is used for elevating.

The dump hopper is elevated 6 ft. above the ground line, which is reached by grading the approach track from 2 to 5 ft., depending on the amount of room available, and local conditions. The hopper is made long enough to accommodate half a car only, in order to get the floor and sides steep enough to keep the

to which buckets are attached at intervals. At the top of the shaft, the chain and buckets are diverted to travel across the house for a short distance, to enable the coal to be dumped about the center of the pocket.

The coal pocket is supported on primary frame bents. A plank is used for the floor, and 2 in. plank for the sides of the pocket. Both floor and side are covered with no. 10 sheet steel lining. The

pocket is roofed over, and has sufficient housing overhead to accommodate the shafts, gears, sheaves and operating machinery. The pocket was first built with one apron, and coal chute door, for supplying the locomotive, but later this was changed to provide two outlets.

To facilitate repairs, and the proper maintenance of the door and apron mechanism, a light gallery, with rail, is placed on front of the coal chutes just above the drop doors.

A number of these coaling plants have been built by Williams & Wilson, Montreal, who have supplied the two photographs reproduced herewith, illustrating plants built at Guelph, Ont., and Sutton, Que., this company making a specialty of this class of work, and having developed to a high point of efficiency many of the details, such as steel boots, aprons, operating machinery, cut off gates and the like.

It is well known that coaling plants

Railway Finance, Meetings, Etc.

Grand Trunk Railway Loan.—A prospectus was issued in New York recently of \$12,000,000 Grand Trunk Ry. of Canada (Canadian National Ry.s.) 15-year, 6½% equipment trust gold certificates, series F., issued under the Philadelphia plan to be dated Feb. 1, 1921, and become

to both principal and interest of mortgage debt.

New York Central Rd. Co.—There has been deposited with the Secretary of State at Ottawa an agreement dated Dec. 15, 1920, between John Cartensen and others, vendors, the Guaranty Trust Co. of New York, trustee, and the New York Central Rd. Co., in pursuance of the pro-

Fifty-ton, Single Track, Gasoline Drive, Coal Handling Plant, Canadian Pacific Railway, Guelph, Ont.

in general are subject to very rough usage, and adverse weather conditions, and for these reasons it is necessary, if the best results are to be obtained, that the operating mechanism be made extra strong, especially in regard to chain and buckets, as well as gears, sheaves and shafting, and that these, whenever possible, be made interchangeable for all plants, in order to keep down the number of parts to be carried in stock and to facilitate repairs.

Canadian Railway and Marine World is indebted for the foregoing information to J. W. Orrock, Principal Assistant Engineer, C.P.R., Montreal, to whom credit should also be given for the design.

Railway Lands Patented.—Letters patent were issued during Dec. 1920 for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acre.
Canadian Northern Ry.	960.00
Canadian Northern Pacific Ry.	78
Grand Trunk Pacific Branch Lines Co.	2.34
Total	963.12

Fifty-ton, Single Track, Electric Drive, Coal Handling Plant, Canadian Pacific Railway, Sutton, Que.

due Feb. 1, 1936, the issue price being 95.40, yielding approximately 7%. The prospectus states, on the authority of F. Scott, Vice President and Treasurer, G. T.R., that these certificates are issued against new railway equipment costing \$16,000,562, an initial payment of \$4,000,562 or 25% of the cash contract cost being made. Under the provisions of the Canadian statutes the rentals payable under the lease of this equipment rank as a railway working expenditure and constitute a claim against earnings prior

to the Dominion Statutes of 1907, chap. 38.

Quebec, Montreal & Southern Ry., Naperville Junction Ry.—The Board of Railway Commissioners has been asked to recommend the sanctioning of an agreement between these two companies, which are owned by the Delaware & Hudson Co., for the transfer by the Quebec, Montreal & Southern Ry. Co. of that part of the loop line at Dolson Jct., Que., heretofore belonging to it, to the Naperville Jct. Ry. Co.

The Importance of Railway Passenger Departments.

By W. H. Snell, General Passenger Agent, Eastern Lines, C.P.R.

The passenger department of a modern railway consists of numerous branches and ramifications contributing to the safe and expeditious travel of the public and its comfort en route. Broadly, its jurisdiction covers the responsibility for all classes of business carried out by the passenger service, comprising the carriage of passengers and their baggage, the transportation of milk, and the superintendence of sleeping and parlor car services. It also decides to what routes these cars shall be assigned and their schedules, superintends the make-up of train, as to dining cars, day cars, express cars, and other equipment, and must be in a position to reckon out the revenue producing possibilities of each.

Whilst these responsibilities form the basis of the department's work, being its service to the travelling public, there are incidental lines of activity of as great importance to the parent company as contributing largely to the profitable operation of passenger trains over the company's lines. Of first importance is the securing of traffic by solicitation through passenger agencies, not only along lines of the railway, but at foreign points — for a Canadian company, for instance, in the United States, Great Britain, European continent, Asia, Africa, and Australia.

When the enormous number of these agencies throughout the habitable globe, as well as the stations along the company's lines, are taken into account, some conception may be formed of the huge aggregate of endeavor of the department at the great work entailed in keeping them accurately informed on tariffs, service and the multifarious obligations due to the public and the railroad. A branch work of some consequence is the compiling and supplying of these tariffs, circulars and bulletins, etc., ensuring adequate, easily understood, workable information.

This latter, however, is only the commencement in the matter of the dissemination of literature from the passenger department, for every agency in every part of the world must be a fund of information and in position to give all particulars of travel desired by potential tourists necessary to ensure traffic, and agents are supplied with the fullest matter possible through the issuance of a mass of printed literature covering all phases of travel through the company's territory. Through travelling passenger agents, men trained in the geography and travel of the company's territory, the multifarious tourist and passenger agencies are kept in touch with each other and the head office, whilst in addition, it is the duty of these men to keep agents of other lines informed regarding their route and its territory, and to solicit traffic personally, through a following up of enquiries as made by letter to the general agencies. Likewise, they assist the agents of other railways acting for their company in routing passengers over their lines.

Of the many units which go to make up a giant railway organization, none reveals the public in so personal and intimate a manner as the passenger department, dealing as it does, continually, with men and women both in the aggregate and as individuals. As temperaments vary, so must treatment, and the successful passenger agent must be diplomatic in endeavoring to please all and

at the same time serve the company he represents.

A passenger department with vision and enterprise can be the most instrumental factor in developing the country in which it is operating, especially if that country be in the first stages of its growth, and in advertising broadcast its potentialities, inducing immigration and capital. Railway and national progress go hand in hand, and the progress of the passenger service, with its widespread branches, is a large factor in both developing country and country.

It will be generally conceded that it is, in a great measure, due to the vision of the passenger department of the C.P.R., organized 40 years ago, that the public of the foreign countries are so well acquainted with Canada and Canadian possibilities, whilst immigration has been largely served and stimulated by its endeavors and activities.

Canadian Pacific Railway Construction, Betterments, Etc.

Sand Point Baggage Shed.—An extension to the second story of the baggage shed at Sand Point, St. John, N.B., is under construction by J. A. Grant & Co., contractors. It will provide 100 dining accommodation for 500 people, bringing up the accommodation for immigrants to 1,000.

St. John River Bridge.—The Board of Railway Commissioners sat at St. John, N.B., Jan. 15, to hear evidence and arguments in favor of increasing the height of the new C.P.R. bridge over the St. John River, above water level. The C.P.R. is replacing its bridge at the reversible falls and obtained the approval of the Public Works and Marine Departments for a bridge 2.58 ft. higher than the line of the present one. The marine interests of the port asked that the height above water level be increased so as to permit greater freedom of navigation, and there was also the question of doing away with the level crossing at Douglas Ave., by the provision of a subway at estimated cost of \$100,000, which would necessitate an increased height of the bridge above water level of 7 ft. After hearing considerable evidence, Chief Commissioner Carvell stated that approval of the gradients for the new bridge would be withheld for two weeks in order to give an opportunity to local interests to agree to the height being increased 2 ft., which the C.P.R. engineers said would be practicable within the present plans, or to have a petition sent to the Government to rescind the order in council approving of the present plans. Unless the bridge is made 7 ft. higher there will be no subway.

The substructure work for the new bridge, which was described in Canadian Railway and Marine World, Dec., 1920, pg. 651, is practically completed.

Timiskaming District.—In opening the Quebec Legislature Jan. 11, the Lieut. Governor said:—"A railway will shortly be under construction which will connect the heart of the Timiskaming District with our great railway systems and hasten the development of that important district." This reference is to the line for the construction of which a contract has been entered into between the Quebec Government and the C.P.R., which

owns the Interprovincial & James Bay Ry. Co.'s charter for a line from near Kippawa to near Ville Marie, Que.

Ottawa, Northern & Western Ry.—The Dominion Parliament will be asked at its ensuing session to extend the time for the commencement and completion of the line authorized in 1919 from Waltham, Que., to a junction with the C.P.R. at or near Chatham River, Ont., and to increase the bonding powers.

Manitoba & Northwestern Ry. Co.—The Dominion Parliament will be asked at its ensuing session to authorize this company to build the following lines:—From Tr. 30, Range 10 or 11, west 2nd Meridian, near Tuffnell, northwesterly, northerly and westerly to a crossing of the North Saskatchewan River, in Tr. 49, 50 or 51, Range 14 or 15, west 2nd Meridian, thence westerly to Prince Albert, Sask., from Tr. 28, Range 6 or 7, west 2nd Meridian, near Theodore, generally westerly to between Govan and Lanigan on the C.P.R. Pheasant Hills branch. Authority is also desired to issue securities for \$40,000 a mile in respect of these lines. (Jan., pg. 14.)

Langdon North Branch.—The Board of Railway Commissioners has approved revised location plans for a portion of the Langdon North Branch, Sask., mile 78.59 to 86.84, and authorized the crossing of highways.

Handling and Sorting New and Old Rails.

More general use of mechanical means of handling heavy rails and old rails at railway store yards, together with greater care in sorting old rails for further use, were among the suggestions made by the rail handling committee at the last annual meeting of the purchases and stores section of the American Railroad Association. It was considered that economy could be effected by the use of locomotive cranes, rail loaders, ditching machines and steam derrick cars. The committee stated that it is now economical to distribute new rails along the track than to unload them into stockpiles.

Inspection of old rails should be performed by stores department men, whose qualifications are satisfactory to the engineering department. They should be classified for main track, for branch lines, and for yards and sidings, those of each class being further classified into four divisions according to height measured to 132 in. To distinguish the rails, the committee proposed painting the ends green, white and red for the three main classifications, and marking the ends with numbers 1 to 4, in white paint, for the four secondary classifications. At the rail docks, each class and sub-class of rails would be piled separately, the rails being in opposite directions in alternate layers, with one end of each layer carefully lined to facilitate counting and measurement. These piles should be as high as they can be built with the machine and it is suggested that many railways incur considerable unnecessary expense through lack of apparatus for handling rails.

Instead of leaving the disposal of scrap rail to track supervisors, it is thought likely that much of this scrap could be resold by the purchasers as second hand rails. For this reason the committee considers that all rail classed as scrap should be sent to the division or general stores department for inspection and classification.

Canadian National Railways Employees Attempt to Enter Political Field.

On Sept. 23, 1920, J. A. Robinson, of the Independent Labor Party, Moncton, N.B., telegraphed to D. B. Hanna, President, Canadian National Rys., who was then on an inspection tour of the Maritime Provinces, at Sydney, N.S.:—"Have you any objection to any C.N.R. employees becoming candidates for the New Brunswick Legislature, and if so could you give reasons? Please wire reply immediately."

Mr. Hanna replied on Sept. 25 from Truro, N.S.:—"Your message yesterday. Under no circumstances can an employee continue as such with the Canadian National Rys. and become a candidate for legislature, either provincial or Dominion. The moment he does so he automatically severs his connection with the railway. The reasons are too obvious for discussion."

This decision was at once resented by many of the employees' organizations and a movement was started to endeavor to secure its withdrawal, which Mr. Hanna declined to do. The matter having been brought to his attention which was in Winnipeg towards the end of Oct. 1920, he issued the following statement to the press:—"Considerable discussion seems to have arisen amongst certain classes of employee of the Canadian National Rys. regarding the attitude of the management towards employees seeking Dominion or provincial parliamentary honors. One would imagine from what appears in the newspapers that something had been promulgated in railway practice. The fact is, so far as the old Canadian Northern lines are concerned, the management then in control had a clear understanding that any officer or employee identifying himself with any party and seeking parliamentary honors automatically severed his connection with the company. This rule was strictly observed and the same practice has been extended under the present board of directors. Prior to the date the lines passed under the control of the Dominion Government by stock purchase, it will be remembered that Sir Robert Borden, then Prime Minister, both in and out of the House of Commons, clearly defined the status of the management which was in effect that the business of the railways would be carried on free from political interferences of all kinds; and the selection of the board of directors later was in accordance with this understanding, indeed it can be said that each member of the board made it a condition of his acceptance that freedom from political control must be maintained. The first vacancy on the board was due to one of its members accepting a nomination and being elected to the Saskatchewan Legislature. If, therefore, the board of directors scrupulously recognize the obligations under which they joined the management, how much more important is it from the standpoint of public service that officers and employees alike of the C.N. Rys., should do so also. We are told no man can serve two masters, and it is inconceivable that any employee could give public service where all classes of politics are included and at the same time be so closely identified with one particular party as to hold a seat in parliament, either Dominion or provincial. In municipal, educational and other organizations of a social kind our officers and employees generally have always taken more or less interest and we gladly welcome it. In politics, officers

and employees, of course, have their own opinions and will naturally express them through the ballot. It is no affair of the management what party they may support, but when an officer or employee undertakes to accept nomination for any political party, and is permitted to do so by the railway's management, he brings the National System into politics, and that cannot under any circumstances be permitted. In other words, therefore, when an officer or employee accepts nomination from any party for parliamentary honors, Dominion or provincial, he automatically severs his connection with the National System. There can be no middle course; there is too much at stake in the interests of the Dominion as a whole to compromise with the situation."

Two of the C.N.R. employees, G. H. Palmer, train dispatcher, Dauphin, and A. E. Moore, a machinist in the Fort Rouge shops, Winnipeg, became candidates for the Manitoba Legislature, for Dauphin and Springfield respectively, were elected, and were dismissed from the service. Jas. Higgins, a boiler maker in the Leaside shops, Toronto, became a candidate for the representation of Northeast Toronto in the Ontario Legislature, resigning his position with the company to do so, and was informed that he could re-enter the service if elected, defeated, but had he been elected, it is doubtful whether he could have sat in the Legislature, as the Ontario Legislative Assembly Act contains the following provision:—"Except as hereinafter specially provided, no person accepting or holding any office, commission or employment, in the service of the Government of Canada, or of the Government of Ontario, at the nomination of the Crown or at the nomination of any of the officers of the Government of Canada or of the Government of Ontario to which any salary, fee, wage allowance, emolument or profit of any kind is attached shall be eligible as a member of the Assembly or shall sit or vote therein."

Mr. Hanna Explains His Position.

Early in Dec. 1920, the co-operative committee of C.N.R. employees met in Toronto for about a week and had a long interview with Mr. Hanna, following which he wrote them as follows:—"I have given very serious consideration to all that was said at the conference on Friday afternoon last, and I regret, having regard to what I sincerely believe would inevitably follow if the management permitted the thin edge of politics to enter the railway organization, that I cannot do otherwise than re-affirm the position already taken, viz., that any officer or employee of the railways accepting nomination from any political party, automatically severs his connection with the railways."

"In re-affirming this, it may not be amiss to briefly review our reasons for taking this position. The board of directors and active executive management accepted office on an expressed understanding with the Dominion Government that no employee would be permitted to play any part in the administration of the properties. This understanding has received Dominion-wide notice, not only through statements made by the Prime Minister and his colleagues in Parliament, but reiterated in speeches made by the same gentleman on many

public occasions, so that it is barely conceivable that members of your organizations had no knowledge of the attitude of the Dominion Parliament in that regard. This understanding has been strictly adhered to; the first change in the composition of the board of directors was occasioned by one of its members accepting a seat in a provincial legislature. The executive has likewise faithfully observed this understanding and had every reason to feel that the employee so the service generally, after over two years of united effort, were loyally behind the management in the high purpose to show that a great publicly-owned utility could be carried on successfully, free from politics, and thus give the lie direct to those doubting Thomases who have in and out of season said it could not be done."

"In the discussion on Friday afternoon it was stated, time and again, by your representatives that your interest in the matter began and ended with the employees who are members of your various organizations. Unfortunately, this does not settle the matter, as the executive of the railways must take cognizance of all officers and all employees outside of recognized organizations. It is obvious, if the railways permitted members of your organizations to enter the political field and still retain their standing, the same privilege would necessarily have to be extended to every other employee who is unrepresented in your organizations, and to all officers as well. Carrying this through to its logical conclusion, I pointed out to your representatives that it would be humanly impossible to prevent the system becoming in time a hot-bed of political intrigue, to the disruption of discipline in the department, and to the utter ruin of the great properties in which all the people of Canada are so vitally concerned. I reminded you also that the rule which we had applied was, in its general effect, the same on state railways in Australia, New Zealand, South Africa, British India, France, Belgium, Italy and other countries. Coming closer home, we find the City of Toronto with a bylaw preventing municipal employees taking part in elections, other than to record their vote. The same general rule is in effect in all Canadian cities; and where the city operates its street car service, as in Calgary for instance, those employed on the civic car service cannot at the same time be councillors."

"I took issue with your representatives when they stated that the executive was prohibiting employees of the railways from exercising their political franchise. I did say, however, that in the case of a railway owned by the people—and they having expressed themselves through their authoritative channels to the effect that this railway system must be kept clear of politics—a political career and a railway career for an employee at one and the same time were obviously impossible. I said that this conclusion had been reached because of what I believed were sound and valid reasons. The executive goes no further than prohibiting employees from becoming candidates for election to the Dominion Parliament or provincial legislatures. Employees are free to, and will no doubt continue to, express their political preference through the ballot, and they may, as heretofore, when opportunity offers, take their seats in council chambers,

boards of education and boards of other organizations which have for their purpose the betterment of the communities in which they reside, and in which party politics are not concerned.

"The board of directors having accepted office under the conditions already stated and the executive being parties thereto, it is clear that any change in the rule laid down must necessarily carry with it the resignation of all those approving the rule. This in itself is of little moment, and it is only stated to definitely emphasize the fact that this was an important condition of their acceptance of office. But because of the important question at issue, I am appealing to all employees, represented by their organizations or otherwise, through this communication, to seriously consider if the issue raised at this time compares in magnitude with the greater question, shall we, by word or deed, permit any officer or employee to enter the political arena, and at the time claim the option of returning to employment with the railways as and when he may elect, or shall we not rather say 'Take no chances; keep politics out of the railways'?"

"If it can be shown that the three employees dealt with entered the political field ignorant of the rule laid down, I will very gladly consider their reinstatement, provided, however, that the employees elected to the Manitoba Legislature give an undertaking that immediately on the opening of the house in Winnipeg, a few weeks hence, they will give their resignations and withdraw from it. I make this proviso as I understand resignations cannot sooner be accepted.

"While the matter has been fully discussed and there seems to be no occasion for further conference, yet if your committee should desire another meeting with us, we will, of course, be glad to arrange for it."

Board of Conciliation.

On Dec. 10, 1920, H. E. Barker, of Winnipeg, and R. J. Tallon, of Calgary, chairman and secretary, respectively, of the co-operative committee of employees, referred to the Minister of Labor for the appointment of a board of conciliation for investigation under the Industrial Disputes Investigation Act, 1907, stating that the application was made on behalf of all classes of employees on the C.N.R., belonging to or represented by the following organizations working in co-operation:—Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, Order of Railroad Telegraphers, Canadian Brotherhood of Railroad Employees, International Brotherhood of Blacksmiths and Helpers, International Brotherhood of Boilermakers and Helpers, Brotherhood of Railroad Carmen of America, International Brotherhood of Electrical Workers, International Association of Machinists, United Association of Plumbers and Steamfitters, International Alliance of Sheet Metal Workers, United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers.

After citing Mr. Hanna's order that no employee can accept a nomination for any political party, for the Dominion Parliament, or a provincial legislature, the application says that as a result of it employees were discharged as follows: Jas. Higgins, boilermaker, Toronto, Nov. 1, 1920; A. E. Moore, carman, Winnipeg, Nov. 5, 1920; and G. H. Palmer, dispatcher, Dauphin, Man., Nov. 11, 1920; that the general chairman and grand

lodge officers of the various organizations mentioned above met in Toronto from Nov. 29 to Dec. 9, 1920, inclusive, and on Dec. 3 endeavored to secure Mr. Hanna's sanction for the withdrawal of the objectionable order and the installment of the men discharged. The application continues as follows:—"Failing to secure President Hanna's concurrence in the request made upon him, the co-operative committee, consisting of the general chairman and the grand lodge officers, unanimously decided and agreed to request a board of conciliation, in the full belief that the situation created by the issuance of the objectionable order referred to was so tense that the men in various of the organizations specified and on certain parts of the railway were even now seriously talking of engaging in a strike without delay. The general chairman and the grand lodge officers associated with the co-operative committee are firmly convinced that the men belonging to the organizations specified above would generally and promptly vote for, and leave the service, on a strike, in resentment against the objectionable terms of the order which is the subject of this controversy."

The Minister of Labor granted the application for a conciliation board promptly. The employees nominated as their representative on it, D. Campbell, barrister, Winnipeg, and the C.N.R. management having declined to nominate a representative, the Minister of Labor named E. H. McGuigan, of Toronto, at one time Vice President, G.T.R., to be the C.N.R. representative; J. M. Godfrey, barrister, Toronto, being subsequently appointed chairman of the board, which sat in Toronto from Jan. 18 to 21 for the hearing of evidence.

Railway Presidents' Christmas and New Year's Greetings.

The following messages were sent by the presidents of the three principal Canadian railways:

E. W. Beatty, K.C., President, C.P.R.: "I desire to express my very deepest appreciation of the loyalty and efficiency which has characterized the service of all officers and employees during the past year, and which has resulted in the company emerging from a difficult period with credit to itself and satisfaction to the public it serves. At the opening of the New Year, which I trust will be a very happy one for all of you, let me suggest three resolutions:—1. To maintain unswerving loyalty to the company and its high ideals. (2) By our enthusiasm and energy to keep the C.P.R. the foremost transportation system in the world. 3. To have unquenchable faith in the great future of Canada, our country."

B. Hanna, President, Canadian National Ry.s.—"This message extends to you every seasonable greeting and good wish for your happiness at Christmas and for your well being throughout the year."

H. G. Kelley, President, G.T.R.—"On this closing day of 1920, I desire to wish each other health and happiness during the coming year and to extend through them to the members of their families my most sincere wishes for their continued well being. Efficient and wholehearted co-operation on the part of each and every one in the service will, I feel assured, produce results gratifying to us all during the New Year."

Fuel Oil for C.P.R. British Columbia Locomotives and Steamships.

As stated in Canadian Railway and Marine World for Dec. 1920, and January, the C.P.R. decided, on account of its inability to secure a satisfactory supply of fuel oil, to convert its oil burning locomotives on its Pacific District, and its British Columbia coast steamships to coal burners, but the situation has changed, respecting which an official has written us as follows:—"Our contract with the Union Oil Co. of California expired on Dec. 1920, and not getting satisfactory assurances that it would be supplied with sufficient fuel oil for our operations, we proceeded to convert for coal, starting with our yard locomotives at terminals and our stationary boilers, and then our freight locomotives on the Cascade and Shuswap Subdivisions. We had converted all the yard locomotives and stationary boilers and about 40 of our locomotives, when the Union Oil Company gave us a satisfactory assurance that it could supply us with sufficient oil to operate our Mountain Subdivision, and handle our passenger trains on the Shuswap Subdivision between Revelstoke and Kamloops. This will enable us to continue during the summer the operation on the rear of our passenger trains of our open observation cars, which have become so popular with tourists. These cars could not be operated with coal fuel, with comfort to passengers, on account of cinders, but with oil the absence of cinders makes them very attractive, and we put them on our passenger trains during daylight between Field and Kamloops. Our British Columbia Coast Steamship Service, for the same reason, had started to convert its steamships for burning coal and got four of them into that service, viz., Charming, Princess Mary, Princess Adelaide, and one of the tug boats, when, on receiving the same assurance from the oil company, the Manager, Capt. Troup, decided not to make further conversions."

Reduced Meal Rates on Railways.

The Canadian National Ry.s' Sleeping, Dining, Parlor Car, Hotel and News Department announced on Jan. 5 a further reduction in prices of meals in its dining cars and hotel. Walter Pratt, Manager of the department, stated that while prices had been most moderate, despite the high cost of commodities and expenses, he anticipated a further reduction during the year. The hotel rates on the system are as follows:—The Prince Arthur, Port Arthur, Ont., \$4.50 and upwards a day, American Plan.

The Fort Garry, Winnipeg, \$2 and up a day, European plan.

The Prince Edward, Brandon, Man., \$4.50 and up a day, American Plan.

The Macdonald, Edmonton, Alta., \$2 and up a day, European plan.

The C.P.R. put in operation on Jan. 1 reduced meal tariffs at its hotels and on its dining cars. The hotel room rates remain unchanged.

Advances aggregating more than \$200,000,000 were made to U.S. railways in 1920, from the \$300,000,000 revolving fund provided in the Transportation Act. Loans aggregating \$1,000,000 may be made on applications pending before the Interstate Commerce Commission.

Canadian National Railways Construction, Betterments Etc.

Construction Plans.—A press report states that the estimates for appropriations for construction work for the year have been prepared and are being given final consideration for submission to the Dominion Parliament. It is not anticipated that much, if any, new construction will be undertaken, but that the expenditures will be confined to improvements on existing lines, and to carrying on construction on lines already under contract. It is reported, however, that it has been decided to build a 30 mile cut off between the Canadian Northern Ry. and the National Transcontinental Ry., but that its construction will not be undertaken this year.

Halifax-Dartmouth Bridge.—A proposal for the construction of a railway and general traffic bridge to connect Halifax and Dartmouth, N.S., was discussed at a recent meeting of one of the Halifax County Council's committees. It was stated that preliminary surveys had been made for a local committee, of which A. H. Whitman, President, Halifax Board of Trade, was at the head, and that the Dominion Government had been approached on the subject.

St. John Station.—A press report states that a plant has been set up in front of the St. John, N.B., station, to make test borings in connection with the foundation work of the proposed new station.

Caraquet Ry.—L. S. Brown, Assistant General Manager, Eastern Lines, C.N.R., is reported to have stated at Newcastle, N.B., recently, that although no funds had been appropriated for the Caraquet Ry., some money had been obtained to make some repairs since it was taken over by the Dominion Government on July 1, 1920, and that an appropriation would be asked for to bring the line up to standard during this year. A telegraph line is being put in at present, so that if a train got stuck it would be possible, at least, to know where it was. He is reported to have expressed the opinion that the line might be extended from Tracadie to the Mirimichi River. The population on the line from Bathurst to Tracadie is 35,000, that between Tracadie and Newcastle, 15,000, and there are existing branch lines less valuable than that would be.

Allenby Jct. Connection.—The Board of Railway Commissioners has approved of a connection of the St. Maurice and Montreal Divisions, at Allenby Jct., mile 5.6 St. Lawrence Division.

Forfar to Findley or Gananogue.—Canadian Railway and Marine World for Sept. 1920 contained a reference to a proposal to build a line from Forfar, Ont., on the Canadian Northern Ry., to Findley, on the G.T.R., and that we had been advised that while a survey for such a line had been made, its construction had not been seriously entertained by the C.N.R. management. Residents of the localities interested have been discussing the matter, and it has been proposed that connection be made with the G.T.R. at Gananogue instead of Findley. The Gananogue Board of Trade took up the matter and the President communicated with members of Parliament and of the Ontario Legislature and with the C.N.R. management. Sir Thomas White, M.P., in reply agreed with the importance of the suggested line; A. W. Gray, M.L.A., informed the Board of Trade that he suggested that a line be built

from Forfar to Thousand Islands Jct., while A. J. Mitchell, Vice President, C.N.R., is reported to have said that if a connection between the two lines should be decided on, Gananogue's claims would be fully considered.

Construction Betterments in 1920.—Important progress was made during 1920 in improving the western lines, despite the shortage of labor and the disturbances in industrial conditions. Many lines were brought up to the standard which existing traffic justified, and these standards are to be improved on as traffic increases, finally reaching the position where the facilities will provide a slight margin over the immediate traffic requirements, so that when emergency traffic develops there will not be congestion. With respect to many sections of the main lines, this margin of capacity now exists. Betterments and construction were proceeded with, with the result that better facilities were provided for farmers in handling grain and wholesalers in transportation of their goods to districts where, formerly, inferior modes of transportation were necessitated.

On lines under construction, considerable grading was done, and a large number of miles of steel laid. Grading past the end of steel on these lines under construction was also completed. The Branch lines under construction include: Acadia Valley; Esten, southeast; Hanna-Medicine Hat, north of Red Deer River; Hanna-Medicine Hat, south of Red Deer River; Jackfish Lake; Luck Lake, MacRae, west; Melfort, west; Melfort-Jaw (Grand Trunk Pacific connection); Melfort, northeast; Munson double track; Oakland; Oliver, northeast; Oonoway; Peebles-Lampman; Prince Albert north-easterly; Red Deer spur; Swift Current; Thunderhill; Turtleford east; Kamloops, Kelowna and Vancouver Island branches.

In line with the management's policy of improving existing facilities on western lines and making provision for the maintenance of the property in the best possible condition, considerable moneys were expended, as follows: Port Arthur, express building; Prince Arthur hotel, new dining room and alterations to barber shop, etc. Mission, car repair shop. Fort Frances, new 5-stall locomotive house, new freight office. Rainy River, new ash pit. Hunter, 100-ton coaling plant, new station. Anne, new station, Transcona, extension to passenger car paint shop. West yard, Fort Rouge, extension to battery building, new concrete chimney, 210 ft. high, new turntable, rebuilding transfer table foundation, rebuilding and extending warehouse. Winnipeg, alterations to express building. Eight section houses on government line between Winnipeg and Fort William. Grand Beach, hotel, new bath house, incinerator, shelter building for picnic parties, new power house, new lavatory building, extension to water supply, ice cream plant, fixing up athletic grounds. Russell, Margo, Melfort, Punnihi, one hundred ton coaling plants, Kamack, new turntable, new ash pit. Humboldt, new turntable. Saskatoon, fifteen stall locomotive house, boiler and machine shop, new turntable, store building, bunk houses, sand house, two ash pits, carmen's work and material building, new express office and addition to express room. Prince Albert, three-stall addition to locomotive house, addition to

station building. Eaton, new five-stall locomotive houses, turntable, tank and other terminal facilities. North Battleford, new track scales. Big Valley, new freight shed. Boston Bar, four workmen's cottages. Victoria, new five-stall locomotive house.

At various places along the system the following buildings were erected: Forty-eight section houses, 11 third class stations, 12 fourth class stations, 14 freight and passenger shelters, 36 sectionmen's houses, two no. 2 locomotive men's bunk houses, two no. 3 locomotive men's bunk houses, five locomotive foreman's cottages, four 24 x 40 ft. freight sheds, two 24 x 60 freight sheds, three express buildings, three carmen's work and material buildings, three dope reclaiming plants, two sand houses, 12 tanks, nine pump houses, detached, 40 stockyards, 53 loading platforms, five ice houses.

Regina Right of Way.—A proposal is reported to have been submitted to the Regina, Sask., City Council to build a line along Fourth Ave., between Albert and Winnipeg Sts., to replace the Grand Trunk Pacific Ry. right of way along the north boundary of the city. It is stated that the G.T.P.R. in 1910 asked for a right of way on Fourth Ave. and that the offer of a right of way on the north boundary of the city was accepted by the company. The city council's reasons for objecting to the use of Fourth Ave. in 1910 for a railway right of way are said to be just as strong, if not more so.

Arizona, Alta.—The Board of Railway Commissioners has approved of location and detail plans for a freight and passenger shelter at Arizona.

Edmonton, Alta.—A. E. Warren, General Manager, Canadian National Ry., Western Lines, is reported to have had a conference with the Mayor of Edmonton, Alta., Jan. 13, in regard to work to be done there. Among the matters discussed is said to have been the new station, car shops and freight sheds.

Oliver, St. Paul de Metis Branch.—The first regular passenger train into St. Paul de Metis, Alta., over the newly completed branch line, was run Dec. 20, 1920, the event being made the occasion of a public demonstration. A freight and passenger station building is reported to be under construction.

Kamloops Bridge and Connection.—The operation of train service on the C.N.R. along and out of Kamloops, B.C., was started Dec. 26, 1920. The main line runs along the opposite bank of the North Thompson River from Kamloops, and the trains now run in and out over a short piece of line and a bridge, the work on which was completed recently.

Port Mann Coal Docks.—Tenders were received recently for pulling old piling and driving 83 piles at the coal dock at Port Mann, B.C.

Victoria Terminals.—A press report states that application is being made to the Dominion Public Works Department for permission to build a car ferry extension slip and approach at the terminals on the old Indian Reserve, Victoria, B.C. The report states that the slip will be within 100 yards of the Point Ellice bridge on the old Indian Reserve; that the length of the approach will be about 500 yards; that the transfer slip will be completely tracked, and provided with a movable apron so as to enable cars to be loaded and unloaded at all stages of the tide.

Mainly About Railway People Throughout Canada.

Clarence W. Adams, whose appointment as Superintendent of Shops, Michigan Central Rd., Jackson, Mich., was announced in a recent issue, was born at St. Thomas, Ont., Mar. 17, 1885. He entered M.C.R. service Sept. 1, 1902, as machinist apprentice, and on completion of his apprenticeship in 1906, was transferred to Pere Marquette Rd. service, and was afterwards in private employ in Detroit, Mich. He returned to M.C.R. service in Oct. 1907, since when he has been, to 1912, machinist, St. Thomas, Ont.; 1912 to 1916, gang foreman and erecting foreman, St. Thomas; 1916, locomotive house foreman, St. Thomas, and latterly, to the date of his present appointment, General Foreman, Locomotive Department, St. Thomas, Ont.

Andrew Allerton, whose appointment as General Superintendent of Hotels, C.P.R., Montreal, was announced in our last issue, entered C.P.R. service in 1890 in Dining Car Department and in August 1893 was appointed Manager of the dining hall at Windsor St. Station, Montreal. From June 1894 to Jan. 1897 he was dining car conductor; Jan. 1897 to Feb. 1905, at Chateau Frontenac, Quebec; Feb. 1905 to Apr. 1906, clerk, Place Viger Hotel, Montreal; Apr. to June 1906, Manager, Place Viger Hotel, Montreal; June 1906 to Nov. 1919, Manager, Algonquin Hotel, St. Andrews, N.B.; and from Nov. 1919 also Manager, Place Viger Hotel, Montreal. Prior to entering C.P.R. service he was for some years in Allan Line Steamship Co.'s service.

E. W. Beatty, K.C., President, C.P.R., as Chancellor of Queen's University, Kingston, Ont., presided at a special convocation there, Jan. 12, when the degree of LL.D. was conferred on Hon. E. C. Drury, Prime Minister of Ontario. On Jan. 21, Mr. Beatty was one of the speakers at the Canadian Club's dinner, New York, N.Y.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., arrived in Canada, Jan. 10, on a visit.

L. S. Brown, recently appointed Assistant General Manager, Eastern Lines, Canadian National Ry., Montreal, was presented at the end of December with a chest of silver by the staff at Moncton, N.B., where he had been General Superintendent, Maritime District, C.N.R.

Roy Bullen, at one time Western Canada representative, Chicago Great Western Ry., Winnipeg, and later General Agent, G.T.R., Minneapolis, Minn., until the appointment of the United States Railroad Administration, died suddenly on board his yacht at Daytona, Fla., at the end of December, aged 48. He left railway service in 1917.

Lieut. Col. Frederick F. Clarke, D.S.O., whose appointment as Chief Land Surveyor, Canadian National Ry., Toronto, was announced in our last issue, was born at Hamilton, Ont., Aug. 22, 1878, and educated at Upper Canada College and the School of Practical Science, Toronto University. During the summer of 1897 he was chairman for Tyndall & Ford, Ontario land surveyors, and from Sept. 1897 to Mar. 1, 1900, continued his studies in civil engineering at Toronto University. From Mar. 1, 1900 to Nov. 1, 1902, he was Lieutenant and Captain, successively, Royal Canadian Regiment, Halifax, N.S., and Assistant Adjutant in charge of Field Engineering during the latter portion of the Boer War in South Africa. From Nov. 1, 1902 to May 1,

1903, he resumed his course in civil engineering at Toronto University, and from May 1, 1903 to Feb. 1, 1905, was instrument man for J. H. Moore, O.L.S., Smiths Falls, Ont.; Feb. 1, 1905 to Apr. 1, 1906, in private practice as Ontario land surveyor, Winchester, Ont.; Apr. 1, 1906 to Aug. 4, 1914, Ontario Land Surveyor, Canadian Northern Ry., Toronto; Aug. 4, 1914 to May 1, 1919, Lieutenant-Colonel, 4th Battalion in Canada, 127th Battalion in England and 2nd Railway Troops in France. On his return from active service he was appointed acting Chief Land Surveyor, Canadian National Ry., Toronto, and on Dec. 1, 1920, Chief Land Surveyor.

C. H. N. Connell, who has been appointed Engineer, Ontario District, Canadian National Ry., Toronto, was born at Woodstock, N.B., Aug. 26, 1876, his railway record being, from Aug. to Oct. 1897, chainman, Crowsnest Pass branch, C.P.R.; Oct. 1897 to Nov. 1898, clerk in

Lt. Col. F. F. Clarke, D.S.O.,
Chief Land Surveyor, Canadian National Ry.

Division Engineer's office, same road; Nov. 1898 to Aug. 1899, topographer, C.N.R. survey between Port Arthur and Winnipeg; Aug. 1899 to Oct. 1900, Assistant Resident Engineer on construction, same road; Dec. 1900 to Nov. 1902, Resident Engineer on construction, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; May 1903 to Oct. 1, 1909, Locating and Resident Engineer, Alberta Ry. and Irrigation Co., Lethbridge, Alta.; Oct. 1, 1909 to July 1914, Engineer of Maintenance, Canadian Northern Ry., Quebec and Quebec and Lake St. John Ry., Montreal; July 1914 to Jan. 1, 1919, Engineer, Maintenance of Way, Quebec Division, Canadian Northern Ry., Montreal; Jan. 1, 1919 to Jan. 1, 1921, District Engineer, Montreal and Saguenay Divisions, Canadian Northern Ry., Montreal, and from June 1919, at Quebec, Que.

J. C. Crombie, who retired from the position of Superintendent, G.T.R., and

Wabash Ry., St. Thomas, Ont., recently, was presented with a diamond ring by employees on that division, Jan. 9, and the Misses Weisbrod, who have lived with him for several years, were presented with a cabinet of silver and a silver tea service.

Stockwell Day and Mrs. Day, the latter of whom is the daughter of Grant Hall, Vice President, C.P.R., arrived in Vancouver, from Montreal, Jan. 3, in the official car, Mount Royal, en route to San Francisco and Honolulu on their wedding trip.

Lieut. Commander C. P. Edwards, Director of Radiotelegraphs, Naval Service Department, has been elected chairman, Engineering Institute of Canada's Ottawa branch.

A. Ferguson, Inspecting Engineer, Railway and Canals Department, has been elected a member of the executive committee, Engineering Institute of Canada's Ottawa branch.

K. E. Graburn, son of A. L. Graburn, General Fuel Agent, Canadian National Ry., was married in Toronto, Jan. 19, to Miss M. M. Davies.

George A. Harrison, who has been appointed General Agent, Passenger Department, Canadian National Grand Trunk Ry., at Portland, Me., was born at Russell, Ont., July 4, 1882, and entered railway service Sept. 1, 1903, since when he has been, to Sept. 1, 1904, car checker, G.T.R., Brockville, Ont.; Sept. 1, 1904 to June 1, 1905, night operator, G.T.R., Colborne, Ont.; June 1, 1905 to June 1, 1907, night operator, G.T.R., Brockville, Ont.; June 1, 1907 to July 1, 1912, day operator and ticket agent, G.T.R., Brockville, Ont.; July 1 to Sept. 15, 1912, Travelling Passenger Agent, G.T.R., Alexandria Bay, N.Y.; Sept. 15, 1912 to Feb. 1, 1917, ticket clerk, G.T.R., Bonaventure station, Montreal; Feb. 1, 1917 to June 17, 1914, Assistant Soliciting Passenger Agent, G.T.R., Montreal; June 17, 1914 to May 1, 1916, City Passenger and Ticket Agent, G.T.R., Sherbrooke, Que.; May 1, 1916 to May 1, 1920, Passenger Agent, G.T.R., Portland, Me.; May 1, 1920 to Jan. 1, 1921, General Agent, Passenger Department, G.T.R., Portland, Me.

Charles J. Haigh, Commercial Agent, G.T.R., Philadelphia, Pa., died there, Jan. 9, aged 71. He had been in G.T.R. service for about 50 years, and among the positions held at different times was the following: Commercial Agent, Detroit, Mich.; Freight Claims Agent, Montreal, Manager, Grand Trunk Lake Valley Fast Freight, Buffalo, N.Y.; Travelling Freight Representative, New York; and Commercial Agent, Philadelphia, Pa. The funeral at Toronto, Jan. 13, was attended by a number of transportation representatives.

J. M. Hannaford has retired from the Northern Pacific Ry. Presidency, after 48 years continuous service with the company. He was a director.

L. W. Hill, Chairman of the Board, Great Northern Ry., returned to St. Paul, Minn., recently, after a moose hunting trip in Alberta.

William Mitchell Hood, who has been appointed General Agent, Passenger and Freight Departments, Canadian National Grand Trunk Ry., North Bay, Ont., was born at Harrow, Ont., Nov. 23, 1883, and entered railway service, Nov. 1, 1882, since when he has been, to Mar. 1900,

station agent, Lake Erie & Detroit River Ry., McGregor, Ont.; Apr. to Aug. 1900, Soliciting Freight and Passenger Agent, same road, Cleveland, Ohio; Sept. 1900 to Nov. 1901, Travelling Freight and Passenger Agent, same road, Walkerville, Ont.; Dec. 1901 to Aug. 1905, Local Freight Agent, Pere Marquette Rd., Saranac, Ont.; Sept. 1905 to Feb. 1911, Local Freight Agent, same road, Chatham, Ont.; Mar. 1911 to Feb. 1913, Travelling Passenger Agent, same road, London, Ont.; Mar. 1913 to Jan. 1915, Travelling Passenger Agent, Canadian Northern Ry., Toronto; Feb. to Nov. 1915, City Freight and Passenger Agent, same road, Oshawa, Ont.; Dec. 1915 to Dec. 1916, Travelling Freight and Passenger Agent, same road, North Bay, Ont.; Dec. 1916 to Jan. 6, 1921, District Freight and Passenger Agent, Canadian Northern Ry., latterly Canadian National Ry., Sudbury, Ont.

A. L. Johnston, City Ticket Agent, Great Northern Ry., Winnipeg, was presented with a walrus travelling bag by a number of his associates, on leaving Winnipeg, Jan. 6, for St. Paul, Minn., where he has been appointed Travelling Passenger Agent, G.N.R.

Harry Linwood Johnston, whose appointment as District Engineer, Vancouver Island Lines, Canadian National Ry., Victoria, B.C., was announced in our last issue, was born at Fredericton, N.B., Aug. 29, 1862, and entered railway service in 1882, since when he has been, to 1888, chairman and Resident Engineer, C.P.R., Mattawa and Lake Superior district, Ont.; 1888 to 1893, instrument man and Resident Engineer, Great Northern Ry., Stevens Pass, and near Spokane, Wash.; 1894 to 1905, Assistant Engineer and Roadmaster, C.P.R., Spences Bridge, Greenwood and Nelson, B.C.; 1905 to 1911, Locating and Division Engineer, Grand Trunk Pacific Ry. in Manitoba and Prince Rupert, B.C.; 1911 to 1917, Division Engineer, Canadian Northern Ry., Kamloops, B.C.; 1917 to 1919, District Engineer, British Columbia Public Works Department, Vancouver; 1919 to Nov. 1920, Division Engineer, Canadian National Ry., Armstrong and Vernon, B.C.

Louis Lavoie, whose appointment as General Purchasing Agent, Canadian National Ry., Toronto, was announced in a recent issue, was born at Rimouski, Que., June 22, 1879, and entered railway service Oct. 1, 1894, since when he has been, to Nov. 1901, clerk in General Manager's office, Intercolonial Ry., Moncton, N.B.; Nov. 1901 to Sept. 1902, secretary to General Manager's assistant, I.R.C., Moncton; Sept. 1902 to Apr. 1903, secretary to General Superintendent, I.R.C., Moncton; Apr. 1903 to Sept. 1905, chief clerk to General Superintendent, I.R.C., Moncton; Sept. 1905 to Apr. 1908, Assistant, Operating, to General Manager, I.R.C., Moncton; Apr. to Nov. 1909, Assistant to General Superintendent, Canadian Government Ry., Moncton; Nov. 1909 to Mar. 1910, Purchasing Agent, Canadian Government Ry., Ottawa; Mar. 1910 to Jan. 1, 1919, Purchasing Agent, Railways and Canals Department, embracing Canadian Government Ry., Dominion canals, Hudson Bay Ry. and Hudson Bay Port Nelson terminals, Ottawa; Jan. 1, 1919 to Dec. 1, 1920, Assistant General Purchasing Agent, Canadian National Ry., Toronto.

George W. Lee, who has been appointed Chairman, Timiskaming & Northern Ontario Ry. Commission, was born at White Lake, Ont., Apr. 15, 1871, and entered railway service Nov. 1, 1898, since when he has been, to June 1, 1900, freight

clerk, C.P.R., Renfrew, Ont.; June 1, 1900 to Jan. 1, 1901, in tie and timber business, C.P.R., North Bay, Ont.; Jan. 1, 1901 to Sept. 1, 1905, in charge of freight sheds, C.P.R., North Bay, Ont.; Sept. 1, 1905 to Apr. 16, 1914, General Agent, Timiskaming & Northern Ontario Ry., North Bay, Ont.; Apr. 16, 1914 to Dec. 31, 1920, Commissioner, T. & N.O.R., North Bay, Ont. He was entertained to dinner by the North Bay municipality, Jan. 20.

R. C. W. Lett, General Agent, Colonization, Industrial and Resources Department, Canadian National-Grand Trunk Pacific Ry., Edmonton, Alta., was entertained to dinner at Winnipeg, Jan. 6, and presented with a pipe, by a number of railway friends. He was for some time Tourist and Colonization Agent, Grand Trunk Pacific Ry., at Winnipeg.

D. O. Lewis, whose appointment as Assistant Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, was announced in our last issue, was entertained at luncheon by the Engineering Institute of Canada's Victoria

Robert Preston,
Superintendent of Motive Power and Car Department,
Eastern Lines, Canadian Pacific Railway.

branch at the end of December, on leaving Victoria, B.C., where he had been, for some years, District Engineer, Vancouver Island Lines, Canadian Northern Pacific Ry.

Capt. Walter J. Loudon, of Toronto, who died in Cuba Jan. 26, was formerly on the C.P.R. and Canadian Northern Ry. engineering staffs. He went overseas with the 102nd battalion and was shell shocked.

Owen McKay, who died at Walkerville, Ont., recently, after a prolonged illness, was born in Ross Tp., Ont., Mar. 13, 1848. After teaching in public schools for about 12 years, he took a course in civil engineering at the School of Practical Science, Toronto, and became a land surveyor for Ontario in 1887. In the same year he joined the late Jos. deCursé, and was engaged in survey work on the Lake Erie & Detroit River Ry., remaining with him in his local practice, and

as Assistant Engineer, L.E. & D.R.R. until Mar. 1898, when he was appointed Engineer, and in Dec. 1901, Chief Engineer. When the L.E. & D.R.R. was taken over by the Pere Marquette Rd. in 1902, he remained with the company, until the Canadian Division was absorbed into the parent company, when he resigned, and was appointed Chief Engineer, Essex Terminal Ry., which position he retained until he became incapacitated through illness in 1920.

J. A. Mackenzie, G.T.R. ticket agent, Woodstock, Ont., resigned, Jan. 6, on account of ill health, after having occupied that position for about 45 years.

George Peter McLaren, who has been appointed Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, was born at London, Ont., Apr. 4, 1878, and was from Jan. to Dec. 1897, rodman, draftsman and instrument man on sewage disposal work, under City Engineer, London, Ont.; Jan. to Nov. 1898, Resident Engineer between St. Thomas and Walkerville, Ont., Lake Erie & Detroit River Ry.; Jan. to Dec. 1899, draftsman, Algoma Central & Hudson Bay Ry.; 1900 to 1910, transit man on location, Canadian Northern Ry.; 1902 to 1904, Resident Engineer on construction, same road; 1904 to 1911, Division Engineer on construction, in Nova Scotia, Quebec and Ontario, same road; 1911 to 1915, District Engineer, North Bay District, same road; 1915 to 1916, Division Engineer, Toronto Division, same road. In 1916 he enlisted for military service and went overseas as Chief Engineer of the 10th Battalion, Canadian Railway Troops, and on his return to civil life in July 1919, he was appointed Engineer, Ontario District, Canadian National Ry., Toronto, which position he held until Jan. 15.

Donald McMaster, K.C., D.C.L., who represents the Chertsey Division in the British House of Commons, and who has been created a baronet, acted as one of the arbitrators between the Newfoundland Government and the Reid Newfoundland Co. in 1904-5.

Jas. Mills, formerly a member of the Board of Railway Commissioners, now the Board's Librarian, at Ottawa, and who was President of the Ontario Agricultural College at Guelph from 1879 to 1904, opened the new college residence, which has been named after him, Mills Hall, on Jan. 12.

Brig. General C. H. Mitchell, C.B., C.M.G., D.S.O., Dean, Toronto University's Applied Science Faculty, has been elected President of the Empire Club, Toronto.

J. C. O'Donnell, whose appointment as General Superintendent, Maritime District, Eastern Lines, Canadian National Ry., Moncton, N.B., was announced in Canadian Railway and Marine World for Dec. 1920, while visiting Winnipeg recently, where he had been Superintendent, Manitoba Division, Central District, C.N.R., for some time, was presented with a diamond ring, and a diamond pendant for Mrs. O'Donnell, by a number of friends.

J. L. Payne, formerly Comptroller of Statistics, Railways and Canals Department, Ottawa, has been superannuated.

T. P. Phelan, President, Canada Railway News Co., had his house in Toronto robbed, Jan. 27, two seal coats, a diamond ring and a pearl necklace of a total value of some \$2,600 being taken.

R. Preston was entertained at luncheon at Winnipeg, Jan. 1, by the local C.P.R. staff on leaving Winnipeg, where he had

been Assistant Superintendent of Motive Power, Western Lines, for Montreal, to take up his new duties as Superintendent of Motive Power, Eastern Lines, C.P.R.

J. G. Rutherford, C.M.G., D.V.S., one of the members of the Board of Railway Commissioners, has been elected one of the honorary presidents of the Eastern Canada Veterinary Association.

H. D. Reid, President, Reid Newfoundland Co., and Mrs. Reid, left St. John's, Nfld., in December, to spend three or four months in Great Britain and on the European Continent.

Wm. A. Ritchie, District Superintendent, Pullman Co., Montreal, retired Jan. 1. He was in Scotland in 1871 and entered Pullman Co.'s service at Montreal in 1876 to supervise portions of the car construction, then being done by the company in the G.T.R. Point St. Charles shops. In 1887 he was appointed Assistant to Superintendent, Pullman Co., Montreal, and in 1889, Superintendent, which position he held for 31 years.

William J. Robider, who has resigned the position of General Master Car Builder, C.P.R., Montreal, was born at Savannah, Ga., Feb. 15, 1869, and entered railway service in Oct. 1884, since when he has been, to Oct. 1905, assistant, assistant foreman, Car Department, and foreman, Car Department, Central of Georgia Ry., Savannah, Ga.; Oct. 1905 to Oct. 15, 1918, Master Car Builder, same road, and from Oct. 15, 1918 to Nov. 29, 1920, General Master Car Builder, C.P. R., Montreal.

J. K. L. Ross, one of the C.P.R. directors, and Mrs. Ross, expect to leave Montreal for the south early in February.

Lord Shaughnessy, Chairman, C.P.R. Co., has been appointed Chairman, Canadian Division, Board of National City Co. of New York, and W. N. Willey, K.C., Consulting Counsel, C.P.R., has been appointed a member of the board.

Archibald Sturrock, who has been appointed Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, was born at Dundas, Ont., July 27, 1883, and after serving an apprenticeship with The John Bertram & Sons Co., Dundas, Ont., entered railway service in 1901, since when he has been, to 1902, machinist, G.T.R., Stratford, Ont.; 1902 to 1904, machinist, Santa Fe, and Denver and Rio Grande Rds.; July 1904 to 1911, machinist, C.P.R., Winnipeg; 1911 to 1913, Locomotive Foreman, C.P. R., Fort William, Ont.; 1913 to Apr. 1914, Locomotive Foreman, C.P.R., Vancouver, B.C.; Apr. to Nov. 1914, General Locomotive Foreman, C.P.R., Ogden Shops, Alberta; Nov. 1914 to Jan. 1915, Division Master Mechanic, C.P.R., Cranbrook, B.C.; Jan. to Apr. 1915, General Master Mechanic, Alberta Division, C.P. R., Calgary; Apr. 1915 to Jan. 1, 1921, General Master Mechanic, British Columbia Division, Vancouver.

Howard Sugden, secretary to D. C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, was married there, towards the end of December, when he was presented with a cabinet of silver by the office staff.

Frederick Byron Tapley, who has been appointed Engineer, Maintenance of Way, Canadian Government Rys., Moncton, N. B., was born at St. John, N.B., Oct. 17, 1876, and entered C.P.R. service in July, 1903, since when he has been, to Apr. 1905, rodman, St. John, to Apr. 1905, to Apr. 1907, transit man, St. John, N.B.; Apr. 1907, to July 1, 1908, acting Resident Engineer, Belleville Jct., Ont.; July

1908 to Dec. 1911, Resident Engineer, Belleville Jct., Ont.; Dec. 1911 to Oct. 1913, Resident Engineer, London, Ont.; Oct. 1913 to July 1916, Assistant Engineer in office of Assistant Chief Engineer, Eastern Lines, Montreal; June 30, 1917 to Jan. 15, 1921, Assistant Engineer, Maintenance of Way, Canadian Government Rys., Moncton, N.B.

C. H. Temple, whose appointment as Chief of Motive Power and Rolling Stock, C.P.R., Montreal, was announced in our last issue, was entertained at luncheon at Winnipeg, Jan. 1, by the company's local officials, on leaving Winnipeg, where he had been Superintendent of Motive Power, Western Lines, C.P.R.

Major A. T. Tomlinson, who died at Toronto, Jan. 20, after a long illness, was born at Grand Falls, N.B., June 22, 1859, and graduated from the Royal Military College, June 1882, with honors in civil engineering. He was, from July 1882 to June 1883, with Toronto Bridge Co., Toronto; Aug. 1883 to June 1884, section engineer, Lake Superior Division, C.P.R.; 1886, Engineer of Maintenance, Burlington & Missouri River Rd., Omaha, Neb.; Feb. 1887 to 1890, Assistant Engineer, Denver & Rio Grande Rd., Pueblo, and Leadville, Col.; 1891 to 1893, Assistant Engineer, Brooklyn Elevated Ry., Brooklyn, N.Y.; 1894 to 1897, Assistant Chief Engineer, Northwestern Union & Lake St. Elevated Railways, Chicago, Ill.; 1898 to 1902, Consulting Engineer, Boston Elevated Rd., Boston, Mass.; 1902 to 1905, Civil Engineer, J. G. White & Co., New York; 1905 to 1908, Civil Engineer, Canadian White Co., Montreal; 1909 to 1912, District Engineer, G.T. Pacific Ry., Cochrane, Ont. In June 1913 he was appointed Chief Engineer, North Ry., Montreal, the project being subsequently abandoned. In 1915 he was appointed to the Canadian Engineers, in charge of the inspection of small arms ammunition in Dominion arsenals. He was a member of the Engineering Institute of Canada, the American Society of Civil Engineers, and the American Railway Engineering Association.

Alfred Tory, Storekeeper, G.T.R., London, Ont., on retiring from the service, Jan. 1, after over 40 years in the company's employ, was presented with a purse of money by his associates.

C. E. Usher, Passenger Traffic Manager, C.P.R., has been elected President, Canadian Forestry Association.

Geo. W. Vaux, General Agent, Union Pacific System, Toronto, and Mrs. Vaux, announce the engagement of their daughter, Frances Ellen, of Montreal, to W. M. Findlay.

David White, who died at Vancouver, B.C., Jan. 5, aged 82, was for over 40 years in Intercolonial Ry. service at Halifax, N.S., and Moncton, N.B., having been Master Car Builder at Moncton shops for about 15 years prior to his retirement on pension in 1908.

Mrs. Wm. Young, wife of the Roadmaster, District One, Timiskaming & Northern Ontario Ry., died at North Bay, Ont., Jan. 8.

The Timiskaming & Northern Ontario Ry. Commission's head office, which has been located in Toronto heretofore, will be removed in the near future to North Bay, Ont., where a number of officials have been located for many years. The offices which will be removed are those of the Chairman, G. W. Lee; Secretary-Treasurer, W. H. Maund, and Auditor of Disbursements and Accountant, D. Hamilton.

Steam Railway Track Laid in 1920.

The figures given in Canadian Railway and Marine World for January in regard to track laid on the C.P.R. during 1920 were estimated up to Dec. 31. We have since been furnished a statement of the actual track laid, which was 100.48 miles, against 102.50 estimated, and have accordingly revised our tabulation for all lines as follows:—

	Miles.	Miles.
Canadian Government Rys.—		
Halifax Ocean Terminals to Halifax & S. Western Ry.		
Jct. —	0.61	
Moncton cut off, mile 1.56, St. John Subdivision, to mile 3.5, Newcastle Subdivision, N.B. —	3.96	4.04
Canadian National Rys.—		
Eastern Lines	2.50	
St. Marc Canadian Northern Quebec Ry., to St. Marc, National Transcontinental Ry. St. Prosper connection, same line —	2.90	
	0.50	
Canadian National Rys., Western Lines —	2.50	
Saskatchewan —		
Melfort-Humboldt line	31.00	
Thunderbolt extension	8.30	
Jackfish Branch	10.00	
Swift Current extension	5.70	
Alaska Southeasterly	20.60	
	75.00	
Alberta —		
Red Deer spur	5.40	
Hanna-Medicine Hat line —	10.00	
Oliver-St. Paul de Metis line	28.10	
Onaway branch	15.10	
	58.60	
Canadian Northern Pacific Ry.—		
Vancouver Island line, mile 52.5 to 74.5 —	22.00	161.10
Canadian Pacific Ry.		
Manitoba —		
Russell Northerly	6.63	
Saskatchewan —		
Consul easterly	1.52	
Lanigan northeasterly branch.	49.34	
Leader southeasterly branch.	20.17	
Alberta —		
Lanigan northerly, Acme-Empress —	74.83	
	17.85	108.48
Kettle Valley Ry.—		
Copper Mountain Branch	1.00	
Allenby to Copper Mountain	8.00	
Mile 7 to concentrator	1.06	
Pacific Great Eastern Ry.		
Deep Creek to Australian Creek, B.C. —	24.00	
	209.65	

The following is the distribution of the mileage by provinces:—

	Miles.
Saskatchewan	100.48
Alberta	108.48
British Columbia	6.16
Manitoba	4.63
New Brunswick	2.96
Quebec	6.68
Nova Scotia	0.65
Total	239.65

In addition to the above mileage of additional new main track laid, the Canadian National Rys. report having laid 470 mile of a diversion near St. Rosalie, Que., and second track on 36.76 miles as follows: Springfield Jct. to Manson, N.S., 9.13 miles; Turin to Belmont, N.S., 7.99 miles; Bagot to St. Rosalie, Que., 10.94 miles, and near Manson, Alta., 3 miles.

In Newfoundland, the Reid Newfoundland Co. have laid 4.5 miles of new track, from Argentina Jct. to Argentina.

Reassuring.

Nervous Tourist: "What if the bridge should break and the train fall into the river?"

Conductor: "Don't worry, sir. This road won't miss it. It has a lot of trains."—Prie Railroad Magazine.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine Ltd.—R. SAUNDERS, heretofore chief officer, s.s. Makura, Canada-Australia Mail Line, Union Steamship Co. of New Zealand, has been appointed Assistant Marine Superintendent, C.G.M.M., at Sydney and Melbourne, Australia.

Canadian National Rys.—G. A. BELL has been appointed City Ticket and Freight Agent, Sudbury, Ont.

G. B. BEMISTER has been appointed Manitoba Land Surveyor, reporting to A. G. Weeks, Chief Land Surveyor, Western Lines, Winnipeg. Office, Winnipeg.

L. C. BROUSSEAU, Engineer, Quebec District, has had his jurisdiction extended to include the Montreal and Saguenay Divisions, Canadian Northern Ry., heretofore under jurisdiction of C. H. N. Connell, District Engineer, who has been promoted. Office, Quebec, Que.

E. C. BROWN, heretofore in Grand Trunk Pacific Ry. service, has been appointed Saskatchewan Land Surveyor, reporting to A. G. Weeks, Chief Land Surveyor, Western Lines, Winnipeg.

J. H. BURD has been appointed Alberta Land Surveyor, reporting to A. G. Weeks, Chief Land Surveyor, Western Lines, Winnipeg. Office, Edmonton.

A. CHARD, heretofore Local Freight Agent, Canadian National Rys., Calgary, Alta., has been appointed sub-agent, Canadian National-Grand Trunk Pacific Rys., there.

G. M. CHRISTIE has been appointed British Columbia Land Surveyor, reporting to A. G. Weeks, Chief Land Surveyor, Western Lines, Winnipeg. Office, Vancouver.

JOHN CONDEGAN has been appointed Nova Scotia Land Surveyor, and temporarily in charge of New Brunswick land surveys, reporting to Lieut.-Col. F. F. Clarke, Chief Land Surveyor, Toronto. Office, Moncton, N.B.

C. H. N. CONNELL, heretofore District Engineer, Montreal and Saguenay Divisions, Canadian Northern Ry., Quebec, Que., has been appointed District Engineer, Ontario District, Canadian National Rys., vice G. F. MacLaren, promoted. Office, Toronto.

R. B. DOVER, heretofore Local Freight Agent, Grand Trunk Pacific Ry., Calgary, Alta., has been appointed Local Freight Agent, Canadian National-Grand Trunk Pacific Rys., there.

E. FITZGERALD has been appointed Ontario Land Surveyor, reporting to Lieut.-Col. F. F. Clarke, Chief Land Surveyor, Toronto. Office, Toronto.

W. M. HOOD, heretofore District Freight and Passenger Agent, Canadian National Rys., Sudbury, Ont., has been appointed General Agent, Passenger and Freight Departments, Canadian National-Grand Trunk Rys., reporting to the traffic officials of those railways at Toronto, on all matters pertaining to those departments in the territory assigned to his supervision, and his former position has been abolished. Office, North Bay, Ont.

J. W. KIMBALL, Superintendent, Boarding Car Department, Canadian National Rys., Winnipeg, has had his jurisdiction extended over the Grand Trunk Pacific Ry., the contract which the G.T.P.R. had with C. L. Petersen and Co., for

boarding men, having been cancelled.

G. P. MACLAREN, heretofore Engineer, Ontario District, Canadian National Rys., Toronto, has been appointed Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., vice H. T. Hazen, appointed acting Chief Engineer. Office, Toronto.

W. McPHILLIPS has been appointed Assistant Manitoba Land Surveyor, Winnipeg.

J. M. MILLS has been appointed Chief Dispatcher, Hornepayne Division, Ontario District, vice J. W. Nicholson, promoted. Office, Hornepayne, Ont.

S. MORRISON has been appointed Assistant Engineer, Maintenance of Way, with jurisdiction over all lines west of Edmonton, Alta., not including Edmonton, and including Vancouver Island lines, and the position of District Engineer, Pacific District, Victoria, B.C., hitherto held by D. O. Lewis, whose appointment

Archibald Sturrock,
Assistant Superintendent of Motive Power, Western Lines, Canadian Pacific Railway.

as Assistant Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, was announced in our last issue, has been abolished. Office, Vancouver, B.C.

J. W. NICHOLSON, heretofore Chief Dispatcher, Hornepayne, Ont., has been appointed Assistant Superintendent, Superior Division, Ontario District, vice F. W. Naylor, transferred. Office, Hornepayne, Ont.

S. E. OLIVER has been appointed Quebec Land Surveyor, reporting to Lieut.-Col. F. F. Clarke, Chief Land Surveyor, Toronto. Office, Quebec, Que.

H. J. PAGE, heretofore Chief Special Agent, Eastern Lines, Canadian Northern Ry., has been appointed Superintendent of Police and Special Service, Canadian National Rys. Office, Toronto.

H. T. RAWLINGS, heretofore Lake Forwarding Agent, Fuel Department, Cleveland, Ohio, has resigned to become

Vice President, Baier Coal Co., Cleveland.

T. DUFF SMITH, formerly Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, Man., has been appointed Assistant Fuel Agent, Canadian National Rys. at Edmonton, Alta.

F. B. TAPLEY, heretofore Assistant Engineer, Maintenance of Way, Canadian Government Rys., Moncton, N.B., has been appointed Engineer, Maintenance of Way, Canadian Government Rys., and his former position has been abolished. Office, Moncton, N.B.

A. G. WEEKS has been appointed Chief Land Surveyor, Western Lines, reporting to Lieut.-Col. F. F. Clarke, Chief Land Surveyor, Toronto. Office, Winnipeg.

Canadian Pacific Ocean Services Ltd. H. H. BORTHWICK is reported to have been appointed Passenger Agent, Dundee, Scotland, vice R. Ferguson.

W. H. POWELL, Passenger Agent, Southampton, Eng., is reported to have been appointed General Agent, Passenger Department, London, Eng., vice G. Gribbon, resigned.

Canadian Pacific Ry.—H. M. ALLEN, heretofore Locomotive Foreman, Alyth, Alta., has been appointed Master Mechanic, Kenora Division, Manitoba District. Office, Kenora, Ont.

HAROLD A. AMY, formerly Locomotive Foreman, North Bay, Ont., has been appointed Division Master Mechanic at Ottawa.

H. H. BOYD, Assistant Chief Mechanical Engineer, has also had assigned to him the duties pertaining to the position of General Master Car Builder, which has been abolished. Office, Montreal.

W. E. CLINE, heretofore Chief Dispatcher, Kenora, Ont., has been appointed Car Service Agent, Saskatchewan District, vice G. S. Lytle. Office, Moose Jaw.

D. COSSAR, heretofore Locomotive Foreman, Transcona, Man., has been appointed Locomotive Foreman, Winnipeg, vice J. MacRae, transferred.

ERNEST G. FREEMAN, formerly Locomotive Foreman at Cartier, Ont., has been transferred to Locomotive Foreman at North Bay, Ont.

JAS. GIBSON, heretofore Locomotive Foreman, Sutherland, Sask., has been appointed Master Mechanic, Moose Jaw Division, Saskatchewan District, vice A. Peers, promoted. Office, Moose Jaw.

J. W. JACKSON, heretofore Locomotive Foreman, West Calgary, Alta., has been appointed Locomotive Foreman, Alyth, Alta., vice H. M. Allen, promoted.

J. MACRAE, heretofore Locomotive Foreman, Winnipeg, has been appointed Locomotive Foreman, Sutherland, Sask., vice Jas. Gibson, promoted.

A. PEERS, heretofore Master Mechanic, Moose Jaw Division, Saskatchewan District, Moose Jaw, has been appointed Master Mechanic, Saskatchewan District, vice W. J. Renix, transferred. Office, Moose Jaw.

JOHN REED has been appointed Night Locomotive Foreman, West Calgary, Alta., vice J. W. Sindall, promoted.

W. J. RENIX, heretofore Master Mechanic, Saskatchewan District, Moose Jaw, has been appointed Master Mechanic, British Columbia District, vice A. Sturrock, whose appointment as Assistant Superintendent of Motive Power, Western Lines, Winnipeg, was announced in our last issue. Office, Vancouver.

W. J. ROBIDER having retired from the service, the position of General Master Car Builder has been abolished, and the duties pertaining to that position have been taken over by the Assistant Chief Mechanical Engineer, H. H. Boyd.

F. S. ROSSETER, formerly Assistant Superintendent, Toronto Terminals Division, Ontario District, Toronto; subsequently acting Superintendent, Sudbury Division, Algoma District; and afterwards acting Superintendent, Chapleau Division, Algoma District, has been appointed Assistant Superintendent, Chapleau Division, Algoma District, vice V. T. Boughton, resigned.

JOSEPH ST. LOUIS, formerly locomotive hostler at Cartier, Ont., and who acted as relieving foreman there on several occasions, has been appointed Locomotive Foreman there.

J. W. SINDALL, heretofore Night Locomotive Foreman, West Calgary, Alta., has been appointed Locomotive Foreman there, vice J. W. Jackson, transferred.

Grand Trunk Ry.—M. P. CUNNINGHAM has been appointed Commercial Agent, New Haven, Conn.

J. B. DUNLOP, heretofore Locomotive Foreman, Fort Erie, Ont., has been appointed Foreman, Erecting Shop, Stratford, Ont., vice W. Seeley, promoted.

W. M. HOOD, heretofore District Freight and Passenger Agent, Canadian National Rys., Sudbury, Ont., has been appointed General Agent, Passenger and Freight Departments, Canadian National-Grand Trunk Rys., reporting to traffic

officials of these railways on all matters pertaining to these departments in the territory assigned to his supervision, and his former position has been abolished. Office, North Bay, Ont.

G. A. KELL, heretofore Travelling Engineer, Turcot, Que., has been appointed Safety Engineer. Office, Montreal.

J. LIVINGSTON, heretofore of the stores department, Stratford, Ont., is reported to have been appointed Storekeeper, East London, Ont., vice A. Tory, retired from the service.

JOHN MCCRAW has been appointed Travelling Representative, New Haven, Conn.

N. T. MAHONEY has been appointed Travelling Representative, New Haven, Conn.

W. RIDDELL has been appointed Locomotive Foreman, Fort Erie, Ont., vice J. B. Dunlop, assigned to other duties.

JOHN ROBERTS, heretofore General Shop Foreman, Stratford, Ont., has been appointed acting Superintendent Motive Power Shops there, vice J. C. Garden, promoted.

W. SEELEY, heretofore Foreman, Erecting Shop, Stratford, Ont., has been appointed General Shop Foreman there, vice J. Roberts, promoted.

N. A. E. SMITH, heretofore relieving agent, London Division, Ontario Lines, has been appointed Town Ticket Agent, Woodstock, Ont., vice J. A. McKenzie, retired.

Great Northern Ry.—S. M. FARRELL, heretofore in Cunard Line's office, Win-

niipeg, has been appointed City Ticket Agent, G.N.R., Winnipeg, vice A. L. Johnston, promoted.

A. L. JOHNSTON, heretofore City Ticket Agent, Winnipeg, has been appointed Travelling Passenger Agent, St. Paul, Minn., vice V. E. Jones, promoted.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—C. H. BENDER has been appointed Deputy Treasurer and Paymaster. Office, Minneapolis, Minn.

W. R. CALLAWAY, Passenger Traffic Manager, Minneapolis, Minn., having resigned, Jan. 1, that office has been discontinued.

H. M. LEWIS, General Passenger Agent, in addition to his regular duties, has been given charge of matters heretofore under the direction of W. R. Callaway, Passenger Traffic Manager, resigned. Office, Minneapolis, Minn.

H. N. PAIST, heretofore Assistant Treasurer, has been appointed Treasurer, vice C. Clement, resigned. Office, Minneapolis, Minn.

Pullman Co.—C. J. SIMPSON, heretofore Assistant Superintendent, Montreal, has been appointed acting District Superintendent there, vice W. A. Ritchie, retired.

Timiskaming & Northern Ontario Ry. G. W. LEE, heretofore one of the commissioners, has been appointed Chairman of the Commission, vice J. L. Englehart, whose resignation took place about a year ago. Office at present Toronto, but will be moved to North Bay, Ont., in the near future.

Co-ordination of Grand Trunk Railway with Canadian National Railways.

Canadian Railway and Marine World for June 1920 gave full particulars of the committee of management appointed, under the agreement between the Dominion Government and the G.T.R., for the acquisition by the Government of the G.T.R. Co.'s properties, and that of its subsidiary companies, to ensure the operation of the G.T.R., as far as possible, in harmony with the Canadian National Rys., the two systems to be treated in the public interest, as nearly as possible, as one system. The Government appointed as its representatives on the committee C. A. Hayes, Vice President in charge of Traffic, Canadian National Rys., and S. J. Hungerford, then Assistant Vice President, Operation, Maintenance and Construction, C.N.R., now Vice President, Operation and Maintenance. The G.T.R. appointed as its representatives F. Scott, its Vice President and Treasurer; and W. D. Robb, its Vice President, Transportation and Maintenance. These four members of the committee elected H. G. Kelley, President, G.T.R., as the fifth member of the committee and its chairman. In the latter capacity Mr. Kelley submitted a report to the Minister of Railways recently dealing with economies effected by the co-ordination up to Nov. 30, 1920, which is summarized as follows:—Although much has been accomplished in the process of consolidation, there are still many matters under consideration in physical difficulties which must be dealt with before parallel trackage can be abandoned, and more direct connections established, which will permit a further considerable saving in train mileage. Capital expenditure connected with the consolidation of facilities to date amount to \$508,473, at an annual cost of \$75,927, but this expenditure will result in a saving estimated at \$965,776 a year. In addition

there is a credit to capital account of Canadian National Rys. from salvage, of \$338,000. A saving of over \$300,000 a year is rendered possible by the routing of freight by Grand Trunk between Toronto and Napanee, by Canadian National between Napanee and Ottawa, and by Grand Trunk between Napanee and Montreal. Similarly a further saving of \$100,000 has been made possible by more economic routing of passenger traffic in Ontario. In addition a saving of about \$250,000 a year will result from the combining of Toronto passenger and freight terminal facilities and staffs. Thirty two thousand dollars is saved by more direct handling of Toronto and Western Ontario freight, destined to the northwest, and there is a saving of \$75,000 from the consolidation of express services. In this connection, it has been necessary, owing to the growth of express business, to put in a special train each way between Montreal and Toronto to handle express traffic solely. These are operated six days a week via the Grand Trunk, and have afforded great relief to the regular passenger train service. Following are particulars of co-ordination of facilities, etc.:

Aston Jct., Que.—Consolidation of station facilities has been effected, C.N.R. being used by both systems.

Belleville, Ont.—The handling of l.c.l. freight has been consolidated, this work being taken over by the G.T.R.

Brighton, Ont.—In obtaining access to existing tracks, the two railways are using a temporary connection at Colbright, a short distance from Brighton. Brockville, Ont.—See Lyn.

Cobourg and Colborne, Ont.—C.N.R. stations have been closed, and the G.T.R. stations are being used.

Eastern Jct., near St. Laurent, Que.—The Board of Railway Commissioners

has approved interchange of this point. The present connecting track will meet the requirements in the meantime.

Grafton, Ont.—C.N.R. station has been closed and the G.T.R. station is being used.

Guelph, Ont.—Arrangements have been made for the Toronto Suburban Ry. to use the G.T.R. station.

Hawkesbury, Ont.—Consolidation of facilities and staffs is under consideration.

Kingston, Ont.—Station facilities have been consolidated.

Lyn, Ont.—A section of the Canadian National Rys., formerly part of the Brockville, Westport and Northwestern Ry., parallels the G.T.R. between Brockville and Lyn, approximately four miles. It is the intention to build a post station at Lyn on G.T.R. property which will permit C.N.R. trains to use G.T.R. tracks into Brockville.

Lyster, Que.—The G.T.R. has taken over the C.N.R. staff.

Montreal. The staffs at this station have been consolidated. The staffs at Montreal Wharf have been consolidated. The dated, G.T.R. facilities have been used. The C.N.R. staff at Point St. Charles has been taken over by the G.T.R. The systems' commissary departments at Montreal have been consolidated. The handling of railway mail at Montreal has been consolidated. Consolidation of the staffs and facilities for handling l.c.l. freight in Montreal terminal is awaiting adjustment of certain features of the carriage section.

Napanee, Ont.—The station facilities have been consolidated.

North Bay, Ont.—The use by the G.T.R. of the C.N.R. station is under consideration.

Ottawa, Ont.—Consolidation of facilities and staffs is practically completed.

Parry Sound, James Bay Jct., and

Falding, Ont.—The G.T.R. is operating into Parry Sound over C.N.R. tracks.

Pembroke, Ont.—The station facilities and staffs have been consolidated, the C.N.R. using the G.T.R. facilities.

Rockland, Ont.—Arrangements have been made to consolidate both facilities and staffs in the spring.

St. Hyacinthe, Que.—The operations and staffs have been consolidated.

St. Rosalie, Que.—Consideration is being given to increased facilities, the intention being to turn C.N.R. locomotives and crews there, the G.T.R. to handle a portion of the C.N.R. tonnage between Montreal and St. Rosalie.

Trenton, Ont.—The C.N.R. has taken over the handling of all local freight.

Udedy Jet, and Orillia, Ont. The C.N.R. line between these points has been abandoned and service withdrawn. The tracks have not yet been removed.

Washago, Ont.—A physical connection has been installed, and a temporary signal to protect movements of C.N.R. passenger trains.

Toronto.—Owing to the C.N.R.'s limited terminal facilities, it has been decided to take care of C.N.R. locomotives and cars, handling of cars in yards, etc., by using G.T.R. facilities, which are being enlarged to meet the joint requirements. It is intended that the C.N.R. shall handle G.T.R. local freight at Cherry St. freight house, which is being enlarged. The freight houses at Parkdale have been consolidated. The dining car facilities have been consolidated and additional provision made for taking care of the supplies. The dispatching of C.N.R. trains between Don and Rosedale is now being handled by the C.N.R. dispatchers.

Passenger Traffic.—All passengers moving between Toronto and Ottawa are routed via C.N.R., which provides a shorter and more convenient route. C.N.R. trains 9 and 10 between Montreal and Toronto are being routed over C.N.R. between Napanee and Colbricht. This involves a slight increase in train miles, which is more than offset by the better service afforded.

G.T.R. trains 29 and 30, which ran formerly between Belleville and Toronto, have been changed to run between Kingston and Toronto, to enable the C.N.R. to withdraw trains 32 and 33 between Yarker and Cobourg. This has effected a net reduction in train miles.

C.N.R. trains 51 and 52, which operated formerly between Picton and Kingston via Harrowsmith Jct., are now routed over G.T.R. between Napanee and Kingston. It has been necessary to increase the train mileage between Yarker and Napanee, which offsets the saving made by routing of trains 51 and 52. The service to the public, however, has been materially improved.

The daily passenger service which the C.N.R. operated formerly from Montreal to Ottawa has been extended to Sudbury and Winnipeg.

The G.T.R. formerly had a tri-weekly service between Toronto and Winnipeg, via North Bay and Cochrane. This has been increased to daily, but the C.N.R. trains which operated formerly between Toronto and Winnipeg four days during each week have been withdrawn, so that there has practically been no increase in the service.

The practice of honoring C.N.R. passes on G.T.R. trains, and vice versa, on different sections of the lines, has been adopted where it has been found that it will be an advantage and facilitate business.

Freight Traffic.—For some years the G.T.R. has handled its freight between Quebec City and Pt. Levi by a ferry boat. Consequent upon this boat being withdrawn for repairs, the G.T.R. has commenced running its manifest trains into Quebec City over the Quebec bridge. It is intended that the G.T.R. shall handle the C.N.R. way freight business between Montreal and St. Rosalie, which is in the interest of economy.

The routing of freight by the G.T.R. instead of the C.N.R. between Toronto and Napanee has permitted of a substantial reduction in train miles. The routing of freight by the C.N.R. between Napanee and Ottawa and by the G.T.R. between Napanee and Montreal has had a similar result.

All freight from Toronto for the Canadian Northwest is delivered to the C.N.R. at Toronto and handled by that line via Sudbury. All freight originating in districts west of Toronto is delivered to the C.N.R. at Allandale, Ont., and handled by that line to the Northwest via Washago and Sudbury. This has resulted in a reduction in train miles.

Freight Department.—Many consolidations have been effected, the freight and passenger traffic and ticket office staffs have been brought together, and are working harmoniously for the joint interests. This refers not only to local points but also to outside agencies, additional representation having been secured at a number of important cities

in Canada and the United States.

It was decided that at such stations as come under the scheme of consolidation, which are considered important, the signs on both passenger and freight stations should be changed to "Canadian National-Grand Trunk."

Express.—The following comprises some of the more important things which have been done in connection with consolidation of the express companies:—

The Canadian Exp. Co. has taken over the express operations on the Halifax & Southwestern Ry.

With the intention of increasing the express traffic between Montreal and Toronto, to meet competition, and to relieve passenger trains from carrying express which resulted on many occasions in delay to these trains, arrangements were made to put on special express trains 20 and 21, which are operated six days a week via G.T.R.

The Canadian and the Canadian National express services have been consolidated at a number of points, but there are still some important terminals at which consolidation cannot be effected until more adequate facilities can be provided, principally Toronto, Montreal and Quebec.

The Dolly Varden Mines Ry., operating from the Dolly Varden Mines to Alice Arm, B.C., has ceased operations, owing to the closing down of the mines for an indefinite period.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

The Creeping of Railway Rails.

In Oct. 1919, J. A. L. Waddell, D.E., L.L.D., consulting engineer, New York, N.Y., was commissioned by some clients to investigate and report on the phenomenon of the creeping of railway rails, in order to determine the cause thereof, and, if possible, evolve a remedy. The first step taken was to send a letter, enclosing a questionnaire, to the Federal manager or the president of each of 70 of the principal railway systems of the United States, Canada, and Mexico, asking for replies to the following questions:—

1. What troubles, in your experience, are engendered by the creeping of rails?
2. Is rail creeping proportional to the amount of traffic passing over a track?
3. With the traffic in one direction only, is the creeping greater on down grade or up grade, and to what extent?
4. On a single track line, is the creeping greater in the direction of the heavy traffic; and, if so, to what extent?
5. On what portions of your line do you find the greatest creeping of rails—on tangents or on curves?
6. Does the degree of curvature affect the amount of creeping?
7. Does one rail in a track ever creep more than the other? Under what conditions?

8. For the same train loads, is the creeping greater on light rails or on heavy ones; and, if so, to what extent?

9. Does the amount of creeping vary with the nature of the roadbed, and with the kind and depth of the ballast; and, if so, to what extent?

10. Does the amount of creeping vary with the temperature and weather conditions.

11. Does the amount of creeping vary with the character and efficiency of the rail splicing; and, if so, to what extent?

12. Does the amount of creeping depend on the use or the non-use of rail-chairs or of tie-plates; and, if so, to what extent?

13. Have you found any satisfactory method of checking or of lessening creeping?

Mr. Waddell has submitted the data secured in a paper read before the American Society of Civil Engineers, from which the following are extracts:—The results for information were honored by officials of 49 roads or 70% of those addressed.

In several cases opinions were given by a number of the officials of the system—in one case there were 34 reports from roadmasters; consequently, the paper is really a compendium of knowledge on the subject, furnished by more than 100 of the best posted men in North America. Those who answered the questionnaire represented, all told, 190 railways or railway systems, covering about 220,000 miles of line, because each Federal manager generally had several systems under his control. This total length of line is 50% of the entire mileage of North America. Among the roads replying were the following Canadian ones and others having lines in Canada:—Canadian National Rys., including Canadian Government Rys., Canadian Northern, Eastern and Western Lines; Grand Trunk Ry., Michigan Central Rd., and New York Central Rd.

In one particular the opinions of all railway men on the creeping of rails are given; and, of what is it?

14. Have you evolved any theory as to the cause or causes of rail creeping, and, if so, what is it?

15. Have you had any computations made as to the resultant force causing creeping under specific conditions?

16. Is there any information on the subject that you can furnish, not covered by the preceding questions; and, if so, unanimous, viz., that it is a phenomenon of serious import, very difficult to contend with, and involving both great danger to the travelling public and large expense to the railway companies; consequently, the subject is one well worth investigating. The writer feels that the best he can do with the matter is to present a compendium of the replies given to the various set questions, offer a few suggestions of his own, and ask for a thorough discussion of the subject by railway men in general, and all patentees of anti-creeping devices in particular. Some of those who answered the questionnaire may feel like elaborating their replies; and other railway men who were not consulted, may have additional valuable information to offer. Quantitative records of rail creeping are still needed; and if any one possesses any, it is hoped that he will submit them in the discussion. The writer hopes that the discussion will be so full and complete as to cause inventors to try their hands at evolving some better anti-creeper than any which has yet been used and which will solve in a truly satisfactory manner the problem of the absolute prevention of the creeping of railway rails.

From the information obtained, Mr. Waddell has drawn the following general conclusions:

Rail creeping is a matter of serious import not only to railway men but also to the whole world; for it increases both directly and indirectly the cost of operation and maintenance of every steam railway system, causes great destruction of railway property, and transportation of goods, and seriously endangers the large scale lives of the travelling public.

The principal troubles caused by rail creeping are slewing of joint ties and bunching of all ties; distortion of gauge; loosening of joints; pounding down of rail ends; grinding of rail heads and wheel flanges; splitting of joint ties; churning and sliding of ties; splitting and breaking of angle bars; shearing of bolts; cutting of ties and consequent starting of decay therein; loosening, pulling and shearing of spikes; bunching and squeezing out of ballast; kinking and waving of rails; breakage of track, kicking or buckling of track with consequent derailment, interference with operation of frogs, switch points, head blocks, signals, interlocking, crossovers, turn outs, derails, and other track devices, injury to rolling stock due to racking of track; and, in short, the auguring of all the difficulties known to trackmen.

Undoubtedly, the primary cause of the fundamental trouble mentioned is because when a strong force of track is absolutely ever it is true that other influences, such as temperature changes and weather conditions, aggravate the difficulty, but, alone, they are powerless to cause it. Wave action of rails and ties in front of the passing wheel, which pushes the ties ahead; and, if there be firmly spiked to the ties, the latter move forward, carrying the ballast with them. Again, the traction of the locomotive drivers, and the friction of all braked wheels tend to impart a longitudinal motion to the rails.

Long cars and widely spaced axles and trucks augment materially the amount of creeping, as do also unbalanced traffic; but these are unfavorable conditions that may very properly be termed unavoidable. The principal avoidable ones, however, are yielding roadbed, lack of thorough drainage, soft or decaying ties, unequal spacing of ties, badly adjusted super elevation of outer rails on curves, rails too light for the traffic, inefficient or badly maintained rail joints, either scant or excessive provision for rail expansion, inadequate or defectively maintained gauge, poor or insufficient ballast, and improper use of train brakes. If the avoidable evils thus listed were effectively corrected, a large proportion of the trouble experienced from creeping track would no longer exist.

Rail creeping increases with the amount of traffic, although not necessarily in direct ratio; is greater on down grade than on up grade; on a single track line is larger in the direction of the preponderance of traffic; in general, is of like amount on tangent and on curve; is often quite different on the opposite rails of a track; is of more serious nature on light rails than on heavy ones; is less with firm roadbed than with soft; decreases with improvement in quality of ballast and with augmentation of its depth; varies with changes of temperature, season of year, and weather conditions; is reduced by improving the character of rail splicing; is not materially affected by the use of non-creeping rail joints; enlarges with the spacing of wheels and trucks; and augments with the speed of trains and with the weights of locomotives and loaded cars.

The longitudinal forces in track developed by creeping, and the horizontal pull between rail anchors and rails is a question to be settled by experiments and not by mathematical assumptions. As a reference to mathematicians in general and to professors of engineering in particular, it can be stated that the question of rail creeping is not one which will properly lend itself to the manipulation of equations based on hypothetical assumptions, because the governing conditions in respect to wave action of rails and track under traffic are far too varied, complicated, and uncertain to warrant any attempt to investigate the subject mathematically. A few valuable experiments have been made to determine the longitudinal thrust of track from creeping, but the results thereof require confirmation by an elaborate series of tests before being accepted as standard or final by rail engineers. The inauguration and carrying out of such a series of experiments is naturally the function of the American Railway Engineering Association, which has already done so much to improve the science and art of railway construction in America; and the writer hopes that that organization will soon undertake such a series of tests as will settle this question with sufficient accuracy for all practical purposes.

Rail anchors, or anti-creepers, may be divided into two general classes, viz., those which attach to the ties and those which are buried in the ballast. The former type is often effective when the track conditions are first class, but usually fail when any one or more in that class of the second type should be used. To be really effective, however, the latter should extend into the ballast well below the elevation of the bottoms of the ties, because otherwise they would move along with the ballast between the ties, which ballast, of necessity, travels with the track. The writer recognizes that,

in some cases, the use of such ballast anchors might involve questions of electrolysis of serious import, but believes that these can be satisfactorily solved by proper design, supplemented by experiment. The writer is of the opinion that, it cases of excessive creeping on soft roadbed and ineffectively ballasted track, the best solution of the problem would be the placing of deadmen, of either reinforced concrete or creosoted timbers, in the embankment well below foundation level, and connecting both rails thereto by strong, adjustable rods running upward between ties at an angle of about 45° to the vertical. If the creeping tendency is always in one direction, one such rod per anchored rail would suffice; but if it is in both directions, two would be necessary. How far apart the deadmen should be would depend altogether on the tendency of the track to creep. Two or three on each stretch of moving track might first be tried; and if they should prove to be inadequate, more could be added at any time. It is submitted that this method of preventing creeping ought to be much less expensive than making the track truly first class. The details of the suggested anchorage cannot well be evolved before the maximum rail thrust from creeping is determined.

Instead of the suggested deadman, there could be substituted a pair of fairly long 12 x 12 in. creosoted piles, driven just outside the rails, with their tops at or above the level of the top of the ties, and 8 x 12 or 10 x 12 in. ties laid flat, spiked or bolted tight against them, with several pairs of short blocks or spacers between adjacent ties directly under the rails on each side of the pair of piles. Then, if a type of anti-creeper were evolved, which would grip the rail so effectively that it could not slip through, and if several of these anti-creepers were used for each rail and were attached to the ties, a combination would be effected that would absolutely prevent all creeping, unless the thrust were great enough either to snap off the piles or to tip them out of plumb by compressing the earth and moving the ballast near their tops. It is, of course, possible that the thrust would be great enough to effect one of these results; but, if so, the remedy evidently would be to put in more pairs of piles with their adjacent short spacer blocks.

In respect to the prevention of rail creeping on important bridges, the writer's practice is to fasten the rails firmly to the deck at the middle of spans and let them slide on the plates out to the ends thereof, where a break in the track over each pier is provided.

Finally, the writer desires to state in relation to rail creeping what he said 40 years ago in a paper entitled "Railroad Drainage," viz., that the effective drainage of both roadbed and right of way is the main essential in good railway engineering practice.

Canadian Railway Club.—Capt. A. H. Kendall, M.C., who was officer commanding the 58th Broad Gauge Operating Co., C.E.F., during the great war, read a paper, "Operating broad gauge railways in the time of war," before the club on Jan. 10, which contained practically the same information as his paper on the same subject published in *Canadian Railway and Marine World* in June 1920. The club's annual dinner was held at the Windsor Hotel, Montreal, Jan. 29.

The Association of Railway Executives states that American railways spent \$349,500,000 for new equipment in 1920.

Freight and Passenger Traffic Notes.

The Mainland Transfer Co., Vancouver, B.C., is reported to have taken over the Great Northern Transfer Co., which has handled the Great Northern Ry.'s transfer business and freight cartage in Vancouver.

Traffic on the Greater Winnipeg Water District Ry., which runs from St. Boniface, Man., to the Shoal Lake section, reported to the Woods, is expected to be normal, and the present bi-weekly train schedule will be continued.

Prince Edward Island Ry. trains 15 and 16 between Charlottetown and Souris, and trains 17 and 18, between Mount Stewart and Georgetown, heretofore operate daily, were put on a Monday, Wednesday and Friday schedule on Jan. 9.

F. M. Rutter, Superintendent, Bruce Division, Ontario District, C.P.R., Toronto, speaking at the Owen Sound, Ont., Board of Trade's annual dinner, Jan. 18, is reported to have stated that a cafe parlor car service will be operated between Toronto and Owen Sound on Feb. 1.

The Canadian National Rys. put a mixed train service in operation between Kindersley and Eaton, Sask., 77.6 miles, on Dec. 20, 1920, a train leaving Kindersley, Mondays, Wednesdays and Fridays, and returning Tuesdays, Thursdays and Saturdays; and on the same day extended the tri-weekly service on the Oliver-St. Paul de Metis line from Spaddon, mile 105.5, to St. Paul de Metis, mile 127.5 from Edmonton.

Traffic on the Newfoundland Ry. between St. John's and Port aux Basques was reported recently as being blocked. The first train from St. John's for five days was reported to Port aux Basques Jan. 16, and the train leaving Port aux Basques Jan. 9 only reached St. John's Jan. 14. The line is reported to have filled up again, and large gangs of men were put at work, particularly in the Topsails district, to open it up.

The Reid Newfoundland Co. has put in operation a tri-weekly train service, leaving St. John's at 1 p.m., Sundays, Tuesdays and Thursdays, reaching Port aux Basques 6 p.m. on Mondays, Wednesdays and Fridays, where connection is made with the s.s. Kyle for North Sydney, N.S., which is reached at 6 a.m. on the mornings following. The Kyle, returning to Port aux Basques, connects with a train at 8 p.m. on Wednesdays, Fridays and Sundays, which is timed to reach St. John's at 10.55 p.m. Thursdays, Saturdays and Mondays.

Windsor Essex Rolling Stock Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Toronto, to build, own and deal in locomotives, motor cars, rolling stock of every description, rails, ties, railway construction materials, ships, shops, warehouses, and with numerous other powers. The provisional directors are:—P. B. Fallis, G. A. Persall, and E. B. Schroeder, Toronto.

Grand Trunk Ry. Arbitration.—The board of arbitration to fix the value of the stock of the Grand Trunk Ry. Co., to be taken over by the Dominion Government, will open its sittings at Ottawa, Feb. 1, and it is hoped that it will be able to reach a decision by April 9, the date fixed for the completion of the purchase, which however, may be extended by the Government, if found necessary.

Traffic Orders by Board of Railway Commissioners.

Exchange on Freight Charges on Traffic Between Canada and United States.

General order 326, Jan. 14.—The judgment on which this order was based, and a summary of the order, are given on another page of this issue, under "Exchange on Freight charges on Traffic between Canada and United States."

Cumberland Railway & Coal Co.'s Passenger Tariff.

30,438. Dec. 14, 1920.—Re application of Cumberland Railway & Coal Co. under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 6, to become effective Jan. 1, 1921. Whereas the applicant company has filed the said tariff to become effective Jan. 1, 1921, on the reduced basis prescribed by the Board's judgment dated Sept. 6, 1920, and general order 308, dated Sept. 9, 1920, the Board orders that the said tariff be approved; the said tariff, together with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Shipment of Compressed and Liquefied Gases.

30,457. Dec. 17, 1920.—Re application of Canadian Carbonate Co. for an order extending the time within which it may test cylinders used for the shipment of compressed gases and equip cylinders containing liquefied gases with a safety device, as prescribed by paragraphs 1861 (i) and 1862 (a) of the Regulations for the Transportation of Explosives and Other Dangerous Articles by Freight, approved by general order 203, Aug. 11, 1917, as amended by general orders 206, 107, 280, and 287, Sept. 7 and Oct. 26, 1917, Mar. 17, 1919, and Mar. 22, 1920. Upon reading what is filed in support of the application on behalf of the Bureau of Explosives; and its being represented to the Board by the applicant company that the extension of time within which cylinders used for the shipment of compressed gases may be tested, as provided by paragraph 1861 (i), applied for, is not now necessary, the Board orders that the time within which the applicant company may equip cylinders containing liquefied gases with a safety device as provided in paragraph 1862 (a) of the Regulations for the Transportation of Explosives and Other Dangerous Articles by Freight, be extended until Dec. 31, 1921.

Freight Rate on Shoddy Blankets.

30,494. Dec. 26, 1920.—Re application of Freight Adjusting Bureau, Vancouver, B.C., for a ruling of the Board that shoddy blankets are entitled to the rate provided for specified articles of dry goods in Item 250 of the Canadian Freight Association's Commodity Tariff, 1-A, C.R.C. 14; and the Board's order 29,435, Mar. 2, 1920, made therein. Upon its being represented to the Board that claims for overcharges on shipments prior to July 31, 1918, the date named in order 29,435, were refused by the carriers, on the ground that they were not covered by the said order, and the Chairman of the Canadian Freight Association having advised the Board, by letter dated Dec. 18, 1920, that the carriers which he represents have no objections to offer to the issuing of this order, the Board declares that blankets of any description of shoddy shipped since Sept. 20, 1916, inclusive, and including July 31, 1918, were and are entitled by the language of the tariff to the rates pertaining to item

320 in Canadian Freight Association's Westbound Commodity Tariff 1, C.R.C. no. E-3174 (C.P.R.); and since July 31, 1918, to the rates pertaining to item 230 in Canadian Freight Association's Westbound Commodity Tariff 1-A, C.R.C. 14, effective Aug. 1, 1918, until amended by Supplement 14 thereto, effective Feb. 20, 1920. And the Board orders that order 29,435, dated Mar. 2, 1920, be rescinded.

Edmonton, Dunvegan & British Columbia Ry. and Central Canada Ry. Tariffs.

30,496. Jan. 3.—Re application of Edmonton, Dunvegan & British Columbia Ry. and Central Canada Ry., under sec. 331 of the Railway Act, 1919, for approval of reduced Standard Mileage Freight Tariffs of Maximum Mileage Tolls, effective Jan. 1, 1921. Whereas the said standard freight mileage tariffs have been filed on the reduced basis prescribed by the Board's judgment, dated Sept. 6, 1920, and general order 308, dated Sept. 9, 1920, the Board orders that the said tariffs be approved; the said tariffs, together with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Freight Rates on Shell Bars or Blanks.

30,501. Jan. 4.—Re application of F. L. Getzler, "Commissioner, Canadian Freight Bureau," Montreal, claiming to represent Dominion Foundries & Steel, Ltd., of Hamilton, Ont., for a reduction in the rate charged on shell bars or blanks, in carloads, to the same rate as charged on commercial steel bars, from Hamilton to Montreal, from Sept. 1, 1915, to Jan. 1, 1917. Upon hearing the application at Ottawa, Dec. 21, 1920, in presence of counsel for the Canadian Pacific and the Grand Trunk Railways, F. L. Getzler appearing in person, and what was alleged, the Board orders that the application be refused.

Commercial Travellers' Transportation Privilege Certificates.

30,513. Jan. 4.—Re application of the Canadian Passenger Association under sec. 348 of the Railway Act, 1919, for approval of certain reduced fare transportation privilege certificates, on file with the board. Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the following reduced fare transportation privilege certificates, viz., Commercial Travellers' Association of Canada, Dominion Commercial Travellers' Association, Maritime Commercial Travellers' Association, Northwest Commercial Travellers' Association, Ontario Commercial Travellers' Association, be approved.

Express Rates on Fish.

30,550. Jan. 12.—Re complaint of Canadian Fisheries Association against charges by Canadian Express Co. on net weight of fish (carloads), excluding allowance of 2½% for slime and ice ad hanging to the fish when weighed, which is by custom allowed to the fishermen. Upon hearing the complaint at Prince Rupert, Oct. 6, 1920, the complainants and the express companies being represented, and what was alleged, the Board orders that the complaint be dismissed.

Not Dressed For It.

English Train Guard: "Come on now, mum, you'll have to pay for the boy, he's not under three."

Child's Mother: "No, but if he didn't 'ad his best suit on, 'ed a bin under the seat."—Boston Transcript.

Canadian National Railways Earnings.

	1920	1919
January	7,727,411	6,179,411

\$70,710,871 \$70,710,871 \$0 \$0

Approximate earnings for Dec. 1920, \$10,000,000, against \$16,800,000 for Dec. 1919, and for two weeks ended Jan. 14, 1921, \$6,000,000, against \$16,800,000 for Dec. 1919, and for two weeks ended Jan. 14, 1920.

Seaplanes for Northern Alberta.

Dominion Government has reported to have given orders for seaplanes to be sent to Northern Alberta in the spring for the conveyance of mail and supplies to the Mackenzie River and around the coast, it is said, is capable of carrying 14 passengers each, in addition to supplies.

Lorne McCutcheon, Former Federal Agent, Canadian National Ry., Vancouver, B.C., writes: "I have, for many years, been an interested reader of this valuable publication, Canadian Railway and Marine World."

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—We officially advised that the contract between the Alberta Government, the Alberta & Great Waterways Ry. Co. and the Northern Construction Co., calls for the building, operation and maintenance of the second division of the railway, viz., from Lac la Biche, northerly, and the reconditioning of the line from Carbondale to Lac la Biche. On Dec. 29, 1920, we were advised that about 14 miles of ballasting had been done north of Lac la Biche, a permanent water supply installed at mile 137; two stalls added to the locomotive house at Lac la Biche, with an addition to the full width of the house for a machine shop; new tracks laid in Lac la Biche yard; new bunk-houses for section and two standard section houses built. In addition a considerable amount of ditching and draining of right of way had been done. Contracts are being let, and it is hoped to obtain 300,000 new ties during the winter, to be delivered at points contiguous to the line, and these will be used for replacements, both north and south of Lac la Biche, during this year.

The programme of work for this year contemplates the grading of about 8 miles to obtain a more favorable location into Fort McMurray, the original line down the Clearwater River valley having been found impossible to maintain, owing to the sliding nature of the material. Ballasting will be resumed in the spring, and it is hoped to have the entire line placed in a satisfactory condition for operation by autumn.

A construction train service is being maintained from Lac la Biche to the end of track, approximately mile 272, by the Northern Construction Co., a train being run north three times a week. H. A. Warner is Chief Engineer and Superintendent for the Alberta Government. (Jan., pp. 16.)

The Alma & Jonquieres Ry. Co. is asking the Quebec Legislature to extend the time within which it may build the line authorized by the statutes of 1913, chap. 85, as amended by the statutes of 1915, chap. 119. The latter statute authorized the company to build a railway to be operated by steam or electricity or both at the same time, from LeBarre, or St. Gedeon, on the Quebec & Lake St. John Ry., to Little Discharge, and the Island of Alma, so as to reach Lake St. John at some point on that island, and the Great Discharge at some other point on the same island, and from there to Jonquieres, on the Q. & L. St. J. Ry., about 30 miles, with branches. In 1918 the company was given an extension of time for construction. (Feb. 1918, pp. 57.)

The Bagotville & St. Lawrence Ry. Co. is asking the Quebec Legislature to extend for three years the time within which it may build the railway authorized by the statutes of 1912, chap. 89. The company had power to build a railway to be operated by steam, electricity or gasoline or other power, from Bagotville, Chicoutimi County, by the most practicable route, through Chicoutimi, Charlevoix, Montmorency and the Gaspé counties, to Quebec. (Mar. 1912, pp. 120.)

Canadian Niagara Bridge Co.—A U.S. press dispatch states that the American Niagara Railroad Corporation has been incorporated in New York State, with a capital of \$1,000,000, to build a railway from the junction of the Lehigh Valley and New York Central Railroads, at

Tonawanda, N.Y., to the Canadian Niagara Bridge Co.'s railway and bridge. The incorporators include A. H. Smith, President, New York Central Lines; A. H. Harris, I. A. Place, Vice Presidents, New York Central Lines; and J. N. Beckley, President, Toronto, Hamilton & Buffalo Ry. The whole project, on both sides of the Niagara River, includes about 22 miles of track and two bridges, which, it is believed, will solve the problem of traffic congestion at the international border near Buffalo. The project includes the construction of 11 miles of track by the New York Central from Tonawanda, N.Y., to Grand Island, the construction of 10 miles of track by the Canadian Pacific and Toronto, Hamilton & Buffalo Ry. from Grand Island to Welland on the Canadian side and the joint construction of two bridges which will cross Grand Island, one of them across the Tonawanda and one across the Chippewa channels. This work will allow the roads to divert much freight and passenger traffic around instead of through Buffalo. The Canadian Pacific and the T.H. & B.R. has organized the Canadian Niagara Bridge Co., of which E. W. Beatty, President, Canadian Pacific, is President. (Nov. 20, pp. 606.)

The Canadian Transit Co. is the title under which the projectors of a railway and general traffic bridge across the Detroit River, between Windsor, Ont., and Detroit, Mich., are seeking a Canadian corporation from the Dominion Parliament. Power is being asked to build a traffic bridge and railway across the Detroit River from near Windsor, Ont., to the opposite side in Michigan, and other works incidental thereto; such bridge, railway and works to be declared to be for the general advantage of Canada. Jameson Kingston and Seymour, St. Catharines, Ont., are solicitors for applicants. A press reports states that Canadian capital to the amount of \$5,000,000 has been voted towards the erection of the projected bridge.

Edmonton, Dunvegan & British Columbia Ry.—The Premier of Alberta is reported to have stated recently that the C.P.R. had expended over \$750,000 on improving the E., D. & B.C. Ry., since it took it over for operation in July 1920. The money was lent the C.P.R. out of \$1,000,000 voted by the Alberta Legislature for putting the road in good shape. The principal improvements have been made on the northern portions of the line. It is said that the \$250,000 remaining of the vote referred to will be expended on the line during this year.

A Victoria, B.C., press report states that negotiations have taken place between the Alberta and the British Columbia Government respecting the extension of the E., D. & B.C.R. to the B.C. boundary, to which point it is proposed to extend the Pacific Great Eastern Ry. from Prince George. (Jan., pp. 16.)

English River Pulpwood & Timber Limit Ry.—The Ontario Government has accepted the offer of E. W. Backus, of Fort Frances, Ont., and International Falls, Minn., for the timber rights on the English River pulpwood lands. The already been published in Canadian Rail terms on which the limit was offered have way and Marine World. The product of the limit is to be manufactured at Kenora, Ont., and it will be necessary to build a railway southerly from some point on the National Transcontinental

Ry. to or near Kenora. (Dec. 1920, pp. 645.)

Esquimalt & Nanaimo Ry.—We are officially advised that construction is being proceeded with on the branch line from near Alberni to Great Central Lake, Vancouver Island, 11 miles. The Foundation Co. of B.C., Vancouver, has the contract for the grading and bridge work. (Jan., pp. 16.)

Flinlon Mining District.—The route under survey for a railway into the Flinlon Mining District in Manitoba starts off from the Hudson Bay Ry., about 7 miles northerly from Pas, passing east of Reeder Lake, and west of Clearwater Lake, east of Goose Lake, there entering the mineral belt, west of Cranberry Lake; then turns westerly, crossing Pine Root River, and on to the Flinlon property, near the Manitoba-Saskatchewan boundary. This route varies considerably from that on which there was some survey work done in 1919. The route then proposed started from the Hudson Bay Ry. near Cheman, about 7 miles from Pas, to a crossing of Goose Lake at the southwest end of Goose Lake, and then northerly near the Manitoba-Saskatchewan boundary to the Mandy Mine, and then on to the Flinlon property.

We are officially advised that the present preliminary surveys are being made by the Manitoba Government through the Canadian National Rys. engineering staff. A. J. Sill is in charge of the survey party, which started Dec. 13 from mile 0 at Reeder Lake, mile 7 from Pas on the H.B. Ry., and is working northerly to Cranberry Portage, approximately mile 50, at which point the second party under J. E. Silcox started Dec. 18 to run a line to the Flinlon property, approximately mile 77. The survey work, which is under general charge of E. M. N. Hill, Reconnaissance Engineer, is expected to be completed in March.

The next stage will be the obtaining of a definite statement from the Flinlon Syndicate with reference to the purchase of the property and a guarantee to the Manitoba Government. It is expected that the question of the construction of the line, with plans and estimate of cost, etc., will be laid before the Legislature in February or March. (Jan., pp. 16.)

Grand Trunk Ry.—We are officially advised that while consideration has been given to a proposal for the erection of car shops at Sarnia, Ont., it will not be built during this year at least.

The Secretary of the London City Council's crossing committee is reported to have said recently that there was every indication that the city and the G.T.R. officials would go to the Board of Railway Commissioners in full agreement as to the proposed start towards eliminating level crossings in London. The action of the work under discussion is the construction of a subway at Rectory St., and it is said that a definite announcement will be made shortly as to the date of starting construction. (Jan., pp. 11.)

Hudson Bay Ry.—Replying to a deputation from Pas, Manitoba, the territory to be served by the H.B. Ry., which waited on him in Winnipeg, Dec. 30, the Dominion Premier, we are officially advised, stated that the Government intends to complete the railway to Hudson Bay, but that he could not give any definite assurance as to how rapidly progress will be made, as much will depend

on financial conditions. (Nov., 1920, pg. 606.)

Hudson's Bay Co.—In connection with the increasing attention being given to the development of the Peace River and Mackenzie River districts, a recent press report credited the H.B. Co. with having decided to start construction in the spring upon a railway about 24 miles long, to connect the Mackenzie River with the Peace River. This report is, we understand, somewhat misleading, as the H. B. Co. has not decided to undertake the project referred to. Several times during the past eight or ten years suggestions have been made that a narrow gauge railway might be built on the portage of 16 miles between Fort Smith and Smith Landing, on the Athabasca River, but nothing has been done to carry it out. See also Slave River Ry. Co.

Lacombe & Blindman Valley Ry.—No further construction is contemplated on this line by the Alberta Government, which is reported to be negotiating with the C.P.R. to take the line over.

Pacific Great Eastern Ry.—We are officially advised that upon completion of the Deep Creek Viaduct, track laying was continued for 34.50 miles, to Australian Creek, B.C. Work is proceeding on the 98 miles of grading, upon which a good deal of work was done some years ago by the original company, between Australian Creek and Prince George. The work is being done by the Northern Construction Co., Vancouver, for the British Columbia Government, under the direction of A. F. Proctor, Chief Engineer, B.C. Railway Department. (Jan., pg. 16.)

Quebec & Chibougamau Ry.—A press report states that a contract has been let for clearing the right of way from Chicoutimi to St. Felicien, Que., at an estimated cost of \$100,000. (Jan., pg. 16.)

Slave River Ry. Co.—The Dominion Parliament will be asked at its ensuing session to incorporate a company with this title to build a railway from Fort Smith on Slave Lake, along the west bank of the Slave River southeasterly to Smith Landing or Fort Fitzgerald. The applicants desire power to build telegraph and telephone lines; to develop and distribute electric power; to build a pipe line for the conveyance of oil; to provide oil storage warehouses and to operate ships. Smellie & Lewis, Ottawa, are solicitors for applicants. See also Hudson's Bay Co.

The Quebec & Orleans Island Ry. Co. is asking the Quebec Legislature to extend the time within which it may build the railway authorized by the statutes of 1907, chap. 88, from Quebec north of the Turnpike Trust Road in Beauport parish, to Montmorency Island, thence to a point of crossing to the Isle of Orleans, not further east than Chateau Richer Church, then crossing to the Isle of Orleans, and passing either around the same or otherwise as may be expedient as far as St. Francois Parish. The company was given power to operate its line by electricity, steam or any other motive power, and was granted extensions of time for construction in 1912 and 1914.

A press report of Jan. 6 states that the Quebec Government is being asked to build a bridge from Quebec City to the Isle of Orleans. (Dec., 1913, pg. 593.)

Sydney & Louisbourg Ry.—The Dominion Minister of Public Works is being asked to approve of the site of, and plans for, a railway bridge over Mira River, N.S., and for repairs to the rest pier and ice protection works of the swing span of the bridge, and to authorize the Sydney & Louisbourg Ry. Co. to

construct the same. (Oct. 1920, pg. 551.)

Timiskaming & Northern Ontario Ry. It is reported that work is to be started at once at Cochrane, Ont., on clearing of about 25 miles of right of way for an extension of the line from that point towards James Bay. The fact that some work in this direction is contemplated was announced by Premier Drury Dec. 15. Subsequently the President of the Timiskaming & Northern Ontario Associated Boards of Trade wrote the Premier to have this work deferred, but on Jan. 12 the Cochrane Board of Trade protested against this, and asked that the work be put in hand as soon as possible. In this connection Dr. Stevenson, M.L.A., is reported to have said in London, Ont., that the extension of the line projected will traverse 300 miles of territory rich in tin and mineral resources. This observation refers to the whole extension from Cochrane to James Bay,

power to connect which has been granted by the Legislature.

Petitions are being circulated in Northern Ontario asking the Government to build a standard gauge railway from Swastika, on the T. & N.O.R. to Westview on the Canadian National Ry., about 80 miles.

The Liskeard Board of Trade has asked the Ontario Government to build a locomotive house and machine shop there, and to make it a divisional point, instead of the present divisional point at Englehart. The Chairman of the T. & N.O.R. Commission, G. W. Lee, is reported to have intimated that this will not be done. (Jan., pg. 16.)

Toronto, Hamilton & Buffalo Ry.—A press report states that the company's bridge over King St. West, Hamilton, Ont., which had been closed for some months, has been reopened for traffic. Jan. 1. (Jan., pg. 16.)

Steam Railway Statistics for Year Ended June 30, 1919.

The annual report on Railway Statistics for the year ended June 30, 1919, the first to be compiled and published by the Trade and Commerce Department's Dominion Bureau of Statistics, shows that the railways carried 8.5% less freight than in 1918, or 116,699,572 tons, against 127,543,687, and 2.7 fewer passengers, or 43,754,194, against 44,948,638, but due to the increased freight and passenger rates which were raised in March and again in August 1918, there was an increase in operating earnings of \$52,756,751, or \$382,976,901, against \$330,220,150. This increase was more than offset by an increase in operating expenses of \$67,911,073, or \$341,866,599, against \$273,955,436, making the net operating revenue \$41,110,392, against \$56,264,714, a decrease of \$15,154,322. This net operating revenue was increased by miscellaneous earnings to \$61,582,832. Taxes amounted to \$5,316,614, and rents, lease of road, interest on funded debt, etc., amounted to \$57,530,798, leaving a net corporate loss of \$1,264,680, against a net income of \$18,328,229 in 1918.

The operating ratio increased from 82.96% in 1918 to 89.27% in 1919. Maintenance of way and structures was \$69,034,242, against \$51,614,857, and maintenance of equipment was \$78,397,270, against \$57,304,234. Transportation expenses were \$170,382,034, against \$145,107,396.

Wages included in the above were, for maintenance of road and equipment and construction, \$93,308,553, against \$64,432,548; trainmen, yard, \$11,353,454, against \$8,665,250; and trainmen, road, \$37,556,658, against \$31,052,421. Total wages in all departments were \$208,939,995, against \$152,274,937. There was a decrease in fuel consumption of 9.45% for steam costing \$52,214,897, against 10,173,341 tons costing \$52,630,430 in 1918. The ties used for maintenance were 11,856,373, costing \$9,369,919, against 7,785,831, costing \$1,701,312.

Passengers carried one mile were 3,074,664,369, against 3,190,025,682. Tons handled one mile were 27,224,397,202, against 31,929,072,279. Average receipts per passenger per mile were 2.55¢, against 2.12¢, and the average receipts per ton mile were \$0.962, against \$0.736.

The average load increased from 23.09 tons a car in 1918 to 23.46, but the average haul decreased from 254 miles to 238.

The capital was \$2,069,209,510, being

made up of stocks \$878,101,113, debenture stock (C.P.R. \$216,284,882, and funded debt \$914,823,515, an increase of \$500,500 in stocks and \$8,828,516 in funded debt.

The miles of single track were practically the same, 38,806, against 38,879, and the total miles of all track was 50,616, against 50,640. Freight cars were, loaded 1,181,758,126, empty 497,882,365; passenger train car miles 297,275,014. Train miles were, freight 55,034,882, passenger 41,048,124, mixed 7,652,411, special 97,418, net revenue 4,159,658. Total locomotive miles 136,926,167. The number of locomotives increased from 5,756 to 5,870, passenger cars from 6,376 to 6,510, and freight cars from 209,026 to 217,258.

From operation the results were as follows:—Canadian Pacific, gross earnings of \$162,846,470; expenses, \$190,416,994; net earnings, \$32,429,475.

Grand Trunk, gross earnings, \$66,424,147; expenses, \$37,005,328; net earnings, \$29,418,819.

Canadian Northern, gross earnings, \$48,238,461; expenses, \$49,716,044; deficit, \$1,477,582.

Intercolonial, gross earnings \$26,977,807; expenses, \$31,489,685; deficit, \$4,511,878.

All other Government operated lines, gross earnings, \$11,706,790; expenses, \$13,809,870; deficit, \$2,103,080.

Grand Trunk Pacific and Branch Line, gross earnings, \$9,625,703; expenses, \$14,999,288; deficit, \$5,373,515.

The total deductions from gross corporate income other than taxes for these roads were:

Canadian Pacific, interest on funded debt, \$597,125; total, \$2,888,944; net corporate income, \$5,677,759.

Grand Trunk, interest on funded debt, \$7,621,000; total deductions, \$11,788,470; corporate loss, \$1,100,000.

Canadian Northern, interest on funded debt, \$11,441,418; total deductions, \$19,466,227; corporate loss, \$30,123,580.

Intercolonial, interest on funded debt, total deductions, \$67,810; corporate loss, \$2,292,102.

All other Government operated lines, no interest; total deductions, \$42,238; corporate loss, \$4,610,118.

Grand Trunk Pacific and Branch Line, interest on funded debt, \$6,366,084; total deductions, \$10,959,427; corporate loss, \$11,079,616.

For all roads there was a total net corporate income of \$45,019,298 and a total corporate loss of \$10,809,574.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—
T. Britt, General Fuel Agent, C.P.R., Montreal, born there, Feb. 3, 1871.

J. S. Byrom, General Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Jersey City, N.J., Feb. 10, 1872.

H. R. Charlton, General Advertising Agent, G.T.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Chisholm, Inspector of Agencies, Canadian National Rys. and Grand Trunk Pacific Ry., Winnipeg, born at Georgetown, N.S., Feb. 25, 1871.

R. Colclough, Superintendent, Canadian National Rys., Quebec, Que., born at Bic, Que., Feb. 24, 1871.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

A. G. Dey, Division Engineer, Bruce Division, Ontario District, C.P.R., Toronto, born at Aberdeen, Scotland, Feb. 4, 1883.

E. A. Evans, consulting engineer, ex-General Manager and Chief Engineer, Quebec Ry., Light & Power Co., Quebec, born at Kensington, Eng., Feb. 26, 1855.

Goodwin Ford, General Superintendent Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

U. E. Gillen, General Manager, Toronto Terminal Ry. Co., Toronto, born at Brooklyn, Mo., Feb. 27, 1867.

T. Ginnely, Assistant Freight Claims Agent, Canadian National Rys., Western Lines, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., born in Ireland, Feb. 11, 1880.

L. L. Grabbil, General Baggage Agent, G.T.R., Toronto, born at Walkerton, Ont., Feb. 6, 1878.

S. M. Greene, City Ticket Agent, Canadian National Rys. and Grand Trunk Pacific Ry., Regina, Sask., born at Derby, Eng., Feb. 15, 1887.

A. J. Hills, Assistant to President, Canadian National Rys., Toronto, born there, Feb. 15, 1879.

T. C. Hudson, General Master Mechanic, Eastern Lines, Canadian National Rys., Montreal, born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Manager of Telegraphs, G.T.R., Montreal, born at London, Eng., Feb. 15, 1889.

C. Gardner Johnson, Lloyd's Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

A. H. Jones, Assistant Engineer, Canadian National Rys., Moncton, N.B., born at Liverpool, Eng., Feb. 16, 1884.

John McCraw, ex-General Agent, Central Vermont Ry., New London, Conn., born at Craigville, Ont., Feb. 6, 1868.

J. K. McNeillie, Superintendent, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., born at Toronto, Feb. 23, 1874.

J. D. McNutt, Assistant Superintendent, Halifax Division, Maritime District, Eastern Lines, Canadian National Rys., Truro, N.S., born at Stewiacke, N.S., Feb. 8, 1873.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, Vancouver Division, British Columbia District, C.P.R., Vancouver, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, ex-Engineer of Water Service, C.P.R., now of Milton Reserve

Co., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, Vice President and General Manager, Algoma Central & Hudson Bay Ry., and President, Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, General Agent, Freight Department, Canadian National-Grand Trunk Rys., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

J. E. Proctor, District Passenger Agent, C.P.R., Calgary, Alta., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

W. J. Robbler, ex-General Master Car Builder, C.P.R., Montreal, born at Savannah, Ga., Feb. 15, 1869.

A. E. Rosevear, General Freight Agent, Canadian National Rys., Western Lines, and Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., and Great Northern Ry. of Canada, Quebec, born there, Feb. 13, 1847.

J. J. Scully, General Superintendent, Algoma District, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

J. M. Sparling, Assistant to Vice President, Traffic, G.T.R., Montreal, born at Toronto, Feb. 16, 1882.

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, born in London, Eng., Feb. 21, 1865.

A. P. Villain, City Ticket Agent, C.P.R., San Francisco, Cal., born there, Feb. 6, 1891.

F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

A. Williams, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, born at Mono Road, Ont., Feb. 22, 1872.

Bridges over Burlington Canal, Lake Ontario.

The highway along Burlington Beach, which separates Lake Ontario from Burlington Bay, on the shores of the latter of which Hamilton is situated, is carried over Burlington Canal, or Channel, by a swing bridge, which is also used by the Hamilton Radial Ry., running between Hamilton and Oakville. Owing to the increase of traffic, the Public Works Department decided, a little while ago, to replace the present bridge by a heavier one of the trunnion bascule type, and a design was prepared by Strauss Bascul Bridge Co., Chicago, Ill., which company was appointed consulting engineer, for a 2-span bridge, one span over the existing channel, and the other to be over a 300 ft. channel to be provided in the future. The first work being done includes the removal of the old bridge and the construction of the substructure for the new one. The contract for this work was given Canadian Engineering & Contracting Co., Hamilton, and tenders for the erection of the superstructure were received to Jan. 11.

The truss bridge which is to be replaced was built in 1896, and was equipped in 1897 with automatic gates to regu-

late traffic. Its first cost was \$41,690, and maintenance expenses have been high. It was a swing bridge, operated by electric power, and counterbalanced on both sides of the pivotal point to compensate for unequal length and weight. It was very close to the G.T.R. bridge across the channel, and on the Burlington Bay side of it. The new bridge will occupy almost the same site as the one to be replaced, the difference being that the center line of the new bridge will be 10 ft. east (nearer Lake Ontario) than the center of the preceding one.

For the present, construction will be confined to a trunnion bascule type bridge to span the present channel, which is 130 ft. 7 in. wide. Provision is also made in the design for a second leaf, to span a proposed new 300 ft. channel alongside the present one. In the event of the additional channel being provided and the second portion of the bridge being built to span it, a new central rest pier, in addition to the main and counterbalance piers of the second portion, would be necessary.

From the center of the main trunnion pier, of the bridge now to be built, to the center of the rest pier, which will support the free end, is 1,604 ft., and from the center of the main trunnion pier to the center of the counterweight trunnion pier is 40 ft. The old bridge had a clearance of but 4 ft. above the channel, but the new bridge will have a clearance of 10 ft., which will obviate the necessity of opening it so frequently for the passage of small craft. The approach to the bridge on a gradient of 3%, and the floor level will be 8 ft. higher than that previously existing.

The new bridge will, like the one to be replaced, carry the single track line of the Hamilton Radial Ry., running from Hamilton to Oakville. In addition, there will be a roadway for vehicular traffic, laid with concrete blocks, crescent-shaped, on each side of the bridge, outside the trusses, which are 25½ ft. center to center, will be a 6 ft. sidewalk, of 2 x 4 in. planking, not crosstied, protected by outside railing of pipe construction.

Work was begun on the new bridge early in Dec. 1920, the use of the old bridge being discontinued on Dec. 6. The old bridge has been taken down, and the piers have been removed to the extent necessary to permit construction of the new ones, excavation for which is in progress. This work, as stated above, is being done by the Canadian Engineering & Contracting Co., of Hamilton, which also removed the old bridge, and is to be finished by the first of July. The new superstructure contract has not yet been awarded. The Hamilton Radial Railway cars now run to the bridge from both directions, the passengers walking across the adjoining G.T.R. bridge, on a sidewalk specially built for that purpose.

The Public Works Department is represented in this work by J. M. Wilson, District Engineer, and W. C. Brough, Senior Assistant, Toronto.

Hon. T. A. Crerar, M.P., leader of the farmers' party, in speaking at Edmonton, Alta., Jan. 19, is reported to have expressed himself in favor of the revaluation of railways owned by the Dominion Government to put them on a proper basis and the use of government power, as far as legitimate, to provide business for the nationally owned system. He suggested that the Government should settle incoming immigrants as far as possible along these lines, and he reiterated his advocacy of public ownership of railways.

Exchange on Freight Charges on Traffic Between Canada and the United States.

The Chief Railway Commissioner, Hon. F. B. Carvell, gave the following judgment Jan. 13:—About a year ago, complaints were made to this Board Board, practically altogether by exporters to the United States, complaining of the fact that they had been prevented by Canadian railway companies from prepaying the freight through to the point of destination in the U.S. in Canadian money. A hearing was held at Ottawa on Mar. 16, 1920, at which practically all exporters were represented, and there it was stated, and with two exceptions admitted, that, before the rate of exchange between the two countries became abnormal, practically all the commodities exported had gone forward collect. The Board held in its judgment of Mar. 27, 1920, that, under the Railway Act, a Canadian railway company could not be compelled to accept prepayment of freight.

Shortly thereafter, U.S. railways commenced demanding the prepayment of international freight to Canada, the result being that, with very few exceptions, the freight on all international traffic between the two countries was paid in the U.S. in U.S. funds, and thereupon Canadian importers commenced pressing for relief, the same as the exporter had previously done. At first the exporters demanded the right to prepay the whole rate in Canadian funds, which of course would give them an advantage in that they would be able to pay the U.S. end of the haul in Canadian funds, which were then a new, low rate than the U.S. dollar. Shortly thereafter, however, the demand from all classes of business men was that the Canadian end of the haul should be paid in Canadian funds, and, to the ordinary business man, this seems absolutely fair and reasonable. However, when considered as a railway proposition, it was vigorously opposed by the Railway Association of Canada, and all the railway companies, on the ground that shippers both ways would naturally forward their goods by the route the longest possible portion of which would be in Canada. In other words, the U.S. roads would be short-hauled in practically every international transaction in Canada, excepting possibly exports from the greater portion of the Maritime Provinces, and, while this would be good business for the standpoint of the Canadian railways, yet it was argued, and I am convinced correctly argued, that, in a very short time, it would result in complete disruption of the whole international rate structure which has been laboriously built up during the past 35 or 40 years. On Dec. 21, 1920, the railway companies were told that a solution of some kind must be found for the difficulty, and one which would in the end practically amount to paying the Canadian end of the haul in Canadian funds. On Jan. 6, 1921, at a conference with representative of Canadian railway companies, a proposal was made, which was accepted in principle, but further time was taken in which to perfect the details, and, finally, on Jan. 11, a written statement was furnished this Board by the Railway Association of Canada, which was the result of extended negotiations between that body and this Board, reading as follows:—

"Exchange surcharge on international shipments, other than coal and coke, to be added to the total through charges, including advanced charges payable to United States carriers, when payable and

collected in Canada.

"1. A surcharge of 60% of the rate of exchange arrived at in accordance with the provisions of this tariff will be added to the total through charges, including advance charges payable to U.S. carriers, on all shipments between Canada and the U.S., in both directions, when such charges are payable and collected in Canada. When all charges are paid at U.S. points in U.S. funds this surcharge will not be added.

"2. On shipments from Canada the surcharge must be collected at the rate governing on the date of the bill of lading; and on shipments to Canada at the rate governing on the date of advice note of arrival at the Canadian destination. Such surcharge will accrue entirely to the Canadian carrier.

"3. Telegraphic advice will be sent to railway agents in Canada on the last day of each month, specifying the surcharge to be collected from the 1st to the 14th (inclusive) of the following month; and on the 14th day of each month specifying the surcharge to be collected from the 15th to the last day (inclusive) of such month. Agents must file such telegraphic advice with this tariff. The surcharge must be shown as a separate item on all bills of lading and waybills for outbound shipments and on all freight expense bills.

"Exception.—This tariff does not apply to export and import traffic from or to points of origin or destination in the U.S. via Canadian ports, on which all charges must be collected in United States currency or its equivalent.

"Note.—In arriving at the surcharge, the rate of exchange quoted from New York funds by the Bank of Montreal at noon in Montreal on the last day of each month will govern from the 1st to the 14th (inclusive) of the following month; similarly, such quotation at noon on the 14th will govern from the 15th to the last day (inclusive) of such month. Should the governing date fall on a Sunday, or Canadian or U.S. legal holiday, the noon quotation of the preceding day will govern.

"In determining the surcharge, fractions less than one-half will be disregarded, and fractions of one-half or over will be counted as 1%.

"This tariff is effective Jan. 22, 1921. The rate of exchange quoted from New York funds by the Bank of Montreal at noon in Montreal on Jan. 21 will govern from Jan. 22 to 31, inclusive."

This proposal was supported and agreed to by representatives of the following railways:—Canadian National, Grand Trunk, Canadian Pacific, Michigan Central, New York Central, Rutland, Toronto, Hamilton & Buffalo, Essex Terminal, Pere Marquette, Delaware & Hudson, and the Railway Association of Canada. It was also accepted by the Quebec, Montreal & Southern representative, who, however, protested that the arrangement would be extremely unfair to that road. We also held conferences with representatives of the important boards of trade and trade organizations generally, all of whom considered the scheme the best that had been offered, although claiming that certain communities would be more favorably affected than others.

After considerable discussion, the proposal was agreed to by the Board. The principal discussion between the Board and the railway companies was as to what would

be a fair surcharge to be added to the rate which would place Canadian railways in a position to receive payment of the whole charge in Canadian funds and pay the U.S. share of their U.S. connections in U.S. funds. This arrangement will also apply to the U.S. roads, which, while not compelled to send their freight forward collect, we are assured will do so, because they will hold Canadian railways responsible to repay them their share in U.S. funds, and arrangements are being made by Canadian roads to have these good forwarded collect, thus giving both the Canadian importer and exporter the right to pay the whole freight rate on international business in Canadian funds.

It is quite evident that the Canadian road which has a short Canadian haul and a long U.S. one is at a disadvantage, whereas the road which possesses a long Canadian haul as compared with a short U.S. one has a distinct advantage in this arrangement, but it was frankly admitted, both by the railway companies and the Board, that whatever was done must be on the broad principle of averages, and therefore, some roads, as well as communities, must be benefited to a greater extent than others.

Without going into details, which I think are unnecessary, we found, after a very careful consideration of the total international traffic carried by Canadian railways, based upon their respective divisions with U.S. connections, that the traffic on the Canadian Pacific would be more nearly divided equally between Canadian and U.S. hauls respectively than any other of the large systems, and its figures showed the U.S. end to be somewhat larger than the Canadian. The Canadian National figures showed a slightly increased Canadian haul on an average over the Canadian Pacific, but the Grand Trunk showed the largest percentage of the U.S. haul greater than the Canadian Pacific. Putting together the business of the Canadian National and Trunk systems, they average practically the same as the Canadian Pacific business. When we come, however, to roads such as the Quebec, Montreal & Southern, and the Toronto, Hamilton & Buffalo, we find that from two-thirds to three-quarters of their international business is on the U.S. end, the Toronto, Hamilton & Buffalo showing about 72%, and, of course, as they will only receive a surcharge of 60%, they will lose to quite an extent on all international traffic. However, as before stated, I have concluded that the principle of averages is the only feasible method under present conditions, by which the difficult problem can be solved at present, and, therefore, think that a sacrifice of 60% of the total rate of exchange to the U.S. end, which will on an average place the Canadian road in a position to pay the U.S. connections in U.S. funds, and yet leave Canadian funds for their own portion of the haul.

This arrangement does not apply to the rate on coke and coal, the reason being that these commodities move practically altogether on local rates, breaking at the border, and, as the Canadian importers have since May 1920 been allowed to pay the Canadian end of the business in Canadian funds, no change is necessary. Neither does it apply to export and import traffic from or to points of origin or destination in the U.S. via Canadian ports, which still must be paid in U.S. currency, because, were this allowed to

be paid in Canadian funds, it would practically mean that goods originating in the U.S., exported through Canadian ports, would pay a less freight rate than if exported from American ports. This would be discriminatory as against U.S. railways and would break up parity of export rates between Canadian and U.S. ports now in existence. This, in my judgment, would be a positive disadvantage to the business of the country as a whole.

It was contended by some interests at our conferences, that the rate of exchange should be fixed weekly rather than fortnightly, but there again it is a question of average. The railways may have a slight advantage under one set of circumstances, and the reverse may be the case under others; but, if it is found in working out the scheme that injustice results on account of the fortnightly arrangements, the Board reserves the right to change it any time it may think proper. While these arrangements are not perfect, yet, in my opinion, it is the best solution of the problem so far advanced by any person, and I feel sure it will grant a great measure of relief to Canadian business interests. The companies will be required to make monthly returns to this Board, showing the amount of surcharge collected, and, if it is found that any change is necessary, either as to dates of averaging the same, or the percentage upon which the whole scheme is based, the Board will make whatever corrections may to it seem necessary. An order should, therefore, issue in the terms of the above proposal, the railway companies to have the privilege of filing the same as a tariff, effective on Jan. 22 instant.

This judgment was concurred in by Assistant Chief Commissioner McLean, Deputy Chief Commissioner Nantel and Commissioners Boyce and Rutherford.

On Jan. 14 the Board passed general order 326 ordering railway companies to file tariffs effective Jan. 22, to put the foregoing judgment in effect and to make monthly returns showing the amount of surcharges collected.

The Canadian Freight Association, on Jan. 15, issued a tariff, no. 16, special local and joint freight tariff of regulations governing exchange surcharge on international shipments of freight traffic, other than coal and coke, effective Jan. 22.

Minimum Requirements for Establishment of Agency Stations.

The Railway Association of Canada made the following application to the Board of Railway Commissioners:—

The Railway Association of Canada, acting on behalf of the several railway companies subject to the Board's jurisdiction, and operating in Western Canada, hereby applies to the Board, under sec. 51 of the Railway Act, 1919, for an order amending general order 54, dated Jan. 6, 1919, issued on the complaint of the Winnipeg Jobbers & Shippers Association, in the matter of facilities at flag stations, by striking out the figures \$15,000 and \$2,000 where they appear in paragraph 4 of the said order, and substituting therefor, respectively, the figures \$25,000 and \$4,000.

In support of such application, the applicant respectfully states: That during the period since the issue of said order, the cost of maintaining an agency station has more than doubled, whereas the basis of rates has been subject to various increases of which the Board is aware.

That by reason of these facts, not only do the minima fixed in the said order furnish inadequate revenue to justify the establishment of an agency, in view of the present increased cost, but they represent a smaller volume of traffic than at the date of issue of the above mentioned order, and, therefore, necessitate the appointment of agents in many cases in which under the original conditions such action would not be called for. That in view of the altered conditions above indicated and accepting the principles upon which the original order was based, the minimum amount which should be fixed for the appointment of a permanent agent should be increased to at least \$25,000, of which \$4,000 should represent inward traffic.

Pilots Must be Used on N.Y.C.R. Locomotives in Canada.

Assistant Chief Commissioner S. J. McLean, of the Board of Railway Commissioners, gave the following judgment Dec. 20, 1920, which was concurred in by Deputy Chief Commissioner Nantel and Commissioners Boyce and Rutherford:—Application is made by the New York Central Rd. for a modification in the Board's regulations, as set out in general order 102, said modification being asked for so as to permit its freight locomotives running in Canada to use a step construction instead of having a pilot. In effect, it is asked that a type of construction which is used in switching service in terminals, may be allowed to be used in road service. It is alleged that the step has every advantage that a pilot has, and it is further alleged that the use of steps in lieu of pilots on freight locomotives is allowed by the Interstate Commerce Commission's rules. This is apparently developed from the fact that, from the silence of said regulations, as specific words of authorization were not referred to at the hearing. It is set out by the applicant that the "step" equipment is not objected to by any of the public utilities commissions of the states through which the railway operates. It is represented that there would be difficulties in operation if a pilot is required as to the portion of the journey in Canada. It is contended, in this connection, that in respect of the short mileage of the St. Lawrence & Adirondack Ry., in connection with the operations of the railway into Montreal, it would be impossible to have one portion of the rule in effect in Canada and another portion in the United States. It is further stated that there are no facilities on the Canadian portion of the journey which will permit of the pilot being put on, and it is also set out that no such facilities are available at or adjacent to the International Boundary. It is admitted that a different situation exists in regard to the New York & Ottawa Ry., which has shops in Ottawa.

Apparently what is involved herein has not been the subject of any uniform rule in the United States. While the Board is not informed what railways, if any, in the U.S. are in agreement with the position of the applicant, it does appear from the Board's files that various outstanding railway systems in the country do use the pilot in road service. Various U.S. railways operate in Canada under Canadian charters. In the interest of safety, various regulations are provided by the Interstate Commerce Commission, in respect of safety appliances. Where the mileage in Canada is short,

and the movement concerned merely incidental to a longer movement in the U.S., the Board has, in a spirit of comity, always been willing to approach the matter from the standpoint of more liberalism, but to consider whether the regulations aforesaid are in substantial harmony with the Board's regulations on the same subject, and thereafter to permit operation under the U.S. regulations where the particular facts justify so doing. But, to my mind, the situation involved in the present application is entirely different from that set out in the preceding paragraph. While a question of safety is involved, the Board is asked to allow a departure from its regulations, and to allow the substitution therefor of a practice depending entirely on tolerance. Having in view Canadian conditions, and the careful consideration given before the regulations concerned were adopted, I am of the opinion that the application should be refused.

Dominion Government Urged to Authorize Rolling Stock Orders.

The following telegram was sent by the Chairman and Secretary of the Canadian Manufacturers' Association, Montreal branch, to the Minister of Railway at Ottawa, Dec. 30:—"In view of unemployment situation at present acute, particularly in large industrial centers of Canada, the Montreal Branch of the Canadian Manufacturers' Association would strongly urge your Government to place orders immediately for large quantities of rolling stock, which is understood to be required by the Canadian National Railways. We would point out that such action by your Government would do much to relieve the stress and strain of unemployment, and we believe that your Government will view with favor the suggestion that any work that is possible to contract for immediately instead of awaiting the spring, should be carried out."

John Murphy's Salary.—The Associated Federal Employees at Ottawa recently made a number of charges against the Civil Service Commission's Board of Hearing, one of the cases mentioned being stated as follows:—"John Murphy, brother of Hon. Charles Murphy, M.P., is an electrical engineer in the Railway and Canals Department. His appeal was heard by the Board, and his salary was raised to \$5,000. This was approved by the Civil Service Commission, and was about to go to the Privy Council when one member of the Board said that the Council would never pass the item, so his salary was reduced to \$4,000. Although this, although the evidence had been heard, and both the Board and the Commission had decided that he was worth \$5,000." The Board of Hearing, in reply to this charge, said:—"The Board feels that the insinuation implied in this statement, that the Board was unfavorably influenced, is unworthy of comment."

Fighting Weeds.—The C.P.R., by arrangement with the Manitoba, Saskatchewan and Alberta Governments, started on Jan. 26 to run a special train through the southern areas of each province to give instruction to farmers as to combating weeds and other plagues that have become specially prominent.

The Canadian National Rys. Association's clubhouse at 105 and 109 Cottingham St., Toronto, were formally opened recently with a series of social entertainments.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 326, Jan. 14.—Permitting railways to file tariffs effective Jan. 22, showing excess charges on interline traffic, shipped over other than coal and coke, to be added to total through charges, including advanced charges payable U.S. carriers, and the payment and collection in Canada; indicating manner in which such surcharge will be applied; and directing railways, until otherwise ordered, to pay and collect in Canada the Board showing amount of surcharges collected. The judgment on which this order is based is given fully elsewhere in this issue.

General order 325, Dec. 20, 1920.—Re dimensions of cattle passes. This order is given in full on page 63 of this issue.

30.420. Dec. 9.—Ordering C.P.R. to build by July 31, 1921, siding and leading platform at south end of bridge at Bear Creek, Sask. 30.421. Dec. 9.—Approving location of Inter-provincial & James Bay Ry. from mile 48.2, main line to mile 7.8 Ville Marie Branch Line, Du-luth, Minn., U.S.A.

30.422. Dec. 9.—Approving new location of G.T.R. station at Hammond, Ont. 30.423. Dec. 9.—Approving Canadian National Ry. to build spur for Imperial Oil Ltd., Fort Saskatchewan, Alta.

30.424. Dec. 9.—Declaring that for present, crossing of Michigan Central Rd. at 2nd station west of Buxton station, Ont., is protected to the satisfaction of the Board.

30.425. Dec. 16.—Declaring that for present, crossing of G.T.R. at first crossing north of Alton, near Falkenburg, Ont., is protected to Board's satisfaction.

30.426. Dec. 9.—Approving change for siding extension to C.R. interlocking plant at Leno-ville, mile 65.97 Mezanite Subdivision, Que.

30.427. Dec. 9.—Approving revised location of Main North-Western Railway, near Medicine Hat Branch, mile 116.39 to 127.63.

30.428. Dec. 9.—Approving location of Canadian National Ry. station at Water, Alta. 30.429. Dec. 9.—Approving location of G.T.R. to rebuild overhead bridge at Portage Road, near Stam-ford, Ont.

30.430. Dec. 8.—Authorizing Vancouver Harbor Commissioners to build spur connecting Great West Ry. Board Inlet, and Dominion Government wharf, Vancouver, B.C. 30.431. Dec. 3.—Authorizing Canadian National Ry. to cross shipway at mile 74.4, C.P.R. Branch, 11, west 2nd meridian, at Kelvington, Sask.

30.432. Dec. 10.—Authorizing Canadian Northern Ry. to open for traffic its Oliver-St. Paul de Metis Branch from Spedden to St. Paul de Metis, Alta., mile 98.9 to 127.63.

30.433. to 30.435. Approving Bell Telephone Co. agreements with O'Connell-Bathurst Telephone Co., Ontario County, Ont.; Whapmaitie Power Co., Sudbury District, Ont. and The Air Board, operating in Simcoe County, Ont.

30.436. Dec. 10.—Authorizing corporation of Le Perrot, Que., to use sidewalk on C.P.R. bridge between Le Perrot and Vaudreuil, Que.

30.437. Dec. 11.—Authorizing C.P.R. and G.T.R. to operate over crossing at Leno-ville, Que., mile 65.97 Mezanite Subdivision.

30.438. Dec. 14.—Approving Cumberland Coal & Ry. Co.'s standard passenger tariff C.R.C. 6.

30.439. Dec. 14.—Recommending to Governor in Council for sanction: 1.—Whapmaitie Power Co., Sudbury & British Columbia Ry. and Central Canada Ry. re use of tracks between Manitowish and Wingham, Ont.

30.440. Dec. 11.—Amending order 27,616 re G.T.R. and C.P.R. crossing of Cote de Liesse River, Montreal, Que., by re-appropriating cut of protection.

30.441. Dec. 13.—Approving location of Inter-provincial & James Bay Ry. from mile 48.2, main line to Guigues, mile 10 to 68, and authorizing it to cross highways.

30.442. Dec. 16.—Authorizing Pere Marquette Rd. to remove west track at crossing of Lake Erie & Detroit River Ry., at Walkerville, Ont., and to remove East track at crossing of Lake Erie & Detroit River Ry., at Walkerville, Ont., build second track across remaining P.M.R. track.

30.443. Dec. 17.—Approving revised location of Canadian Northern Ry. from mile 6 and 7, Sec. 21 and 22, Tp. 9, and Lot 5, Sec. 15, Tp. 9 (Registered Plan 455), Ononago Division, Mile District, mile 3, Yorkton Subdivision.

30.444. Dec. 16.—Authorizing Saskatchewan Public Highways Department to carry road allowance across Canadian National Ry. from Sec. 13, Tp. 47, Range 18, west 83rd meridian, Sask.

30.445. Ordering Canadian National Ry. to build farm crossing on John Kearney's property, Slemons, Ont.

30.446. Dec. 17.—Amending express rates on fresh fish, c.l. from Riverton and Gimli, Man., to U.S. points. This order is given fully on another page under "Traffic Orders by Board of Railway Commissioners."

30.447. Dec. 18. Extending for two months,

time within which City of St. Thomas, Ont. may operate St. Thomas Street Ry. p.a.y.e. one-man cars, Pere Marquette Ry., on Wilson Ave.

30.448. Dec. 16.—Extending to May 31, 1921, time within which G.T.R. may build fresh shed at Grimsby Beach station, Ont.

30.449. to 30.451. Dec. 16.—Extending for two months time within which City of St. Thomas, Ont. may operate p.a.y.e. one-man street cars, over London & Port Stanley, at Wellington, Talbot and Elm Sts.

30.452. Dec. 17.—Authorizing Canadian Northern Ry. to cross highway at Wellington, then Pacific Ry. to cross highway at B.C., mile 6.6 Lumby Branch.

30.453. Dec. 15.—Approving location C.P.R. Cuthrie-Whitford Lake Branch from Sec. 31, Tp. 43, Range 21, mile 0 to Sec. 23, Tp. 49, Range 21, west 73rd meridian, mile 72.70, and authorizing it to cross highways.

30.454. Dec. 16.—Extending to May 31, 1921, time for completion of G.T.R. extension to siding for Swift Canadian Ry., Ottawa, Ont.

30.455. Dec. 18.—Authorizing Hydro Electric Power Commission of Ontario to build high tension transmission line across wires of Great Northern Western Telegraph Co. and Canadian National Ry., at easterly limits of Port Arthur, Ont.

30.456. Dec. 16.—Approving agreement between City of Port Arthur and Fraserburgh Telephone Co., Muskoche District, Ont.

30.457. Dec. 17.—Extending to Dec. 31, 1921, time within which Canadian National Ry. may equip cylinders containing liquefied gases, and may safely device as provided in par. 182 (a) of Branch Rules for Transport of Dangerous Articles and other Dangerous Articles by Freight.

30.458. Dec. 17.—Declaring that for present, C.R. 445, 2nd crossing of G.T.R. at Galt Station, Wolverton, Ont., is protected to Board's satisfaction.

30.459. Dec. 20, 1920.—Authorizing C.P.R. to build spur for G. & W. Weir (Canada) Ltd., at mile 0.75 South Bank Branch, Lachine Canal, and St. Patrick, LaSalle, Que.

30.460. Dec. 21, 1920.—Declaring that for present C.P.R. crossing at Elmhurst Ave., east of Northern Ontario Station, Que., is protected to Board's satisfaction.

30.461. Dec. 20, 1920.—Amending order 20,194, re crossing of C.P.R. main line at mile 98.9, Oliver Branch from Oliver to mile 98.5, Alta.

30.462. Dec. 20, 1920.—Extending to May 31, 1921, time within which C.P.R. may build Dominion Brass & Iron Bedstead Co., Outremont, Que., may be built.

30.463. Dec. 20, 1920.—Declaring that for the present the Canadian National Ry. crossing, 25 poles west of milepost 5, Oakland and Delta Subdivisions, Man., is protected to Board's satisfaction.

30.464. Dec. 20, 1920.—Extending for one month time within which C.P.R. may install a bell at crossing at mile 32.8, about mile north of Guelph, Ont.

30.465. Dec. 21, 1920.—Declaring that for the present the C.P.R. crossing east of Cornwall station, Ont., is protected to Board's satisfaction.

30.466. Dec. 20, 1920.—Authorizing British Columbia Public Works Department to build highway crossing over Grand Trunk Pacific Ry. at Woodstock, B.C., mile 145.4 east of Prince Rupert.

30.467. Dec. 21, 1920.—Extending to June 30, 1921, time within which the G.T.R. may complete station at Marysville, Ont.

30.468. Dec. 21, 1920.—Amending order 30,391 re G.T.R. spur for Ontario Malleable Iron Co., and 30,392, re changing name of company to Pedlar Properties Ltd.

30.469. Dec. 20, 1920.—Authorizing Canadian National Ry. to build spur for United Last Co., St. Jerome, Que.

30.470. Dec. 21, 1920.—Authorizing C.P.R. to build spur for International Milling Co., Moose Jaw, Sask.

30.471. Dec. 20, 1920.—Extending to May 31, 1921, time within which C.P.R. may build spur for Rock Creek Lumber Co., in Lot 4688, Group 1, East Kootenay District, B.C.

30.472. Dec. 20, 1920.—Authorizing G.T.R. to build spur for Laneslow Limited, Cobourg, Ont.

30.473. Dec. 22, 1920.—Amending order 30,447, re crossing of C.P.R. main line at mile 0.75, one-man operated cars over Pere Marquette Ry., on Wilson Ave.

30.474. Dec. 21, 1920.—Authorizing Canadian National Ry. to open for traffic portion of its line between St. Erius and Humboldt, Sask.

30.475. Dec. 22, 1920.—Authorizing C.P.R. to build spur for McLaren Lumber Co., mile 94 west of Port Huron, Mich., U.S.A.

30.476. Dec. 21, 1920.—Authorizing Ontario Highways Department to build bridge over G.T.R. crossing at Port Hope, Ont.

30.477. Dec. 23, 1920.—Declaring that for the present the C.P.R. crossing at mile 0.75, between St. Erius and Humboldt, Sask., is protected to Board's satisfaction.

30.478. Dec. 22, 1920.—Ordering C.P.R. to maintain a speed not exceeding 6 miles an hour for trains over crossing at Paulson St., Cambridge, Alta.

30.479. Dec. 23, 1920.—Declaring that for the present the C.P.R. crossing near mile 61, Carberry Subdivision, 64 miles west of Portage la Prairie,

Man., is protected to Board's satisfaction.

30.480. Dec. 23, 1920.—Declaring that for the present the Canadian National Ry. crossing at milepost 22, Laidlaw Subdivision, 8 miles north of McCreary, Man., is protected to Board's satisfaction.

30.481. Dec. 20, 1920.—Dismissing appeal of Manitoba Government, et al., for suspension of rate increases as granted by general order, re altered rates on lumber, order by re during increases west of Fort William.

The judgment on which this order was based was published in Canadian Railway and Marine World, January issue.

30.482. Dec. 25, 1920.—Extending to Jan. 31, 1921, time within which Kettle Valley Ry. may build 2 pen stock yard at Princeton, B.C.

30.483. Dec. 21, 1920.—Approving agreement between Bell Telephone Co. and D'Amore Telephone Co., Wolfe County, Que.

30.484. Dec. 23, 1920.—Approving location of Saskatoon Land Survey of portion of R.R. 1920, eastward Easterly Branch from mile 164 to 192.3.

30.485. Dec. 24, 1920.—Ordering Canadian National Ry. to enlarge waiting room and freight shed at Chipman, Alta., and make other improvements by Sept. 1, 1921.

30.486. Dec. 24, 1920.—Dismissing complaint of Farmers' Local United Farmers of Alberta and 621, against proposed location of Canadian National Ry. station agent at Darwell, and ordering C.N.R. to appoint a caretaker there.

30.487. Dec. 24, 1920.—Approving C.P.R. to open for traffic portion of its Russell North Branch, from mile 0 to 6.7, Man.

30.488. Dec. 24, 1920.—Approving extension of Canadian National Ry. St. Maurice and Matilda Division, at Albany, Que., mile 1.6 St. Maurice Division, Que.

30.489. Dec. 28, 1920.—Authorizing G.T.R. to build spur for Hanover Portland Cement Co., Bentinck Tp., Ont.

30.490. Dec. 29, 1920.—Authorizing G.T.R. to build spur for Hanwell-Hosie Wire Fence Co., Hamilton, Ont.

30.491. Dec. 28, 1920.—Authorizing Canadian National Ry. to divert and build a new highway in s.w. 1/4 Sec. 14, Range 18, west 3rd meridian, at mile 75.3, C.P.R. Branch, near station of C.N.R., London.

30.492. Dec. 28, 1920.—Approving revised location of C.P.R. main line at mile 75.3, from mile 75.24 to mile 75.13, and from mile 75.13 to mile 75.0, also authorizing it to cross a number of highways.

30.493. Dec. 29, 1920.—Authorizing C.P.R. to build spur for Pembroke Shock Mills, Pembroke, Ont.

30.494. Dec. 28, 1920.—Re freight rates on shoddy and waste, given in full under "Traffic Orders by Board of Railway Commissioners," on another page of this issue.

30.495. Dec. 28, 1920.—Approving location of Lynn Road crossing, by G.T.R. in Elizabethtown, Tp. Ont., by providing that 2' of the east side of road and 2' of the west side of road and railway grade crossing (and the remainder as follows: 15' south by Leeds and Greenville Counties, 15' north by townships 24, 25, 26, 27, by G.T.R.)

30.496. Jan. 3.—Approving Edmonton, Dominion & British Columbia Ry. Standard Mileage Freight Tariff C.R.T. 130, and Central Canada Ry. Standard Mileage Freight Tariff C.R.T. 131.

30.497. Jan. 3.—Ordering Grand Trunk Pacific Ry. to provide right of way for crossing of C.P.R. line at Sec. 25, Tp. 9, Range 19, west 1st meridian, Alta., by June 1, 1921.

30.498. Dec. 29, 1920.—Approving C.P.R. spur for Sachs Bros., Ottawa, Ont.

30.499. Jan. 3.—Ordering G.T.R. to cross over and under crossing at mile 0.75, near Albany station, Ont.

30.500. Jan. 3.—Ordering G.T.R. to cross over and under crossing at mile 0.75, near Albany station, Ont.

30.501. Jan. 4.—Dismissing appeal of Canadian National Ry. against order by Board of Dominion Foundries & Steel Works, Ltd., for reduction in rate on cast iron and steel, loaded in cars, from Hamilton, Ont., to Montreal, Sept. 1 to Jan. 1, 1921.

30.502. Jan. 4.—Ordering Board of Railway Commissioners' on another page of this issue.

30.503. Jan. 4.—Declaring that Canadian National Ry. crossing near mile 0.75, between St. Erius and Humboldt, Sask., is protected to the Board's satisfaction.

30.504. Dec. 23, 1920.—Approving location of passenger shed at Albany, Que., mile 1.6 St. Maurice Division, Que.

30.505. Dec. 23, 1920.—Approving location of passenger shed at Albany, Que., mile 1.6 St. Maurice Division, Que.

30.506. Jan. 3.—Authorizing C.P.R. to build spur from main line at mile 0.75, near Albany station, Ont.

30.113. Jan. 4.—Approving reduced fair transportation privilege certificates for certain commercial travellers' associations. This order is given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

30.114. Jan. 5.—Authorizing Canadian National Rys. to build transfer track with C.P.R., at Estevan, Sask.

30.115. Jan. 5.—Authorizing C.P.R. and Montreal Tramways Co. to operate over Park Ave. crossing, Montreal, without first stopping, providing that crossing be closed between 6 a.m. and 6 p.m. for taking empty cars over C.P.R. twice a day, or in case of emergency.

30.116. Jan. 5.—Dismissing application of Carmichael rural municipality 109, Sask., for order requiring C.P.R. to stop train 3, on flag, twice a day.

30.117. Jan. 5.—Extending to Mar. 30, 1922, the order within which C.P.R. may operate tracks over portion of road allowance between Co. 8 and 9, North Dumfries Tp., Ont.

30.118. Jan. 5.—Extending temporarily to May 31 time within which work required to be done by Grand Truck Pacific Ry. at Telkwa, B.C., by order 29,827 and 30,105, be completed.

30.119. Jan. 5.—Declaring that for the present the G.T.R. highway crossing west of Niagara Falls (hydro crossing), Ont., is protected to Board's satisfaction.

30.120. 30.121. Jan. 5.—Authorizing Saskatchewan Highway Department to close highway crossings over C.P.R. on road allowance Co. 8 and Secs. 29 and 30, Tp. 15, Range 14, west 3rd meridian.

30.122. Jan. 5.—Authorizing Great Northern Rys. to make highway crossing at mile 53, Crownsburg line, near Honey, B.C.

30.123. Jan. 7.—Extending to Mar. 1, time within which G.T.R. may install wireless signal at crossing of main line into Camp, Ont., for construction. The judgment on which this order is based is given fully elsewhere in this issue.

30.124. Jan. 7.—Dismissing application of Central and Boston & Maine Rys. from complying with general order 235 requiring that all locomotives be equipped with whistle.

30.125. Jan. 7.—Dismissing Marconi Wireless Telegraph Co.'s application to increase proportion of transmittal time for its station at Camp by Western Union and Great North Western Telegraph Cos.

30.126. Jan. 11.—Authorizing Arundel Tp., Que., to make temporary crossing for six months from date over Canadian National Rys. on Lot 1, Range 3.

30.127. Jan. 10.—Authorizing British Columbia Telephone Co. to erect wires under Equinault & Vancouver line at Vancouver, B.C.

30.128. Jan. 10.—Approving Bell Telephone Co.'s agreements with Fifth Line Telephone Co., Grey County, Ont., and Mutual Telephone Co., Simcoe County, Ont.

30.129. Jan. 7.—Ordering Canadian National Rys. forthwith to appoint station agent at Wilsey, Sask.

30.130. Jan. 8.—Authorizing Saskatchewan Highway Department to make highway crossing over C.P.R. on s. ¼ s. 4, T. 6, R. 13, Range 20, west 2nd meridian.

30.131. Jan. 9.—Approving agreement between Bell Telephone Co. and Silcoate Telephone Co., Grey County, Ont.

30.132. Jan. 9.—Rescinding order 18,818, Mar. 3, 1918, authorizing Grand Truck Pacific Ry. to build spur for Edmonton Gravel Co., in Secs. 18 and 21, Tp. 1, Range 25, North Albert District, Alta.

30.133. Jan. 12.—Authorizing Grand River Ry. to insert diamonds in crossing of G.T.R. near Lundas Road, North Dumfries Tp., Ont., and authorizing it to operate over crossing pending installation of interlocker.

30.134. Jan. 10.—Amending order 30,421, re location of portions of the Imperial & James Bay Rys. from mile 38.2, near New Leno, to the Village Marie, B.C.

30.135. Jan. 11.—Declaring that for the present C.P.R. crossing at mile 81, Kibbey Subdivision, one mile north of Sedley station, Sask., is protected to Board's satisfaction.

30.136. Jan. 12.—Approving agreement between Bell Telephone Co. and Erie Telephone Co., Hamilton, Ont., and rescinding order 23,475.

30.137. 30.138. Jan. 13.—Authorizing G.T.R. to build overhead bridge K. at John St. and Catharine St.; and overhead bridges at John St. and Catharine St., Hamilton, Ont.

30.139. Jan. 14.—Approving agreement between Bell Telephone Co. and Canadair Electric Telephone Co., Middlesex County, Ont., and rescinding order 22,006.

30.140. Jan. 12.—Authorizing Hydro Electric Power Commission of Ontario to build its power development across Main River, Ontario, and to divert same temporarily in Stamford Tp., Ont.

30.141. Jan. 13.—Declaring that for the present C.P.R. crossing two miles east of Belleville station, Ont., is protected to Board's satisfaction.

30.142. Jan. 13.—Extending to Mar. 31, 1921, time within which C.P.R. may build spur for St. Lawrence and St. Mary's Parish, Que.

30.143. Jan. 7.—Approving location of Canadian National Rys. 4th class station at Birsay, Sask.

30.144. Jan. 10.—Declaring that for the present Napierville Jet. Ry. crossing, near Lacolle station, Ont., is protected to Board's satisfaction.

30.145. Jan. 12.—Dismissing application of Canadian Fisheries Association against charges of trespass committed by net fishing (e. l.) excluding allowance of 2½¢ for slime and adhering to fish when weighed.

30.146. Jan. 12.—Extending for 30 days, time within which agreement may be entered into between Great Northern Ry. and Vancouver Harbour Commission for location of lands and construction of spur, Vancouver, B.C.

30.147. Jan. 12.—Dismissing application of Notre Dame Investment Co., Winnipeg, for order directing Canadian National Rys. to spot cars only as directed by applicants on spur running between north side of Market and south side of James St., by reason of certain parties receiving benefit heretofore from said spur and now paying nothing towards cost and maintenance.

30.148. Jan. 14.—Approving agreement between Bell Telephone Co. and Mount Granite Telephone Co., Algonia District, Ont.

30.149. Jan. 17.—Authorizing use of bridge across Lake Huron, near North Branch at Hamilton & Buffalo Rys.

30.150. Jan. 15.—Authorizing C.P.R. to cross at crossing of St. Lawrence North Branch at 77.32, the Canadian National Rys. Verreville-Culinary Branch, protecting same by interlocker.

30.151. Jan. 17.—Authorizing C.P.R. to build spur for Alderice Lefevre, at mile 4.45 Lacoste Subdivision, Que.

30.152. Jan. 14.—Rescinding order 30,773, ordering Canadian National Rys. to build farm crossing on property of Byssik, Erickson, Man.

30.153. Jan. 17.—Declaring that for the present, C.P.R. crossing near Kleinburg station, Ont., is protected to Board's satisfaction.

30.154. Jan. 17.—Authorizing C.P.R. application to close and divert road allowance on west boundary of n. w. ¼ Sec. 27, Tp. 13, Range 25, west 1st meridian, Man.

30.155. Jan. 17.—Approving location and details of C.T.R. station at Allamogus, Ont., work to be completed by June 30.

30.156. Jan. 17.—Authorizing Canadian National Rys. to build across highway between Secs. 8 and 13, Township 13, Range 25, west 1st meridian, Man.

30.157. Jan. 17.—Authorizing Canadian National Rys. to build across highway between Secs. 8 and 13, Township 13, Range 25, west 1st meridian, Man.

30.158. Jan. 17.—Authorizing Canadian National Rys. to build across highway between Secs. 8 and 13, Township 13, Range 25, west 1st meridian, Man.

30.159. Jan. 17.—Authorizing C.P.R. to build siding and two crossovers for Canada Star Co., Fort William, Ont.

30.160. Jan. 13.—Authorizing Canadian National Rys. to build additional track (C.T.R. Branch Line) across Pangua St. and encroaching on McKinley St., North Regina, Sask.

Steel Rails Price Suit.

The Exchequer Court gave judgment at Ottawa, Dec. 15, 1920, in the action of the Dominion Iron & Steel Co. against the Crown, in the steel rails case. It was stated that the claim involved something like \$3,000,000, being the difference between a price fixed by the Minister of Railways and Harbours and the price actually paid by the company at the Dominion Government request at a time when the company had a shell steel contract with the Imperial Munitions Board. The case came on for hearing in Sept. 1920, and occupied the court for a considerable time at Ottawa and Sydney, N.S., the argument being heard at Ottawa, Nov. 9. During the hearing the Dominion Iron & Steel Corporation joined with the Dominion Iron & Steel Co. as plaintiff.

The judge of the Exchequer Court states in a lengthy judgment that in Mar. 1918 the Dominion Iron & Steel Co. had a contract for the rolling of steel shells for munition purposes. On Mar. 15, 1918, a copy of the Privy Council decision received a report from the Minister of Railways representing that it was essential that rail renewals be obtained immediately for the various railways in Canada if they were to continue in operation to their full capacity during the next year. The Imperial Munitions Board was will-

ing to release the company from its contract as from April 1, 1918, in order that it might roll 100,000 tons of rails. The company offered to roll 100,000 tons, 5% to be second class rails, at \$70 a ton for first class and \$68 a ton for second class rails. The Minister of Railways recommended the acceptance of the offer to roll not less than 100,000 tons of rails, the price to be determined on his recommendation, after an investigation of the company's costs by experts. Under the order in council issued subsequently the company rolled 99,000 tons of no. 1 rails, and 17,000 tons of no. 2 rails, and by a later arrangement an additional number of tons of second class rails were to be laid over. Under an order of Feb. 26, 1919, the fixing of the price of the rails was referred to the Exchequer Court, the Minister of Railways having put a price of \$65 a ton on them. The Dominion Iron & Steel Co. subsequently made a claim for compensation under the War Measures Act of 1914 on the ground that the contract for munition steel was on the basis of \$80 a ton. Upon full consideration of the matter the judge held that the steel company could not avail itself of the provisions of that act. The relationship between the Crown and the company was one of contract and not a compulsory order under the provisions of the War Measures Act. After an examination of the facts as set out in the evidence the judge said: "After the best consideration I can give to the case, and having regard to all the circumstances existing owing to the war, I think that the price arrived at by the Minister of \$65 a ton for no. 1 rails will fully and amply compensate the company. For the second class rails I would allow \$65.75. Counsel will have no difficulty in arriving at what amount should be paid at the prices I have quoted, and the act must not be lost sight of, that since the claim was filed further payments have been made by the Government and received by the company. I have no power to allow interest as against the Crown. This seems to have been conceded by counsel, who only claim interest as part of the compensation, if the company was entitled to compensation under sec. 7 of the War Measures Act. I am of opinion that under all the circumstances, each party bear their own costs."

The Railway Audit and Inspection Co. Incorporated, Ltd., has been incorporated under the Dominion Companies Acts, with authorized capital of \$50,000, and office at Montreal, to make systematic examinations of railways and other properties; to make examinations of the financial condition of companies owning or operating such properties; to audit their accounts and generally to act as an expert accountant, and to report the result of such examinations and investigations. The principal directors are: E. C. Hathaway, H. N. Brown, Philadelphus, Pa.; J. A. Mercier, K.C., J. A. Sullivan, Outremont, Que.; C. Turpin, Montreal.

An aerial mail service was started Jan. 4, between Toronto and Camp Borden, Ont., to determine the possibilities of the use of aeroplanes for mail purposes, the intention being to continue for a month.

J. C. O'Donnell, General Superintendent, Maritime District, Canadian National Rys., Moncton, N.B., writes Canadian Railway and Marine World:—"I am enclosing money order covering renewal subscription to your valuable paper for 1921."

Telegraph, Telephone and Cable Matters.

Canadian National Telegraphs has opened an office at St. Maurice, Que., and has closed its offices at Aston, Cape Rosier, Perthuis and St. Casimir, Que., and at Gormie and Rocky Inlet, Ont. The name of its office at Endat, Ont., has been changed to Elsas.

W. G. Barber, who has been appointed General Commercial Superintendent, Canadian National Telegraphs, Toronto, was presented with a gold watch and chain and a gold penknife, by G. D. Perry, General Manager, on behalf of the staff, early in January, on his promotion from the position of District Commercial Superintendent, Great North Western Telegraph Co., now Canadian National Telegraphs.

The U.S. Commissioner of Internal Revenue issued a ruling recently, defining the originating point of a cablegram as the point where it is paid for. Therefore the U.S. war tax will not be collected in the U.S. on collect messages destined to foreign countries, including Canada, but the tax will be collected on collect messages received in the U.S. from foreign countries, including Canada. The tax is based on the tolls paid, and not on the tariff rate for 10 words.

Capt. James Adams, master of the cable ship Lord Kelvin, was killed when an automobile in which he was traveling was struck by the Maritime Express at a level crossing near Bedford, N.E., Jan. 1. He was born at Saltcoats, Scotland, about 56 years ago, and was brought to Canada at an early age. He commenced his marine service in ships engaged in trade with the far east, and in 1890 joined the Western Union Telegraph Co.'s cable ship service, and served on the ship Minia for several years, and from 1916 to 1919 was in command of her, being appointed to the command of the Lord Kelvin at the end of 1919.

The Montreal Telegraph Co.'s annual meeting was held at Montreal Jan. 14. The annual report showed total assets of \$2,315,487, of which \$163,663 consisted of cash, accounts receivable, bonds and other securities, and the balance, of telegraph lines, cables, offices, equipment and real estate, in Canada and the United States. Dividends were paid during the year amounting to \$160,000, and in addition a bonus of \$5,000. The property is operated under lease for 97 years from July 1, 1881, by the Great Western Telegraph Co., now owned by the Dominion Government and operated as Canadian National Telegraphs by the Canadian National Rys. The directors for the current year are Wm. McMaster, President; W. R. Miller, Vice President; R. McD. Paterson, H. G. Rawlings and F. W. Molson.

The Pacific Cable Board's statement for the year ended Mar. 31, 1920, which has been published recently, shows net receipts of \$642,948, an increase of \$8,436 over the previous year. Of this amount, \$353,000 was appropriated to reserve and renewal accounts, and after providing for all other charges, there was a surplus of £10,433, which has been applied to reduce the outstanding balance of the original Government advance of £2,000,000. The international traffic handled during the year covered 9,000,000 words and in addition there were handled about 2,320,000 words between Australia and New Zealand, and between those Dominions and the Pacific Islands. The week end deferred cable

service will be resumed as soon as possible, but the report states that it is difficult to forecast the probable date of its resumption. Government traffic exchanged between the United Kingdom and Australia and New Zealand was about 2,200,000 words, about 1,300,000 less than in the preceding year.

The Board of Railway Commissioners passed order 30,528, Jan. 5, as follows:—The application of Marconi Wireless Telegraph Co. of Canada, for an order, under sec. 375 of the Railway Act, 1919, directing the Western Union Telegraph Co. and the Great North Western Telegraph Co. of Canada to continue to handle the applicant company's full rate trans-Atlantic traffic at the rates shown in exhibit D filed to handle the applicant company's deferred trans-Atlantic traffic at one-half of the proportionate rates charged for full rate trans-Atlantic traffic, as set forth in the said schedule D; and for an order directing the Western Union Telegraph Co. to accept all traffic at its Canadian offices routed for transmission to the United Kingdom "via Marconi." Upon hearing the matter at Ottawa, July 6, 1920, the applicant company, the Western Union Telegraph Co. and the Great North Western Telegraph Co. being represented at the hearing, and what was alleged, and upon reading the further written submissions filed, it is ordered that the application be dismissed.

The Maritime Telegraph & Telephone Co. has offered \$500,000 7% refunding mortgage gold bonds, serials, at 97½. This company operates in Nova Scotia under Nova Scotia Public Utilities Commission's jurisdiction, at rates approved by that body, and considered fair and reasonable. The company's physical assets are valued at \$5,000,000, or more than twice the amount of bonds outstanding, including the latest issue. In addition to the Nova Scotia properties, it controls the Prince Edward Island telephone system, and connects with the New Brunswick Telephone Co.'s lines, as well as others. In Nova Scotia it has approximately 4,100 miles of pole line, 45,500 miles of wire and 28,700 telephones. Under the N.S. Public Utilities Commission, the company is allowed to earn, after operating sufficient to more than meet its fixed charges and dividend requirements. The gross revenue for 12 months ended Nov. 30, 1920, was \$1,418,569; operating expenses, maintenance, depreciation, etc., \$1,085,861; net earnings \$332,703.

Great North Western Telegraph Co. becomes Canadian National Telegraphs.

The letters G.N.W. and the name they indicate—the Great North Western Telegraph Co., long familiar to every Canadian, whatever his position or walk in life—manufacturer or business man, financier or merchant, public man or private citizen—are eventually to disappear. The G.N.W.T. Co. is now a branch of the Canadian National Rys. system, and, as stated previously in Canadian Railway and Marine World, has been known since Jan. 1 as the Canadian National Telegraphs.

The history of the G.N.W.T. Co. covers a period of precisely 40 years, the company having been organized in 1881, when it leased the Montreal and Dominion Telegraph Companies lines and merged them into one system. From that time on, it grew steadily, and in corres-

pondence with the growth of the country, spreading out and extending its lines until they covered practically all Eastern Canada with a veritable network, while it materially increased its foothold in the west.

In 1915, control of the G.N.W.T. Co. was acquired by the Canadian Northern Rys., and the railway's already extensive commercial telegraph system being combined with that of the G.N.W.T., the latter became for the first time a practically Dominion-wide organization. In 1918 the Canadian Northern Rys., with the G.N.W.T. and its other subsidiary companies, became the Dominion Government's property, followed by the Grand Trunk Pacific Rys., being handed over by its receiver to the Canadian National Rys. for operation, and the two systems, together with the National Transcontinental Rys., were co-ordinated. The National Transcontinental Rys. telegraph lines were placed under G.N.W. control, and arrangements were completed recently for the co-ordination, with the G.N.W.T. and its associated lines, of the Grand Trunk Pacific Rys. telegraph lines.

The first General Manager of the G.N.W.T. Co. was H. P. Dwight, who held the position for 22 years until 1903, when he was succeeded by Isaac McMichael, a Canadian by birth, who had won a name for himself in the United States telegraph world. He died in 1911, and was succeeded by Geo. D. Perry, who, entering the G.N.W.T. service as a young man, had worked his way up to the position of Secretary-Treasurer. He continues with the new national system as General Manager, the other principal officials being A. C. McConnell, Secretary and Auditor; D. E. Henry, Treasurer; F. Davies, General Traffic Superintendent; and W. G. Barber, General Commercial Superintendent.

Vast improvements have been made by the company by installing the most modern telegraph apparatus at its offices, operating the way circuits by selector concentration units, and the trunk circuits by Morse or automates, which comprise five 8-channel multiplex printer circuits, 14 duplex Morkum printer circuits, and 22 Morse duplex circuits. Three-channel multiplex printer circuits are operated between Montreal and New Sydney cable station; N. Y. R. T. and to Winnipeg, also T. T. and to Winnipeg. With this apparatus it is possible to transmit three messages simultaneously, in both directions, at the same time, and one message at a time by increasing the capacity of a wire as compared with the Morse duplex or quadruplex method which is capable of only two messages in both directions at the most. Sixteen are installed on trunk circuits at a terminal station, and the terminal office has a selector unit, and attempts to be made in a few minutes. The new facilities provided for this year will also include 14 duplex multiplex printer circuits and 22 Morse duplex circuits. In connection with this plan of equipment, there are some 1,000 miles of pole line and 114,000 miles of wire.

The head office remains in Toronto, the executive staff occupying comfortable quarters in the World Building, 200 Wellington St. West. The local office, the operating staff and the commercial new department remain at the company's building on Wellington St. East.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—We are officially advised that the increase of fares agreed to between the company and the Victoria, B.C., City Council, went into effect Dec. 14, 1920, together with a city ordinance prohibiting jitneys from running in direct competition with the street cars. The agreement authorized the increase of the cash fare from 5c. to 6c., six tickets to be sold for 35c.; school children's tickets 3c.; all to carry transfer privileges. The old cash fare was 5c. without transfer, the new rate is 6c. with transfer. Order 30,409, passed by the Board of Railway Commissioners Dec. 2, 1920, approving this company's supplement 1 to its Standard Tariff of Maximum Fares, C.R.C. 8, as mentioned in Canadian Railway and Marine World for January, approved the increase in the city fare in Victoria.

Order 30,376, passed by the Board of Railway Commissioners Nov. 29, 1920, approved this company's Standard Freight Mileage Tariff, Supplement 1 to C.R.C. 132, to become effective Dec. 6, 1920, as mentioned in Canadian Railway and Marine World for January. This supplement is simply the application to the line of the increases granted steam railways by the Board, under general order 308.

Fort William Municipal Railway.—Port Arthur Civic Railway.—Canadian Railway and Marine World for January gave particulars of the Ontario Railway and Municipal Board's hearing of a ratepayer's complaint, on which judgment was reserved. D. M. McIntyre, K.C., Chairman of the Board, delivered its opinion on Jan. 3 as follows:—C. A. Goodeve, a citizen of Fort William, complained to the Board that fares were being charged upon the municipal railways operated in the cities of Fort William and Port Arthur, respectively, in excess of those permitted by The Ontario Railway Act. Pursuant to appointment, A. B. Ingram, Vice Chairman of the Board, attended at Port Arthur, and heard what was alleged by the complainant and by the respondents, as appears by his report dated Nov. 1920. An order was issued by the Board on Nov. 22, 1920, based on that report, prohibiting the collection of fares in excess of those approved by the Board's order of Jan. 6, 1919. Subsequently, the respondents applied to the Board for a suspension of its order of Nov. 22, 1920, in the premises, pending the disposal of certain questions of law raised by them, and this the Board did and fixed Dec. 16, 1920, for hearing argument.

Upon the argument it was alleged that the effect of certain private acts affecting the cities of Port Arthur and Fort William, and their respective railways, was to take these cities adn their railways out of the purview of The Ontario Railway Act as far as the fares to be charged were concerned, or at least throw doubt upon the Board's jurisdiction to entertain this complaint. The Board has carefully considered the legislation affecting these two railways, as well as the general law applicable in force from time to time, and finds no reason to conclude that the provisions of the Ontario Railway Act, sec. 210, limiting the fares to be charged on street railways, are inapplicable to these two railways. By

force of the interpretation clause of the Ontario Railway Act, the term "company" as used in sec. 210, includes a municipal corporation having authority to construct and operate a street railway. From as early a period as the statute revision of 1887 the Municipal Act and the Street Railway Act, read together, clearly establish that the provisions of the latter act were, and have since been, applicable to street railways owned and operated by municipal corporations, except of course as they might be qualified by private legislation. The Street Railway Act of that date contained provisions limiting the fares chargeable on street railways, in the same form, with slight modifications, as in the Ontario Railway Act, sec. 210, and these provisions have been re-enacted.

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutcheon, General Manager, Montreal Tramways Co.

Honorary Vice President, Adam Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Ry.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co., and Lake Erie & Northern Railway Co.; A. W. McLiment, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ.—Canadian Railway and Marine World, Toronto.

ed and kept in force in every revision of the Street Railway Act down to the present day.

No doubt, when the then Town of Port Arthur was by order in council of Dec. 31, 1892, given authority to extend its railway into the then Town of Fort William, the fares to be charged were fixed by paragraph 6 of that order. These fares have since been gradually lowered down to May 1917, when an application was made to the Board, under 7 Geo. V, chap. 27, sec. 71, and the rates for through service were increased. In 1908 the portion of the railway within the limits of the City of Fort William was acquired by purchase by the City of Fort William. Paragraph 6 of the agreement of purchase, while providing that the then rates of fares should not be exceeded, until Dec. 31, 1918, also provides that on and after Dec. 31, 1918, each city might operate the railway within its own limits, and as how the council thereof might determine. This the Board takes to mean that, after the date mentioned,

the respective municipal councils might each operate its railway, but subject to the provisions of the Ontario Railway Act. The legislation of 1917 merely extends to validate an agreement fixing through rates upon the railways, and neither the agreement, nor the provisions of the act, authorize the municipal councils to charge a rate in excess of that permitted by the Ontario Railway Act, sec. 210.

In July 1920 the representatives of the municipalities applied to the Board for approval of a tariff which fixed the fare in each city at 7c. or 4 tickets for 25c., with special reduced rates for children and pupils. The Board, believing that the tariff was in excess of the tariff permitted under the Ontario Railway Act, refused to approve it. Mr. Goodeve now complains that the municipalities are, notwithstanding, charging fares according to the tariff last referred to, and the representatives of the two municipalities, respectively, admit that this is so. This is, in the Board's opinion, unauthorized and illegal, and an order should issue prohibiting the municipalities collecting such fares, or any fares in excess of those authorized by the Ontario Railway Act, sec. 210.

The Board followed this judgment with an order to carry its decision into effect, but the councils of the two cities evidently decided to ignore it, as on Jan. 11 a Port Arthur newspaper telegraphed the Chairman of the Board as follows:—"Despite your order to revert to 5c. fare, 7c. fare is still being collected on the street railways in Fort William and Port Arthur. Fort William City Council tonight passed resolution to appeal your order. Will they be allowed to collect 7c. fare in the interval, pending decision whether appeal will be granted? Citizens much concerned."

The Board's Chairman replied on Jan. 12 as follows:—"Notice of appeal by municipalities served on Board returnable on Jan. 17. Pending hearing of application no action will be taken by Board to enforce its order."

An appeal to a divisional court of the Ontario Supreme Court, at Toronto, was entered on behalf of the two cities, returnable on Jan. 17, but up to the time of writing, Jan. 21, no decision had been announced.

The cities of Fort William and Port Arthur are asking the Ontario Legislature for a special act to authorize their city councils to pass bylaws from time to time varying the fares on the electric railways owned by the two municipalities.

New Brunswick Power Co.—A press report states that new rates of fare on this company's electric railway in St. John, N.B., were put in effect Jan. 10, as follows:—Cash fare, 10c.; three tickets for \$1. The previous schedule was based on a 6c. cash fare. L. R. Ross, the company's President, is reported to have said in an interview: "So far as the street railway is concerned there is only one solution of this difficulty, and that is the one-man car. It has been tried in so many places and with such marked success that it is no longer an experiment. The best estimate obtainable shows that one-man car operating would mean a saving to the company of some-

where in the vicinity of \$70,000 a year. The company would be able to reduce the cost of carrying each person by from 1c. to 1½c.

Ontario Fares.—A meeting of officials of a number of both publically and privately owned electric railways operating in Ontario was held in Toronto, Jan. 15, to consider steps to be taken to secure a change in the Ontario Railway Act, which limits the fare on electric railways under Ontario jurisdiction to 5c. for any distance not exceeding three miles, and to 2c. a mile for over three miles, and in the case of children under 10 not to exceed 3c. for three miles or less and 1c. a mile for over three miles. Subsequently they had an interview with the Attorney General on the matter. Electric railways in Ontario under Dominion jurisdiction are allowed by the Board of Railway Commissioners to charge 2.87c. a mile. The Port William and Port Arthur city councils passed bylaws recently to advance fares on these lines to over 5c, but the Ontario Railway and Municipal Board has decided that they are illegal. The Waterloo-Wellington Ry., by leave of the municipalities in which it operates, advanced its fares recently, but on the complaint of a single ratepayer the Board has ordered the old rate to be restored.

Port Arthur Civic Ry.—See Port William Municipal Ry.

Waterloo-Wellington Ry.—The reason for raising of fare charged on this line was stated in Canadian Railway and Marine World for January. The Ontario Railway and Municipal Board authorized A. B. Ingram, Vice Chairman, to investigate the fares charged. He reported that the company was charging fares in excess of those authorized under the Ontario Railway Act, sec. 210, and the Board made an order on Dec. 21, 1920, directing the company not to charge any fare in excess of those authorized under the section mentioned.

We were officially advised, Jan. 6, that the company had stopped charging the 10c. cash fare or 12 tickets for \$1, complained of, and had returned to the 5c. cash fare, and subsequently we were advised that the line would stop operating on Feb. 1, it being impossible to cover expenses on the fares authorized.

Sale of Toronto Railway Company's Subsidiary Companies.

The following questions were submitted to Toronto ratepayers at the municipal elections on Jan. 11. Are you in favor of the Hydro Electric Power Commission of Ontario acquiring for and behalf of the city the following:

(1) The distribution system within the city of the Toronto & Niagara Power Co., at the price of \$7,226,295. (2) That part of the Metropolitan Division of the Toronto & York Radial Ry. Co. within the city (limited to what lies on the highway), at the price of \$585,000. (3) The properties of the Toronto & York Radial Ry. Co., including the Metropolitan Division (except that part on the highway within the city), the Scarborough Division and the Mimico Division, also the properties of the Schomberg & Aurora Ry. Co., at the price of \$2,375,000.

(b) The city's transferring to the Hydro Electric Power Commission of Ontario the right of way and physical assets acquired by the city from the Toronto & York Radial Ry. Co. on that part of the Kingston Road within the city to the Woodbine, and on the Lake

Shore Road from Sunnyside to the Humber;

(c) Paying for the property in clauses (1) and (2) above by assuming 6½ bonds charged on the property in clause (1) to the amount of about \$840,000 (of which \$30,000 becomes due every three months until 1922, when the balance matures), and issuing city 6½ twenty-year bonds to be dated Dec. 1, 1920, for the balance;

(d) The issue by the city of 6½ twenty-year bonds for \$2,375,000 to be deposited with the Hydro Electric Power Commission of Ontario to secure the bonds of the Commission, guaranteed by the Province of Ontario, for a similar amount to be issued by the Commission in payment for the property in clause (3);

(e) Entering into the necessary agreements with the Hydro Electric Power Commission of Ontario to carry out the foregoing which will provide that the municipalities interested will be given an opportunity to vote under the Hydro Electric Railway Act to acquire the proportionate interest of each in the property referred to in clause (3);

(f) Applying for legislation at the next session of the Legislature, validating and confirming the said agreements with the Hydro Electric Power Commission of Ontario, and authorizing the council of the city to pass a bylaw or bylaws for the issuing of all necessary debentures and otherwise carrying out the foregoing without the further assent of the electors.

The votes recorded were 29,081 in the affirmative and 1,672 in the negative, a majority of 27,409.

Agreements between the Toronto Ry. Co. and the Hydro Electric Power Commission of Ontario are being drawn up in accordance with the terms arrived at as detailed in Canadian Railway and Marine World for January. These agreements will be submitted to the trustees of the companies acting for the shareholders of the several companies concerned, and by the Toronto Ry. Co.'s directors, then to the Hydro Electric Power Commission of Ontario for approval and execution.

Several organizations of residents in the North Toronto area have passed resolutions asking for the inauguration of a 2c. fare on the Toronto & York Radial Ry.'s Metropolitan Division within the city limits when it comes under operation by the city, that being the fare charged on other civic lines.

Regina Municipal Railway's Financial Position.

A report by J. Grasset and L. A. Thornton, city commissioners, to the Mayor of Regina, Sask., on the city finances, etc., for the 10 months ended Oct. 31, 1920, contains the following in reference to Regina Municipal Ry.:—"A moderate increase over 1919 in revenue was estimated. The actual results are for the 10 months \$17,000 short of the estimate, and may be accounted for by the general tendency towards economy in expenditures and particularly by the very fine weather conditions which have obtained. Where the bulk of the traffic is first haul the street railway is the first to experience the effect of the weather."

"The fares were increased in August and resulted in a marked decrease in patronage, so that since its inception there has been little revenue benefit. The three months of increased fares has

been too short a period to point to any definite conclusions as to the ultimate effect. When winter sets in its earnest it is hoped, however, that substantial results will be derived from the increase. The deficit shown by the auditor's statement, \$30,484.03, will be reduced for the year to approximately \$40,000. While this is a good position as compared with that of 1914-15-16-17 and 18, viz., \$80,752.00, \$109,755.00, \$76,145.00, \$85,912.00 and \$67,407.00 respectively, there is still room for much improvement. Strict accounting methods would require greater contribution to depreciation costs than are now provided. Unless the one-way car system is adopted we cannot predict any material reduction in operation costs.

The average number of passengers carried daily from January to April inclusive was 18,722; from April to July 23, 15,927, and from Aug. 5 to Oct. 31, 13,211. These figures indicate an effect of weather conditions very clearly. The street railway ride is the cheapest service available to the public. A more consistent use of the service would soon result in the wiping out of the deficit, which now has to be borne by the same public in taxation. In the following table the figures for 1920 are for the 12 months, ending October 31, 1920, the figures and making proportionate allowance for the whole year:—

	1919	1918
Revenue . . .	\$14,322.00	\$14,100.00
Expenditures . . .	296,200.00	271,250.00
Operating and surplus . . .	181,878.00	257,150.00
Fixed charges . . .	98,825.00	97,812.24
Deficit . . .	10,000.00	20,000.00
Passenger car mileage . . .	914.00	875.00
Total passengers . . .	6,677.20	6,675.00
Receipts per passenger car mile . . .	\$7.60	\$1.10
Cost per passenger car mile . . .	41.66	41.66
Receipts per passenger . . .	1.90c	1.90c
Cost per passenger . . .	6.22c	6.22c

Street Railway Extensions as Local Improvements.

The Toronto Transportation Commission's General Manager, H. H. Connors, in announcing recently that it had been decided to ask the city council to apply for legislation to provide that property the value of which is increased by street railway extensions, should contribute towards the cost of the improvement, reported to have said: "The principle that property which has clearly been increased in value by an improvement should contribute to the cost of such improvement is felt to be fundamentally equitable and sound, and has been generally recognized for many years in Canada, the United States and England. The principle has been applied to transportation by the New York State Rail Road Transit Law of 1911, which provided that the whole or any portion of the cost of any future rapid transit extension assessed against the property thereby benefited."

"The Commission has not decided as to the extent to which these powers, when obtained, will be put in force, but a letter has been forwarded to the Board of Control making the request at suitable intervals."

"Regarding the statement that the matter has been taken up with York Township Council, this was discussed informally with a deputation from that year's council, which waited on the Commission some time ago, but as the matter has not been dealt with by the City Council, the York Township Council has not been said to have been officially approached."

Electric Railway Projects, Construction, Betterments, Etc.

The Edmonton Interurban Ry., which extends from the outskirts of Edmonton, Alta., to St. Albert, 9.50 miles, was completed and put in operation, Dec. 21, 1913, a gasoline car service being operated. The line was either partially or wholly electrified in 1914-15, and an arrangement was made in Sept. 1915 with the City of Edmonton for its Edmonton Radial Ry. to operate the E.I. Ry. from Edmonton to Calder, about two miles, which arrangement is still in effect. A press report states that efforts were made during 1920 to arrange for the sale of the E.I. Ry. line, etc., to the city, negotiations being started on the basis of an offer by the company to take \$20,000, that this was met by an offer of \$12,000 by the city, and that the company reduced its price to \$15,000. It was reported Jan. 5 that the company had given notice to terminate the agreement for the operation of the line on Mar. 31. (April, 1916, pg. 156.)

Edmonton Radial Ry.—We are officially advised that work was commenced on the following extensions in 1919, that track was laid during 1920, and that they will be finally completed this year: Loop built in exhibition grounds, 3,000 ft.; addition to Interurban Ry. Co.'s tracks in Calder, Alta., 2,000 ft. (April, 1920, pg. 202.)

Grand River Ry. has, we are officially advised, under construction an additional track from Preston to Hayes, Ont., 1,132 miles; and a revision of its double track line in Galt, 1,524 miles. A. R. R. R. St. Catharines, Ont., is the contractor.

In connection with the revision of the track in Kitchener, we are officially advised that the total length of line is 1,742 miles, and that it is expected during the year to abandon 0.935 of a mile of the original mileage, which is still being used under agreement with the city, new track on revision not being in service. (Jan., pg. 36.)

Hydro Electric Ry., Essex Division.—We are officially advised that during 1920 there was laid 4,031 ft. of new track, on London St., Windsor, Ont., from Ouellette Ave. to the Michigan Central Rd. bridge, converting the line for that distance into a double track one. The management has under survey the following extensions or additions, with a view to putting them under construction during this year: Loop on Sandwich, Ferry and Pitt Sts., 1,245 ft.; double track on Ouellette Ave., 7,065 ft.; double track belt line on Wyandotte, Monmouth, Ottawa, Parent and Erie Sts., 19,977 ft. (Nov., 1920, pg. 616.)

Lethbridge Municipal Ry.—We are officially advised that Lethbridge, Alta., City Council has ordered automatic reclosing circuit breaker equipment from the United States for its substitution.

Montreal Tramways Co.—Montreal press dispatch, Jan. 20.—The big power plant being constructed on Cote St. for the Montreal Tramways Co. at a cost of approximately \$1,000,000, is expected to be completed and in operation early in February. The plant consists of four transformers, which will take current from the Montreal Light, Heat & Power Co. and convert it into power for the tramways. The capacity of the plant is 13,000 h.p., or 10,000 k.w. The plant is being constructed in order to economize on costs of electrical power used by the

Tramways Co.

The Montreal Tramways Co., we are officially advised, has under construction the following extensions: Kelly St., 2.30 miles; Park Ave., 1.08 miles. The work is being done by the company's own staff. (Dec., 1920, pg. 672.)

Quebec Ry., Light & Power Co.—The Quebec Board of Trade's council is reported to have discussed recently the question of extending the company's line to the Quebec Bridge, and to have asked the city council to take the matter up with the company. (Nov., 1920, pg. 616.)

The Saskatchewan Municipal Ry., we are officially advised, built 2,500 ft. of new track during Nov. 1920, on the Mayfair-University line, making such sections double track. A considerable part of this line is still single track. The new work was done on the parts of the line where most needed to relieve congestion, and promote effective operation. (Nov. 1920, pg. 616.)

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—A press report says that J. D. Mortimer, retiring President, Western Power Co. of Canada, Ltd., stated recently that about 90% of the preferred and common stock certificates of that company had been transferred to interests representing the B.C.E.R. Co., under the terms of its option. The sale price of the stock is reported to have been \$30 for preferred and \$35.10 for common. Shareholders who did not participate in the option contract, have been given until May 16 to dispose of their shares. Walter Gow, Toronto, is reported to have been elected President, Western Power Co. of Canada, under the new ownership.

Calgary Municipal Ry.—A press report states that the operation of the railway showed a deficit of \$3,621.52 for Nov. 1920, making a total deficit for the 11 months ended Nov. 30 of \$1,873.38.

Cape Breton Electric Co.—

	Nov. 1920	Nov. 1920	Nov. 1920	Nov. 1920	Nov. 1920
Gross	\$63,635	\$51,611	\$593,259	\$528,716	\$528,716
Expenses	49,430	40,249	501,865	414,607	414,607
Net	13,605	11,262	81,394	114,109	114,109

The London & Port Stanley Ry. Co.'s annual meeting of shareholders was held in London, Ont., Jan. 17. The receipts for the year were reported to be \$25,400, viz. the net paid to the city for the line by the London Railway Commission, and it was stated that the shareholders had no power or authority to ask for any reports or information as to the operation of the line. This amount, less some small expenses, was paid over to the city. The following are the directors for this year: President, Mayor Little; Vice President, Alderman W. A. Wilson; other directors: Aldermen Watt, Wenige, Ross, Brighton, Drake, Watkinson and Ashton.

London St. Ry.—A press report states that the total earnings for Nov. 1920 were \$44,382.30, and operating expenses \$37,959.63, leaving a net revenue of \$6,422.67. The Ontario Railway and Municipal Board, which is operating the line, has paid out of net revenue \$2,187.55, interest on bonds; \$119.73, interest on loan; \$80.00, taxes, and \$3,000 for retirement of bonds. This leaves a balance of \$365.39.

The net income from June 17, 1920, when the Railway and Municipal Board took over the organization, is reported

to have been \$4,487.27, out of which the Board has paid \$4,078.58 as increased wages to the men, leaving a net surplus of \$412.59.

Montreal Tramways Co.—A dividend of 2½% for the three months ended Dec. 31, 1920, has been declared payable Feb. 1. It is stated that the company now owes only one payment on account of dividend arrears, and that it will be paid in the near future.

Regina Municipal Ry.—A press report states that operation showed a net revenue of \$1,585.87 for Nov. 1920, thus reducing the deficit for the 11 months ended Nov. 30, 1920, to \$48,958.18.

Toronto Civic Ry.—The total revenue for 1920 was \$543,570.92; passengers carried 32,441,083; against \$443,575.09 total revenue, and 26,622,343 passengers carried during 1919. It is anticipated that there would be a deficit of approximately \$200,000 on the operations for 1920.

Toronto Railway.—

	1920	1919	City	City
Jan.	\$ 232,221	\$ 119,172	\$ 119,172	\$ 96,563
Feb.	595,881	119,172	119,172	96,563

Winnipeg Electric Ry. Co. offered recently \$3,000,000 of 7% cumulative preferred stock, preferred as to dividends and assets, at 90% with a bonus of 30% in common stock. The proceeds of the issue, the subscription lists for which closed Jan. 22, will be used to retire notes and bank loans. The prospectus states that with these paid off, it is expected that the company will be in a position to recommend payment of dividends on its common stock within a reasonable period.

Winnipeg Electric Ry. and allied companies:—

	Nov. 1920	Nov. 1920
Gross	\$483,908.82	\$483,908.82
Operating expenses	363,232.27	363,232.27
Net	119,666.55	119,666.55

The surplus after allowing for fixed charges, was \$55,447.65, against \$37,623.71.

Vancouver and Edinburg Car Fares.

The following is reproduced from the British Columbia Electric Ry.'s publication, the Buzz:—You remember we told you how Edinburg folk walked to spite the tramways when the fares went up, but they found they had to make it up eventually through taxes. Some interesting figures have come to hand which make Vancouver show up pretty well. Here they are:

Passengers per car mile, Edinburg.	12.32
Passengers per car mile, Vancouver.	5.6
Revenue per car mile, Edinburg.	58.2
Revenue per car mile, Vancouver.	36.8c.

Even with traffic twice as dense as in Vancouver, Edinburg charges 2c. a mile. Commutation rates on the Central Park line, Vancouver, are less than 1c. a mile.

Ontario Car Advertisers Ltd. has been incorporated under the Ontario Companies Act, and office at Toronto, to carry on a general advertising business, and particularly advertising in connection with street cars, tramways, busses, and motor vehicles, and to buy, sell and transact business incidental thereto.

Proposed Purchase of Ottawa Electric Railway Defeated.

Ottawa ratepayers voted on Jan. 3 on the following question:—"Are you in favor of the city applying for legislation enabling it to borrow money, without a further vote of the electors, to acquire the property and assets of the Ottawa Electric Ry. Co. at the expiration of its franchise in 1923, under the agreement between the city and the company, at a price fixed by arbitration, as provided by the agreement?" The votes were 2,326 in the affirmative, and 4,438 in the negative, a majority of 2,112 against the proposal.

The proposed purchase of the line by the city upon the expiration of the franchise has been under consideration for a long time, and the discussions at the committee and council meetings prior to the settlement of the form of the question, as given above, were lengthy and at times rather warm. In the course of the campaign, between the date of the settlement of the question and the voting, the then Mayor, H. Fisher, wrote several letters to the local papers in which he advanced a number of reasons in favor of the taking over of the line by the city, criticized the policy of service at cost which the Ottawa Electric Ry. Co. had offered to put in operation, and urged the people to vote in favor of the bylaw. Major F. D. Burpee, Manager, O.E.R., replied to these letters at length, explaining the principles and merits of service at cost.

The question will doubtless be taken up again at an early meeting of the city council. We are advised that the company's proposal to operate the line on a service at cost basis is still open for consideration by the city.

Mainly About Electric Railway People.

Major F. D. Burpee, Manager, Ottawa Electric Ry., broke a small bone in one of his ankles early in January, and had to lay up for about a fortnight.

F. L. Butler, who entered the Winnipeg Electric Ry. service as General Superintendent, in April 1918, and was appointed Manager in Aug. 1920, has resigned to take charge of the Georgia Ry. & Power Co.'s railway department at Atlanta, Georgia. That company operates all the city and suburban lines in and out of Atlanta, also a line in Gainesville, all of which will come under Mr. Butler's jurisdiction.

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., attended the annual meeting of the Nova Scotia Association for the prevention of Accidents in Halifax, Jan. 6.

A. H. Dion, who resigned the position of Manager, Moose Jaw Electric Ry., Moose Jaw, Sask., in December, has been appointed Managing Director of the Welding Accessories Co., New York, N. Y., in which he is financially interested.

W. F. Graves, Chief Engineer, Montreal Tramways Co., has been appointed a member of the American Electric Railway Association's committee on way matters.

A. T. Goward, Local Manager, British Columbia Electric Ry., Vancouver, B.C., is taking two months leave of absence from the end of December, his duties being performed by G. M. Tripp, Electrical Engineer.

H. M. Hopper is reported to have resigned the position of Secretary-Treasurer, New Brunswick Power Co., and of the Eastern Electric Co., a subsidiary company, after over 20 years service. The report states that he will go on leave of absence until Mar. 1, when his resignation will take effect.

F. S. Livingston, Traffic Manager, Toronto & York Radial Ry., has been re-elected President, Metropolitan Hockey League, which comprises teams along the railway's Metropolitan Division, between Toronto and Sutton.

E. A. MacNutt, Secretary-Treasurer, Cornwall Street Ry., Light & Power Co., and Levis County Ry., and Treasurer, Sun Life Assurance Co., Montreal, has been elected a director of Barcelona Traction, Light & Power Co.

I. L. Matthews, for some years a member of the Port Arthur, Ont., Public Utilities Commission, has been re-elected Mayor of Port Arthur, and M. C. Campbell and B. Tourtelot have been re-elected members of the city's Public Utilities Commission.

Hugh C. Niekke, General Superintendent, Kingston, Portsmouth & Cataract Electric Ry., has been re-elected by acclamation as Mayor of Kingston, Ont.

Ottawa Electric Railway's Insurance and Benefit Plan.

Canadian Railway and Marine World for Sept. 1920 contained full particulars of the O.E.R.'s insurance and benefit plan, including a copy of the policy. The company's Manager, Major F. D. Burpee, comments on it as follows:—"The plan contains a death benefit of \$1,000, a retirement allowance of \$1,083.12, with other options, \$10 a week for any 26 consecutive weeks in case of sickness or accident happening while off duty, and free service of a physician for all purposes except surgical operations. If the employee leaves the service for any cause prior to reaching the age of 65, he may have returned to him all the amounts he has paid in with interest at 3%, so that in this sense it may be regarded as a savings account, or he may purchase the company's interest in the policy and carry it on at the full premium.

As our employees are protected against accidents happening while on duty, by the Ontario Workmen's Compensation Act, whether they are responsible for such accident or not, every contingency is provided for, with the one exception of permanent disability occurring before the retirement age is reached. We are considering the addition of this benefit to our plan, and find that it could be arranged at a small extra cost per member, for the death benefit to be paid immediately a permanent disability is established.

Our insurance plan is open to all employees, with the exception of those over 50 years of age who have not been in the employ of the company for more than five years, as it was not considered fair that a heavy premium should be paid for men who could not be regarded as old employees of the company. We found that we had a number of men of 60 years and over who have been in the service for many years. These men have all been taken in as members, but instead of underwriting these risks we are carrying them ourselves and providing a reserve to look after the payment of their claims.

While all the risks, with the exception

of those mentioned above, are underwritten by the Travelers Insurance Co., the employee deals directly with this company. If a death occurs, our welfare man hands the death benefit to the beneficiary, and does whatever he can to assist her with funeral arrangements and in any other way that may appear to him to be helpful. In the payment of sick benefits these amounts are turned over to the employee as he needs them without reference as to when the claim is settled with the insurance company. The employing company afterwards recovers whatever amounts are due on the claims.

At the time the employee puts in an application for membership he is told his policy to use so that as claims are made underwriters are made by him. The insured has nothing to do with it.

As shown by the contract, men paid off duty through sickness, are not entitled to the sick benefit or free medical, such employees pay \$1.25 a month. All others who are not paid when they are away from duty pay \$1.50 a month.

This insurance plan has been in operation a little more than a year and has been operating most satisfactorily. During the return of the flu last winter a large number of employees were materially assisted at a time of great need. I think that the only reason this plan has not been unanimously adopted by our employees is because of the mistaken impression of organized labor to all insurance plans proposed by employing companies. This plan was inaugurated and is being carried on as a definite part of our welfare work for employees. There is no possible chance for any man to lose by becoming a member, as in any case he receives more than he has invested in when he leaves the service.

Losses in Operating Toronto Civic Railway.

The Toronto Bureau of Municipal Research gives the following as the financial results of operating the Toronto Civic Ry.:

Year	Expenses (including depreciation)	Income	Excess of income over expenses
1916	\$84,498.97	\$67,000.00	\$17,498.97
1917	102,118.58	87,000.00	15,118.58
1918	160,098.52	100,000.00	60,098.52
1919	174,800.00	100,000.00	74,800.00
1920	181,000.00	100,000.00	81,000.00
Total	\$602,515.07	\$354,000.00	\$248,515.07

In comment on the above, the Bureau says:—"The civic railway has been handicapped in the financial management by insufficient fares and by the lack of through passenger service. The recommendation of the Commissioner of Finance and the Commissioner of Works that fares be increased to the level of the street car fares, and that the through passenger service be maintained, will be a great help to the civic railway."

British Columbia Electric Railway Statistics.

NORTH B.C. RAILWAY CO. (INCORPORATED IN BRITAIN)	
Western Power Co. of Canada	
The following have been received by the company since January 1, 1920, as follows:	
Capital stock authorized	\$1,000,000.00
Capital stock issued	\$1,000,000.00
Surplus	\$1,000,000.00
Reserve fund	\$1,000,000.00
Unpaid dividends	\$1,000,000.00
Unpaid interest	\$1,000,000.00
Unpaid taxes	\$1,000,000.00
Unpaid wages	\$1,000,000.00
Unpaid salaries	\$1,000,000.00
Unpaid pensions and gas	\$1,000,000.00

Ontario Hydro Electric Railways Projects.

The Mimico, Ont., Town Council was informed recently that debentures for \$122,000, guaranteeing the bonds for the building of the section of the projected radial railway under the Hydro Electric Power Commission of Ontario's plans, had been handed over to the Commission.

Ratepayers of East Whithy Tp. passed a resolution recently urging the township council to take no further steps toward issuing debentures in connection with hydro radial proposals till after the Ontario Government Commission, investigating the entire radial scheme, brings in its report. The resolution also requested that if the report of the commission is unfavourable to the enterprise the township's debentures, amounting to nearly \$300,000 and representing its share of the Toronto Eastern Ry. capital cost, be not issued, and that nothing further be done in the matter until it be again submitted to the ratepayers.

The section of the old Belt Line Ry. which Toronto City Council acquired some years ago on account of non-payment of taxes, is coming to light again. It is reported that the G.T.R. wants to recover a portion of it, and also that the Hydro Electric Power Commission of Ontario is desirous of getting it for use in connection with its projected system of radial railways.

Electric Railway Notes.

Peterborough, Ont., ratepayers on Jan. 1 approved a bylaw for the operation of cars on Sundays on the Peterborough Radial Ry.

London, Ont., ratepayers on Jan. 1 defeated by 42,596 to 1,681 a proposal to provide \$100,000 to buy motor busses and operate them as a civic enterprise.

St. Thomas, Ont., ratepayers on Jan. 3, by a majority of 1,132, voted in favor of the operation of cars on Sundays on the St. Thomas St. Ry., owned by the city.

The Moose Jaw Electric Ry. Co.'s power plant was disabled Jan. 7 by the bursting of an oil pipe on the Diesel engine, and car service was delayed for several repairs. It is also reported that arrangements are being made for the railway to be operated by power from the city electric power plant.

Brantford City Council is applying to the Ontario Legislature, among other things, for power to appoint an engineering board, of which the engineer or construction head of the Brantford Municipal Railway shall be a member, to consider and report to the board of control upon engineering questions which may arise in connection with the affairs of the city and of the various public commissions.

Saskatoon, Sask., ratepayers have passed a bylaw authorizing the operation of one-man cars on the municipal railway, but we are officially advised that it is not the management's intention to make any change at present. It is expected that a trial will be made with one-man cars in April, and that if it is satisfactory the present equipment of single truck cars will be converted for one-man operation.

A. E. Warren, General Manager, Western Lines, Canadian National Ry., is reported to have discussed with the Mayor of Edmonton, Alta., recently the

all-night street car service to Calder for the employees of the railway shops. At present the C.N.R. guarantees the city \$2.50 a trip, with a rebate on the receipts on the trip. Unless a satisfactory arrangement can be made the C.N.R. will probably put on a steam service.

Regina, Sask., Trades and Labor Council is asking for the operation of extra cars on the municipal railway on Sundays for the convenience of employees at the Canadian National Ry. and Grand Trunk Pacific Ry. shops. Superintendent Houston is reported to have advised the city council that the present average Sunday car earnings are \$357, representing about 6,000 fares, and that the expenses are \$576; and that the extra expense asked for would mean an additional expenditure of \$70 a Sunday for labor and power.

The British Columbia Electric Ry., in apologizing to its customers for recent shut down of from four to 10 minutes on the light and power system, and of 20 minutes on the railway system, including also the Western Power Co. of Canada's lines, throughout the Vancouver area, on Dec. 20, 1920, at 2 p.m., when the Christmas shopping traffic was very heavy, stated that it was caused by the breaking of 10 insulators on high tension poles in North Vancouver by stones thrown by small boys. The short circuiting of high tension lines threw a surge on to the other circuits. The company has offered a reward of \$100 for the arrest and conviction of the persons causing the damage.

British Columbia Electric Railway Subsidiary Company's Application to Dominion Parliament.

Notice has been given that The Vancouver, Fraser Valley & Southern Ry. Company will make application to the Parliament of Canada, at the next session, for an act to amend its act of incorporation, chap. 175 of Statutes of Canada, 1906, so as to enable it to purchase, lease or otherwise acquire any railways, street railways, tramways, and light, heat and power systems, within or without the Province of British Columbia, and particularly the railways, street railways, tramways, and light, heat and power systems constructed, controlled, owned, leased or operated by the British Columbia Electric Ry. Co. Ltd., the Vancouver Power Co. Ltd., and the Vancouver Island Power Co. Ltd., and the Western Fraser Ry. Co. of Canada Ltd., and to enable it to carry on such railways, street railways, tramways, light, heat and power systems so purchased or acquired under the powers contained in the charters of such railways, street railways, tramways, or light, heat and power companies, subject to The Railway Act; and to enable the company to extend the lines of railway, street railway and tramway, or light, heat and power systems now owned or to be acquired as aforesaid by it beyond the limits of the Province of British Columbia into the State of Washington; and for a declaration that the railways, street railways, tramways and light, heat and power systems to be acquired shall be declared to be for the general advantage of Canada; and to enable it to increase its capital; and to enable it to change its name; and to enable it to alter its borrowing powers; and to amend sections of its act of incorporation relating to the purchase and disposal of power; and to enable it

to pay for the railways, street railways, tramways, and light, heat and power systems to be acquired by it by shares in the company; and to enable it to sell all or any part of its undertaking; and for such other powers as may be necessary or incidental to the above.

The Vancouver, Fraser Valley & Southern Ry. Co., which is a subsidiary of the British Columbia Electric Ry. Co., was incorporated by the Dominion Parliament in 1906, and built a line from New Westminster along the Fraser River Valley to Chilliwack, 76.3 miles, which was completed in 1909, and is operated by the B.C.E.R. Co.

Hydro Electric Railways, Essex Division, Operating Results.

The Hydro Electric Power Commission of Ontario has supply the following particulars of the operating results for seven months to Oct. 31, 1920, of the Hydro Electric Railways, Essex Division, formerly the Sandwich, Windsor & Amherstburg Ry.

Maintenance and operation, including insurance, taxes and administration	\$185,104.96
Cost of electrical energy (steam generation)	27,600.03
Total	\$212,704.99
Revenue	296,573.74
Gross surplus	\$83,668.75
Interest on investment	49,886.09
Sinking fund (1.05%)	11,346.72
Net surplus	\$22,335.94
Commission, 6 1/2%, 622,026.	

Comparison of Expenses, Seven Months, April to October.

	1919	1920
Power	\$14,062.01	\$27,600.03
Maintenance and administration	15,600.00	14,508.00
Stationery	2,400.00	3,400.00
Administration	No record	2,800.00

Purchase Cost.

Way and structures	\$1,229,829.91
Equipment	206,968.79
Total	\$1,436,797.80
Intangible	142,202.20
Total purchase cost	\$1,579,000.00
Additions to Oct. 31, 1920	249,918.45

Total, Oct. 31, 1920 \$2,008,918.45
Interstate Commerce Commission regulations require provision for renewals on equipment (same at 5% on above is \$3,622.00, at 2 1/2% \$3,018.00). Provision for renewals on way and structures is optional (same at 5% on above is \$21,522.00, at 2 1/2% \$17,935.00).

The operating statement carries the following items of expense considered to be abnormal but for obvious reasons allowed to remain therein. Clearing road from 18 miles of track, Windsor-Amherstburg section \$1,256.00
General overhauling of cars 108 and 102, roofs, cables, etc. 1,000.00
Cost of rebuilding at March, 1920, at \$20 each (conservative) 2,500.00
Cost of painting office 300.00
Power costs at usual rates, \$2,895 a month for 7 months \$20,265.00
Actually cost 27,600.03

18 cars crippled when system taken over, largest through triple car ?
Administration salaries for March, 1920, delay in taking over system 750.00
Labor costs for 1920 and equipment removal and installation and half value of ties installed 8,335.11

\$21,470.14
Items of a capital nature charged to revenue during the seven months, now reflected in plant account
Half of ties used (\$5,014.21), average life 16 years \$2,507.10
Armature coils, normal life 2-3 years 5,538.39
Field coils, normal life 2-3 years 1,590.00
Pinions 320.92
Wheels 1,475.00
Car 56, rehabilitation of trucks in April
Painting cars 108 and 102 (old paint burned off) 500.00
Charge against Detroit United Ry. 461.30
2-80 armature coils on hand 221.00

\$13,251.77

Service at Cost Advocated for Winnipeg.

From the Winnipeg Electric Railway Public Service News.

Those who framed street railway franchises 30 years ago, when horse cars were the vogue, did not, and could not possibly, anticipate the remarkable progress which the art of transportation was to make. Any one with an open mind who today reads the provisions of these franchises—and Winnipeg's franchise is similar to others all over the country—will readily agree with that. And it is equally apparent that the first and primary purpose of such franchises was to secure first class adequate public service, because it was recognized then, as it is now, that anything less than adequate street car service would mean a blow to the commercial development of any community and the comfort and convenience of its citizens.

In Winnipeg, as elsewhere, the franchise is based upon service, and the spirit of the franchise requires that the price of the service must meet its cost. There may be certain stipulations in the franchise, made in good faith by those who sought to guard the interests of the public, but when time and development of the transportation art make these stipu-

dependent commission appointed by the authorities to endeavor to solve traction problems there and recommend a method to secure the most adequate and efficient railway service at the lowest cost.

Whenever service at cost has been tried, the results have proved highly satisfactory. The U. S. Federal Electric Railways Commission, appointed to find a national solution to street railway problems, reported unanimously in favor of service at cost recently.

A New English Type of Tram-Car.

Bradford, Eng., has introduced a novel type of tram-car, which an English paper speaks of as follows:—It runs with or without rails, but takes electricity from overhead wires in the ordinary way. The first of its kind to be built possesses the quality of being adaptable to a permanent way, although in the main intended

The new car is particularly distinctive by reason of its enclosed top deck, the provision of which is made practicable by a 7 ft. wheel case. A most graceful effect is rendered by the sides of the vehicle tapering towards the roof. The aim here, however, has not been aesthetic, but one of practicability, as such a feature tends to avoid the risk of collision when a sharp curve in the road would cause a wider roof to overhang.

The Guelph Radial Railway Situation.

Guelph, Ont., ratepayers on Jan. 1, by a vote of 1,152 to 472, approved of the new agreement between the city and the Hydro Electric Power Commission of Ontario respecting the Guelph Radial Ry. Under this agreement the city agrees to sell and the Commission agrees to buy all the assets, undertakings and pro-

These cuts are reproduced from the Winnipeg Electric Railway Public Service News.

lations a factor in causing deterioration of the property and impairment of service and threaten inconvenience to the public and economic disturbance, the situation becomes one to be adjusted in the public interest.

Such an adjustment is being made in cities all over the continent by the adoption of a new franchise to meet the new conditions. This new franchise, or rather plan, is known as service-at-cost, and is already in operation in the following and other cities: Montreal, Chicago, Philadelphia, St. Louis, Cincinnati, Cleveland, Des Moines, Dallas, Buffalo, New Orleans, Louisville, Oakland, Youngstown.

When cities of this size and importance adopt service at cost for the operation of their street railways, in preference to any other plan, there must be some merit to the proposition.

The latest city to adopt he plan is Syracuse, following the report of an in-

dependent commission appointed by the authorities to endeavor to solve traction problems there and recommend a method to secure the most adequate and efficient railway service at the lowest cost. The advantages of such a car will be at once apparent. The upkeep of permanent way is a disorganizing and expensive factor which tramway undertakings are called upon to face, the relaying of an important length of tram lines now costing something like \$20,000 a mile. The working expenses of the new type of car may be slightly more than the ordinary tramway, but against this fact must be placed the stupendous saving in the cost of laying a permanent track. One advantage of primary importance, and one which will make a cogent appeal to passengers, is the fact that the irritating delay not infrequently experienced by a hold up of a train as a result of the breakdown of one vehicle would be nullified by the adoption of the railless car.

property of every kind and interest belonging to the Guelph Radial Ry. in which the G.R.R. is entitled to share with its business, free from liability, that the consideration shall be \$1,000,000, payable in instalments of \$11,000 in each year for 20 years in half yearly payments on May 1 and Nov. 1. The first of such half yearly payments of \$5,500 is to be made on Nov. 1, 1921. The city agrees with the Commission to bear the cost of acquiring, equipping, operating, maintaining, repairing, renewing and insuring the railway and its property and works as established by the Commission, and also to lease a franchise for \$400,000, maturing in 30 years from the date of issue, bearing interest at 5 per annum, payable half yearly. The debt must be confirmed of the agreement and it be held or disposed of from time to time by the Commission.

Winnipeg Electric Railway Preferred Stock Issue.

The Winnipeg Electric Ry. Co. offered for subscription recently \$3,000,000 7% cumulative stock, preferred both as to dividends and assets, at 90, yielding 7 3/4%, and carrying a common stock bonus of 30%. Following are extracts from the prospectus. The Winnipeg Electric Ry. Co. does a power, lighting and gas business, and operates the entire street railway system of the City of Winnipeg, consisting of 120 miles. It has a hydro electric development of 33,000 h.p. capacity, and an auxiliary plant of 13,000 h.p. In addition, this company controls a large undeveloped waterpower capable of 170,000 h.p. development capacity. The company's franchises are very satisfactory.

The company's properties (exclusive of the value of the large undeveloped water power), were valued by the Public Utilities Commission at \$24,369,431. This replacement value is equivalent to over \$450 a share for the preferred stock, or about \$100 a share for the common stock.

Average annual net earnings for the three pre-war years ended Dec. 31, 1914 (which would have been available for dividends on the present issue of preferred stock), were \$1,148,193. Average annual net earnings for the three years ended Dec. 31, 1919, under very adverse and war conditions, which would have been available for dividends on present issue of preferred stock, were \$496,637. Preferred stock dividend \$210,000, equal to almost two and one half times preferred dividend. Estimated net earnings for current fiscal year based on actual figures for first eight months are \$630,000, equal to three times preferred dividend.

The Public Utilities Commission authorized the company to increase its street railway fares to 7c. cash or 4 tickets for 25c., and to increase the price of gas to \$1.75 per 1,000 ft. as from Sept. 1, 1920, and made the following statement in connection therewith: "To ensure continuance of a satisfactory service the rate must be such as will be attractive to investors. In my judgment 8% is the proper rate to fix."

The company's management was taken over in Oct. 1917 by A. W. McLimont, who possesses a broad experience in the operation of Public Utility Companies. Since his inception as Vice President and General Manager, the company's progress both as regards the growth of its operations and from an operating standpoint, has been very gratifying to all concerned.

The proceeds of this issue will be used to retire notes and bank loans. With these paid off it is expected that the company will be in a position to recommence payment of dividends to holders of its common stock within a reasonable time.

Ontario Hydro Electric Railway Enquiry.—The proceedings up to the end of Dec. 1920 of the commission appointed to enquire into the system of hydro electric radial railways proposed by the Hydro Electric Power Commission of Ontario, were dealt with fully in Canadian Railway and Marine World for January. The commission resumed its sittings in Toronto on Jan. 10 to 12 when W. G. Hewson, one of the H.E.P.C. of O.'s railway engineers was examined, and cross examined, at length, and a further adjournment was then made.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Argolis, Mowat and Rosseau Road, Ont.

The Canadian National Express Co. offices at Pembroke, Ont., Ardill, Sask., and Spedden, Alta., have been closed.

The Board of Railway Commissioners passed order 30,550, Jan. 12, dismissing the complaint of the Canadian Fishermen's Association, which was heard at Prince Rupert, B.C., Oct. 6, 1920, against the Canadian Express Co.'s charges on net weight of fish in car loads, following

W. C. Muir,
General Manager, Canadian National Express Co.

allowance of 2 1/2% for slime and ice adhering to the fish when weighed, which is by custom allowed to the fishermen.

G. E. Bellerose, whose appointment as Assistant to General Manager, Canadian National Ex. Co., Winnipeg, was announced in our last issue, was born at Penetanguishene, Ont., July 15, 1884, and entered transportation service in Mar. 1902, since when he has been, to May 1903, clerk, Car Service Department, G. T.R., Toronto; June 1903 to May 1904, clerk and messenger, Eastern Lines, Dominion Ex. Co.; May 1904 to Sept. 1909, messenger and agent, Western Lines, Dominion Ex. Co.; Oct. 1909 to Nov. 1911, chief clerk, acting agent, and messenger, British Columbia and Northwestern States, Great Northern Ex. Co.; Nov. 1911 to June 1915, messenger and station agent, Victoria, B.C., Nelson, B.C., and Calgary, Alta., Dominion Ex. Co.; July 1915 to Jan. 1917, messenger, Canadian Northern Ex. Co., Winnipeg; Feb. 1917 to Nov. 1920, Traffic Supervisor, Canadian Northern Ex. Co., and latterly Canadian National Ex. Co., Winnipeg.

James Bryce, formerly Vice President and General Manager, Canadian Ex. Co., died at Montreal, Jan. 5. He was born at Galt, Ont., Mar. 30, 1846, and was, from 1860 to 1868, operator at various points in Ontario, Great North Western Telegraph Co.; 1868 to 1870, agent, American Ex. Co., Dundas, Ont.; 1870 to

1877, chief clerk, same company, Hamilton, Ont.; 1872 to 1877, joint agent, Canadian Ex. Co. and American Ex. Co., Guelph, Ont.; from 1877 to 1882 he was in manufacturing business; 1882, cashier and chief clerk, Canadian Ex. Co. and American Ex. Co., Toronto; 1882 to 1889, Superintendent, Canadian Ex. Co., St. John, N.B.; 1889 to 1896, Superintendent, Canadian Ex. Co., Montreal; 1896 to 1901, Manager, Canadian Ex. Co., Montreal; 1901 to 1911, Vice President and Manager, Canadian Ex. Co., Montreal. He retired on a pension in 1911, and had been in poor health for over a year.

The British Columbia Ex. Co., which, it is reported, has decided to relinquish business, was founded by the late F. J. Barnard, in 1861. It is stated that transport was, at that time, accomplished by the founder, on foot, taking letters from Yake to Soda Creek, and from there to Quensel by canoe, at \$2 each. In 1862 he put on the first pony express, consisting of a small horse, which carried the mail on its back. In 1863, a light wagon, with two horses, was placed in service, a road having been built by the Government, and in 1864, the first horse stage was run, connecting with the North Fraser River canoe service at Soda Creek. The company subsequently developed considerably, and, until recently, three steamboats were operated on the Upper Fraser River, between Soda Creek and Fort George, but since the building and operation of the Pacific Great Eastern Ry. the traffic has left the boats for the track. The last of the company's steamboats is stated to have been dismantled recently, for transportation to the Mackenzie River, where she will be operated in taking men and materials into the new oil fields.

Dominion Express employees in Montreal offices were accorded the privilege of attending the annual New Year's ball held under C.P.R. auspices in the concourse and general waiting room, Windsor St. station, New Year's eve. The waiting room was decorated with the allies flags and the lights were all shaded with red draperies. A number of the staff took advantage of the occasion and had a most enjoyable evening. They also enjoyed the privilege of being presented to President Beatty, who received and shook hands with the majority of those attending the dance. After the departure of all trains out of the station at 10.30 p.m., moving pictures were shown on a screen erected inside the concourse. Promptly at 12 o'clock, Father Time was ushered in, sitting on the front of a miniature locomotive, a replica of the original engine of Duffin, the first locomotive used by the C.P.R. in the west. On the tender of the engine were three men attired in the costumes of cowboy, Indian and farmer respectively, all three singing Auld Lang Syne and other popular songs. After the blowing of whistles and trumpets heralding in the New Year, supper was served in the luncheon room and buffet. The dance opened officially at midnight and closed at 2 a.m. Promptly at two, the function terminated with the singing of O, Canada, and God Save the King.

This evening will surely linger in the minds of all those who were privileged to be present as an occasion when fellow-workers and their friends meet for a few hours of light fantasies to drive away business cares for the time being and create a more sincere feeling of good fellowship among all concerned for the best interests of both employer and employee.

Marine Department

Launching of Canadian Pacific Ocean Services' s.s. Montrose.

The launching of the twin screw, geared turbine s.s. Montrose, for the C.P.O.S. at Govan, Glasgow, Scotland, on Dec. 14 by Fairfield Shipbuilding & Engineering Co. was mentioned in Canadian Railway and Marine World for January, since when additional particulars have been received. The christening was performed by Lady Raeburn, of Auchengower, Henshingly, wife of Sir Ernest M. Raeburn, K.B.E., who has been appointed C.P.O.S. General Agent for Scotland, the duties of which he assumed on Jan. 1, 1921. The C.P.O.S. was represented by Sir Thomas Fisher, K.B.E., R.N., General Manager; Hugh R. MacDonald, Naval Architect; Wm. Baird, General Passenger Agent; Capt. D. H. Pearson, Publicity Agent; Eng.-Admiral C. W. Rooome, Chief Superintendent Engineer; J. R. Crawford, acting Agent, Glasgow; and W. Stewart, General Agent, Glasgow.

Description of Ship.—The Montrose's principal dimensions are:—Length over all 575 ft., between perpendiculars 566 ft.; breadth 70 ft., depth from boat deck 68 ft., from shelter deck 43½ ft.; gross tonnage 16,250. She is of the shelter deck type, with a bridge deck extending almost the full length. Accommodation is provided on the bridge and shelter deck amidships for 458 cabin passengers in the staterooms arranged for 2 and 4 berths. Permanent accommodation for 450 third class passengers is provided for in 2 and 4 berth rooms, also portable accommodation for an additional 850 third class passengers, if required. The cabin dining saloon is on the upper deck, and has seating accommodation for 312. The remaining public rooms, situated on the promenade deck, consist of smoking room, drawing room, long passage, library, lounge, card room and writing room. A large portion of the promenade deck can be screened off and illuminated with electric clusters. A spacious lounge extending the full breadth of the ship on the bridge deck is provided for third class passengers, also smoking rooms, entrance halls, etc. The ship will also be fully equipped with hospitals, dispensaries, and an operating theater, with surgical appliances. All the cabin accommodation and public rooms are heated by steam radiators, and ventilated by natural inlets, and the public rooms are also ventilated by mechanical extraction. The third class accommodation is heated and ventilated on the thermo tank hot air system, and the public rooms are heated on the thermo tank hot air system, and ventilated by mechanical extraction. The lifeboats have a capacity for all on board, and are operated by Babcock & Wilcox patent Wylie davits, and the Australis davits, all worked by electric boat winches. The emergency lifeboats are hung on ordinary davits, with hand turn gear, and electric boat winches. The doors in the watertight bulkheads are operated by hydraulic system, which permits of the doors being worked locally or from the navigating bridge. Wireless telegraphy plant, submarine sound signalling apparatus, and a Sperry gyro compass are part of the ship's equipment.

The propelling machinery will consist of two sets of Brown-Curtis turbines,

driving twin screws through double reduction gearing. There will be three turbines in each set, the high pressure and intermediate pressure turbines being coupled together in tandem, driving one first reduction pinion of the gearing, and the low pressure turbine driving the other first reduction pinion. A high pressure astern turbine will be incorporated in the same casing as the intermediate pressure ahead turbine, and a low pressure astern turbine incorporated in the same casing as the low pressure ahead turbine. The boiler installation will consist of 10 single ended cylindrical return tube boilers, designed to burn oil fuel in conjunction with forced draft, and fitted with superheaters capable of sup-

ereating the steam at the high pressure turbine inlet to 200 degrees F. Provision has also been made for readily converting the boilers to coal burning if required. Special consideration has been given to the design of the auxiliary machinery to economize the consumption of steam for propelling purposes, and to suit the requirements of the passenger service in which the ship will be engaged.

Speeches at the Luncheon.

At the luncheon given by the builders after the launching, Robt. Traill, one of the Fairfield Co.'s directors, who presided, in proposing "Success to the Montrose and the C.P.O.S., and good health to Lady Ernest Raeburn," said the Montrose was the tenth ship that the Fairfield Company had built for the great Canadian Pacific Ry. Co. She was known as an intermediate ship, or rather of a type not quite so luxurious as the Empress of Canada, which was fitting out alongside the Montrose. She would be a large passenger carrying steamship, carrying no less than 520 first class, and

about 1,650 emigrants. Her tonnage would be 16,250, so they would see also would be no mean vessel; they hoped she would carry out a lot of good work, and prosperity to the C.P.O.S., and it was the forerunner of more orders to the Fairfield Co. in the future. There was always in these difficult times, when a ship was launched, as orders were very difficult to obtain, and the work would not be very easily filled. Shipowners, naturally, were concerned at the very high costs at present, and it was very difficult to perceive where reduction was to come from. So high had costs become that many of the first class companies had cancelled very large orders, and their company, along with other shipbuilding companies, had suffered very greatly in that respect. The building of two very large liners, almost as large as the Montrose, had been cancelled, and there was a prospect that others might be stopped or cancelled also. That was a very serious consideration. A few days before he attended a dinner given by the foremen engineers in Glasgow, over which the Duke of Atholl presided. The Duke made a speech referring chiefly to the economic situation, and particularly as he was addressing the foremen of Clyde shipyards, he referred to the difficulty of the labor situation. He emphasized particularly what is known as the "ca' canny" policy. Probably all present did not know what that meant. It meant that workmen were not exerting themselves to the utmost, with the result that the value of labor had gone down very considerably, and they were not getting from workmen the reward that they ought to get from the high wages they were paying. Recently he had occasion to emphasize the point that the Duke of Atholl brought out in his speech. He had the opportunity of comparing the costs of engines built immediately pre-war with an exactly duplicate set of machinery finished at the beginning of this year. The labor cost should have been two and three-quarter times the pre-war figure. It made a curious comparison; the cost was divided into two sections, first that carried out by men on piece or contract, and the other portion was done by workmen. The cost of the portion built on piece worked out exactly in accordance with the rise in the wages; that was, two and three-quarter times the pre-war cost. The figures for the men working on time was four and a half times, so that saw there a clear proof of what was known as the "ca' canny" policy, that they were not getting value for the amount of money given in wages to the workmen. Happily he thought there was every indication that the water element in the trade union movement appreciated the fact, and he thought that in the near future they would agree to contract on piece-work. The work was not very prevalent in the Clyde, and if it were introduced, it would not only keep their costs down, but it would give a very much higher reward to labor. They were anxious that working men should earn as much as they physically could, and the better class of workman should be able to get a sufficient reward for his extra exertions and skill. But the trade union

movement in Great Britain was such that all men were supposed to be on one level, and the good and the bad should get the same wages. Another distressing feature at present was that in certain trades, he referred to moulders, they had great difficulty in obtaining change for their engines. Without castings they could not get on; the moulders were on strike for four months and this strike terminated at the beginning of this year. They had never been able to make up the leeway, and the engines cost more money; but the moulders persistently refused to work on piece, and they would not work any overtime. Where did the brotherly love come in? Thousands of workmen were thrown out of work because castings could not be obtained, yet the moulders absolutely refused to help their fellows to get any castings. He thought that was a very deplorable state of affairs. He was showing Sir Thomas Fisher during lunch a letter which was received by a shipbuilding firm with which he was connected, stating that unless some means were found whereby costs could be reduced, the writers would be compelled to cease their continuous programme of building with that firm. This shipbuilding firm had had continuous orders for a series of years, building one ship after another, but they said that unless they could get some guarantee they were not prepared to place any more orders. He did not know what Sir Thomas Fisher would tell them on that subject, whether the C.P.O.S. intended to order more ships or not, but the fact remained that all the large liner companies would require to build in the future.

He had occasion the previous evening to read a paper which was given at one of the scientific societies, and he was comparing the amount of tonnage afloat now and pre-war, and he saw what rapid strides the United States had made. At present in tramp tonnage, there were 17,500 ships, with a total tonnage of 8,250,000 tons. Pre-war there was only 15,000 ships with 2,500,000 tons, so that at present there were 750,000 tons of tramp shipping afloat carrying cargo more than in 1914. That increase in tonnage was entirely owned by the U.S. That seemed to him a very serious consideration for shipowners in Great Britain. Turning again to the liners and intermediate ships of higher classes carrying passengers, he found the reverse was the case. In 1914 there were 3,100 ships of the liner type with a total tonnage of 13,350,000 tons. Today there was 2,470 such ships, which was 630 less than they were in the pre-war days, and tonnage of 1,200,000 tons. It appeared to him that, sooner or later, that tonnage would have to be made up, and, in addition to that, the natural increase which occurred from year to year in the number and size of ships would make a shortage somewhere in the neighborhood of 2,000,000 tons.

Now, if labor and material were stabilized and brought into reasonable bounds, he thought that the large liner companies would have to build. It seemed to him that at present the companies seemed so horrified at the huge costs that they declared they were not able to build ships that would be a commercial venture, with freights and expenses such as they were today. On behalf of his co-directors, he desired to thank Lady Raeburn for the great honor she had done them in coming there to launch the Montrose, and he would ask her to accept a small souvenir of that occasion, viz., a diamond pendant.

Sir Thomas Fisher, K.B.E., R.N., General Manager, C.P.O.S., in responding, said in the absence of Sir Ernest Raeburn it fell to him to thank the Fairfield Co. on behalf of Lady Raeburn for the very beautiful souvenir they had presented to her. It was a great pleasure to him personally that the company had launched for the C.P.O.S. since Sir Ernest Raeburn's appointment as their agent in Scotland should have been launched by Lady Raeburn. His only regret was that Sir Ernest was not there to enjoy the launch and the reception. He had been acquainted with Sir Ernest for three years during the strenuous times of the freight business. A passenger, especially a tourist, did not travel if the cost was too high for him, and from what he could hear and learn from his own business and talking to others there had been a real falling off in what might be called tourist traffic, and seeing that the tourist taxation was very high in all countries he thought they must recognize that the tourist traffic was more or less gone.

In the future the passenger liners would have to look to business men and emigrants; for this reason, there were more and enough of liners built and under construction to cover the requirements of the world during the next few years, and he was afraid that the shipbuilding industry of this country was in for a very bad time. Indeed, when he last had the pleasure of being present at a gathering of that kind in the Fairfield works he referred to the fact that in his opinion it would be necessary for shipping companies to simplify the ships they were constructing for the passenger trade, and the Montrose would carry only two classes of passengers. He felt sure that the right type of ship. There was only one feature in which she fell short of the ideal of what a modern passenger liner should be; she was, unfortunately, to burn oil. He held that that was a waste, for oil should be consumed in an internal combustion engine, but their engineers had not made sufficient advances to justify that in that direction. The ship was 16,000 tons odd, designed to have a speed of 16½ knots at sea. They estimated she would leave Liverpool on a Friday afternoon, and would without fail discharge her passengers at Quebec on the early morning of the following Friday. She would reach Quebec during the night, and get her passengers on shore at the most comfortable time of the morning.

These ships of the type of the Montrose, he thought, were being constructed pretty largely by other companies—cost in the neighborhood of £1,500,000. They would only be operated successfully if they could turn them round quickly and fill them reasonably full with passengers and cargo on every voyage. It was quite impossible to make a

success of a ship of that type if they fell short of cargo or had to delay the ship on account of cargo. Before the war the most progressive and successful shipping companies were, he was afraid, to be found in Germany, and he believed their great success was due to the quick despatch with which they got their ships in their ports, thereby enabling them to earn more money, especially with the constant flow of third class emigrant traffic which they were able to divert to their ships at Hamburg. They were not in the same position in this country as regarded their emigrants. The British emigrant was a more intelligent and self reliant man than the man on the Continent. Their emigrants went to the new country in the spring of the year; fortunately they mostly went to their own Dominions, and not to the U.S., but this thing, fortunate as it was for the Empire, was bad for the shipping companies. It was almost impossible to see how such ships as the Montrose were going to handle that traffic. They could not get third class traffic in the off season as well as in the season when the British emigrants were moving overseas. They felt that it was absolutely essential to the success of the company operating from Liverpool that they should have continental emigrants. They could only get those emigrants in competition with the continental lines if all concerned, railway companies, Government officials, port authorities, and others interested in the transport of the emigrants gave them assistance. They all wished to take away or inherit the trade which Germany had lost by handing over their ships to them, but it would be very much better for British companies that they should take the business away from Germany from their own ports rather than British ships should be sent to German or other continental ports. In particular he referred to the inadequate facilities provided at the port of Liverpool. Unless improvements were made it was really impossible to hope that they would be able to hold that trade, and they looked with confidence to the Liverpool authorities for improving the facilities of their port while there was time. If they did not avail themselves of that opportunity of improvement in the coming spring, it would not occur again, because the Germans would have restarted. So much for the necessity of doing everything possible to encourage the third class emigrant in the off season.

Another important feature of a ship of the Montrose type was that no less than 30% of her earnings for the year was estimated to be taken from freight. In order to get the full earnings from freight they had to delay the ship. They had decided that the ship must run on a monthly turn round, but that meant, under present labor conditions shutting out 2,000 tons of cargo every voyage, which represents a loss of gross revenue of £70,000 a year. On the other hand, if they put her on a five weeks service it would even be more than £75,000. Every week such a ship was held in harbor there was an interest and depreciation charge on capital alone of £3,500. To make such a ship a success something had to be done to obviate the shutting out of cargo now caused by the present labor conditions. If the unions would only see that by working a machine, or a ship, 24 hours out of 24 they were benefiting themselves by reducing the amount which capital took out of the industry, there would be a very much better prospect in the ship-

ping and other trades.

He was very pleased to see the announcement in the press that the engineers had recognized this principle, to work three shifts, and he hoped it would spread to other industries. They felt it necessary to have the shift system in shipping. They made an offer to the Dockers' Union that they would try it experimentally under any safeguards which they might care to suggest. If it did not succeed the dockers were none the worse off, and if it succeeded it could be extended as circumstances dictated. Under the present system of the 8-hour day, mitigated by overtime, he was told that 11,000 dockers in Liverpool received not less than £4 a week, and 5,000 got under £2 10s. a week. Double shifts would tend to equalize matters, the general standard would be raised, and more employment would be found for men, certainly in the case of the regular liners about which he was speaking. It was not possible to over-estimate the importance of the experiment in shift working at Liverpool now when the docks were not congested, having regard to the time when the docks might become congested. In dock congestion only two remedies were possible—one to work the existing facilities during more hours, which could only be done under the shift system, or to extend the facilities which at present would involve the borrowing at a very high rate of interest. The position at Liverpool would certainly become extremely serious when a revival of trade occurred. It was not too much to say that the very existence of the entrepot trade was bound up with the question of the prompt despatch of steamers and efficient and economical handling of goods in the ports. He would respectfully suggest that the importance of the question was such as to call for the intervention of the Minister of Transport to bring the various parties together, and to find a solution which would enable the industry to go forward in the future as it had done in the past. If no improvement could be made he was greatly pleased that very few more orders would be placed on the Clyde for a long time for ships of that type. But his confidence in British common sense was such that he was sure they would find a way out of the difficulties.

The Head Line Steamship Co.'s Canadian Business.

The Belfast agent of the Ulster Steamship Co. referring to reports regarding unsettled conditions in Ireland, states that business has been carried on practically unhindered. He says: "We think you are already aware of our Head Line Service, which has been in existence for many years, and pre-war was under subsidy from the Canadian Government for the winter service from St. John N.B. to Belfast and Dublin. We maintained our trade from Canada throughout the war under serious disadvantages, and our sailings have now been practically resumed, giving at least a fortnightly service from Montreal to Belfast, and every three to four weeks to Dublin. The logical centers for distribution in Ireland have been found to be Belfast and Dublin. At Cork we find it impossible to do business, although we have repeatedly endeavored to berth steamers to that port before the war. For instance, Cork merchants would not receive Canadian flour. They insisted on wheat imports, which could be milled on

the spot, and other similar prohibitions made a regular service with Cork impossible.

"By our steamship which arrived at Belfast from Montreal on Oct. 23, we had cheese shipments valued at about £12,000. Our agents, McLean Kennedy, Ltd., Montreal, have been most energetic and successful in getting exporters of Canadian products in touch through us with importers on this side and shortly after starting our steamship service we sent out one of our staff, F. C. Thompson, established him at Toronto in order to get in touch with all shippers of all classes of goods to Ireland, and we are glad to say his efforts have also been very successful in promoting Canadian trade with this country. We have had considerable shipments of British Columbia wood via our line from Montreal. Our agents, McLean Kennedy, Ltd., are in constant touch with a view to development of this traffic, bringing the goods from the west by rail."

Dominion Coal Co.'s Additions to Fleet.

The Dominion Coal Co. has bought the steamships Kamouraska, 8,000 d.w. tons; and Rose Castle, 12,000 d.w. tons; from Laurentian Steamship Co. and Lewis Steamship Co., respectively, both of Liverpool, Eng. A controlling interest has also been bought in the Norwegian collier steamship Dagbild, 12,500 d.w. tons. All three ships were built specially for the Dominion Coal Co. and the Dominion Iron & Steel Co.'s coal and ore trade.

The s.s. Kamouraska was built at Low Walker, Eng., in 1911, of steel, and has the following dimensions,—length b.p. 375 ft., breadth 52 ft., depth 28.1 ft.; tonnage, 4,903 gross, 2,673 net. She is screw driven by engine of 488 h.p.

The s.s. Rose Castle was built at Sunderland, Eng., in 1915, of steel, and has the following dimensions,—length b.p. 455 ft., breadth 58 ft., depth 31.1 ft.; tonnage, 7,546 gross, 4,351 net. She is screw driven by engine of 696 h.p.

Both ships were for some time under charter to the Dominion Coal Co., and were used in war service, the charters being suspended meanwhile. They were returned to charter service recently on being reconditioned.

Great Lakes Levels.

The United States Lake Survey reports the monthly stages of the Great Lakes in feet above mean sea level for Dec. 1920 as follows:—Superior, 602.25; Michigan and Huron, 580.12; St. Clair, 574.77; Erie, 571.89; Ontario, 245.40.

Lake Superior was 0.23 ft. lower than November 1919, 0.08 ft. lower than Dec. 1919, 0.05 ft. below the average December stage of the last 10 years, 0.88 ft. below the high stage of Dec. 1916, and 1.05 ft. above the low stage of Dec. 1879.

Lakes Michigan and Huron were 0.18 ft. lower than Nov. 1920, 0.04 ft. lower than Dec. 1919, 0.01 ft. above the average December stage of the last 10 years, 2.46 ft. below the high stage of Dec. 1879, and 1.12 ft. above the low stage of Dec. 1855. During the last 10 years the December level has averaged 0.2 ft. lower than the November level, and 0.2 ft. higher than the January level.

Lake Erie was 0.06 ft. lower than Nov. 1920, 0.02 ft. higher than Dec. 1919, 0.15 ft. above the average December stage of

the last 10 years, 1.64 ft. below the high stage of Dec. 1885, and 1.03 ft. above the low stage of Dec. 1895. During the last 10 years the December level has averaged 0.1 ft. lower than the November level, and 0.1 ft. higher than the January level.

Lake Ontario was 0.17 ft. higher than Nov. 1920, 0.34 ft. lower than Dec. 1919, 0.06 ft. below the average December stage of the last 10 years, 2.21 ft. below the high stage of Dec. 1861, and 1.97 ft. above the low stage of Dec. 1895. During the last 10 years the December level has averaged 0.2 ft. lower than the November level, and about the same as the January level.

Newfoundland Steamship Services.

The steamship services operated formerly by the Reid Newfoundland Co. are now managed by the Newfoundland Government Railway Commission, and comprise the following:—

S.s. Argyle, 439 tons gross, 199 tons net, two trips a week in Placentia Bay Connects with railway at Placentia.

S.s. Clyde, 439 tons gross, 199 tons net, weekly trips between Port Union and La Scie, via Lewisporte.

S.s. Earl of Devon, 194 tons gross, 84 tons net, weekly trips between Lewisporte and Cook's Harbor.

S.s. Glencoe, 767 tons gross, 336 tons net, weekly trips, southwest coast service, between Placentia and Port aux Basques.

S.s. Home, 439 tons gross, 200 tons net, weekly trips on north side of Notre Dame Bay.

S.s. Kyle, 1,055 tons gross, 548 tons net, tri-weekly trips between Port aux Basques and North Sydney, N.S.

S.s. Meigle, 836 tons gross, 427 tons net, weekly trips between St. John's and North Sydney, N.S.

S.s. Petrel, 346 tons gross, 190 tons net, two trips a week in Trinity Bay Connects with railway at Clarendville.

S.s. Sebastapol, 321 tons gross, 150 tons net, Belle Isle Straits, weekly trips from Humbermouth.

S.s. Sngona, 808 tons gross, 420 tons net, Labrador service, from St. John's every three weeks, touching principal points in Trinity, Bonavista and Notre Dame Bays, thence to Battle Harbor and all ports of call north to Lupedale and Nain.

S.s. Senec, 321 tons gross, 150 tons net, south side of Notre Dame Bay, weekly trips from Lewisporte.

S.s. Watchful, 378 tons gross, 193 tons net, Bonavista Bay, weekly trips from Port Blanford.

R. G. Reid, Vice President of Newfoundland Co., visited England last year with a view to obtaining new steamships, but, up to the present, he has been unsuccessful in getting any suitable for the service.

Re-imposition of Canal Tolls.—Ottawa press dispatch, Jan. 5. While the re-imposition of canal tolls may be considered, with a view to raising the revenue, as suggested in an Ottawa newspaper this morning, it does not seem likely at present that any such plan will be put in effect this year. Hon. J. D. Ross, Minister of Railways and Canals today expressed doubt as to whether Canada would not lose, instead of gain, by the application of tolls to the canal system. If tolls were to be re-applied, much traffic would simply be diverted through United States canals, which are free, to the detriment of Canada.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Keels Laid.—We have been advised of the laying on Jan. 6 of keels for two steel cargo steamships for Canadian Government Merchant Marine, viz., s.s. Canadian Transporter, and Canadian Freighter; Marine Department contracts 62 and 63; builder's yard nos. 20 and 21; each approximately 8,390 d.w. tons, by J. Coughlan & Sons, Vancouver, B.C.

Deliveries of Steamships.—The s.s. Canadian Sapper; Marine Department contract 59; builder's yard no. 8; approximately 2,800 d.w. tons, was, as stated in Canadian Railway and Marine World for January, delivered to the Marine Department by the Nova Scotia Steel & Coal Co., New Glasgow, N.S., Dec. 18, 1920. She was transferred to Canadian Government Merchant Marine at Pictou, N.S., going from there to Halifax, N.S., where she loaded a general

be followed by the s.s. Canadian Forester on Feb. 3, and from then on there will be a sailing every three weeks. Each of the ships mentioned has accommodation for 30 passengers and a large freight carrying capacity.

The passenger fares one way are as follows:—

	First class.	Deck.
Halifax, N.S., and Nassau, Bahamas	\$ 90	—
Halifax and Kingston	125	—
Halifax and Belize	200	—
Nassau and Kingston	35	\$ 8
Nassau and Belize	110	21
Kingston and Belize	75	13

Canadian war tax five cents on every \$5 or fraction thereof on all tickets issued in Canada. Also on all orders issued outside of Canada, calling for transportation from Canada. On return tickets issued in Canada, Canadian war tax is chargeable on southbound portion on-

United Kingdom—	
Between Montreal, St. John or Halifax and any port in United Kingdom	\$125
South America—	
Between Montreal and Rio de Janeiro	225
Between Montreal and Santos	225
Between Montreal and Montevideo	255
Between Montreal and Buenos Aires	260
Between Halifax or St. John and Rio de Janeiro	195
Between Halifax or St. John and Santos	200
Between Halifax or St. John and Montevideo	230
Between Halifax or St. John and Buenos Aires	235
Africa—	
Between Montreal and Bombay, India	400
Between Halifax or St. John, N.B., and Bombay	375
Australia and New Zealand via Pacific—	
Between Vancouver, B.C., and Auckland, New Zealand via direct steamer	168
Between Vancouver, B.C., and Sydney or Melbourne, Australia, via direct steamer	200
\$5 war tax on each ticket issued in Canada.	
Children's Fares.—United Kingdom—	
One year and under 10, half fare. Infants \$11. South America.—Children 10	

Steel cargo steamship Canadian Winner, approximately 8,390 d.w. tons, built for Canadian Government Merchant Marine Ltd., by Harbour Marine Co., Victoria, B.C.

cargo for Newfoundland and sailed, Dec. 28, arriving at St. John's Dec. 31. She is continuing to run between Halifax and St. John's.

The s.s. Canadian Commander; Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons, was delivered provisionally to the Marine Department, by Canadian Vickers Ltd., at Montreal, Dec. 21, 1920, subject to satisfactory trials at the opening of navigation next spring, after which she will be transferred to Canadian Government Merchant Marine for operation.

West Indian Services.—The Canadian Government Merchant Marine has commenced a regular service from Halifax, N.S., to Nassau (Bahamas), Kingston (Jamaica) and Belize (British Honduras), the first sailing being by the s.s. Canadian Fisher on Jan. 15. This will

be followed by the s.s. Canadian Forester on Feb. 3, and from then on there will be a sailing every three weeks. Each of the ships mentioned has accommodation for 30 passengers and a large freight carrying capacity.

The passenger fares one way are as follows:—

Canadian war tax five cents on every \$5 or fraction thereof on all tickets issued in Canada. Also on all orders issued outside of Canada, calling for transportation from Canada. On return tickets issued in Canada, Canadian war tax is chargeable on southbound portion on-

ly, i.e., the single fare. A deposit of 25% of the passage fare for each person is required to engage a berth or stateroom, and full amount of passage must be paid 14 days before sailing. Accommodations are not considered finally engaged unless secured by such deposit or payment in full.

Staterooms are numbered 1-10 inclusive and have two berths in each, one upper and one lower. Passengers desiring exclusive use of staterooms will be charged two fares. Suites are lettered A and B, and consist of bedroom with two berths, parlor with sofa, and private bathroom, and will be sold at four fares.

Intermediate Steamship Fares, Etc.—The following are minimum first class fares for three persons in each stateroom. If exclusive use of stateroom is desired, 2½ fares will be collected.

years and over, adult fare. Children 4 years and under 10, half fare. Children one year and under 4, quarter fare. One child under 1 year old, free, and each additional child under 2 years of age, quarter fare. India via Mediterranean and Suez.—Twelve years and over, adult fare. Two years and under 12, half fare. One child in each family under 2 years, free, and each additional child under 2, quarter fare. Australia and New Zealand via Pacific.—Two years and under 12, half fare. Each child under 2 years, 10% of minimum fare with no berth provided.

Each of the following steamships have two staterooms, each fitted with two berths and sofa, latter of which can be used as bed if necessary. In addition there is a smoking room, and a dining room. The figures give the d.w. tonnage: Canadian Conqueror, 8,350; Canadian

Victor, 8,350; Canadian Spinner, 8,350; Canadian Planter, 8,350; Canadian Mariner, 8,100; Canadian Explorer, 8,100; Canadian Prospector, 8,100; Canadian Wanderer, 8,390; Canadian Explorer, 8,100; Canadian Traveller, 8,100; Canadian Inventor, 8,100; Canadian Winner, 8,100.

Fire on s.s. Canadian Pioneer. — A London, Eng., copyright cable of Jan. 13 to the Montreal Gazette says that fire breaking out in the bunkers of the s.s. Canadian Pioneer while she was en route to Colombo, Ceylon, finally, caused a total damage over \$30,000.

Objection to the C.G.M.M. Flag. — Bern, Switzerland, press dispatch, Jan. 20.—The announcement just made here that the Canadian Government has introduced a merchant marine flag showing a white cross encircled by a ring on a red ground has caused consternation. The Swiss flag is a white cross on a red ground, but without any ring around the cross, and the Swiss press and public are asking their Government whether Canada cannot be prevented from having a merchant marine flag so closely resembling the Swiss flag, especially as Switzerland hopes one day to have her own merchant marine, in view of her long cherished project of having a canal connecting Marseilles with Lyons and Geneva, and also utilizing the Rhone. Switzerland likewise wants to establish shipping connections with Antwerp by the Rhine, while Italy is planning to connect Venice and the Upper Adriatic with the great Alpine passes by means of the River Po and Lake Maggiore, one end of which is in Switzerland. Before the war German manufacturers once got into the habit of using the Swiss national colors for various toilet articles, but the Swiss Government protested and the custom was abandoned. It is suggested that this new grievance is one which might be carried to the League of Nations, but it is possible that the Swiss Government will merely make friendly representations to Canada.

Editor's Note.—From the remark that the Swiss are asking their Government "whether Canada cannot be prevented from having a merchant marine flag so closely resembling the Swiss flag," it is evident that those complaining have been misinformed as to the C.G.M.M. flag. As mentioned and illustrated in Canadian Railway and Marine World for January, Canadian Government Merchant Marine has adopted as a new house flag, a pennant, showing a red cross bordered with white, on a blue ground, with a white circle in the center of the cross, on which is a maple leaf in natural colors. The Swiss flag is of the ordinary size and type, and shows a Greek cross in white, in the center, on a red ground. There is nothing whatever in the two flags, either in shape, design or chief coloring, by which either could be mistaken for the other.

Canadian Vickers Ltd., Montreal, delivered the steel cargo steamship Canadian Commander, Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons, to the Marine Department Dec. 21, 1920, provisionally, subject to satisfactory trials on the opening of navigation next spring, after which she will be transferred to Canadian Government Merchant Marine for operation.

J. Coughlan & Sons, Vancouver, B.C., laid the keels on Jan. 6 for two steel cargo steamships for Canadian Government Merchant Marine, viz., s.s. Canadian Transporter and Canadian Freight-

er; Marine Department contracts 62 and 63; builder's yard nos. 20 and 21; each approximately 8,390 d.w. tons.

Tidewater Shipbuilders Ltd., Three Rivers, Que.—The passenger accommodation with which the steamships Canadian Fisher and Canadian Forester, built by this company, are being equipped by Halifax Shipyards Ltd., include a dining room on the upper deck, 46 x 22 ft., with one table for 10 persons, and 4 tables for 4 persons each, a total seating capacity of 30; saloon on the bridge deck 30½ x 13 ft., smoking room 18 x 9 ft., 2 suite rooms, with living room 10 x 8½ ft., bedroom 10 x 8 ft., and bathroom 7 x 7 ft.; 10 staterooms, 4 of which are 8½ x 6½ ft., 6 being 8 x 6½ ft., and 5 bathrooms, each 5½ x 6½ ft., each with w.c., and also one w.c. on the upper deck.

Prince Rupert Dry Dock & Engineering Co., Prince Rupert, B.C.—At a meeting of creditors at Prince Rupert, Jan. 6, W. E. Hodges was appointed receiver, and M. P. McCaffrey, G. W. Nickerson and D. G. Stewart, Prince Rupert; —, McIlwray, Vancouver, and —, Cantwell, the last mentioned representing eastern creditors, were appointed an inspection committee in connection with the liquidation. Mr. Justice Macdonald, sitting as a judge in bankruptcy at Vancouver, Jan. 6, declined to interfere with the selection of a receiver, on the objection of a Prince Rupert creditor, who favored the appointment of the Canadian Credit Men's Trust Association, and confirmed the appointment. The statement of affairs presented showed liabilities of approximately \$800,000.

The Marine Department has made ar-

rangements with the Wallace Shipbuilding & Dry Dock Co., North Vancouver, for the completion of the two steel cargo steamships, Marine Department's contracts 42 and 43; builder's yard nos. 1 and 2, Canadian Reeper and Canadian Thrasher, 8,100 d.w. tons each, under construction by the Prince Rupert Dry Dock & Engineering Co., when it failed. The terms under which the ships will be completed are time and material plus 8%. The Canadian Reeper is 90% completed, and the Canadian Thrasher 60%, and the work will be taken up as soon as possible, Henry A. Butt, overseer, Prince Rupert, representing the Marine Department. The boilers are being built by the Atlas Co., Vancouver, and the engines by John Inglis Co., Toronto.

Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C.—See under Prince Rupert Dry Dock & Engineering Co.

The Inner Harbor Association of Victoria, B.C., held its 14th annual meeting, Jan. 7. Included in the report of the Secretary-Treasurer, T. C. Sorby, were details of the progress made by the port, a resume of which was published in Canadian Railway and Marine World for Nov. 1920. Addresses were delivered by A. F. Mitchell, Resident Engineer, Public Works Department, and W. L. Johnston, acting District Engineer, Canadian National Ry.

Canadian Pacific Ocean Services' s.s. Melita was drydocked at Antwerp, Belgium, at the end of December, for general overhaul and cleaning. She is expected to resume her trans-Atlantic service about Feb. 3.

Sault Ste. Marie Canals Traffic.

Summary for 1920.

Articles	Canadian Canal	U.S. Canal	Total
Lumber	18,487	17,435	192,840

Dominion Marine Association's Annual Meeting.

The Dominion Marine Association's annual meeting was held at Montreal, Jan. 8. In the absence of the President, A. E. Mathews, Mathews Steamship Co., Toronto, owing to illness, H. W. Cowan, the Association's First Vice President and Director of Operation, Canada Steamship Lines, presided.

The executive committee's report for 1920, prepared by the Counsel, Francis King, M.A., and approved by the committee, was submitted in printed form, dealing with the following subjects:—Legislation, including bills introduced and those passed at the Dominion Parliament's last session, viz., Shipping Act (Steamboat Inspection); Shipping Act (Sick and Distressed Mariners); Shipping Act (Certificates of Service); Shipping Act (Pilotage); Act Respecting Canadian Wheat Board; Act Respecting

was 33,920 net registered tons, against 19,549 in 1919, a total of 189,260 tons, against 177,862 in 1919.

The executive committee also reported

able through the Upper Canada Tract Society, in recognition of the society's work and in particular of the use made of the shipping registered at that port.

That a committee consisting of H. W. Cowan, T. K. Enderby, W. J. McCas-mack, W. H. Smith and A. A. Wright had been appointed to confer with a delegation from Winnipeg Grain Exchange, Toronto Board of Trade and Montreal Corn Exchange, regarding the proposed new bill of lading.

That a resolution had been adopted urging the appointment of steamship inspectors by the Board of Inspectors at Ottawa, rather than by the Civil Service Commission, and that this question had been referred to the incoming executive committee.

That L. L. Henderson, formerly of the Montreal Transportation Co., had been

H. W. Cowan,
Director of Operation, Canada Steamship Lines,
and First Vice President, Dominion Marine Association.

A. A. Wright,
Vice President and Managing Director, Davie
Shipbuilding & Repairing Co., and Tidewater
Shipbuilders Ltd., and President, Dominion Marine
Association.

Francis King, M.A.,
Counsel, Dominion Marine Association.

Shipbuilding Industry, and bill to place ships under Dominion Board of Railway Commissioners, introduced by J. E. Armstrong, M.P. for East Lambton. The following subjects were also dealt with: International Joint Commission; grain bill of lading; shovelling charges, trimming, etc.; cargo outturns; pilotage; loadlines; docking of steamships for inspection; submarine signals; ice-breaking; seizure of Canadian ships on Lake Erie, under Volstead law; wages; shipping registers; Dominion Wreck Commissioners' enquiries; overtime customs payments in United States; Chicago Drainage Canal; Welland Ship Canal; lake levels; amalgamation with Canadian Lake Protective Association; membership of executive committee; dock, harbor, channel, and canal improvements; aids to navigation; obituary; other business, membership and tonnage. Under the heading last mentioned, it was stated that the steam tonnage enrolled in 1920 was 155,340 net registered tons, against 158,313 in 1919, and the barge or sailing tonnage

the following recommendations decided on at a meeting immediately preceding the annual meeting—

That a grant of \$200 had been made to the Sailors' Institute at Toronto, pay-

Hon. Lorne C. Webster,
President, Webster Steamship Co., Ltd., and Second
Vice President, Dominion Marine Association.

elected an honorary life member of the Association.

That the committee recommended the election of A. A. Wright as President, with a recommendation that his election be continued from year to year, so long as the Association may deem it desirable.

A resolution was adopted, commencing the Association's fund at the death of J. W. K. Martin, Superintendent, Imperial Oil Co., Toronto, who was a member of the executive committee.

The appointment of a committee to make a survey of the Association's affairs to the executive committee with the recommendation that it consist of a small number of members from the Association, who would be appointed a trustee of such of practical experience in marine life.

The following were elected members of the executive committee for one year: W. E. Ruske, H. W. Cowan and T. K. Enderby, Canada Steamship Lines, Montreal; Yvon Dupre, Steamship Navigation Line, Montreal; A. E. Mathews, Mathews Steamship Co., Toron-

to; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; G. J. Madden, Geo. Hall Coal Co. of Canada, Montreal; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; F. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Senator L. C. Webster, Webster Steamship Co., Montreal; A. A. Wright, Toronto, and L. L. Henderson, Montreal. One additional member is to be elected by the executive committee, after consultation with Imperial Oil Ltd., to fill the vacancy caused by J. Wilkie's death.

At a subsequent meeting of the new executive committee the following officers were elected:—President, A. A. Wright, Toronto; First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal; Second Vice President, Senator Lorne C. Webster, President, Webster Steamship Co., Montreal.

The executive committee appointed A. A. Wright, H. W. Cowan, T. R. Enderby, G. J. Madden and J. F. Sowards, as a committee to take up questions arising in correspondence from the Canadian Merchant Service Guild.

A special vote of thanks was passed to Francis King, M.A., the Association's Counsel, for his valuable services, and an honorarium was voted to him in addition to the amount of his salary for 1920.

The Association's annual dinner, held at the Windsor Hotel, Montreal, in the evening, was largely attended, and was most enthusiastic and successful. A. A. Wright, President, occupied the chair, and the other speakers were E. Hawken, acting Deputy Minister of Marine; W. A. Bowden, Chief Engineer, Railways and Canals Department; and Wm. Livingston, President, Lake Carriers Association, Detroit, Mich. During the evening, a demonstration of wireless telephoning was given by A. H. Morse, Managing Director, Marconi Wireless Telegraph Co. of Canada, and an excellent musical entertainment, which had been arranged by J. F. Pierce, Passenger Traffic Manager, Canada Steamship Lines, was presented.

Panama Canal Operating Results.

The sixth and best year of operation of the Panama Canal, ended June 30, 1920, shows a revenue of \$2,987,599 in excess of expenses of \$2,877,599 in maintenance, and thus reduced the deficit of the six-year period to \$2,231,091, according to the recently issued annual report of Brig.-General Harding, Governor of the canal. For the year 1919-1920, the revenues were \$8,935,879, against expenses of \$6,548,272. For dredging the expense was \$1,611,359, an excess of about \$500,000 over the previous year owing to the slides in the Gaillard cut. The report states that the motion of the slides has been much retarded and that a new period of stability is approaching. The number of ships passed was 2,745, of which 2,478 were in commercial service. Governor Harding predicts that within a reasonable period of normal world conditions the canal will earn an actual profit on its construction cost, which was \$366,650,000, this sum being exclusive of the expense for military and naval defence, which come under another department.

General Shipbuilding Matters Throughout Canada.

British Columbia.—The total deadweight tonnage of steel cargo steamships built in B.C. during 1920 is given as \$3,300, against 70,200 for 1919. Twelve steamships were launched during 1920, of which 5 were for Canadian Government Merchant Marine Ltd.

B.C. Yacht & Boat Builders Co., Victoria, B.C.—The first of the two motor boats under construction by this company for the Dominion Government's British Columbia coast patrol service was launched Jan. 4, and was to be followed by the second later in the month. These boats are 75 ft. long over all, with beam 17 ft. 8 in., and are equipped with heavy oil engines of the semi-Diesel type of 100 h.p., by Canadian Fairbanks-Morse Co. The members of the building company are returned soldiers, who have qualified in boat construction in the Department of Soldiers Civil Re-establishment vocational training branch.

Manitowoc Shipbuilding Corporation, incorporated in the State of Wisconsin, to build, repair and operate steam and other ships of every description, has been licensed to carry on such business in Ontario, provided that it shall not use any large capital in the province than \$40,000. R. B. Henderson, Toronto, is its attorney.

Midland Shipbuilding Co., Midland, Ont.—The s.s. Glenclava, the launching of which was announced in our last issue, is being built for the Great Lakes Transportation Co., Midland, to the highest classification of the British Corporation and will be fitted for lake and ocean service, with the usual pumps and auxiliaries, electric light, refrigerator and all up to date appliances for trade in the south. She is being built on the arch system, with three holds without any obstructions in either, and with a water bottom extending the full length of the ship, the last section being arranged for carrying fuel oil if required. Her dimensions are,—length over all 254 ft., breadth 42 ft., depth 16 ft. The engines, with which she is being equipped were formerly in the Great Lakes Transportation Co.'s s.s. Major, were built in Detroit, Mich., and have been rebuilt by the Great Lakes Foundry & Machine Co., Midland. They are of the triple expansion type, with cylinders 18, 30 and 50 in. diam. by 42 in. stroke, and are supplied with steam by two 180 lb. working pressure, built by John Inglis Co., Toronto. These boilers are fitted with forced draft, and are equipped with the John Reid & Co. system of oil burning, so that either coal or oil may be used as fuel.

Newfoundland Dockyards Ltd. has been incorporated in Newfoundland, with \$1,000,000 authorized capital and office at St. John's, to carry on a general dock, yard, and shipbuilding business. This company is a subsidiary of the Reid Newfoundland Co. Ltd., and has been formed to take over and operate the drydock and ship repairing business, heretofore carried on by the Reid Newfoundland Co. The dock is equipped with special facilities for building and repairing wood and steel ships, and has a complete electric and acetylene welding plant. H. D. Reid, President, is reported to have stated that no repairs were done to the dock during the war, and that a number of repairs and improvements are necessary. The incorporators of the company are H. D. Reid, R. G. Reid and C. O'N. Conroy.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—We are officially advised that it is the intention to launch the steel cargo steamship of 3,000 d.w. tons capacity, yard no. 45, under construction for private owners, details of which were given in our last issue, early in the spring.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The first of the four wood barquentines to be built at the Choblog shipyard, Victoria, under special aid granted by the Dominion Government to relieve unemployment, was launched Dec. 28, 1920, and named S. F. Talmie, the ceremony being performed by Mrs. S. F. Talmie, wife of the Dominion Minister of Agriculture. It is expected that the second ship, to be named Sir Henry Drayton, will be launched during February. Considerable progress has been made on the third ship, and the keel for the fourth is being laid in the berth formerly occupied by the first one, now launched. The new ship has a lumber loading capacity of 1,700,000 ft. b.m., being about 100,000 ft. more than similarly sized ships. The additional lumber capacity is obtained by the use of forged steel knees in the upper and lower holds, and the addition of a special loading port for extra long boards.

A Victoria press report states that all work on the three remaining ships has been suspended, and all effort concentrated on the completion of the S. F. Talmie. A number of men are said to have been let go.

Yarwood Ltd., Victoria, B.C., has received a contract for repairing the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, which was wrecked in Swanson Bay, B.C., Sept. 29, 1920. The price is \$248,000, exclusive of the renewal of furnishings, which will be done by the G.T.P.C.S. Co. She is to be completed in 115 running days.

Great Britain Leads in Shipbuilding.

Great Britain is building more commercial ships than all the rest of the world combined. On reports received up to and including Dec. 31, 1920, shipping under way in the United Kingdom amounted to 3,709,000 gross tons. In the United States it amounted to 1,210,000 tons and in all the countries of the world 7,179,000 tons. Tonnage under construction in all countries on Dec. 31, 1919, amounted to 7,861,000 tons.

On a percentage basis the report shows Great Britain's share to be 51.6% of the total, compared with 38.1% at the beginning of 1920. In the same period the share of the United States has decreased from 37.7% to 18.2%.

Tank steamships under construction at the beginning of this year amounted to 1,169,000 tons, of which 637,100 tons were in U.S. yards. Indicating an increase in internal combustion engines, ships of this type building at the end of 1920 amounted to 454,000 tons.

The United States Shipping Board's s.s. Delco, which sailed from Gothenburg, Sweden, Dec. 24, for New York, with a cargo of pulpwood, and lost her propeller, Jan. 1, was taken into St. John's, Nfld., Jan. 13, by the Danish s.s. Stoberg. The Delco was picked up Jan. 1, and towed about 1,000 miles, during very heavy gales.

Salvaging the s.s. Prince Rupert at Swanson Bay, B.C.

Canadian Railway and Marine World for January contained some interesting information about the preliminary work for salvaging this ship which was supplied by C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., at our request. Mr. Nicholson wrote us subsequently at sea on the s.s. Prince John on Dec. 21, 1920, but the letter did not arrive in time for our January issue. Following are extracts from it:—

"Since my letter to you of Dec. 11, the plans outlined therein have been, to a very large extent carried out. The second pumping operations were commenced on the night of Dec. 17, and owing to the necessary stoppages to re-arrange pumps, and also to keep the water under control, so as not to allow it to flow too freely and cause dangerous lists, was not completed before the night of Dec. 17, the ship being then well floated and practically dry. A couple of days will be occupied in getting steam on the ship, trying her boilers, testing her engines and pumps, as well as telegraph and steering gears, engine telegraphs and other arrangements necessary for taking her to Prince Rupert for her preliminary docking at that point. This will be accomplished on Dec. 22, the cargo discharged on Dec. 23, and the ship docked at Prince Rupert on Dec. 24.

"The carrying out of all the details of the plans for the floating of the ship were not completed until Dec. 14. Low water occurred at 21 o'clock on that date. The pumps were thoroughly tested and got away to a fair start about 20 o'clock and in about three hours the ship had lifted enough to clear the bottom, when she was gradually worked into the place prepared for her, in shallower water, at which the pumps were stopped and she was allowed to fill again. In this position at low water the water level would be about even with the boat deck and the cofferdam was removed down to nearly that point. It was very gratifying to watch her coming up, as she did not vary a degree from the perpendicular, notwithstanding the tremendous top weight added to her by the cofferdam. When it is remembered that there were over 125,000 ft. of timber in this cofferdam, which, with the enormous weight of the canvas, iron fastenings and other attachments necessary to its construction and strength, would approximately add nearly 200 tons additional weight to the ship and all above her shade deck, her action in coming out of the water as she did was most gratifying.

"Owing to the ship's construction and the arrangement of her cabins, the most satisfactory location of pumps was not possible; consequently a re-arrangement of them was necessary after the upper portion of the cofferdam was removed; and at this only a depth of 27 ft. could be handled successfully, as the after pumps had to be located on top of all her superstructures. This would not permit of the water being pumped as low as the main deck. Consequently, when this point was reached, and held by the pumps already installed, additional duplex 6 in. under water pumps were rigged on the main deck, the discharge of which was conducted to the no. 2 hold, where it could be reached by one of the large centrifugal pumps, and thrown overboard.

"While no new principles have been called into play in connection with this salvage operation, still the peculiar cir-

cumstances attending it have made the carrying out of the work most difficult and it ranks as one of the notable salvage feats on this coast. The Pacific Salvage Co. of Victoria, B.C., which undertook the work, is excellently equipped for such service and perhaps some brief outline of its plant would be of interest as showing the facilities available on the Pacific coast for salvage purposes. The company's chief salvage unit is the s.s. Algerine, formerly a naval gunboat. She is 192 ft. long and 32 ft. beam; twin screw, triple expansion engines of 1,400 h.p. On acquiring her from the Naval authorities, she was completely overhauled and re-arranged, making her specially adaptable for the purpose intended. She, as well as the company's other ships, are under a permanent annual retainer from Lloyd's, the company undertaking, in consideration of this, to keep the plant under steam and in readiness at all times to move to the scene of a wreck on two hours notice. The Algerine has her own air compressor plant, capable of handling eight submarine divers simultaneously. Her regular equipment of pumps is five 10 in. centrifugal pumps, four steam and one gasoline driven; three 6 in. duplex and a large number of smaller sizes, the total pumping capacity being 4,000 tons an hour.

"A machine shop fitted up on board the Algerine contains a 16 ft. lathe, a drill press, pipe and bolt threader, and a very large assortment of air tools. Her lifting or handling outfit consists of 7-ton derricks and one 30-ton. She is fitted with two powerful steam winches, two steam capstans and steering gear. She carries an unusual supply of ground anchors, her anchors running from 1,000 lb. to seven tons, with a large equipment of chain cable and wire hawsers up to 2 in. in diameter. There is a 2½ k.w. wireless set and an auxiliary transportable wireless set for installing on wrecks during salvage operations; lighted throughout with electricity and in addition she is fitted with a portable electric set for installing temporarily in wrecks, for carrying out night operations. She also has two portable steam boilers, as well as an auxiliary air compressor set to be used on wrecks if necessary, powerful gasoline launch, a diver scow, work boats and dories in sufficient number. The regular crew for an ordinary expedition consists of 60 men; three deck officers, five engineers and artificers, three carpenters, one blacksmith, one painter, one mechanical superintendent, two submarine divers, a wireless operator and a chief steward, the balance of the crew being made up of seamen, stevedores, firemen and stewards.

"In addition to the Algerine, the company has two auxiliary ships, one British, the Alaskan, and one United States, the Sargat Sea. Each of these carries four 10 in. centrifugal pumps, and two 6 in. duplex, as regular equipment. Besides this, at its base in Victoria, the company has a large number of pumps of all sizes and kinds, which are always ready and can be brought into use as the occasion calls for."

Mr. Nicholson furnished us with some further information on Jan. 11, which is summarized as follows: The Pacific Salvage Co. used only one of its ships, the Algerine, in the salvage operations, its Mechanical Superintendent, Wm. Allan, being in charge of the work; Capt.

Hewison in charge of the ship; Jno. McHardy being master diver, and Capt. W. H. Logan, the London Salvage Association's representative, being in general charge.

The damage to the hull is not as extensive as anticipated. It will require a new stem bar, and about 10 new plates, and others will have to be re-conditioned, and there will be the usual work on frames, stringers, tank margin plates, etc. The decking and interior woodwork were very extensively damaged and will practically require to be renewed, and in addition the furnishings were totally destroyed. Tenders for repairs, other than the interior furnishings, were asked for, to be submitted at Prince Rupert on Jan. 5, and the submitted at Yarrow was awarded to Yarrow's Limited, Esquimalt, the lowest tenderer, at \$248,000, the work to be done in 115 running days. The furnishings will be taken care of by the Grand Trunk Pacific Coast Steamship Co.'s Stores Department, under the supervision of the London Salvage Association's representative.

Press reports state that the other tenders received were as follows:—B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, \$379,000; J. Coughlan & Sons Ltd., Vancouver, \$264,000; Wallace Shipbuilding & Dry Dock Co., North Vancouver, \$238,000.

Another press report states that the s.s. Prince Rupert sailed from Prince Rupert on Jan. 5, and arrived at Esquimalt Jan. 9.

United States Shipping and Shipbuilding Notes.

Shipbuilding in the United States is said to have advanced since 1914 from the 58th industry to the 15th.

The U.S. Bureau of Navigation reports 86 sailing, steam, gas and unrigged ships of 176,781 gross tons built in the U.S. and officially numbered during Dec. 1920.

The U.S. Commerce Department announces that the output of U.S. shipyards during 1920 comprised 1,783 ships of 2,860,725 gross tons, officially numbered by Bureau of Navigation.

The Panama Canal office announces that the tolls collected during Dec. 1920 were \$1,007,875.07. With one exception this is the highest amount collected in a month since the opening of the canal.

U.S. shipyards reports to the Bureau of Navigation show that on Dec. 1, 1920, private U.S. shipyards were building, or were under contract to build, for private ship owners, 293 steel ships of 1,193,946 gross tons, against 134 steel ships of 1,206,486 gross tons on Nov. 1, 1920.

The U.S. Shipping Board's Chairman has issued a statement to all operators of Shipping Board ships, which says in part: "As the representative of the largest ship owning corporation in the world, the Chairman of the Shipping Board feels that it is timely to invite attention of owners and operators to the fact that the largest factors in ship expense under conditions which prevail at this time are repairs and fuel. While the policy of every prudent owner and operator is rightfully toward reduction in ship expense, the Chairman of the Board earnestly cautions all ship owners and operators not to be misled at this time into employment of foreigners merely because it may be possible to obtain them at a lower schedule of pay."

Atlantic and Pacific Ocean.

Canada Steamship Lines' s.s. Korona collided with a car float in New York harbor, Jan. 5, and had a large hole cut in her hull, about 4 ft. above the water line.

The Halifax, N.S., Board of Trade quotes the gross tonnage of shipping entered at the custom house there, during 1920, as 8,955,863, compared with 9,111,942 for 1919.

Canadian Pacific Ocean Services Ltd., with, on the resumption of St. Lawrence navigation, resume the direct freight steamship service to Norwegian ports, in conjunction with the Norwegian-American Line.

The Nippon Yusen Kaisha, which it is reported, shortly include a regular call for its passengers and freight steamships at Vancouver, B.C., instead of, as at present, calling at Victoria, B.C. It is announced that B. W. Greer & Son have been appointed agents for the company at Vancouver.

The Ormes Steamship Co., of which McLean Kennedy Ltd., Montreal, acts as agent, has placed the s.s. Ormes on the Canadian register. She was built at Brooklyn, N.Y., in 1920, and is equipped for wireless telegraphy, and screw driven by engine of 151 h.p. Her dimensions are,—length 227.6 ft., breadth 33.7 ft., depth 13.8 ft.; tonnage, 1,304 gross, 796 net.

Furness Withy & Co. have transferred the steamships Fort Hamilton and Fort Victoria to the Canadian register. The first named ship was built at Sunderland, Eng., in 1904, and is screw driven by engine of 1,004 h.p. Her dimensions are,—length 425 ft., breadth 50 ft., depth 24.9 ft.; tonnage, 5,530 gross, 2,889 net. The latter ship was built at Dalnair, Scotland, in 1913, and is screw driven by engine of 626 h.p. Her dimensions are,—length 417.7 ft., breadth 56.7 ft., depth 25.1 ft.; tonnage, 7,784 gross, 4,531 net. Both are equipped with wireless telegraphy.

Canadian Pacific Ocean Services Ltd. is reported to have completed arrangements with the Italian General Navigation Co., by which a joint direct passenger and freight steamship service will be established between Montreal or St. John, N.B., and Geneva and Naples, the latter mentioned port being the terminus.

The Italian company, it is stated, is to place one of its best passenger steamships in the service, and the C.P.O.S. will utilize the s.s. Koenig Friedrich August, a former German steamship, which it bought, and which is to be renamed Montreal. This latter steamship was built at Hamburg in 1906 and is 9,462 net tons. Her dimensions are,—length 475.7 ft., breadth 55.3 ft., depth 30.9 ft.

Robert Reford & Co., Montreal, as agents, Cunard Line, are reported to have stated recently that the Cunard service between Great Britain and Halifax, N.S., would be maintained through the winter and spring, but that nothing definite had been settled as to the summer service on the St. Lawrence. The Anchor-Donaldson Line steamships will also make calls at Halifax, eastbound, for the remainder of the winter, their run being from Portland, Me., to Halifax, thence to Liverpool and on to Glasgow, instead of from Portland to Glasgow direct as hitherto. Westbound the route will be continued as at present, viz., Glasgow, Halifax and Portland.

The Cunard Line's s.s. Samaria, the launching of which, at Birkenhead, Eng., Nov. 27, 1920, was mentioned in our last issue, has a gross tonnage of 31,000, with 27,000 tons displacement. Her dimensions are,—length 625 ft., breadth 74 ft., draft 30 ft. She is said to be the largest ship ever built on the Mersey. She is equipped with double reduction geared turbine of 12,500 i.h.p., and the boilers are equipped for oil fuel. The speed will be approximately 16 knots, and there will be accommodation for 336 first class, 340 second class and 1,924 third class passengers, as well as for 315 officers and crew. Included in the equipment will be wireless telegraphy, gyroscopic compass and submarine signalling apparatus.

The White Star-Dominion Lines' service between New York, Halifax, Hamburg and Dantzig, which it had been announced would be commenced in Dec. 1920, with the sailing of the s.s. Montgolfier from New York, was inaugurated Jan. 20, with the s.s. Gothland. She will make sailings every six weeks, and special efforts are being made to handle the European emigrant traffic, which, prior to the war, and owing to Continental restrictions, was held by the Germans. The creation of the Dantzig corridor eliminates the handling of passports by the Germans, and those taking that route. Under the old regulations, persons going overseas were not allowed to travel on German railways to a seaport, unless they had transportation by a German steamship.

Maritime Provinces and Newfoundland.

The reinforced concrete steamship Permanencia, owned by W. N. McDonald, Sydney, N.S., and built at North Sydney recently, is reported to have developed a speed of over 7 knots an hour on her trial trips. Subsequently she left for Bay of Islands, Nfld., where she loaded a cargo of dried fish for Boston, Mass. It is stated that she will be operated during the winter between U.S. ports.

Canada Steamship Lines agents, Canadian General Transatlantic Co., opened its Canada-Newfoundland steamship service Jan. 25 with the sailing of the s.s. Manola from St. John, N.B. The next sailing will be on Feb. 15, and thereafter the service will be fortnightly. It is proposed to put three steamships on the route during the winter, and additional ones should traffic warrant it. The rates are in line with those of other companies operating on the route.

The Boston & Yarmouth Steamship Co.'s returns for 1920 are said to show a decrease of about 1,800 tons in freight, compared with 1919, being chiefly due to a falling off in lobster shipments, occasioned by heavy weather. Outward traffic was about 4,431 tons less than in 1919, the inward traffic from Boston showing an increase of about 2,546 tons. Passenger traffic was heavy, the number of persons handled being 61,531, against 51,991 in 1919.

Province of Quebec.

The water was drained from the portion of the Lachine Canal below Cote St. Paul locks, Jan. 9, so that some repairs might be undertaken. It was anticipated that the water would be returned to the canal by the end of the month. The reach above St. Paul locks is not to be emptied.

Ontario and the Great Lakes.

The Dominion Public Works Department's steam tug Sir John, for which tenders were invited recently, has been sold to H. J. Dixon, Toronto, who is associated with J. E. Russell, contractor, in the Toronto Dry Dock Co. Ltd. The Sir John was built at Sorel, Que., in 1902, and is screw driven by engine of 8 h.p. Her dimensions are,—length 81.2 ft., breadth 17.3 ft., depth 8 ft.; tonnage, 94 gross, 41 net.

The Keystone Transportation Co.'s steamships Keyport and Keywest, which are berthed at the Grand Trunk Dock, Kingston, for the winter, are having new smoke stacks fitted by Collingwood Shipbuilding Co., which is also carrying out, at its Kingston yards, repairs to the s.s. Keynor, consisting of a new rudder shoe, and some plates in the bows. The s.s. Keyvive, which returned to Montreal about the middle of December, and laid up for the winter, was engaged during 1920 in the West Indian trade.

The s.s. City of New York, owned formerly by Lake Shore Sand & Gravel Co., Toronto, is reported to have been sold to Capt. H. F. Randall, Kingston, Ont., for operation in the coal trade between Oswego, N.Y., and Montreal. The price stated to have been paid is about \$12,000. She was built at Cleveland, Ohio, in 1863, rebuilt there in 1889, and has a wood hull with the following dimensions; length 96 ft. 136 ft., breadth 27 1/2 ft., depth 11 1/2 ft.; tonnage, 292 gross, 199 net. She is equipped with a high pressure engine, and has a 36 in. diameter under 26 in. diar. by 36 in. stroke, 600 i.h.p. at 85 r.p.m., and supplied with steam by a firebox boiler 10 ft. diar. by 14 ft. long, at 80 lb. pressure.

British Columbia and Pacific Coast.

The Pacific Salvage Co.'s s.s. Algerine is being converted to an oil burner by Yarrows Ltd., Victoria, B.C. The work is being carried out in such a manner that the ship while in the builders' hands will be ready to put to sea at any time on short notice.

The Kingsley Navigation Co.'s s.s. Queen City, formerly a sailing ship, has had her machinery removed, and has been converted and re-registered as a barge. She was built at Vancouver in 1894, and was screw driven by engine of 25 h.p. Her present dimensions are,—length 116 ft., breadth 27 ft., depth 17.3 ft.; tonnage, 376 gross, 366 net.

The s.s. Etta White, owned formerly by R. J. Armstrong and others, Vancouver, B.C., and which was burnt at Fraser River in Oct. 1920, has been removed from the Canadian register. She was built at Freeport, Wash., in 1871, and was screw driven by engine of 120 h.p. Her dimensions were,—length 93 ft., breadth 19.4 ft., depth 9 ft.; tonnage, 111 gross, 76 net.

J. Coughlan & Sons Ltd. is reported to have awarded a contract to P. E. Ritchie, Vancouver, for diamond drilling on the site of the company's dry dock, at Vancouver, which is being built under the Dry Dock Subsidies Act. This work is expected to be completed during February or March, and while it is proceeding, offices and shops will be built at the foot of Woodland Drive.

The Hudson's Bay Co. is considering the making of arrangements in Vancouver

for the building of a stern wheel steamship for operation on the Mackenzie and Peace Rivers. This ship, it is said, will be dispatched to northern ports in knock-down shape and return in the north. The company's s.s. *Port Simpson*, which for some years was operated on the Skeena River, is being dismantled and is, it is said, to be shipped to the Mackenzie River for operation there in the spring.

The British Columbia Cement Co. is reported to have bought the motor ship *Teo*, a wooden ship built in the U.S. in 1918, and which is 125 ft. long, and equipped with Bolinder engines; also the motor schooner *Laurel Whaler*, built by Cameron-Genoa Mills Shipbuilders, Victoria, B.C., in 1917, for Canada West Coast Navigation Co. The dimensions of the latter ship are, length 240.5 ft., breadth 43.9 ft., depth 19 ft.; tonnage, 1,357 gross, 1,049 net. She is equipped with internal combustion engine of 36 h.p., driving a screw. The first named

will be used in transporting cement from the company's plant at Bamforth and Tod Inlet, and the latter as a depot supply ship for Saanich Inlet.

The White Pass & Yukon Ry.'s s.s. *Selkirk*, which was wrecked on the Yukon River on her last trip down, prior to the close of navigation in 1920, is lying in about 18 in. of water, with a large hole 65 ft. long cut in her hull. It is not considered worth while to salvage the hull, but the boiler and engines will probably be removed in the spring. The removal of the machinery from the hull will be an interesting problem, it being stated that a donkey engine will be hauled to the scene of the wreck and a cable about 1,500 ft. long attached to the boilers and connected to a capstan on shore, by means of which the machinery will be lifted from the ship and skidded over the ice to the shore, and as it is stated there are only about six horses in the country the work will all have to be done by steam.

Mainly About Marine People.

G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, Ltd., and Mrs. Bosworth, will sail from Vancouver, B. C., on Feb. 10 on the *Empress of Asia* for Japan and China.

Hon. C. C. Ballantyne, Minister of Naval Service, and of Marine and Fisheries, gave a dinner at the Ottawa Country Club recently for Capt. Adams, C.B.E., Commanding Officer of the Canadian Navy. Among others present were Hon. J. D. Reid, Minister of Railways and Canals; Admiral Sir Charles Kingsmill; Capt. Hosi, C.B.E.; Commander R. M. T. Stephens, R.N.; and G. J. Desbarats, C.M.G., Deputy Minister of Naval Service.

Mrs. Chas. Cameron, who died at Collingwood, Ont., Jan. 21, from blood poisoning, was the widow of Chas. Cameron, at one time a director of the Northern Navigation Co. of Ontario.

E. L. Cousins, Chief Engineer and General Manager, Toronto Harbor Commission, left Toronto, Jan. 3, with one of the Commissioners, R. Home Smith, for Mexico, for his holidays, which he takes in the winter. He is expected to return to Toronto early in February.

Harold E. Kane, whose appointment as Port Agent, Canadian Government Merchant Marine Ltd., St. John, N.B., was announced in our last issue, was born there May 20, 1895, and entered transportation service in Mar. 1912, since when he has been, to Sept. 1912, in Resident Engineer's office, C.P.R., Woodstock, N.B.; Sept. 1912 to June 1915, in Bay of Fundy Steamship Service, C.P.R., St. John; June 1915 to Oct. 1918, in Eastern Steamship Lines service, St. John; Oct. 1918 to Mar. 1920, in Travelers' Freight Tariff Inspector, C.P.R., St. John, and Montreal; May to Oct. 1920, chief clerk, Canadian Government Merchant Marine, St. John, N.B., and Oct. 1 to Dec. 1, 1920, acting Port Agent, Canadian Government Merchant Marine, St. John.

Francis King, M.A., Counsel, Dominion Marine Association, was born at Kingston, Ont., in 1870. He is an M.A. of Queen's University, Kingston, 1890, was called to the bar in 1892, and in 1903 formed a partnership with Geo. H. Smythe, B.A., son of the late E. H. Smythe, K.C., LL.D., the firm name King & Smythe. He assisted in the formation of the Dominion Marine Association in

1903, and has been connected with it since; first as Secretary-Treasurer, and since as Counsel. He has been a member of council of Queen's University since about 1900, and is now Counsel for the university. He is an Anglican, and has been the Honorary Law Secretary of Ontario Diocese for the past 11 years. He is a member of council of Ontario Bar Association, and chairman of its committee on legal ethics, a member of board of commissioners (three in number) appointed four years ago by the Ontario Government to act with commissioners from the other provinces in promoting uniformity of legislation throughout Canada, was President, Kingston Board of Trade, in 1917 and 1918, and President, Frontenac Club, Kingston, 1919-1920.

Capt. McGregor Lambert, for 27 years in charge of the Chantry Island lighthouse, Lake Huron, died at Southampton, Ont., Jan. 6. He succeeded his father, who had held the position for 22 years. During the time he was in charge period of the lighthouse, he personally saved 20 lives from drowning, and in 1892 saved the entire crew of the schooner *Nettie Woodward*, bringing them ashore in a 12 ft. boat. He held the Imperial Service Order, the Royal Humane Society's medal, and was presented with a gold watch by the Dominion Government. He retired from active service in 1907.

Wm. Livingston, Detroit, Mich., has been re-elected President, Lake Carriers Association.

John J. Main, who died at Toronto, Jan. 14, aged 70, was, until a few years ago, Vice President and General Manager, Polson Iron Works Ltd., which failed some time ago, and was the inventor of the Heine boiler.

A. E. Mathews, Managing Director, Matthews Steamship Co., Toronto, who was laid up with ptomaine poisoning, early in January, left Toronto Jan. 16, with Mrs. Mathews, for California, expecting to return about the middle of March.

Capt. Jas. McIlhench, who is reported to have been appointed assistant port warden, Vancouver, B.C., came to Canada, on behalf of McClay & McIntyre, Glasgow and Liverpool, about the end of the war, to take the s.s. *War Company*, built by J. Coughlan & Sons, to

England. He returned recently as chief officer of the s.s. *Margaret Coughlan*, built at the same yards for Western Canada Steamships Ltd. During the war he was on ships operated by McClay & McIntyre, and prior to the war was in Anchor Line service, out of Glasgow. J. O. Kennedy, C.E., who died at Owen Sound, Ont., Jan. 2, from heart failure, was a son of the late William Kennedy, of Owen Sound, and a brother of Sir John Kennedy, C.E., of Montreal. He was associated with The William Kennedy & Sons Ltd., marine engineers, etc., Owen Sound.

Senator Lorne Campbell Webster, who has been elected Second Vice President, Dominion Marine Association, was born at Quebec, Que., Sept. 30, 1871, and educated at Quebec High School, where he obtained the Lieutenant Governor's medal in 1895, and the Governor General's medal in 1896; and at Montmagny College. He has been associated with the coal business at Quebec, and has commercial life, acting for the Dominion Coal Co. and the Nova Scotia Steel & Coal Co. He is President, Quebec Ry., Light, Heat & Power Co., Quebec, Montmorency & Charlevoix Ry., Lottiborne & Megantic Ry., Webster Steamship Co., Canadian Import Co., St. Lawrence Stevedoring Co., Canadian Salvage Association, Holt Renfrew & Co., Canadian Fur Auction Sales Co.; Vice President, Goodwins Ltd., Travelers Life Assurance Co., Dominion Flour Mills, International Trading Corporation, Hudsons Bay Knitting Co., and director, Montreal Tramways Co., Nova Scotia Steel & Coal Co., St. Lawrence Sugar Refineries, Dominion Manufacturers Ltd., and Bakers Trust Co. He is a member of the council of the Quebec Board of Trade, and is associated with the Canadian Order of Foresters, Canadian Order of Oddfellows, is President, St. Andrews Society and a former President of the Y.M.C.A. He is a member of Garrison Club, Quebec, Canada and Montreal Clubs, Montreal, Rideau Club, Ottawa, and National Club, Toronto, and was appointed a senator in January 1920.

John Wilkie, Marine Superintendent, Imperial Oil Ltd., Toronto, was killed in an explosion on one of the Standard Oil Co.'s tank steamships, at Barranquilla, Colombia, South America, Dec. 19, 1920, aged 42. The funeral took place from his home at Toronto, Jan. 3. He had been in the company's service for several years, and was a member of the Dominion Marine Association's executive committee.

Connection Between the Great Lakes and the Mississippi.

A navigable connection between the Great Lakes and the Mississippi River, which has been the subject of several projects and considerable expenditure during recent years, will apparently be becoming an accomplished fact within a few years, as the U.S. Government has approved the plans of the State of Illinois for an 8 ft. waterway and the State has awarded the contract for the work and is inviting bids on the other work. The state project includes sand excavation and river improvement from Lockport, at the end of the Chicago drainage canal, to LaSalle on the Illinois River, beyond which point there is an 8 ft. channel in the river. The distance is about 40 miles, with a difference in water elevation of about 123 ft., this difference being provided for by 5 locks of 41 to 46 ft. lift.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Princess Royal-Marmion-Louisiana Collision.

Held at Vancouver, B.C., Dec. 1, 2 and 3, 1920, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commander F. W. Evans, R.N. R., and Capt. A. P. W. Williamson, as nautical assessors, into the collision of the C.P.R. s.s. Princess Royal with the British s.s. Marmion, and the hulk Louisiana, in the Granville channel, Nov. 6, 1920. The court having considered the evidence, which was very conflicting, found that the blame for the collision must be imputed to Capt. Thomas Rippon, master of the Princess Royal, for failing to comply with the regulations as laid down by article 16 of the International Rules of the Road. It cannot be disputed that he should certainly have stopped his engines, immediately he became aware, by seeing a whistle ahead, that another ship was in the vicinity, and there can be little doubt that by failing to stop his engines, the ship was going ahead at such a speed, in the dense fog then prevailing, that on sighting the Marmion, which had the Louisiana in tow, she had no time to perform the proper evolutions to avoid a collision. Though attributing the sole blame to Capt. Rippon, the court was not prepared to say that his actions were such as to justify anything more severe than a warning to be more careful and prudent in future. Apart from his infringement of article 16, and his non-compliance with article 28, when his engines were moving full speed astern, which last omission, in the court's opinion did not contribute to the collision, he appeared to have taken every other seamanlike precaution, after encountering the fog. The court therefore returned his certificate of competency as master (coasting). No possible blame for the collision could be attached to the master of the Marmion, or to the master of the Louisiana. The former appeared to the court to have taken every precaution, and to have handled his ship and tow with considerable skill and care. In view of the fact that the Marmion, a ship of no great power, was towing a 1,300 ton hulk, against a flood tide, estimated to be running at about two knots, it can hardly be argued other than that she was making very little way, more especially after she had slowed down, a short time previous to the collision, and at the actual impact, she was barely stemming the adverse tide.

Charmar-Princess Royal Collision.

Held at Victoria, B.C., Dec. 9 and 10, 1920, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commander F. W. Evans, R.N. R., and Commander G. E. Bridge, R.N. R., as nautical assessors, into the collision between the C.P.R. steamships Charmar and Princess Royal, near the entrance to Victoria harbor, Oct. 18, 1920. The court found that the whole blame for the casualty rests with Capt. Charles Campbell, master of the s.s. Charmar, for the most reckless and imprudent manner in which he handled and navigated the ship under his charge. Apart from the fact that articles 23, 24 and 28 were most grossly violated, and might never have existed, for all the attention that was paid to them, it is inconceiv-

able to the court, that the master of any ship, going full speed, could so possibly place his ship in such a position, that, by his own oral and written evidence, he was left with no alternative, than to collide with the s.s. Princess Royal, or run on to the breakwater at the entrance to the harbor. The court therefore suspended his certificate of competency, no. 2,196, for 12 months, to expire Dec. 10, 1921, and also ordered him to pay the costs of the investigation. No possible blame to the master's opinion can be attributed to the master of the s.s. Princess Royal, Capt. P. J. Hickey, or to any of the crew of that ship, the master appearing to have handled his ship with considerable skill and nerve, under somewhat trying circumstances, and consequently he was returned his certificate of competency.

Loss of s.s. Romsdalsfjord.

Held at Halifax, N.S., Dec. 14, 1920, by Commander H. St. G. Lindsay, commissioner, assisted by Capts. Neil Hall and J. D. MacKenzie as nautical assessors, into the loss of the Norse Amerika Line's s.s. Romsdalsfjord on Sambro Ledges, off Halifax, Dec. 10, 1920. She sailed from Narvik, Norway, with iron ore, Nov. 17, for Baltimore, Md., with a total crew of 39, and after a stormy passage was obliged to make Halifax for coal. The Egg Island light was sighted Dec. 9, and cross bearings of that and the Jeddore light were taken, giving the ship's position as 9½ miles from Egg Island, and 10 miles from Jeddore. On Dec. 10, cross bearings of Devil's Island and Chebucto Head lights were taken and the ship was steered direct for the Chebucto light, and the patent log was hauled in, shortly after the signal "stand by" was rung to the engine room, and about half an hour after, the ship struck on Sambro Ledges, about a mile east of Sambro Island, becoming a total loss. The weather just prior to the striking appears to have been fine and clear, with the wind freshening from the east, and all leading lights being visible. It appeared to the court, from the evidence, to be inexplicable that, with all the leading lights plainly visible, and with the positions given by two cross bearings, the ship was deliberately allowed to run at practically full speed on the ledges, without any apparent display of ordinary care or judgment on the part of those on board. The master's statement of his mistaking Sambro light for that on Chebucto Head cannot be justified, the former showing a flash every 5 sec. and the latter one showing four flashes every 30 sec., and these lights were plainly visible for over an hour before the ship struck, but apparently no comparison of the two was made. Taking into consideration the cross bearings of Devil's Island and Chebucto Head, the ship's position as shown on the chart at that time gives the course and distance to Chebucto Head as S 78 W (true), distance 7½ miles, therefore allowing a speed of 10 knots, which the court considered quite possible, owing to the set to westward usually found with easterly winds off the harbor, in 45 minutes the ship would have made the distance, but it was only 25 minutes later that the casualty took place, and no reduction of speed was made. The court was therefore unanimous in its decision that the master, Capt. Harry Pay, was guilty of culpable negligence in not taking the customary

and proper precautions when approaching land at night, in so far that he did not "completely distinguish, by timing, the difference between the two principal lights, and did not steer a safe and proper course, thereby causing the loss of the ship, and it therefore recommended that a copy of the evidence and the finding be forwarded to the Norwegian Government for its information and action. The court also stated that the fact that the Sambro lightship was not on her station, had no particular bearing on the case.

Stranding of s.s. South American.

Held at Halifax, N.S., Jan. 6, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. Neil Hall and C. A. Hunter, as nautical assessors, into the stranding of the South American Steamship Co.'s s.s. South American, near Little Cape, Gulf of St. Lawrence, Nov. 18, 1920. The s.s. South American is a new steel built single screw vessel, owned in Toronto, carrying a crew of 28, including 3 deck officers,—the third officer not having a certificate,—and four engineers, two having certificates. She has triple expansion engines, with a speed of 11½ knots. The master, first and second officers were alone available as witnesses, others whose evidence would be material, such as the third officer, who was on watch previous to and at time of stranding, wheelmen and lookout men, having been discharged. The evidence shows that the master accepted the conditions and did not demur against the master's opinion of non-certificated third officer, therefore accepting all responsibility which should, in part, be shouldered by the officer in whose watch the casualty occurred. The master retired to a room connected with the chart room, at about 6.35 p.m., after having stopped his ship and given instructions to the chief officer to be called in the event of anything being seen, or an important change of wind. A snowstorm had been raging from 4 p.m. on Nov. 17. A bearing had been taken off Chlorydormes and afterwards Fame Point, and the sound of the latter fog signal was heard. Then the ship was hauled more to the eastward, and stopped, it being estimated that she was 8 miles off, and that the usual current would counter the effect of the leeway and the ship keep her position. It is noted that the instructions given were verbal, no night order book being kept. The master retired, not with the intention of sleeping, but to rest, being fully dressed. He fell asleep and was not awakened till the ship struck, 5½ hours later. The first officer said the wind had hauled from the eastward but two points, and that this change was not sufficiently important to notify the master when he left the bridge at the relief of watches. The second officer had only got on the bridge, and noticing a light on the shore, asked the third officer if he had seen it. The third officer had apparently just left the wheelhouse at the moment of this observation of the light. The second officer rang the telegraph full speed astern, the ship grounding at the same time, her port side abaft amidships first, heading west. The master then came up and ordered boats ready, whilst soundings were being taken.

In the face of the above statements the court was of opinion that the master, Capt. William Fraser, was remiss

in not giving more specific instructions to be told when Chief Officer Sutherland was relieved, since he could not, nor did not place any reliance or trust on the third officer's ability as a navigator. He elected to stop his ship, and leave her to the mercy of winds and waves, a mode of procedure the court did not appreciate. The reason given for the stopping of the ship is not considered a serious excuse, because the fact that a sister ship had lost the blades of her propeller was not a reason for holding this ship on her voyage. Since it was ascertained, more by approximation, that the ship was 8 miles off, had she been kept at slow, her propeller would not have been endangered, and the officer would have been in a position to better watch and calculate her progress. With a cast of the lead, even in 150 fathoms, it would have been demonstrated whether their calculations as to distance from the land were accurate. It is apparent, though direct evidence is lacking, that the wind must have veered during the third officer's watch, and he failed to convey the information to the master. The court therefore found that the master, Capt. William Fraser, certificate no. 3909, failed to give such specific, detailed, peremptory instructions as the occasion demanded, before he went below, as to taking a few casts of the lead, and to being called at the least change. The slightest change at that time, when the barometer was falling rapidly, was of great conse-

quence. The court therefore, taking into consideration his straightforward statement, and good work in taking his ship out of such a dangerous situation, did not deal with his certificate, but reprimanded him severely, and advised him to make it a fast rule for the future to keep a night order book and signify his wishes in writing when his intention is to retire to his room. The first and second officers were exonerated from all blame. In view of the fact that the third officer was not present to give his evidence the court abstained from commenting on his conduct.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships, and the ports at which they are berthed for the winter, of which Canadian Railway and Marine World has been advised, in addition to those published in the January issue:

Algonia Central Steamship Co., Sault Ste. Marie, Ont.—Agawa, Home Smith, J. Frater Taylor, W. C. Franz, at Collingwood, Ont.

Canada Steamship Lines Ltd., Montreal.—Cape Diamond, Cape Eternity, Cape St. Francis, Cape Trinity, Louis Philippe, Montreal, Quebec, Rapids King, Rapids Prince, Rapids Queen, Saguenay, Tadoussac, Three Rivers, Turbina, at Sorel, Que.; Longueuil, Montreal; Am-

erica, Ramona, Kierston, Ont., Cayuga, Chippewa, Corona, Kingston, Manawaka, Modjeska, Toronto, at Toronto; White Star, at Hamilton, Ont.

Canadian Towing & Wrecking Co., Port Arthur, Ont.—A. F. Bowman, Gagebic, James Whalen, at Sarnia, Ont., and barges Coteau, Empire and Mary E. M. Lachlar, at Port Arthur, Ont.

Donnelly Salvage & Wrecking Co., Kingston, Ont.—Carwall, Francesa, Harriet D., William Johnston, at Kingston.

Keystone Transportation Co., Montreal.—Keybell, Koyewski, Koyewski, Grand Trunk Dock at Kingston, Ont.; Koyewski docked for repairs, by Collingwood Shipbuilding Co., Kingston, Ont.; Koyewski, at Montreal.

Esquimalt Drydock.—Canadian Railway and Marine World for January gave a press report stating that the Dominion Public Works Department had accepted the tender of P. Lyall & Sons Construction Co., Montreal, for building a drydock at Skippers Cove, Esquimalt, B.C., at a short distance from the present government drydock there. We have since received official confirmation of this and have been advised that the approximate amount of the contract is \$4,220,000, which is about \$200,000 less than the Department's estimate. H. M. Scott left Montreal early in January to take charge of the work for the contractors.

Ships Registered in Canada During October and November, 1920.

In compiling the following lists of ships registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

(1) Recovered wreck. (2) Formerly a steamer.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

British Columbia, Brown Passage.—A new light and fog alarm will be established about Jan. 1, on the northwesterly rock of the Triple Island group, with a double flashing white light of the third order, showing a double flash every 8 sec.; the diaphone fog alarm giving one blast of 4 sec. duration every 30 sec.

Arrow Lakes.—Buoys have been established, as follows:—At Cottonwood Point, on east side of lower end of dredged cut in the narrows, between Lower Arrow Lake and Upper Arrow Lake, white wooden spar buoy with red horizontal band; at Point No Point, on west side of upper end of dredged cut in narrows between Lower Arrow Lake and Upper Arrow Lake, white wooden spar buoy with black horizontal band.

Burrard Inlet.—The positions of the buoys in Vancouver harbor entrance are as follows:—Red spar buoy, 2,230 ft. 304 deg.; and black spar buoy, 1,760 ft. 312 deg., from Brockton Point lighthouse.

Chatham Sound.—A new edition of chart 303, Tree Bluff to Kinahan Islands, on the eastern side of Chatham Sound, corrected to May 1920, has been published by the Hydrographic Survey, Naval Service Department. Price 15c.

Quatsino Sound.—An uncharted rock, with a least ascertained depth of about 13 fathoms, but it is considered probable that there is less water, is situated about half a mile southwestward from the entrance to Clesklagh River, in the west arm of Quatsino Sound, Vancouver Island.

Vancouver Island.—The wreck of the floating dry dock, mentioned in a previous notice, has been moved, and is lying off the ruins of what is now of Dunn's Nook, and 1,250 ft. 185 deg. from the south point of Macarthy Island, Esquimalt harbor.

Vancouver Island.—The light on Lewis Point, on the west side of entrance to Beaver Cove, Broughton Strait, consists of a pole with white circular slatwork daymark attached, surmounted by a lantern at an elevation of 25 ft., and visible over an arc of 114 deg. from 184 deg. through W to 298 deg.

New Brunswick, Kennebecasis River. The lights on the west side of the public wharf at Clifton and on the wharf at Reid Point, were permanently discontinued at the close of navigation, 1920.

Newfoundland.—A diaphone fog alarm, operated by air compressed by an oil engine, giving 2 blasts every 92 sec., in a white one story building, with flat roof, connected to the lighthouse on the southwest side by a covered way, has been established on the southeast point of Allan Island, Lamalin light station.

Nova Scotia, Bay of Fundy.—The Lurcher Shoal lightship has been replaced on her station, after being under repair.

Bay of Fundy.—The light on the shore of Minas Basin, at Salter Head, was permanently discontinued at the close of navigation, 1920.

Cape Breton Island.—On the opening of navigation, the fixed red light on Fraser Point, on the north side of the channel, at Whyecomagh, Great Bras d'Or Lake, will be replaced by a fixed white light.

Halifax Harbor.—Lightship 15 will be replaced on her station, on Sambro outer

bank, at the entrance to the harbor, 6 1/5 miles from Sambro Island lighthouse, without further notice.

Ontario, Lake Erie.—On the reopening of navigation, a red steel cylindrical buoy, showing a fixed white light, and surmounted by a bell rung by the motion of the waves, will be established 300 ft. south of Old Dummy foundation, south of Pelee Point.

A more powerful diaphone fog alarm has been installed on the inner end of the west pier, at Port Maitland, and the characteristic has been changed from blast 4 sec., silent 4 sec., blast 4 sec., silent 48 sec.; to blast 2 sec., silent 5 sec., blast 2 sec., silent 53 sec.

Lake Erie.—The Public Works Department has dredged the entrance channel at Kingsville to a least depth of 13 ft. for a length of 1,100 ft. and a width of 40 ft. The dredged channel is parallel with the alignment of the range lights, the center light being 45 ft. west of the line of range; the berths alongside the eastern pier were dredged to a least depth of 11 ft. and a width of 75 ft.; depths are below the zero of the harbor gauge, which is 571.8 ft. above mean sea level at New York.

Lake Superior.—The Public Works Department has dredged the Canadian National Rys. elevator B. slip, from the outer or easterly end of the old wharf, to a depth of 25 ft., for 800 ft. by 120 ft. The next 375 ft. has a width of 225 ft., with 25 ft. depth for the first 260 ft., and 21 ft. for the remainder. These depths are below the zero of the P.W.D. gauge, which is 601.86 ft. above mean sea level at New York.

Ottawa River.—A black wooden spar buoy has been established on the north edge of shoal at the west entrance to Carillon Canal, about 800 ft. east of existing buoy.

St. Clair River.—The white pyramidal slatted structure, 10 ft. high, showing light at an elevation of 16 ft., on Stag Island, has been rebuilt, and moved upstream to the corner of Marysville dock, 75 yd. from its former position.

St. Lawrence River.—On the reopening of navigation, the occulting white light, on the gas buoy, at Empress shoal, in 16 ft. of water, south of Grenadier Island, will be changed to an occulting red light.

Quebec, River St. Lawrence.—Uncharted shoal in Lake St. Louis, 5,750 ft. 308 deg. 30 min. from the Mound cross, and 500 ft. southeast of the line of the Dixie range lights. It is composed of a small bank of mud and stone, on which a less

depth than 11 1/2 ft. may be found on further examination. The depth of water is 11 1/2 ft. at low water datum, Lake St. Louis chart 50, corresponding to 14 ft. on the upper miter sill of the Lachine Canal entrance. The channel northwest of this shoal has been swept to a depth of 19 ft. at low water, for 350 ft. on both sides of the alignment of the Dixie range lights. Mariners are cautioned to adhere closely to the Dixie range alignment at this point in the channel, rather than the Melochville range lights, which are too distant to give an accurate transit. A further examination of this shoal will be made in the spring. A black wooden spar buoy has been established on the channel side of the shoal.

United States, Lake Ontario.—The fixed white light on the inside angle of the outer breakwater, Oswego harbor, N.Y., has been replaced by a group flashing light every 12 sec.

St. Marys River.—The fixed white light on the south side of Pipe Island, has been replaced by a fixed red light.

St. Marys River.—Two red spar buoys have been established in 21 ft. of water, to mark shoals to the eastward of, and near, the Canadian canal lower entrance range, at Sault Ste. Marie.

A Correction from Quebec Pilots.—P. M. Lamontagne, Secretary-Treasurer, Union of Licensed Pilots, Quebec, Que., writes Canadian Railway and Marine World as follows:—"In the January issue of your valuable paper, on page 51, you say that on the outward trip of the s.s. Keyingham, on Dec. 12, 1920, she was accompanied by the C.G.S. Montcalm to the mouth of the St. Lawrence River. The s.s. Lake Gatun, and the s.s. Keyingham, the last ships going down the river in 1920, were not preceded by the Montcalm, but made their way along the river, and met the heavy ice on the river until they reached the Traverse. The C.G.S. Montcalm these last two seasons has not given any help to steamships leaving Quebec at the end of the season in charge of pilots."

Vancouver Shipping Statistics.—Figures compiled by the Vancouver, B.C., Harbor Commissioners show that during 1920 shipping of approximately 7,967,136 gross tons moved in and out of the port in the coastwise trade, compared with 6,233,674 gross tons in 1919. The number of ships during 1920 was approximately 9,650. The number of deep sea ships entering and leaving port during 1920 was approximately 506, with an approximate gross tonnage of 1,755,308, against a gross tonnage of 1,745,522 for 1919.

Canals, Harbors, Rivers Supplementary Estimates.

The further supplementary estimates for the year ending Mar. 31, 1921, passed by the Dominion Parliament's last session, contained the following items:—

Railways and Canals, chargeable to income canals.

Lachine, St. Peter River siphon repairs	\$75,000
Ontario-St. Lawrence, to refund security deposit to Wm. Birmingham	1,250
Trent, to rebuild wharf at Lindsay, revote	10,000
Impoundments, to complete work required (Nasau dam)	50,000
Welland, reconstruction of Port Colborne locks, including revetment	440,000
Public Works, chargeable to capital; harbors and rivers.	

Quebec harbor, River St. Charles, improvements, to pay Railways and Canals Department towards construction of substructure of Canadian Northern Co.'s bridge	\$80,365.48
--	-------------

Public Works, chargeable to income, harbors and rivers.

NOVA SCOTIA.

Advocate, repairs to wharf	\$2,000
Avonport, repairs to wharf	1,500
Bailey's brook, extension to pier	6,000
Barrington's Cove, Sydney Mines, repairs to wharf	1,400
Barrington Passage, wharf	5,000
Base River, wharf	21,000
Battery Point, breakwater extension	1,600
Bear Cove (Digby), breakwater improvement	510
Bear Cove (Halifax), reconstruction of skidway and shed	1,245
Bear Cove, repairs to breakwaters	800
Burlington Cove, repairs to wharf	1,400
Caldwell's Cove, to repair breakwater	800
Chimney Corner, in final settlement of claim of T. D. Morrison in connection with his contract for wharf	867

Devil's Island, repairs to breakwater, further amount required	5,000
East Ferry, repairs to wharf and removal of sand and gravel	2,000
East Passage, beach protection, repairs to breakwater	4,840
Falconsouth, repairs to breakwater	1,375
Freemont, repairs to breakwater	1,800
Galbraith, breakwater	2,100
Georgetown, repairs to wharf	600
Green Point, renewal of sea wall	1,620
Half Island Cove, repairs to breakwater	2,500
Halifax quarantine station, new wharf	40,000
Imbrieston's Cove, wharf extension	700
Hunt's Point, reconstruction of beach protection	2,000
Inverness, harbor improvements, further amount required	3,000
Kelly's Cove, to repair and strengthen breakwater	3,200
Ketch Harbor, repairs to breakwater	1,000
Litchfield, groyne	2,200
Limington's Cove, wharf extension	2,500
Lung Point (Craigmore), repairs to breakwater	900

Lower L'Ardoise, repairs to breakwater	1,250
Maitland, extension of ferry wharf	2,400
Marine, repairs to breakwater	9,000
McKay's point (Judique), repairs to breakwater	860
Quidley's repairs to breakwater	2,300
Parkerville Cove, repairs and renewal to breakwater	2,000
Port de Greenville, repairs to breakwater	1,300
Port Lorne, breakwater repairs and renewal	9,200
Port Maitland, breakwater improvement	8,900
Portuguese Cove, reconstruction of skidway, breakwater repairs and renewal	20,000
Sandy Cove, to repair and strengthen breakwater	2,500
Seaford, repairs to breakwater	2,500
Seaford, rebuilding part of breakwater	7,100
Sidney, repairs to wharf	4,350
Sidley's Cove, wharf	1,500
Spencer's Island, repairs to breakwater	700
Upper Port Lauro, repairs to wharf	1,050
Vallée, repairs to wharf	1,500
West Arichat, wharf repairs and improvements	2,400
West Arichat, repairs to breakwater	4,500
White Head, repairs to wharf	1,200
Whycomeach, repairs to wharf	2,000
Wolfville, harbor improvements	2,000

PRINCE EDWARD ISLAND.

Tinianish Point, to repair protection works	1,650
West River (McArthur's landing), repairs to wharf	700

NEW BRUNSWICK.

Back Bay, wharf repairs and improvements	4,500
Edgett's landing, repairs to wharf	1,000

Gautreau Village, repairs to wharf	600
Kochichouan harbor, to repair and construct dam and breakwater	13,000
Litt' Aldouane, to repair and raise	800
Lord's Cove, wharf	15,500
Richibou Cape, completion of pier and breakwater	5,000

QUEBEC.	
Aylmer, repairs to wharf, further amount required	600
Barabois's Malbaie, repairs to wharf	1,000
Chandler, repairs to pier	2,000
Chicoutimi Basin, new pontoon and wharf	4,800
Dougloustown, repairs to breakwater	3,750
Fabre, wharf repairs and extension, to complete, revetment \$900	5,300
Fort Couloigne, wharf improvements	2,100
Fort Point, repairs to wharf	1,000
Gaspé, reconstruction of deep water wharf damaged by fire	2,200
Grosse Ile quarantine station, retaining wall	1,500
Laprairie to complete protection works	13,500
Lanigan, repairs to wharf	2,000
Notre Dame des Sept Douleurs (Isle Verte), completion of western wharf	5,700
Point St. Roch, repairs to breakwater	10,140
Riviere du Lièvre, lock and dam, reconstruction of protected walls	5,700
Riviere aux Vases, wharf reconstruction	1,000
Roberval, repairs to wharf	1,000
St. Lawrence, repairs to wharf	1,500
St. Marc, reconstruction of wharf	4,000
St. Roch, repairs to wharf	600
Sorel, wharf repairs and reconstruction, further amount required	2,500
Tadoussac, wharf reconstruction	8,900
Three Rivers, repairs to coal dock, further amount required	11,250

ONTARIO.

Beaverton, repairs to breakwater	1,250
Bronte, repairs and improvements	2,650
Huntsville, repairs to wharf	3,900
Kingston, harbor improvements	1,000
Lake Katrine, wharf	730
McGregor's Creek, renewal of revetment wall	11,100
Meadow, repairs to revetment wall	900
McLaren's Landing, wharf	6,600
Owen Sound, wharf reconstruction	2,100
Penetanguishene, repairs to wharf	2,100
Pelee Island, repairs to piers, further amount required	5,750
Port Burwell, repairs to pier, further amount required	2,000
Port Hope, repairs to breakwater	3,000
Port Stanley, harbor improvements	10,000
Rouge, repairs to wharf	13,000
Roubaud, harbor protection work	1,900
Sturgeon Falls, revetment wall	1,300

MANITOBA.

Kill Island (Hecla), wharf	3,000
Risley, repairs to dam and cut	1,100
Trewharke, wharf	14,000

BRITISH COLUMBIA.

Alce Armo (Silver City), landing float, to complete	15,000
Alce Armo, wharf, conditional on Provincial terminal building	15,000
Canby's Landing, repairs to wharf, revote	7,000
Carroll's Landing, wharf	2,400
Cherish Point, wharf reconstruction	1,500
Chico, repairs to wharf, further amount required	1,500
Deep Cove, repairs to wharf	1,100
Dennan Island, new float	1,000
Fraser River, landing North Arm, further amount required	8,500
Graham, wharf	11,500
Haleway, wharf approach	3,500
Haleway, wharf repairs	6,300
Hurst Island, landing float	1,700
Jackson Bay, approach to float	9,000
Larsymith, wharf	9,000
Loyal Harbor, Starna Island, wharf	5,000
Mayne Island, repairs to wharf	1,400
Mill Bay, repairs to wharf	1,000
Nesby's Landing, wharf renewal	1,000
Nootka Island, repairs to wharf, further amount required	950
Okanagan River, maintaining dam and repairing bank protection works, further amount required	1,900
Pen Harbor, float	2,000
Port Alberni, float, revote	2,900
Port Clements, repairs to wharf	1,000
Prince Rupert quarantine station, protection work	865

Procter, floating wharf	7,000
Stadepoint Pier, reconstruction of wharf	10,000
South to Nootka Island, wharf, revote	3,000
St. Mary's, float	1,400
Stewart, reconstruction of wharf, further amount required	2,000
Westbank, extension of wharf	1,000

DREDGING.

Dredging, Manitoba, Saskatchewan and Alberta, further amount required	\$10,000
Public Works, chargeable to collection of revenue.	
St. Andrew's Rapids, Man. Lock and dam, further amount required	\$1,000

Re-grouping of Atlantic Passenger Steamships.

A committee of the North Atlantic Passenger Conference, have completed a re-grouping of the steamships plying on the Atlantic Ocean in the passenger trade. Before the war, steamships were placed in different groups, the grading being decided by a committee, which took into consideration the age, the size, and the accommodation of the ship. During the war, this grouping became obsolete, and owing to the large amount of business since the close of the war, it was not found necessary, up to last year, to take the question up again. There were so many differences, however, in the fares quoted, some of the larger steamships charging less than the smaller and older ships, that it became necessary to re-group the steamships again, to put them on a satisfactory basis. The increases in fares are small, the main object being to re-grade the ships in groups composed of ships corresponding to each other as much as possible. An instance may be mentioned in the case of the White Star-Dominion Line's s.s. *Megantic*, the first class fare being increased from \$125 to \$205, the second class from \$119 to \$120, and the third class from \$84 to \$85.

Conversion of C.P.R. British Columbia Coast Steamships to Coal Burners. Canadian Railway and Marine World for January contained the announcement made by the C.P.R. that it was decided to convert its British Columbia coast steamships to use coal for fuel instead of oil, on account of the shortage of fuel oil, and its inability to obtain the requisite supplies. The company has had the changes made on the steamships *Charmar*, *Princess Adelaide* and *Princess Mary*, and the steaming *Sitnat*. The company has also arranged for a supply of oil for this year and will not change over any more of its fleet, so the steamship *Princess Alice*, *Princess Charlotte*, *Princess Patricia*, *Princess Maquina* and *Island Princess* will remain as oil burners.

Marine Public Works Contracts Awarded.—The Dominion Public Works Department has awarded the following contracts—Royston, B.C., repairs to wharf, \$26,100; and pier at Harrison, Ont., removal of old wharf frame and construction of substructure of wharf and trunnion barge bridge, (Canadian Engineering & Contracting Co., Hamilton, Ont., Nov. 30, 1920, and price \$10,000).

Keystone Transports Ltd. has been incorporated under the Dominion Companies Act, with capital stock consisting of 1,000 shares of no nominal par value, provided that it shall carry on business with a capital stock of \$5,000, and office at Montreal, to own and operate ships of every description, and to carry on a general shipping and forwarding business for passengers and freight by land and water.

Dominion Canal Statistics for the 1919 Navigation Season.

A general summary of these statistics for 1919, prepared by the Dominion Bureau of Statistics, Transportation Division, was published in Canadian Railway and Marine World for January. Following are the principal details:—

The total traffic through the canals was 9,995,266 tons, a decrease of 8,888,353 tons from 1918. The volume of traffic through the various canals was as follows:—

	Tons.	Increase.	Decrease.
Sault Ste. Marie	4,138,085	8,776,626
Welland	2,170,779	8,519
St. Lawrence	2,891,619	135,015
Chambly	242,961	126,225
St. Peter's	61,879
Murray	105,250	65,510
Ottawa	218,438	51,268
Rideau	103,539	49,403
Trent	52,933	11,940
St. Andrews	3,763	877
Total	9,995,266	8,888,353

Gross Traffic Since 1906.			
Tons.		Tons.	
1906	10,523,185	1913	52,053,913
1907	20,543,639	1914	37,023,237
1908	17,502,820	1915	15,198,803
1909	33,720,748	1916	23,583,491
1910	42,990,608	1917	22,238,935
1911	38,030,353	1918	18,883,615
1912	47,587,245	1919	9,995,266

Following is an analysis of the various commodities passing through the canals:

Canals.	1919	Agricultural products.	Animal products.
		Tons.	Tons.
Sault Ste. Marie	1,581,576	1,812
Welland	778,419	895
St. Lawrence	792,563	5,244
Chambly	127,000	2,982
St. Peter's	5,993	1,686
Murray	2,446	2,988
Ottawa	1,547	2,327
Rideau	2,328	188
Trent	91
St. Andrews
Total	3,181,562	15,523

There were 2,473,700 barrels of Canadian flour, and 396,780 through the U.S. canal, a total of 2,870,480 barrels, equivalent to 12,917,160 bush. of wheat, at the rate of 4½ bush. of wheat to the barrel of flour. The total bushels of waterborne wheat in 1918 and 1919 would thus be:—

	1918	1919
Through Canadian canal	19,987,255	21,060,989
Through U.S. canal	42,312,016	70,513,847
In form of flour	7,061,913	12,917,160
Total	69,361,184	104,491,996

Water carriers obtained lower rates on wheat during 1919 than during 1918, the rates for the different routes for the past four years being as follows:—

	1916	1917	1918	1919
Port William and Port Arthur to Montreal—				
Per ton per mile	0.2056	0.2856	0.3096	0.2926
Per bushel	7.55c	9.78c	11.39c	10.76c
Port William and Port Arthur to Georgian Bay—				
Per ton per mile	0.2646	0.2706	0.2726	0.2056
Per bushel	4.10c	4.25c	4.37c	3.18c
Port William and Port Arthur to Other Canadian Ports—				
Per ton per mile	0.169c	0.185c	0.205c	0.150c
Per bushel	3.68c	4.18c	4.48c	3.46c
Port William and Port Arthur to Buffalo—				
Per ton per mile	0.159c	0.196c	0.158c	0.142c
Per bushel	4.27c	5.00c	4.11c	3.76c
Total	14.42	11.67	14.57	11.24

The number of ship passages and tons of freight in Canadian and U.S. ships, and the total of Canadian and U.S. freight for 1918 and 1919, were as follows:—

	Canadian ships	U.S. ships
	No. Tonnage	No. Tonnage
1918	18,909 7,800,972	6,791 9,016,290
1919	20,682 8,785,957	4,069 5,259,375
	Canada.	United States.
1918	3,369,477 15,514,142	18,883,619
1919	4,863,831 5,129,485	9,995,266

The following table shows the bushels of Canadian wheat passing through the Canadian and U.S. canals at Sault Ste. Marie, for the past four years:—

	1916	1917	1918	1919
Canadian canal	82,807,342	60,551,243	19,987,255	21,060,989
U.S. canal	102,196,325	98,023,019	42,312,016	70,513,847
Total	185,003,667	158,574,262	62,299,271	91,574,836

In addition to the wheat passing through the Sault Ste. Marie Canals, other grains moved during 1918 and 1919 as follows, the figures representing bushels:—

	1918	1919
Oats	10,120,625	16,300,853
Rye	3,470,358	12,573,877
Barley	1,588,062	1,588,062
Flax	15,179,085	30,772,777

The distribution of Canadian wheat, moved through the Canadian and U.S. canals at Sault Ste. Marie, from Port Arthur and Port William, was as follows in bushels:—

	1918	1919
To Montreal	455,000	653,000
To Georgian Bay ports	38,774,391	53,793,931
To other Canadian ports	20,638,204	33,096,288
To Buffalo, N.Y.	2,156,176	4,127,614
Total	62,299,271	91,574,836

	1918	1919
Manu- Products of forest		
factures	Tons.	Tons.
303,837	29,068	2,222,943
238,807	91,682	1,060,949
231,903	449,597	1,412,312
5,966	123,042	100,377
1,556	4,579	4,579
8,147	100,103	108,250
18,555	114,355	79,884
12,184	13,294	103,539
2,497	47,079	861
268	5,404
829,266	573,087	5,005,948
.....	9,995,266

It may be assumed that nearly all the wheat shown in the foregoing table as being moved from the head of the lakes to other Canadian ports, means to Port Colborne, Ont., for transfer to Montreal.

Details of all traffic passing through the Sault Ste Marie canals are published monthly in Canadian Railway and Marine World, and a summary of the total traffic for 1919, compared with similar figures for the 1920 traffic, is published elsewhere in this issue.

Vancouver Harbor Development Works.

In addition to the works to be undertaken by the Vancouver Harbor Com-

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken without any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Diamond State Fibre Co. of Bridgeport, Pa., has incorporated a Canadian company, the Diamond State Fibre Co. of Canada Ltd., with office, factory and warehouse at Toronto, which will look after the entire Canadian territory. The latter company has issued Bulletin 14, respecting Diamond F. railway installation, describing in detail the uses and application of fibre.

Mason Regulator & Engineering Co., Montreal and Toronto, has issued a catalogue of its principal engineering specialties.

Whiting Foundry Equipment Co., Harvey, Ill., announces that it has changed its name to Whiting Corporation, and has increased its authorized capital stock from \$700,000 to \$3,000,000. The Whiting Corporation remains under the same management, and will continue the manufacture of cranes, foundry equipment and railway specialties as heretofore.

Removal of Restrictions on Coal Bunkering.—The Board of Railway Commissioners has authorized the removal of restrictions placed on the bunkering of ships at Canadian Atlantic ports, ordered in Sept. 1920. In his instruction on the matter to the Shipping Federation of Canada, the Chief Commissioner stated that the effects of the measures taken had been carefully watched and that a reasonable margin of safety in the matter of coal supplies had been achieved.

Canadian Navigators Federation.—At a meeting in Ottawa, on Jan. 11, of members of the Canadian Merchant Service Guild, and other similar organizations, it was practically decided to amalgamate all organizations of shipmasters, and other ships officers, pilots, etc., in Canada, as the Canadian Navigators Federation. Two delegates, although expressing themselves in favor of amalgamation, had to reserve decision until they could consult their local bodies.

The locomotive house, of which the first unit of 10 stalls is completed, is of solid brick construction and concrete foundation and with tar, felt and g.

vel roofing. The stalls are 100 ft. long, 14 ft. wide in front, and 30 ft. wide at the rear. All tracks have concrete lined pits, with end drainage, and steam heating coils at the side. The house is equipped with three drop pits, for driving, locomotive truck and tender truck wheels. A concrete floor, 20 ft. wide, extends the length of the house, adjoining the outer wall. The large windows ensure the interior being well lighted, and electric lights are used for artificial illumination. The arrangement of the lighting causes a good light to be thrown into cab interiors, a desirable feature in locomotive house work. The house is piped for compressed air, water and steam; the air compressors and water pumps being located in the boiler house, and the steam being piped from there also. A Hancock boiler testing apparatus is also being installed.

This locomotive house is not in use as a terminal for road locomotives, the only power now using it being two yard locomotives doing transfer work between Leaside and Rosedale, general switching and handling the special train for employees between Leaside and North Toronto station three times a day. It is also being used for the repair of work equipment, principally hoists and steam shovels. The C.N.R. freight and passen-

lathes, planer, radial drill, power hack saw, etc., all driven off a line shaft by one motor. The accompanying cross-section of the house furnishes further details of construction.

Coal, Sand, Water, etc.—The coaling plant, a Fairbanks-Morse installation, is of 200 tons capacity, of the endless chain bucket conveyor type, and electrically operated. The coal is unloaded into a hopper on the center track, there being two chutes for each track on both sides. The sand house is in connection with the coaling plant, the steam coil drying system being used. The water tank, of 60,000 gal. capacity, is of wood on concrete foundations, and the ash plant, on the north inward track, will be mechanically operated on completion.

Oil Storage.—Auxiliary to the locomotive house is the oil house, also of brick on concrete foundations. It is equipped with four 1,000 gal. tanks, three 500 gal. tanks, and a 200 gal. gasoline tank, the last being outside the building. The ground floor is of concrete, and the tanks below are filled through openings in the floor. A complete set of eight Bowser pumps is installed. The tank room, beneath the floor, is of concrete construction and heated with steam coils.

The boiler and power house, of the

compressor, and three boiler feed pumps, condenser and fire pump. Power for the entire plant is received here from the Toronto & Niagara Power Co. at 13,200 volts, and the main transformer, which is water cooled, steps it down to 550 volts, for the use of machine motors. Auxiliary transformers take the current at 550 volts, and step it down to 110 for lighting purposes. Two generators, the capacity of each being 375 k.v.a., are held in reserve. The switchboard was made by the Northern Electric Co., and the high tension instruments by the Canadian General Electric Co., the main transformer by the Maloney Electric Co., and the auxiliary transformers by the Ferranti Co.

The locomotive shop is to the north of the locomotive house, and is of transverse type, built of brick, on concrete foundations, with felt, tar and gravel roofing, and plank floor. One of the accompanying illustrations shows the general design. This shop is 300 x 151 ft. There are 12 tracks in the erecting shop portion of it, all equipped with pits, one of which is fitted with an electric pit jack of 200 tons capacity, operated by a 25 h.p. Canadian General Electric a.c. motor, and having a maximum lift of 90 in. At present, two tracks are used exclusively for tender work, which, not

Leaside Shops, Canadian National Railways. See also opposite page.

ger locomotives running out of Toronto are being taken care of at the G.T.R. locomotive house at York, 5.44 miles from the Union Station, on the Toronto line.

The turntable, 80 ft. long, is to have an air motor installed.

In connection with the locomotive house is a small machine shop, equipped with

same type of construction as the locomotive house, is equipped with four 200 h. p. Babcock & Wilcox boilers, hand fired, with coal storage at the north side. These boilers supply steam for heating the entire plant, the automatic steam trap principle being employed. The power house portion of the building is equipped with a Canadian Ingersoll-Rand

counting the drop pit track, leaves nine tracks for locomotive repairs.

The large number of windows ensures excellent lighting, and night illumination is by electricity. The shop is heated by steam coils, the steam being piped from the boiler house. Ventilation is provided by windows in both sides of a large hood extending the length of the

roof, these also providing an additional source of light.

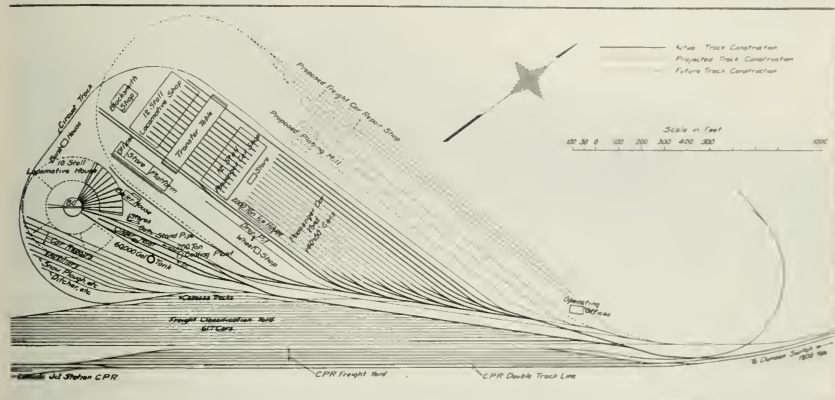

In addition to the machines on the ground floor, which occupy the west half of the shop, a second floor, or gallery, extends along the west side of the shop, and on this floor are located the air brake repair department, the department for repairing injectors, lubricators and other brass parts, and the tool repair and tool

a month; in 1920, 97 were repaired there.

Transfer Table.—As shown by the accompanying plan, the transfer table is located to serve both the locomotive shop and the passenger car shop. It is of 80 ft. span, and operates on 5 rails laid on concrete supports. The pit is of concrete construction and 372 ft. long. The table is electrically operated, current being taken from an overhead trolley wire,

flooring. Ample light is furnished by large windows, and also through windows through hoods in the roof, 12 in number, which extend across the building and are located vertically over each track. Artificial illumination is by means of electricity, and heating is by steam coils, the steam being piped from the boiler house.

The shop contains 12 repair tracks, 10

Leaside Shops, Canadian National Railways. See also opposite page.

Leaside Shops, Canadian National Railways. See also opposite page.

making rooms.

All machinery is electrically driven, the larger machines by individual motor, the smaller from a line shaft. The shop is equipped with two Northern cranes, of 10 and 25 tons capacity, the runways for which extend the total length of the shop. The average number of locomotives repaired at present is eight

supported on arms extending from piles embedded in concrete at the west side of the pit, and used with a 50 h.p. Fairbanks-Morse motor. One track at the north end, and two at the south, provide for movements on and off the table.

The passenger car shop, also of transverse type, and of brick on concrete foundations, is 283 x 140 ft. It has plank

of which are being used for passenger car repair work. The space for two tracks at the north end of the shop is used for a wood working plant, where matchers, planers, band saws and boring machines are in operation, pending the construction of the proposed planing mill as indicated by the plan.

A gallery, 25 ft. wide, access to which

tendence. It is equipped with furniture, electric heaters, etc., and a complete supply of medical and surgical necessities are kept on hand. It is the headquarters for these supplies for the Ontario District, and the first aid kits are made up here.

portion is used for storage of passenger car storm sash.

The ice house is of 2,000 tons capacity, but is not all being used for ice storage, a portion of it being used for storage of other material.

Additions, Enlargements, etc.—In so

the proposed planing mill and freight car shop is also shown, but at the time of writing, information was not available as to when this work will be undertaken. It is expected that several of the passenger car yard tracks are to be covered. New machinery for the different shops

Locomotive Shop, Leaside, Canadian National Railways.

Gallery of Locomotive Shop, Leaside, Canadian National Railways.

Wheel Shop, Etc.—The frame construction building shown on the plan as a wheel shop is not at present used as such. The east portion of it contains a complete waste reclaiming plant which is very efficient in operation. The west

far as future additions and enlargements are concerned, the accompanying plan shows the ultimate capacity of the classification yard, and shows the area the locomotive house would occupy if it were enlarged to 45 stalls. The location of

OUIS GRANT,
Vice-President of Leaside Shops, Canadian
National Railways.

is being received and installed from time to time, and it is probable that extensions and enlargements will be made to the existing plant, to keep pace with the de-

velopment and growth of the National System.

The total number employed in the shops is about 1,000, the locomotive department employing 430, blacksmith shop 36, car department 446, and locomotive house 37, the remainder being in the electrical department, boiler house, power house, offices and stores.

Location, Construction, etc. — The shops, yards, etc., were planned and laid out under the direction of A. F. Stewart, then Chief Engineer, Eastern Lines, Canadian Northern Ry., at Toronto, now Chief Engineer, Canadian Government Rys., etc., at Moncton, N.B. The grading, which was commenced in the latter part of 1917, and completed in 1918, was done by Franceschini & Co. The plans for the buildings were prepared by G. C. Briggs, Supervisor of Buildings, Canadian Northern Ry., and construction was done by company forces, under his supervision. The yard was laid out and track laying and ballasting completed under the supervision of R. A. Baldwin, Assistant Engineer, Eastern Lines, W. Huffman being the Resident Engineer in charge of the work. The entire shops

are in charge of Otis Grant, Superintendent of Shops, who was born at McAdam Jct., N.B., July 13, 1869. He first entered railway service in May, 1884, since when he has been, to Oct. 1889, messenger boy, New Brunswick Ry. (now C.P.R.); Oct. 1889 to May 1895, machinist's helper, C.P.R., McAdam Jct., N.B.; May 1895 to May 1904, machinist, C.P.R., McAdam Jct.; June 1904 to Oct. 1904, leading hand machinist, C.P.R., McAdam Jct.; Nov. 1904 to Feb. 1906, Asst. Foreman, C.P.R., McAdam Jct.; Feb. 1906 to Jan. 1907, Shop Foreman, C.P.R., McAdam Jct.; Jan. 1907 to Aug. 1908, Locomotive Foreman, C.P.R., McAdam Jct.; Feb. 1909 to May 1909, machinist, Canadian Northern Ontario Ry., Parry Sound; May 1909 to Sept. 1913, Machine Shop Foreman, C.N.O.R., Parry Sound; Oct. 1913 to June 1915, Shop Foreman, C.N.O.R., Parry Sound; July 1915 to Nov. 1919, Locomotive Foreman, C.N.O.R., Parry Sound; Dec. 1919 to date, Superintendent of Shops, Canadian National Rys., Leaside, Toronto.

The foremen are as follows:—Erecting Shop, H. Daley and R. Currie; Machine Shop, E. Farrar and W. Sherwood;

Boiler Shop, W. Hewitt; Tool Room, E. Doherty; Air Brake, E. Brooks; Blacksmith Shop, J. Templeton; Tender Shop, E. Ross; Carpenter Shop, W. Craven; Paint Shop, W. Fleming; Locomotive House, J. Crooks; Foreman Pipe Fitter, J. Cotton; General Car Foreman, H. J. White; Asst. Passenger Car Shop Foreman, A. Gouge, E. Bushey; Truck Foreman, J. Johnson; Paint Shop, A. Arthur; Tinsmith, H. Cornell; Patternmaking, W. Smith; Freight Car, W. Gouge; Asst. Freight Car Foreman, G. Potter; J. Smith, A. Pettibone and J. Nolan; Engineer, Power House, J. G. Young; and Electrical Foreman, J. Stirling.

The steam shovel and general work equipment repair work is under W. H. Second, Supervisor of Work Equipment, Ontario and Quebec Lines, J. McDonald being foreman in charge. Miss Hill is the nurse in charge of the first aid building.

We are indebted to W. H. Robinson, Official Photographer, Canadian National Rys., for the photographs from which the accompanying half tone illustrations were made.

C.P.R. Cantilever Bridge Over St. John River.

The present cantilever bridge at St. John, N.B., carrying the tracks of the St. John Railway & Extension Co., operated by the Canadian Pacific Railway over the Reversible Falls, on the St. John River, at St. John, N.B., was built in 1887, by the Dominion Bridge Co. The time having come to renew the bridge, to accommodate heavier and more powerful power, to enable increased tonnage to be handled with a consequent reduction in cost of operation, it was therefore decided recently to build a new bridge alongside the old structure, with the necessary connecting lines at each end to link up with the main line, be-

near the water's edge, and at various points along the center line, it was found that a main cantilever span length of 450 ft. could be obtained, which was considerably less than the main span would have been if located in any other position.

The approach from the west will consist of eight 70 ft. deck girder spans, supported on concrete piers. This construction was adopted instead of the usual steel trestle which had been originally used for the west approach, for the reason that the side hill on which this approach is located is of such a nature that considerable expense would

have pleasing curves, which besides improving the aesthetics of the structure, will provide more headway over the water than straight chords.

The vertical headway for the new bridge will be 2 ft. 7 in. greater than that provided by the old bridge, for the length of the suspended span, which is 150 ft.

The steelwork of the cantilever, as before stated, will be of the stiff riveted type, no pins being used anywhere, except in the anchor links at each end and at the points of support for the suspended span.

The piers are of concrete, with the ex-

C.P.R. Cantilever Bridge, St. John, N.B. General plan and elevation. See also opposite page.

tween Fairville station and the heart of the City of St. John.

The conditions were such that the most economical site for the new bridge was found to be immediately north of the present cantilever bridge and at a distance of approximately 30 ft. c. to c. therefrom. After borings had been made

have been necessary for shoring the old trestle during construction.

The main cantilever span will be a stiff structure of the through type, with a horizontal top chord throughout, which will allow the use of stiff portals and other horizontal bracing. The lower chords of the cantilevers themselves will

ception of those parts of the main piers between high and low water, which are faced with substantial courses of granite, pointed with lead wool in the extreme lower courses, and the usual cement mortar in the upper.

The east anchorage was obtained by excavating a suitable cavity into the

solid rock, and the anchor link will be securely concreted into it. The west anchorage, however, is composed of a mass concrete pier, of suitable dimensions to give the usual factor of safety as regards uplift.

Foundation Co., of Montreal, and while no great difficulties were encountered in obtaining suitable foundations, yet the nature of the ground necessitated efficient and expensive precautions, in order to allow the work to go ahead for a

end early in the spring, and to have the bridge ready for trains by the end of the working season of this year.

The work is being carried out under the direction of J. M. R. Fairbairn, Chief Engineer, C.P.R. P. B. Motley, Engi-

C.P.R. Cantilever Bridge, St. John, N.B. General view, looking east, Aug. 26, 1920.

This illustration shows, in the foreground, the earlier portion of the work on the substructure of the western approach viaduct to the new bridge, then the present C.P.R. cantilever bridge, and beyond it the arch bridge for vehicular, pedestrian and electric railway traffic, built by the New Brunswick Government.

C.P.R. Cantilever Bridge, St. John, N.B. General plan and elevation. See also opposite page.

The location of the new bridge on the north side of the present cantilever, necessitated some rock excavation to accommodate it. At the east end this rock was used for grading both ends of the bridge and for other purposes.

The preliminary borings were made and the substructure was built by the

maximum amount of time during tide fluctuations. The whole of the substructure was completed between April 1920 and Jan. 15, 1921.

The contract for the steel work has been given to the Dominion Bridge Company, Montreal, and the intention is to commence erection work from the west

near of Bridges, C.P.R., is responsible for design and construction, with Ralph Modjeski, of New York, as consulting engineer. C. F. Draper is Resident Engineer in charge of construction.

In addition to the illustrations on this page, others are given on page 120.

This illustration shows, in the foreground, the substructure of the western approach viaduct to the new bridge.

C.P.R. Cantilever Bridge, St. John, N.B. General view, looking west, Dec. 31, 1920.

This illustration shows the western main pier of the new cantilever bridge, the west anchor pier, and the piers for the western approach viaduct, then a portion of the present C.P.R. cantilever bridge and a portion of the New Brunswick Government's bridge for vehicular, pedestrian and electric railway traffic. On the main pier in the foreground will be seen the granite facing, between high and low water marks.

Railway Mechanical Methods and Devices.

Handy Trucks for Railway Repair Shops.

Two trucks, which greatly facilitate the work for which they were constructed, and which were made at, and used in,

wheels is such that the largest size driving box may be taken, and the pair of grab hooks shown make the operation of picking up or letting go of a box the work of but a second.

As the handling of material from point to point within a locomotive repair shop

and for the new steel draft gear. The new gear extends 3 ft. back of the buffer, and is bolted to the center sills. Bunting blocks behind the buffer are bolted to the center sills through the draft gear extension. Drawbars, pockets, springs, etc., are all new, and all stand-

Fig. 1. Handy Trucks for Railway Repair Shops.

Fig. 2. Handy Trucks for Railway Repair Shops.

the C.P.R. repair shops at West Toronto, are illustrated herewith. The one shown in fig. 1 is for carrying locomotive side rods between the erecting shop and the machine shop. The wheels, 20½ in. outside diameter, have 3 in. tread, and the yoke supporting them is of 13 in. inside width. This yoke is made of 1½ in. square stock, and the other yoke, for supporting one end of the rod which is being carried, is of 2½ x ½ in. stock. The length over all is 8 ft. 3 in., the handle being of 1½ in. pipe. The method of supporting the rod in the truck is as

is a matter of great importance, and one wherein there is often lots of opportunity to introduce time and labor saving methods and devices, the practical value of additions to equipment such as those described above is at once apparent.

Equipping Freight Cars with Steel Draft Gear.

The freight car repair department, Canadian National Ry. Lease shops, Toronto, is equipping from 90 to 100 cars

and safety appliances are applied. The accompanying illustration of a flat car which is being equipped, shows the method of doing the work, which is under the supervision of G. Potter, assistant to W. Gouge, Freight Car Foreman.

Welding Universal Valve Chest.

An interesting welding job was done recently at the Canadian National Ry. Lease Shops, Toronto. The live steam portion of a universal valve chest became badly fractured in service. A portion of the wall of the chamber was cut out with air operated tools, and a patch of the same thickness and the required

Equipping Freight Cars with Steel Draft Gear.

shown, and the chain can be lengthened or shortened at will.

The truck shown in fig. 2 is specially adapted for the carrying of driving boxes from point to point in the shop. The inside width of the yoke supporting the

monthly with Bradford and Universal steel draft gear. The work, which is being done in strict accordance with M.T.B. standards, necessitated the removal of the wood draft timbers, and the replacing of the deadwoods by those stand-

Welding Universal Valve Chest.

shape and size. Only one V-bank for 4 in. air pressure, and decided on by the V-bank method. The work was done in a shop, and the patch welded in and the pipe cutting removed with air used to make it smooth. It cost a considerable amount of time and money, and the required portion was shown in the work. The accompanying illustration shows the valve chest, and the patch which was welded in, just before the completion of the operation. The welding was done by M. Karlik, leading welder, under the supervision of H. Davey, Erecting Shop Foreman, and Otto Grew, Superintendent of Shops, C.N.R. Leas-

Portable Babbitt-melting Furnace.

Fig. 1 of the accompanying illustration shows a small C.P.R. babbitt-melting furnace used in West Toronto shops, C. P.R. Being set on small wheels, it can be taken from place to place throughout the locomotive shops, and operated in a location convenient to the work. Fuel oil is used, in connection with compressed air, and a hose connection to the compressed air line in the shop is all that is

Fig. 1. Portable Babbitt Melting Furnace.

necessary to be able to use the furnace at any point in the shop.

The principle of operation, which is simple, is seen by reference to fig. 2. The fuel oil tanks A and B are filled; the oil flow through pipe C is controlled by valve D; the compressed air entering through the hose connection F is controlled by valve E; the combined jet is

Facing Valves of No. 6 E.T. Brake Equipment Distributing Valve.

The distributing valve is one of the most important parts of the no. 6 engine and train equipment, which style of brake is the present standard in locomotive practice. It replaces the triple valve and auxiliary reservoir of the old style brake equipment, and by its action ensures the brakes remaining set, regardless of brake cylinder

Fig. 2. Portable Babbitt Melting Furnace.

leakage or piston travel. The application portion of the distributing valve contains the application valve and exhaust valve; the equalizing portion contains the equalizing valve and graduating valve, and it is essential to the proper action of the locomotive and tender brakes that these internal valves have a perfect bearing on their seats. Great

of the babbitt plate until it is down to a perfect bearing surface. The valve seats are faced with a babbitt face plate of the same width as the seat, which is rubbed over the seat, with as much flour emery as will remain in contact with the face plate when it is inverted.

The accompanying illustration shows a distributing valve with some of the interior valves removed, these valves, the application valve cap, and the babbitt face plate used in the facing operation, together with its case. The method described has been in use on the Canadian National Rys. for three years, and the results have been uniformly successful, the saving in time over the old method being great.

Changing Superheater Joints.

The Vaughan-Horsely superheater has two headers, the one for saturated steam being directly connected to the dry-pipe, and the superheated steam header con-

Babbitt Plate and Distributing Valve Parts of No. 6 E.T. Brake Equipment.

controlled by valve G. The jet is ignited at nozzle K, and the flame is directed to the ladle through pipe H.

This furnace is employed in pouring hub liners, re-babbitting truck axle bearings, and in babbitting and soldering jobs of all descriptions.

Apple shipments from Halifax, N.S., to United Kingdom ports were 119,044 barrels in January, making a total for the season to Jan. 31, of 732,613, against 376,137 for the corresponding period of 1919-20.

care is thus required in facing them.

A method of facing these valves, largely used in the past, is as follows:—A steel plate, perfectly flat, has spread over its surface a very thin film of colored grease; the valve, secured in a vise, is scraped with a special tool, then taken out, and the valve face drawn over the surface of the steel plate. The portions of the valve face showing color indicate the bearing surface. The operation is repeated until the valve face is flat and a contact exists completely around every port opening.

Changing Superheater Joints.

necting to the two steam pipes conveying steam to the valve chests. The series of superheater pipes which extend back toward the firebox connect the saturated superheated steam headers.

Fast practice, in making the joints of the superheater pipes and the headers, was to use a copper gasket, the retaining nut being tightened over it with a

long handled wrench. At present, however, these superheaters are being equipped with ball joints between the pipes and header pipe connections, as this type of joint is found to give better service. Another advantage is that whereas a new copper gasket has to be used every time a superheater joint is broken, necessitating a new set of gaskets every time the locomotive is shopped, and the superheaters gone over, and the ball joint gasket can be used over and over again indefinitely.

In making the change, the pipe connection on the header must be tapered out, so as to accommodate the ball joint gasket, and the work is done as shown in the accompanying illustration. The tool used is a ratched rose-bit, in combination with a stand to keep it applied to the work. The stand is so made that it screws on the pipe connection which is

to be changed, and at the center of the inside of the top of the stand is a center for the ratchet, thus ensuring the bit keeping a good center and doing an accurate job. This job could be done with the superheater units in the front end of the locomotive, by uncoupling and moving to one side the pipe which is in the way of the tool stand, while changing any specified joint, but, as a matter of fact, the change is made when the locomotive is in for general repairs, and the superheater units would have to be taken out and gone over in any event.

A complete installation of the largest size can be changed in about 16 hours, and from a performance and maintenance standpoint the new type of joint is much superior to that in former use. We are indebted to H. Tod, Erecting Shop Foreman, C.P.R. West Toronto shops, for this information concerning the above.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John River Bridge-Douglas Ave. Grade Separation.—These two works are related to each other and everything depending on the Board of Railway Commissioners' decision as to the height above water of the new bridge which the company is building across the St. John River at the reversible falls, St. John, N.B. Marine interests have asked the Board to direct the raising of the bridge by 9½ ft. above the level proposed by the railway, and we are advised that if this is done the overhead crossing of the highway over the railway tracks would be out of the question, and a subway to take the roadway under the tracks would be the only solution. The type of structure for the overhead crossing of the highway that is said to be mostly favored is a 90 ft. span reinforced concrete arch, and the location lends itself to such a structure with a minimum of grade on either side of the tracks.

A conference of engineers and representatives of local interests was held in St. John, Feb. 9, at which it is reported that the marine interests pressed for a bridge with as great a clearance as the highway bridge alongside—91½ ft. at slack water. It was pointed out that the new railway bridge as planned will give a greater clearance than the present one, and that no objection was taken by local interests until the piers for the new structure were 75% completed.

Interprovincial & James Bay Ry.—The C.P.R. has, for some years, had a branch line, starting from Mattawa, Ont., 314½ miles west of Montreal, on the main line, and running to Timiskaming, Que., formerly Lumdens Mills, on Lake Timiskaming, 37½ miles, with another branch from Kipawa Jct., Que., 36½ miles from Mattawa, to Kipawa, Que., 9.2 miles. In 1914 the latter branch was extended for 19 miles, but its extension has not been operated. As stated in previous issues, the C.P.R. has, on behalf of its subsidiary, the Interprovincial & James Bay Ry., entered into a contract with the Quebec Government for the construction of 66 miles of the line, to start from the present end of track 10 miles north of Kipawa, and 45½ miles from Mattawa, and to run to the Quinze River, 60 miles from Kipawa, to Ville Marie, on the shore of Lake Timiskaming. This will make about 68 miles to be built, or two miles more than covered by the subsidy agreement with the Government, under which the company will receive a cash bonus of \$1,600 a mile, as provided for in the Que-

bec Statutes of 1920, in addition to 4,000 acres of land a mile authorized in 1919, and a further cash subsidy of \$6,400 a mile in case the company does not receive a subsidy of the same amount from the Dominion Government. The Board of Railway Commissioners has approved of the company's route maps, from mile 10 from Kipawa to mile 70 at the Quinze River, and from mile 48.2 on the line from Kipawa to Quinze River, to Ville Marie, 7.8 miles. Right of way is being bought and the clearing of the way will start at an early date. (Feb., pp. 69.)

Montreal-Smiths Falls Rail Relaying. A press report states that about 100 miles of 100 lb. rails are being laid between Montreal and Smiths Falls, Ont.

London Division Betterments.—A press report states that approximately \$60,000 has been appropriated for general maintenance of way work to be done on this division during the year, that about 20 miles of 85 lb. rails will be laid on Port Huron and Marys, and St. Thomas branches; that 150,000 ties will be replaced; that about 20 miles of ballasting will be done between London and Chatham, and an additional 20 miles between Guelph and Goderich.

Western Lines Betterments.—D. C. Coleman, Vice President, Western Lines, is reported to have stated, on returning from Montreal to Winnipeg recently, that a considerable amount of bridge replacement, rail replacement and work of that character will be undertaken and that there will be certain improvements to terminal, shop and passing track facilities, to enable the grain crop to be handled with efficiency.

Milden-Empress Line.—D. C. Coleman, Vice President, Western Lines, is reported to have stated recently that the contracts for grading the first 59 miles of this line were let in 1919 and 1920, and the work on them is only about half completed. When the grading is finished, the track on this 59 mile section will be laid. It is not the intention to let contracts for further grading on this line in 1921. The line will follow the amended route map as approved by the Board of Railway Commissioners.

Keppel-Kelfield Line.—D. C. Coleman, Vice President, Western Lines, is reported to have stated recently that no announcement could then be made as to the starting of construction on this line.

Coaling Plants.—The company has built recently a standard 280 ton double truck coaling station at Revelstoke, B.C.

and standard 100 ton stations at Sicamous, Natch Hill, Ruby Creek and Vancouver, B.C. A 50 ton addition is being built to the mechanical coaling plant at North Bend, B.C.

Port Coquitlam Line.—A press report states that a suggestion was made to Grant Hall, Vice President, while at New Westminster, B.C., recently, that the branch line from there to Port Coquitlam should be electrified, and operated by the British Columbia Electric Ry.

Vancouver Pier.—A press report states that it is expected that tenders will be asked for at an early date for the construction of the new pier, "B.C.," some details of which were given in Canadian Railway and Marine World for Feb. 1920, pp. 75.

The Pacific Construction Co. is expected to complete its dredging and filling contract on the site by Mar. 1. (Feb., pp. 69.)

The Largest Locomotives on the Canadian Pacific Railway.

A Vancouver subscriber has written asking Canadian Railway and Marine World whether the decapod (2-10-0) is the largest locomotive operating on the C.P.R.'s British Columbia district. The C.P.R. Mechanical Department has provided us with the following information:

The largest locomotives on the British Columbia District are of the decapod (2-10-0) type, known as the R-3 class, locomotives of this class being in the 5700 series. Following are some of the principal details:—

Tractive effort	54,000 lb.
Total weight of engine	240,000 lb.
Loaded weight of tender	150,000 lb.
Total weight of engine and tender combined	390,000 lb.

The largest locomotive in the Province of British Columbia, in fact on the C.P.R. system, is the Santa Fe (2-10-2) type, the locomotives of this class being in the 5800 series. Following are some of the principal details:—

Cylinders	36½ x 22 in.
Driving wheels	36 in.
Tractive effort	45,570 lb.
Weight on drivers	275,000 lb.
Total weight of engine and tender combined	334,600 lb.
Loaded weight of tender	140,000 lb.
Total weight of engine and tender combined	474,600 lb.

The C.P.R. has 15 Santa Fe locomotives in service, 3 on the Quebec District and 12 on the Alberta District.

The dividing point between the Alberta and British Columbia districts is at Field, B.C., 220 miles from Montreal and 505½ from Vancouver. Field itself is in the B.C. District.

Rapid Coal Handling.—The N. & W. Ry. has contracted for a large car dumper which will have a tremendous capacity. It will take the largest road cars and overturn them into specially designed motor driven transfer cars having power operated bottom gates through which the coal will be distributed to the lines of coal loading bins on the piers. The ships coming alongside the piers will then be loaded rapidly by gravity with breakage of the coal reduced to the minimum. Mechanical trimmers, which are claimed to effect a wonderful saving by eliminating hand trimming, will be used. Could the road cars be supplied without interruption, this machine alone would have a capacity for loading into ships over 8,000 tons of coal a year when operated for eight hours during each working day. This represents 1,440 ocean going ship cargoes.

Train Schedules and Locomotive Fuel Consumption.

By Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

A study of locomotive fuel consumption is, by the very nature of the subject, a complicated one, because there are so many factors which influence the

day while on the road, and (2) that on account of the frequent presence, in more or less degree, of conditions which are given no, or not enough, consideration in

It is possible only under a system of day to day observation under road conditions to study these factors not brought to light otherwise, and to establish

Fig. 1. Variation of train resistance with speed.

Fig. 2. Variation in coal consumed, with power exerted.

performance of locomotives in regard to fuel economy. It may be studied from three points of view, as follows:—

1. The design. This introduces considerations such as grate area and heating surface, boiler capacity and cylinder volume, port area and valve steam distribution; the effects of compounding, superheating, feed water heating, and of the introduction of various economy devices into locomotive practice.

2. Maintenance. As examples of the considerations entering herein may be mentioned the effect of frequency of boiler washing; front end adjustment and exhaust area; injector losses; valve, piston, superheater and steam pipe leaks; defective grates, defective lubrication and so on.

3. Operation. As factors of design and maintenance more readily lend themselves to classification and standardization, while operating conditions, in so far as locomotives are concerned, are always characterized by change and uncertainty, it is the writer's opinion that the operating end of the study of fuel consumption is the most interesting one, and the one offering the best field for enquiry.

It is obvious that, in a paper of this nature, fuel economy cannot be discussed from any one of these three points of view, and thoroughly covered. The discussion must be confined to one feature in one of these divisions. The point chosen for discussion here is a detail of operation, and has to do with the relation between a train schedule and the amount of coal burned by the locomotive.

Before proceeding with this analysis, it may be well to mention two things, (1), that there is close agreement between the results obtained by investigators under test conditions, and the results of close observation from day to

Fig. 3. Application of Fig. 2.

theoretical calculations, or arranged tests, the degree of economy obtainable in actual service is not equal to that which may be demonstrated as possible.

lish their importance.

In attempting to determine the relation between locomotive fuel consumption on the one hand, and the way in

which a train schedule fits a division on the other, and the first thing to be presented is the variation in train resistance in agreement with variations in speed. Fig. 1 represents a good average relation. It is assumed that the train make up, as affected by loads and empties, is taken care of by an adequate scheme of adjusted tonnage rating. No first principles are introduced in the derivation of train resistance, tractive effort, etc. The figures and charts have been derived from various sources, and averages struck, and these are representative of conditions as they exist.

The next consideration is the locomotive. We here deal with a modern milado type freight locomotive, capable of developing a maximum tractive effort of 54,000 lb., the boiler capacity being such that this tractive effort can be sustained without trouble at 10 miles an hour. When worked a maximum capacity, this locomotive will burn 7,200 lb. of coal an hour.

Another consideration has to do with variation in fuel consumed by the locomotive, in relation to variation in the power exerted by it. The relation is demonstrated by fig. 2, which perhaps makes clear why it takes half as much coal again, or more, to take a train up a hill, and let it drift down the other side, as it does to take the train the same distance on the level. It will be observed that fuel consumption does not increase directly in proportion to increase in power exerted, but a great deal faster, and the greater the power exerted, the faster the rate in increase in coal burned. Cinder losses, and imperfect combustion, the degree of imperfection increasing as rapidly of combustion increases, produce remarkable results.

Fig. 2 shows that to increase the trac-

this speed, and the amount of coal which must be fired to support this effort.

Schedule 1.				
	Speed	Time	Power	Coal
A-B	20 m.p.h.	16 min.	577.6	504 lb.
B-C	15 m.p.h.	19 min.	904.4	1,044 lb.
C-D	24 m.p.h.	17.5 min.	751	699 lb.
D-E	30 m.p.h.	12 min.	down grade	
E-F	25 m.p.h.	24.5 min.	974.5	1,357 lb.
F-G	25 m.p.h.	9.5 min.	817	423 lb.
G-H	15 m.p.h.	16 min.	1,369	1,666 lb.
H-I	30 m.p.h.	16 min.	down grade	
I-J	15 m.p.h.	33.3 min.	1,183	2,252 lb.
J-K	24 m.p.h.	15 min.	781	598 lb.
K-L	30 m.p.h.	14 min.	down grade	
L-M	24 m.p.h.	12.5 min.	789	489 lb.
M-N	15 m.p.h.	25.7 min.	1,066	1,619 lb.
N-O	25 m.p.h.	7 min.	2,345 lb.	
				395 min.
				13,307 lb.
				12,085 lb.
Coal saved				1,222 lb.

The table is constructed as follows:—In schedule 1, from A to B, 6 miles, it takes 18 minutes to run, at 20 miles an hour. Fig. 1, shows that train resistance for a 1,600 ton train at 20 miles an hour on level track is 10,830 lb. Twenty miles an hour is equivalent to 1,760 ft. a minute. Drawbar power is 10,830 times 1,760, divided by 33,000, which is 577.6. Fig. 3 shows that a drawbar horsepower of 577.6 requires the consumption of 1,680 lb. of coal an hour. This d.b.h.p. is exerted for 18 minutes. Hence, to take the train from A to B, at the speed indicated, requires 18 sixtieths of 1,680, or 504 lb. of coal. The amount of coal consumed between succeeding stations is figured similarly.

It will be seen that one schedule keeps the train on the road 18½ minutes longer than the other. Yet, owing to having this extra time, and to a better distribution of time in accordance with profile,

flected in the higher coal consumption figures. Taking the siding, keeping the

Schedule 2.				
	Speed	Time	Power	Coal
A-B	24 m.p.h.	10 min.	782	504 lb.
B-C	24 m.p.h.	11 min.	1,369	992 lb.
C-D	24 m.p.h.	11 min.	down grade	
D-E	24 m.p.h.	10 min.	down grade	
E-F	24 m.p.h.	8 min.	1,010	970 lb.
F-G	24 m.p.h.	8 min.	1,040	433 lb.
G-H	10 m.p.h.	24 min.	862	1,900 lb.
H-I	24 m.p.h.	11 min.	down grade	
I-J	24 m.p.h.	11 min.	1,369	992 lb.
J-K	24 m.p.h.	11 min.	down grade	
K-L	24 m.p.h.	11 min.	down grade	
L-M	24 m.p.h.	11 min.	down grade	
M-N	24 m.p.h.	11 min.	down grade	
N-O	24 m.p.h.	11 min.	down grade	
				395 min.
				13,955 lb.
				15.5 min. slower time.

Fig. 4. Profile of division.

tive effort exerted from 42.5 to 59.9% of the maximum (an increase of 17.4% of the maximum), an increase of 12.5% of the maximum coal consumption is required. To increase the tractive effort exerted from 72 to 81.3% of the maximum (an increase of but 9.3% of the maximum), the same additional amount of coal must be burned.

Fig. 3 is an application of fig. 2 to the locomotive here considered. Assuming for the purposes of our calculations that 1,440 represents the maximum working drawbar horsepower attained by this locomotive, and which is represented by the consumption of 7,200 lbs. of coal per hour, it can easily be determined, by drawing in the proper ordinates to the curve, the amount of coal it is necessary to fire to support the locomotive at whatever stage within her range of power she is working.

The next consideration is the profile of the division on which this locomotive is working. Fig. 4 shows the general profile. The following table is a comparison of two schedules for a 1,600 ton freight train handled from A to O over this division. The columns in each case show the speed between stations, the time used between stations, the drawbar power the locomotive must exert throughout this period of time to haul the train at

this schedule saves 1,222 lb. of coal over the other. Basing calculations on an average of six trains a day, the coal saving would amount to \$16,054 a year, with coal at \$12 a ton at the firebox door. As to the 18½ minutes, the average number of hours a day a freight car is in motion on the main line is represented by a surprisingly low figure; running a train over a division on a schedule which represents just about as good a job as the locomotive can do, to leave it standing in the yard a couple of hours before the yard locomotive can get around to it, will make for a poor coal consumption record.

In the comparison of these two schedules, no account was taken of train order or time table meets, stops for water or to register train, or other factors which would influence the amount of coal consumed, this on the supposition that the effect would be the same in both cases. It will now be well, however, to consider the fuel performance of the locomotive hauling an extra train, which will more nearly portray conditions as they exist. This train will be of 1,600 adjusted tons, as before, and hauled by the same locomotive as in the preceding two schedules.

On hauling A it is necessary to work the locomotive hard, to get to C for an opposing passenger train. This is re-

bursts. Lifting the train on this grade, after a new hose is put on, and the train line recharged, requires an extra 240 lb. of coal. The water stop at E requires 200 lb. more coal than would have been burned had the stop not been necessary. The extra then makes N, where it heads into an auxiliary track to meet a schedule freight train and be passed by a passenger train. It backs out, takes water, and proceeds to O, the work and lay at N having cost 340 lb. of coal. The following table records the performance.

	Speed	Time	Power	Coal
A-B	20 m.p.h.	17 min.	1,141	1,141 lb.
B-C	22 m.p.h.	16 min.	1,141	1,141 lb.
C-D	24 m.p.h.	14 min.	1,141	1,141 lb.
D-E	30 m.p.h.	12 min.	down grade	
E-F	20 m.p.h.	21 min.	1,141	1,141 lb.
F-G	20 m.p.h.	8 min.	862	1,900 lb.
G-H	15 m.p.h.	16 min.	1,369	1,369 lb.
H-I	30 m.p.h.	16 min.	1,369	1,369 lb.
I-J	15 m.p.h.	33.3 min.	1,183	2,252 lb.
J-K	24 m.p.h.	15 min.	781	598 lb.
K-L	30 m.p.h.	14 min.	down grade	
L-M	24 m.p.h.	12.5 min.	789	489 lb.
M-N	15 m.p.h.	25.7 min.	1,066	1,619 lb.
N-O	25 m.p.h.	7 min.	2,345	
				791 min.
				13,955 lb.
Water at E				240 lb.
Water at F				200 lb.
Water at N				340 lb.
Work at N				1,000 lb.

This table shows that conditions requiring the locomotive to exert nearly its maximum power over various portions of the road, resulted in a fuel consumption of 15,386-12,085, or 3,301 lb. more coal for hauling the train than was required by the most favorable of the two preceding schedules. Meeting trains, taking the siding, delays and stops required the consumption of 1,860 lb. of coal additional.

The lesson demonstrated by these considerations is to the effect that, in the operation of a train over a division, it should be so scheduled that the locomotive can take its time on the hills; it should be able to use all its time in running, and not be unduly subjected to delays which necessitate it trying to make up as much time as possible. Of course, in the case of passenger trains and fast freights, fuel has to be sacrificed to secure the desired speed, and the only consideration in these cases is that of properly distributing over the division the allowed time. But in the operation of the majority of freight trains, the aim should be to give the train a reasonable and well distributed running time, well within the capacity of the locomotive, cut the delays down to a minimum, and make the total number of stops as small as possible. From a fuel conservation viewpoint, which, upon thought and analysis, is found to be representative of operating efficiency in its entirety, the practice of giving full tonnage trains work to do at different side tracks along the road, cannot be too strongly condemned.

After a study, of long duration, of this matter of fuel economy, on a division where its importance is continually emphasized, and where the degree of efficiency obtained is high, the writer has concluded that the viewpoint which has to do with operating conditions is the one from which the subject of locomotive fuel economy deserves the most study and is representative of the field wherein the greatest economies can be effected. So far as maintenance is concerned, the existence of defects, and their effect as concerns the amount of coal consumed, can be so well located and classified with reference to a well defined standard of maintenance, that the whole matter resolves itself down to the necessity of repairing existing defects, and guarding against the recurrence of others. So far as design is concerned, the subject is a matter of mathematical calculation, and accumulated knowledge based on tests and past performance throughout a long period of time, and is a problem of concern to the qualified individuals entrusted with its solution.

The operating features, however, present a succession of variations, changes and uncertainties, wherein great waste can take place, or great savings can be effected. Such things as lighting up, cleaning fires, and terminal handling generally; the prompt supply of locomotives to operating department on demand, prompt utilization of locomotives by operating department when supplied; correct tonnage rating, and weather record; efficiency of car inspection and brake testing; character of train dispatching; handling of way freight work; the relation between train schedules and division profile; all of these things have their influence on fuel economy. On considerations such as these, it must be apparent that there is no better or more faithful indicator in demonstrating the kind of job a division is doing in the line of clean cut railroading,

than the record of locomotive fuel consumption.

Editor's note.—The subject of the foregoing paper is of such vital importance that we invite a thorough discussion of it, and we shall be glad to hear from any of our readers, either in elaboration of the subject as dealt with above, or in criticism of any of the views expressed.

The Canadian National Railways' Position and Construction and Operating Policy.

The following statement has been issued from Canadian National Rys. headquarters:—When the Grand Trunk Railway System is incorporated in the Canadian National Railways, the mileage of Government-owned railways in Canada will be 22,375 miles, comprising more than 50% of the total railway mileage.

Writing in 1876, in the preface of his history of the Intercolonial Ry., Sir Sandford Fleming said: "The Intercolonial Ry. is national in its objects and character." This great railway engineer was, at the time, Engineer in Chief of the Newfoundland, Intercolonial, and Canadian Pacific Railways, the latter then being projected as a Government undertaking, and it is to this he refers in the last sentence of the preface when he states that the completion of the work "realizes the national aspirations of half a century, by bringing within a few hours, the old fortress of Halifax and the older citadel of Quebec, and which must form an important section of the railway, destined, ere long, to extend from east to west through the entire Dominion." The words then spoken with confidence by a man experienced in achievement have been fulfilled, but in a manner quite different to that then in the mind of the writer. The Canadian Pacific became a privately-owned company and is now the only competitor of the system that is "national in its objects and character," of which the Intercolonial is an important section.

Future Development Largely Internal. Canada's main traffic arteries are built for some time to come, and the National system's immediate development will be largely internal; some branch lines will be required, but apart from these and connections for operating economy, such as the Long Lake cut-off, between the National Transcontinental and the Canadian Northern east of Nipigon, there will be little additional mileage warranted in the near future.

The policy will naturally be to bring the physical properties of the National lines into excellent operating position, meaning more than mere maintenance of line and equipment, and involving the bringing about of a proper balance of facilities, the removal of features that limit the capacity of certain sections of line, such as an inadequate terminal, which, when congested, may affect the operation of a division, putting in double track where required, improving terminal equipment and so on. This work is not spectacular, but will be reflected in the operating statement at the end of the year. Work of this kind can only be undertaken on the assumption that the traffic will develop, for which various sections of the National system were built, and, naturally, such development work may have to be discontinued, or postponed, when business conditions are depressed to the extent that these traffic possibilities seem remote. At present, the business outlook is too uncertain to justify any large expenditure for equipping the National systems to handle large increases in traffic. With possibly

one or two local situations excepted, the National system has a capacity above the traffic to be immediately handled.

Co-ordination.—The monetary advantages of co-ordination are apt to be over estimated by the public, who, seeing two ticket offices combined in one, at once jump to the conclusion that operating expenses are being cut half. Unfortunately, the effect of such consolidation is limited to a very small percentage of the total operating expense. The traffic expenses of Canadian railways are less than 2% of the total. As a matter of fact, if the total expense of the traffic departments could be cut in half on all Canadian railways, the saving would not be within \$1,000,000 of meeting the recent 8½% increase per hour for section forces wages. While the economies by co-ordination, made up of small items, aggregate quite a large sum, yet, compared with the general wage increase, average more than \$25 a man per month, which took effect throughout last year, the amount is negligible. The increase referred to is, it is hoped, the last of a series of advances of which the McAdoo Award was the main feature, with its many supplements. The result is that the average wage of railway employees in Canada has advanced from the pre-war rate of \$700 a year to \$1,700 a year.

As long as lines have to be maintained (and what lines can be abandoned?) the maintenance charge remains; the equipment must be kept up. Reductions in train service effect economies, but the cost of station service at outside points is not affected by the number of trains handled, but by the spread of hours of the staff as affecting overtime. The case is similar in connection with branch line runs. The inclusion of the Grand Trunk Pacific lines with those of the Canadian Northern in the west, under Canadian National Rys. management, has, of course, effected economies; as regards the actual operation of the G.T.P., through removal of some administration expenses, yet, as stated, these have come, unfortunately, at a time when they have been overshadowed by large wages increases.

In the case of the Grand Trunk lines in the east, also being co-ordinated with the National system, the savings effected are not noticeable, when compared with the increases occasioned by the adoption of the United States Railroad Labor Board's 1920 award, which made increases effective May 1, 1920, involving large back time payments. The co-ordination that has been effected, with the G.T.R. still maintaining its corporate existence, has naturally been limited, but those that loom up as possible, when the lines are consolidated, are substantial.

Rate Increases Absorbed by Wage Rise. The rate increases granted by the Board of Railway Commissioners not being up to the pace that was required by the railways, and, coming as they did with a business decline, have not produced sufficient additional revenue to offset the step-up in expenses which wage increases

and attendant rise in other costs placed on the railways during the past year. Under the circumstances, the only course for the management to pursue, is to reduce operating expenses to the lowest possible notch consistent with safe operation and reasonable service. Action along these lines is sometimes opposed by local interests that consider they are unfairly affected, but the matter must be handled on lines of broad policy in the interest of the owners of the property, who are the Canadian people, represented by the Government of Canada. The management have every reason to believe that the public will appreciate the fact that the steps being taken to make ends meet are in the national interest, and that the campaign of retrenchment will have general support.

Machinery Flat Cars, Canadian Pacific Railway.

The C.P.R. has had built recently, at its Angus shops, Montreal, five machinery flat cars, designed for special service, one of which is shown in the accompanying illustration. They are of the usual fish belly type, of specially

Freight and Passenger Traffic Notes.

At a grain growers' convention at Moose Jaw, Sask., Feb. 2, it was reported that up to Jan. 21, the C.P.R. had moved 67,157 cars, or 92,335,375 bush. of wheat, and the Canadian National Ry. had moved 40,975 cars, or 49,170,000 bush.

The Quebec Harbor Commission's application to the Board of Railway Commissioners, for an order that export rate on grain from Georgian Bay ports to Quebec be made the same as to Montreal, was heard Feb. 3, and judgment reserved.

Alberta wheat is being moved through Vancouver, B.C., to United States and other ports, a shipment of 2,700 tons having been made to San Francisco, Cal.; and about 7,000 tons have been shipped to continental Europe. The motorship Siam is expected to load a further 5,500 tons for Europe.

The North Vancouver City Council's ferry committee will, it is reported, approach the Pacific Great Eastern Ry.'s management with regard to the possibility of co-operative arrangements for handling of through passengers from Vancouver to points on the railway's

in that area, and appointed a deputation to co-operate with the Gaspé delegates and to interview the Quebec Government to ask improvements in railway and steamship service to Quebec and Montreal. One of the Gaspé delegates is reported to have stated that it took some of them almost a week to reach Quebec, owing to the inefficient equipment of the railways serving the district.

The Hudson Bay Ry., we are officially advised, has no regular train schedule. The line is being operated by the Canadian National Ry., and since July 14, 1920, a train has been operated on alternate Wednesdays, leaving Pas. Man., at 7 a.m., and running to Piquitenay, mile 214, where the contractor's temporary headquarters are situated. The fare is 5c. a mile, and C.N.R. agents are advised that through tickets to points on the line are not to be sold. The end of track is at mile 332.

The Quebec, Montreal and Southern Ry. is reported to have been fined \$20 for not having printed its bill of lading forms in French as well as English, as required by a Quebec statute.

Machinery Flat Car, Canadian Pacific Railway.

strong construction, to carry heavy concentrated loads.

The end sills are pressed steel, in one piece, and on the top, extending the full width of the car, a piece of timber 6 x 10 in. is fitted to form an end blocking for the load. The end stake pockets pass through this blocking and are flush with the top.

The deck is 2½ in. thick, secured to the underframe by bolts, which pass through longitudinal steel straps laid on top of the wood near the sides of car. The car is equipped with W.A.B. 10 x 12 in. air cylinder and Ureco drop hand brake.

The trucks are of low construction, with Vulcan side frames and cast steel bolsters. The following are the principal dimensions:—

Length inside pulling face of knuckles.....	45 ft. 5 in.
Length of load platform.....	40 ft. 9 in.
Width of load platform.....	9 ft. 10 in.
Width over all.....	9 ft. 9½ in.
Truck centers.....	32 ft. 0 in.
Truck wheel base.....	5 ft. 5 in.
Height from rail to top of deck.....	3 ft. 7½ in.
Height from rail to top of brake shaft.....	5 ft. 7 in.
Couplers, type D, shank.....	5 x 7 in.
Diameter of wheels.....	33 in.
Size of journals.....	6 x 11 in.
Tare weight.....	44,200 lb.
Limit load.....	165,800 lbs.

The through traffic between Vancouver and the Okanagan and Kootenay districts via Kettle Valley Ry., is reported to have been suspended for the winter owing to snowslides in Coquihalla valley extending for about 14 miles. The Kettle Valley trains will, it is said, connect with the C.P.R. at Spence's Bridge, with the main line trains 3 and 4.

North Shore line from North Vancouver to Whytecliffe, B.C., 13 miles.

The Prince Rupert, B.C., News claims that 2,000,000 lb. of halibut, equal to 103 car loads, valued at \$200,000, were diverted to Ketchikan and Seattle, United States ports, during 1920, owing to a shortage of refrigerator cars to ship east, and that a revenue of about \$60,000 was thus lost by the express company operating from Prince Rupert.

The Pacific Great Eastern Ry., a press report states, put in operation on Feb. 21, a new train schedule between Squamish and Deep Creek, B.C. Instead of two trains a week leaving Squamish, Wednesdays and Saturdays, the new schedule provides for only one, leaving Squamish on Mondays, stopping over at Lillooet, and running on to Deep Creek on Tuesday, returning to Williams Lake the same night, resuming the trip on Thursday to Lillooet, and proceeding thence to Squamish on Friday morning.

On the Minister of Agriculture's recommendation the Governor General in Council has made the following regulation, to be added to those made Nov. 30, 1909, under the Animal Contagious Diseases Act: "The agent of any railway or common carrier receiving cattle or other live stock for shipment shall attach to the waybill accompanying such shipment the district health certificate relating to such cattle or other live stock, whenever the owner or shipper possessing such certificate requests him so to do."

The Quebec Board of Trade recently heard representatives of the Gaspé peninsula explain transportation conditions

Action was taken by a private person in the form of a quia tain action. The company represented that it had forms in both French and English, but that it was not possible to combine them and still keep the bill of lading within the limits of a certain size. The judge held that the law was imperative that the bills of lading and other shipment forms should be printed in both languages and on the same form. Half the penalty goes to the Crown and half to the party bringing the action.

The Imperial Privy Council's Judicial Committee, a London, Eng., cable of Feb. 4 states, has refused the Canadian Northern Ry.'s application for leave to appeal against the Quebec High Court's judgment in the action brought against it by Messrs. Greenhields of Montreal which involved a matter of about \$200 and represented the value of a consignment of goods given to a firm of carriers, who acted as the company's agents, and from whose wagon the goods were stolen. Two Quebec courts found against the railway company, which was barred from appealing to the Supreme Court of Canada, because of the statutory provision that there can be no appeal to the Supreme Court in cases involving less than \$2,000. The presiding judge in the judicial committee asked if the company would pay the costs of an appeal, whichever way it went, but the railway's counsel was not prepared to assent. The court held that the case did not involve any intricate or delicate problems about which Quebec judges needed any further direction.

Canadian National Railways Construction, Betterments, Etc. Model of the C.P.R.'s First Locomotive.

Quebec Viaducts.—We are advised that a contract has been let for the superstructure for the new bridge construction involved in the revision of the crossing of Rivière-du-Loup, at mile 103 from Quebec, and for a revised crossing of the East Yamachiche River, at mile 96 from Quebec.

Albany Junction Connection.—We are officially advised that the connection of the St. Maurice and Montreal Divisions at Albany Jct., mile 5.6 St. Lawrence Division, approved by the Board of Railway Commissioners recently, is merely the reversing of the direction of the connection and does not involve any new arrangement of tracks of any account; but merely changing the direction of the crossover.

Hornepayne Building.—A large amount of building has been done recently at this important division point, on the Superior Division, 573.4 miles west of Montreal.

The new station building is a commodious brick structure 34 x 133 ft., planned to afford the maximum service facilities. The basement walls are of concrete and the main floor is of reinforced slab construction. The main floor is laid out with a general waiting room, smoking room, large luncheon room with counter and tables, operators rooms, yard office, baggage room, etc. The second floor comprises a large general office and offices for the divisional officials.

A 16 stall locomotive house has been completed recently at Hornepayne, which is a radical departure from the usual stereotyped roundhouse, the building being rectangular. Within heavily buttressed brick enclosing walls and covered by a lofty steel trussed roof, lined with numerous monitors, are the 80 ft. turntable, the machine shop, blacksmith shop, boiler room, pump room, locomotive supply room, tool room, locomotive foreman's office, general office, locomotive men's registering office, etc. The number of steel columns supporting the roof trusses has been kept to a minimum, there being only 19 in the whole building which is 287 x 223 ft., and covers an area of about 1½ acres. The building was designed by Geo. C. Briggs, Architect, C.N.R., and built by the construction department.

Eleven houses have been built this year in Hornepayne by the C.N.R. to help to relieve the housing situation by providing modern dwellings.

The boarding house at Hornepayne, is to be enlarged, the work to commence in the spring. The building will have a basement and three floors, with outside dimensions of 32 x 139 ft., with a rear extension for kitchen, etc. When the alterations and additions are completed the building will be equipped and run along hotel lines, with large dining room and luncheon counter; large reading room with fireplace alcove, billiard room, etc. There will be 50 bedrooms. A portion of the second floor is to be set apart for women.

Western Lines Improvements.—A press report states that standard 85 lb. rails will be laid this year on the sections of the C.N.R. which now have 60 lb. rails, and that extra ballasting will be laid.

Edmonton, Alta.—We are officially advised that the plans for fitting up a building in Edmonton for the accommodation of the C.N.R. office staff has no connection with the question of the creation of a new station there. The move

has been necessitated by the co-ordination of the Canadian National Rys. and Grand Trunk Pacific Ry. staffs there.

St. James Interlocking Plant.—A press report states that since the operation of the Grand Trunk Pacific Ry. by the Canadian National Rys. management the two tracks between Pembina and St. James Jct., Man., are being operated as a double track east and west passenger line, and the Canadian Northern Ry. main track to Portage Jct. is being used as a freight line. This made it necessary to change part of the layout and interlocking plant at St. James, which is completed, the working having been done by the company's forces.

Yorkton Water Supply.—A press report states that C.N.R. engineers are

Model of Canadian Pacific Railway's First Locomotive, Countess of Dufferin.

preparing plans and estimates for a new water supply at Yorkton, Sask.

Hanna-Medicine Hat Branch.—Work on the Red Deer bridge on this line is being proceeded with rapidly, a press report stating that about 2,000 ft. of the work have been completed.

Edmonton Station.—The Edmonton, Alta., City Commissioners have been instructed, a press report states, to communicate with the C.N.R. management to ascertain, if possible, what it is proposed to do this year about building a union station and a subway at 1101st St.

Vancouver and Victoria Terminals.—A press dispatch states that the British Columbia Railways Department has reported to the Legislature that during 1920 the amount approved for payment to the C.N.R. on account of work done on the terminals at Vancouver and Victoria was \$542,832.69.

The Pacific Construction Co. is reported to be making satisfactory progress with the fill at the reclaimed land on False Creek Flats, Vancouver. When the fill is completed the road work will be gone on with. (Feb., pg. 72.)

Early Locomotive Name Plate.—The Ottawa Women's Historical Society has received for its museum from E. W. Beatty, K.C., President, C.P.R., the name plate of the locomotive Bytown, which hauled trains on the Prescott & Ottawa Ry. in the fifties.

Canadian National Rys. reduced the sleeping car service between St. John and Campbellton, N.B., from daily to two days a week on Feb. 7. The sleeping car for Campbellton is attached to train 10 leaving St. John at 11:25 p.m. Mondays and Thursdays only, and the one for St. John is attached to train 32 at Campbellton on Tuesdays and Fridays, reaching St. John on train 9 the following mornings.

One of the features of the C.P.R. staff's last New Year's reception at Windsor station, Montreal, was a model of the company's first locomotive, the Countess of Dufferin, which was made from a photograph in about three days. It was about 20 ft. long, mounted on a couple of baggage trucks, and was propelled by a baggage man, who was dressed as Father Time. The model negotiated its way through the concourse without any difficulty.

The four passengers carried on the tender, as shown in the accompanying illustration, represented four hardy pioneers, one, an Indian chief; the second, a cowboy; the third, a hayseed (presumably, our informant says, from Ontario);

and the fourth, a French-Canadian habitant. They were singers from the C.P.R. Recreation Club, and at midnight led off "Auld Lang Syne," after which each of them sang an appropriate ditty. The Indian chief sang "Good Morning Mr. Zip, Zip, Zip"; the cowboy sang "My Little Grey Home in the West"; the hayseed sang, "I am McDonald from the Farm," and the habitant sang "Alouette," after which a lady member of the staff, Mademoiselle Rose Dumas, sang, "O! Canada!" in French, and then the locomotive disappeared.

Equipment for Points Beyond Switching Limits.—The Railway Association of Canada has issued the following circular:—The question of practice to be followed by railways performing switching service, in furnishing equipment for loading to points beyond switching limits on a carrier road, has received consideration, and the following is recommended to member lines for adoption as standard practice:—"Railways performing switching service, when supplying cars for loading to points beyond the switching limits on a carrier road, shall furnish either equipment belonging to the line to which the load is to be delivered, or other foreign equipment that may be properly loaded under Car Service Rules via such carrier, and in event of inability to do so, road haul carrier shall be called upon to furnish necessary cars."

Canadian National Rys. and Canadian Government Merchant Marine have, a press report states, leased 911 Government St., Victoria, B.C., for offices, and expect to move in March, when alterations have been completed.

The Roberval-Saguenay Ry. Co. applied recently to the Quebec Public Service Commission for authority to reduce train service on the Laterrière branch from daily to biweekly.

Increases Authorized in Express Rates by Board of Railway Commissioners.

The Board of Railway Commissioners passed general order 327 Feb. 2, as follows:—Re application of Express Traffic Association of Canada, on behalf of express companies subject to the Board's jurisdiction, for an increase of 40% in the tolls at present in effect. Upon hearing the application at Toronto, Saskatoon, Edmonton, Prince Rupert, Victoria, Vancouver, Vernon, Nelson, Medicine Hat, Calgary, Regina, Winnipeg, Fort William, Moncton, Halifax, St. John, Montreal, and Ottawa, on various dates between Sept. 2 and Dec. 13, 1920, in the presence of counsel for and representatives of the express companies, the Express Traffic Association of Canada, the cities of Montreal and Toronto, Boards of Trade of Toronto, Saskatoon, Edmonton, Vancouver, Nelson, Calgary, Fort William, Sault Ste. Marie, Montreal, and Halifax, Montreal Chamber of Commerce, Dominion and Nova Scotia Departments of Agriculture, Canadian Manufacturers' Association, Canadian Fisheries Association, Fisheries and Produce Association, British Columbia Fisheries, National Dairy Council, Canadian Creamery Association, Canadian Produce Association, United Farmers of Ontario, United Farmers of Alberta, United Fruit Growers, Niagara Fruit Growers, shippers of produce from Prince Edward Island and certain other shippers of fresh fish, Church & Co., Saskatoon Bread Co., Saskatoon Pure Milk Co., Modern Steam Laundry of Saskatoon, Saskatchewan Dairymen's Association, Alberta Dairy Association, Ogilvie Flour Mills Co., Alberta Box Co., Vernon Fruit Co., Calgary Brewing & Malting Co., and Stock Growers' Protective Association, and what was alleged, and upon reading the written submissions filed, judgment, dated Feb. 2, 1921, was delivered by the Chief Commissioner and concurred in by the other members of the Board who heard the application, a certified copy of the said judgment being attached hereto; the Board orders that the changes in the tariffs of the express companies subject to the Board's jurisdiction, which is hereby made part of this order, be authorized.

Chief Commissioner Carvell's judgment, referred to above, covers 28 foot-cap pages of typewriting, and we are unable, on account of pressure on our space, to reproduce it in full. After very fully reviewing the evidence given at the hearing and the arguments, he said:—

"I find on the examination of the Express Classification that beer and other spirituous liquors are carried at second class rates. I think all alcoholic liquors should be advanced to the first class."

Further on he said:—"The express companies asked for a 40% increase, and I have given their best estimate of the results should this request be granted. They have stated that if the cartage differential were eliminated they could produce practically the same results on an increase of 33 1/3%. I have above decided that this differential should be eliminated. I am also of the opinion that there will be some reduction in the cost of carrying on the express business during the coming year, especially in the maintenance and feed of horses, maintenance of equipment, and purchase of supplies, and, while it will not be very great, yet, with the allowance that should be made for the revenue from

the money order business, I am of the opinion that an increase of 30% would produce them about the amount of money which they should receive, viz., sufficient to pay the cost of operation, maintenance, and depreciation, and leave sufficient to pay interest upon the actual investment and possibly a small amount of money for reserve. These figures relate more particularly to the Dominion Ex. Co. than to the Canadian Ex. Co., as the whole case seemed to be based upon their requirements.

"According to exhibit 45, the result of one day's shipments by the Dominion Ex. Co. showed that by weight the goods moving on first class rates amounted to 61.36% of the whole, those moving on second class rates to 32.68%, and those moving on commodity rates to 5.96%. As the goods carried under second class and commodity rates consist largely of food and food products, I naturally am anxious that no greater increase be imposed upon this traffic than is absolutely necessary, and I find that an increase of 35% on first class rates and charges, 25% on second class rates, and 20% on commodity rates will produce about the same revenue as a flat increase of 30%, and, as the greater increase should be imposed upon the more expensive goods carried at first class rates, I therefore de-

cide that the express companies be permitted to increase their rates and charges 35% on all traffic, excepting that classified second class, on which the increase may be 25%, excluding articles of food covered by published commodity tariffs on which the increase may be 20%.

"The increases herein authorized may be provided for by the publication and filing, on one day notice, at all express offices, of blanket supplements to the existing tariffs. In the disposition of fractions any amount not exceeding 2 1/2% may be waived, and above 2 1/2% and up to 5% may be considered as 5%.

The judgment was concurred in by Assistant Chief Commissioner McLean and Deputy Chief Commissioner Nantais.

Aerial Transportation Notes.

The Minister of Customs has granted a license to Fredericton, N.B., as an air harbor.

The Civil Service Commission has made the following appointments for the Canada Air Board:—J. A. Glen, O.A.S., Air Station Superintendent, British Columbia; C. McLaurin, O.A.S., Air Station Superintendent, Ottawa.

A London, Eng., cable states that French air lines have started cutting the fare by aeroplane between Paris and London to \$17.50. English lines are reported to have stated that they are unable to make a profit with the fare at \$30.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east and U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Mainly About Railway People Throughout Canada.

Mrs. Apps, widow of Wm. Apps, some time General Master Car Builder, C.P.R., and mother of J. O. Apps, General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, died at her home in Toronto, Feb. 9, aged 75.

B. M. Armstrong, Controller of Railway Mail Service, Post Office Department, Ottawa, has resigned. An Ottawa dispatch says that the railway mail service branch and the mail contract branch will be merged.

J. E. Armstrong, M.P. for East Lambton, Ont., has been elected chairman of the House of Commons' Railway Committee.

E. W. Beatty, K.C., President, C.P.R., was one of the speakers at the Canadian Railway Club's dinner in New York on Jan. 21, and was the principal speaker at the Engineering Institute of Canada's annual dinner in Toronto, Feb. 2.

A. Brostedt, General Freight Agent, Canadian National Rys., Vancouver, sailed from there on Feb. 10 on the s.s. Empress of Asia for the Orient, as C.N.R. official representative to look into trade conditions in China, Japan, the Philippines and the Straits Settlements. He will visit the principal places in those countries, and is expected to return to Canada in July or August. He was accompanied on the Empress of Asia by N. S. Brown, one of the managers, at Hong Kong, of Butterfield & Swire, Oriental Agents for Canadian National Rys. and Canadian Government Merchant Marine, who had been in England and returned to China via Canada.

A. B. Calder, who has been appointed on the Executive Staff, C.P.R., was born at London, Ont., Aug. 24, 1867, and from 1882 to 1887 was in various capacities on C.P.R. construction west of Winnipeg, Man. He entered C.P.R. service in 1887, since when he has been, in 1889, in Passenger Department, Winnipeg; 1889 to Oct. 1893, ticket agent, Tacoma, Wash.; Oct. 1893 to July 1895, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Seattle and Tacoma, Wash.; Nov. 1904 to Nov. 1910, General Agent, Passenger Department, Seattle, Wash.; Nov. 1910 to Sept. 1911, Chicago, Ill.; Sept. 1, 1911, to Dec. 1916, General Agent, Passenger Department, associated with his father in a general ticket agency at Winnipeg, and since Jan. 1917, Assistant General Passenger Agent, C.P.R. In 1917 he was associated with the British Canadian recruiting mission, under Col. J. S. Dennis, and he represented the C.P.R. President on the company's special trains during the Prince of Wales' Canadian tour in 1919 and the Imperial press tour in 1920.

H. R. Charlton, General Advertising Agent, G.T.R., Montreal, attended the 19th annual dinner of the Canadian Camp at New York, Feb. 18.

H. J. Dalton, who has been appointed Auditor of Disbursements, C.P.R., Montreal, was born in 1862, and entered C.P.R. service in 1887, since when he has been, to 1893, clerk in the Audit Department, Western Lines, Winnipeg; 1893 to 1899, Travelling Auditor, Montreal; 1899 to 1913, Chief Travelling Auditor,

Montreal; 1913 to Feb. 1, 1921, Assistant Auditor of Agencies, Montreal.

W. R. Devenish, General Superintendent, Ontario District, Canadian National Rys., Toronto, was presented with a club bag, and a bar pin for Mrs. Devenish, on leaving Moncton, N.B., recently, where he was Superintendent, C.N.R., for some time.

Edward Fitzgerald, Deputy Chairman, Canadian Advisory Committee, Hudson's Bay Co., Winnipeg, formerly Assistant General Purchasing Agent, C.P.R., Montreal, has been elected a director of National Trust Co.

Hugh Gallinger, a G.T.R. brakeman, has been presented with the Royal Canadian Humane Society's bronze medal, in recognition of his rescue of a child from a burning building at the risk of his life. He noticed fire near the track while on his train at Coteau Jct., Que., and, leaving the train, he proceeded to the upper story of the building, where he had been

Major G. P. MacLaren,
Engineer, Maintenance of Way, Eastern Lines,
Canadian Northern Railway System.

told a child had been trapped, and brought the child to the ground safely.

D. B. Hanna, President, Canadian National Rys., addressed the Pembroke, Ont., Board of Trade Feb. 1.

Mrs. Hays, widow of Chas. M. Hays, formerly President, G.T.R., and Grand Trunk Pacific Ry., left Montreal, Feb. 2, on a trip to California.

David H. Hays, only brother of the late Chas. M. Hays, formerly President, G.T.R. and Grand Trunk Pacific Ry., died in California, recently.

C. K. Howard, General Tourist Agent, Canadian National Rys., attended the 19th annual dinner of the Canadian Camp at New York, Feb. 18.

W. R. Ingram, Traffic Manager, Swift Canadian Co., Winnipeg, who has been appointed General Traffic Manager for all Swift enterprises in Canada, with of-

fice in Toronto, received his early transportation training on the Louisville & Nashville Ry. and has been with the Swift Canadian Co. for 20 years.

Dr. Jno. D. Langham, who died at Minnitonas, Man., Feb. 4, aged 27, was the son of Edward Langham, ex General Purchasing Agent, Canadian National Rys., Toronto. He served with the Canadian Medical Corps, during the war, and then started practicing at Minnitonas. He was buried at Toronto.

Ernest E. Lloyd, who has been appointed Assistant Comptroller, C.P.R., Montreal, was born at Great Grimby, Eng., Sept. 2, 1868, and came to Canada in July 1876, settling in Winnipeg. He entered C.P.R. service Dec. 27, 1877, and was, to June 13, 1894, in various positions in the Stores Department, Winnipeg; June 13, 1894, to Dec. 17, 1897, in charge of payrolls and labor statistics, Stores Department, Winnipeg; Dec. 17, 1897 to Feb. 1, 1903, chief clerk, Stores Department, Vancouver, B.C.; Feb. 1, 1903 to Dec. 1, 1904, chief clerk to General Storekeeper, Montreal; Dec. 1, 1904 to Jan. 15, 1910, on the separation of the Accounting and Storekeeping Departments, chief clerk to Auditor of Stores and Mechanical Accounts, Montreal; Jan. 15, 1910 to Aug. 1, 1913, Assistant Auditor of Stores and Mechanical Accounts, Montreal; Aug. 1, 1913 to Feb. 1921, Auditor of Stores and Mechanical Accounts, Montreal.

Guy Sebern Lytle, who has been appointed acting trainmaster, C.P.R., Moose Jaw, Sask., was born at Denison, Iowa, Sept. 23, 1878, and entered transportation service Sept. 1, 1891, since when he has been, to Feb. 1, 1893, messenger, Seattle & Northern Ry., Amacortes, Wash.; Feb. 1, 1893 to Jan. 7, 1897, agent, Seattle & Northern Ry., and Seattle & Lake Shore & Eastern Ry., at various points in Washington; Jan. 7, 1897 to May 2, 1898, operator and clerk in Superintendent's office, Seattle, Lake Shore & Eastern Ry., Seattle, Wash.; May 2, 1898 to Mar. 31, 1901, dispatcher, Seattle & International Ry. and Northern Pacific Ry., Seattle, Wash.; Mar. 31, 1901 to Feb. 1, 1907, dispatcher, Northern Pacific Ry., Tacoma, Wash.; Feb. 1, 1907 to Sept. 1, 1909, dispatcher, same road, Missoula, Mont.; Sept. 1, 1909 to May 16, 1911, Assistant Chief Dispatcher, same road, Missoula, Mont.; May 16, 1911 to Sept. 5, 1912, Inspector of Train Dispatching, same road, St. Paul, Minn.; Sept. 5, 1912 to Apr. 9, 1913, Chief Dispatcher, same road, Missoula, Mont.; Apr. 9 to Aug. 25, 1913, Inspector of Transportation, C.P.R., Winnipeg; Aug. 25, 1913 to Aug. 1919, Car Service Agent, Manitoba District, C.P.R., Winnipeg; Aug. 1919 to Jan. 1921, Car Service Agent, Saskatchewan District, C.P.R., Moose Jaw, Sask.

H. T. Malcolmson, Superintendent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., declined to be nominated as President of the Central Railway Club, Buffalo, N.Y., recently, on the ground that he expected to be appointed presiding officer for two years of a large fraternal organization in Hamilton.

Albert Edward McAmmond, who has been appointed Chief Dispatcher, Kenora Division, Manitoba District, Kenora, Ont., was born at Britannia Bay, Ont., Feb. 19, 1879, and entered C.P.R. service June 1, 1896, since when he has been, on Jan. 2, 1897, night operator, Stittsville, Ont.;

Jan. 2 to May 21, 1897, night operator, Hull, Que.; May 21 to Sept. 15, 1897, night operator, Pembroke, Ont.; Sept. 15, 1897 to Oct. 2, 1902, agent, The Brook, Ont.; Oct. 2, 1902 to June 4, 1904, night operator, Carleton Place, Ont.; June 4, 1904 to May 1, 1910, dispatcher, Ottawa, Ont.; May 3 to June 4, 1910, operator, Regina, Sask.; June 5 to Dec. 5, 1910, dispatcher, Macleod, Alta.; Dec. 5, 1910 to Jan. 11, 1911, operator, Pincher, Alta.; Jan. 11, 1911 to Jan. 5, 1921, dispatcher, Medicine Hat, Alta.

Alex. McDonald, of Winnipeg, was stated in a Regina press dispatch recently as having been appointed freight rate expert to the Saskatchewan Government. We are officially advised that the appointment is a temporary one, to act on behalf of the Saskatchewan Government in conjunction with the Manitoba Government, in the railway rates case which those provinces are interested in.

Mrs. W. R. MacInnes, wife of the Vice President in charge of traffic, C.P.R., will leave Montreal shortly for France, where one of her daughters is at school.

Sir Geo. McLaren Brown, General European Manager, C.P.R., and Lady Brown, sailed from New York, Feb. 1, on their return to England.

M. H. MacLeod, Vice President in charge of construction, Canadian National Rys., left Toronto, Feb. 26, with E. Langham, formerly Purchasing Agent, C.N.R., to sail from Halifax, N.S., on Mar. 2, on Canadian Government Merchant Marine's s.s. Canadian Forester, for a trip to the West Indies, and British Honduras.

Lt. Col. C. N. Monsarrat, Consulting Engineer, Railways Department, Ottawa, has been elected a director of Canada Foundries & Forgings Ltd., Brockville, Ont.

Frank Moore, Travelling Passenger Agent, Canadian National Rys., Moncton, N.B., was presented with a silver cutlery recently on behalf of the British journalists who were touring in Canada recently.

W. J. Moule, Assistant Comptroller, C.P.R., Montreal, died at Montreal West, Jan. 28, from a cerebral lesion. He entered C.P.R. service in 1891 as a clerk in the Accounting Department. In 1898 he was transferred to the Stores Department, and in 1900 to the Second Vice President and General Manager's office. He was subsequently transferred to the statistical branch of the Audit Department; in 1905 was appointed chief clerk there; in 1908 Assistant Auditor of Disbursements; in 1914 Auditor of Disbursements; and in 1918 Assistant Comptroller. The funeral at Mount Royal Cemetery Jan. 29 was attended by a large number of C.P.R. officials and employees, many of whom went by special train from Windsor St. station.

Sir Augustus Nanton, of Winnipeg, one of the C.P.R. directors, and President, Winnipeg Electric Ry., has been elected a director of the Royal Trust Company.

J. B. O'Brien, who died at Renfrew, Ont., Feb. 18, aged 67, was a brother of Senator M. J. O'Brien and was associated with him in railway construction in different parts of Ontario and also on the Grand Trunk Pacific Ry.

Alexander Peers, whose appointment as Master Mechanic, Moose Jaw Division, Saskatchewan District, C.P.R., Moose Jaw, was announced in our last issue, was born in Cheshire, Eng., in Aug. 1875, and entered C.P.R. service July 16, 1901, since when he has been,

to June 1, 1906, machinist, Winnipeg; June 2 to June 12, 1906, draftsman, Winnipeg; June 13 to Aug. 6, 1906, relieving Locomotive Foreman, Winnipeg; Fort William, Ont., and Ignace, Ont.; Aug. 7, 1906, to Apr. 24, 1914, Locomotive Foreman, Souris, Man., Brandon, Man., and Winnipeg; Apr. 24, 1914 to Dec. 31, 1920, Division Master Mechanic, Winnipeg and Moose Jaw, Sask.

Patrick Philip, who has been appointed Chief Engineer, British Columbia Public Works Department, vice A. E. Foreman, who has resigned to go into private practice in Vancouver, was born at Londonderry, Ireland, in 1882. He took an engineering course at the Royal University of Ireland, and after serving an apprenticeship in civil engineering, he went to British Columbia in 1907, and entered Grand Trunk Pacific Ry. service on construction, near Prince Rupert, B. C. He entered the City Engineering service at Vancouver, B.C., in 1910, and in 1917 entered the B.C. Public Works Department service.

F. B. Tapley,
Engineer, Maintenance of Way, Canadian National Railways, Toronto.

W. D. Robb, Vice President, Transportation, Construction and Maintenance, G. T.R., Montreal, has been elected a director of Canada Foundries & Forgings Ltd., Brockville, Ont.

Lord Shaghnessy, Chairman, C.P.R. Co., and C. R. Hosmer, another member of the directorate, visited Augusta, Ga., Washington, D.C., and other southern points, recently.

F. W. Sterling, heretofore District Freight Agent, C.P.R., Edmonton, Alta., has resigned, and has entered into partnership with Harry Quelch, of Shanghai, China, to carry on a merchandise brokerage business. Mr. Sterling taking charge of the firm's office at Vancouver. He was born at Thornbury, Ont., Sept. 13, 1879, and entered C.P.R. service in 1894, since when he has been, to 1903, messenger, local freight office, Vancouver, B.C.; 1903 to 1904, claims clerk, General Freight Department, Vancouver, B.C.; 1904 to 1906, chief clerk, General

Freight Department, Vancouver, B.C.; 1906 to 1910, Contracting Freight Agent, Seattle, Wash.; 1910 to 1913, Travelling Freight Agent, Vancouver, B.C.; 1913 to May 1920, District Freight Agent, Nelson, B.C.; May 1920 to Feb. 1921, District Freight Agent, C.P.R., and Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta.

C. E. E. Usher, Passenger Traffic Manager, C.P.R., Montreal, has been re-elected President, Canadian Forestry Association.

Lady and Miss Van Horne entertained at luncheon at Montreal recently, in honor of W. H. Taft, ex-President of the U.S.A., who is one of the arbitrators on the value of certain G.T.R. stocks to be taken over by the Dominion Government. H. G. Kelley, President, G.T.R., and Mrs. Kelley were among the guests.

Grand Trunk Railway Construction, Betterments, Etc.

Portland Freight Shed and Wharf.—We are officially advised that considerable repair work is in progress at the company's wharves at Portland, Me. The material for renewal of the wharves consists of approximately 75,000 lineal feet of creosoted piling in 45 ft. to 65 ft. lengths. The proposed freight shed will be of timber construction. Work was started early in October 1920, but was suspended in December. The old superstructure has been entirely removed and the piling has been driven for replacement by the new superstructure. Work will, it is expected, be restarted in the spring, so as to be completed by the end of August.

Somerset St. Bridge, Ottawa.—A proposal is under consideration at Ottawa for building a bridge over the Rideau Canal and the G.T.R. tracks at Somerset St., and the city's Board of Control is reported to have decided Feb. 11 to ask the G.T.R. to pay a part of the cost.

Ingersoll to Eastwood.—A press report states that 50 men are replacing the present rails between Ingersoll and Eastwood, Ont., with 100 lb. rails. The work is said to have been completed on the eastbound track between Hyde Park and Eastwood, and the work at present in hand is on the westbound track. It is also stated that it is expected to complete the relaying of the westbound track between Hyde Park and Eastwood with 100 lb. rails this year (Feb., pg. 82).

London, Huron & Bruce Branch.—A proposal for the electrification of the London, Huron & Bruce Branch is being put forward by residents of the district through which it runs. Several conferences of Reeves and other officials have been held, which resulted in the calling of a meeting of representatives of the 24 municipalities at London on Feb. 23. The London Chamber of Commerce is co-operating in the matter.

Protection for Maintenance of Way Employees.—The Railway Association of Canada has been giving consideration to the possibility of providing further protection for maintenance of way department employees, against accidents resulting from being struck by trains, and has recommended to member lines, not equipped with whistle posts covering curves where view of track ahead is obscured, that the following instructions be issued to locomotive crews: "Engineers on all trains shall sound whistle signal 14 (1) when approaching curves where view of track ahead is obscured."

Traffic Orders by Board of Railway Commissioners.

Increases in Express Rates.

General order 327. Feb. 2.—Authorizing increases in express rates. This order is given in full, together with a portion of the judgment on which it was based, on another page of this issue, under "Increases Authorized in Express Rates."

C.P.R. Lake Service in British Columbia.

30,585. Jan. 25.—Re application of Slocan District Board of Trade for re-establishment of a daily lake service on the C.P.R. Slocan, Nelson & Nakusp lines. Upon hearing the application at Nelson, B.C., Oct. 18, 1920, the Boards of Trade of Slocan, Slocan District, and Nelson, the C.P.R., and certain lumber interests being represented, and what was alleged, the Board orders that the application be refused.

The Chief Commissioner, Hon. F. B. Carvell, gave the following judgment in this case:—At a sitting of the Board in Nelson, B.C., on Oct. 18, 1920, this matter came up for discussion, when it was simply alleged that, up to a comparatively recent date, the C.P.R. had maintained a daily lake service in connection with the Slocan, Nelson, and Nakusp lines. There was no difference as to the facts, and it became purely a question of law as to whether or not the Board had jurisdiction over a railway company as to service by sea or inland waters. The only authority which I can find on the subject is sec. 358 of the Railway Act, 1919. There is no doubt that all the conditions of ownership and operation as set forth in that section exist in the case under discussion. The C.P.R. carries on traffic by the various inland lakes in and around Nelson, including both the Kootenay and Arrow Lakes, in close connection with railway lines in that vicinity, and, moreover, the railway trains and lake vessels are not only owned by the same company but run on schedule time, the one with the other. The act, however, reads as follows:—

"358. The provisions of this act shall, in respect of tolls, tariffs and joint tariffs, so far as deemed applicable by the Board, extend and apply to the traffic carried by any railway company by sea or by inland water, between any ports or places in Canada," etc.

As I construe this, our jurisdiction extends only over tolls, tariffs, and joint tariffs, and give us no power whatever over service, or character of service, and, therefore, we would have no jurisdiction to order the re-establishment of the daily service. The application should, therefore, be dismissed.

Toronto Suburban Ry. Freight Mileage Tariff.

30,592. Jan. 27.—Re application of Toronto Suburban Ry., under sec. 330 of the Railway Act, 1919, for approval of its Standard Freight Mileage Tariff, C. R.C. 4, effective Feb. 6, 1921.—Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said tariff be approved; the said tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Rate on Zinc Concentrates from New Hazelton, B.C.

30,605. Jan. 29.—Re complaint of Silver Standard Mining Co., of New Hazelton, B.C., that having received from the Grand Trunk Pacific Ry. a refund of excess charges on five carloads of zinc concentrates shipped from New Hazelton to

Band Springs, Oklahoma, on the bills of lading for which the applicant company had limited the value to \$50 a ton, it has been unable to obtain a similar refund on the remaining four carloads shipped between the same dates, because the applicant company had omitted the limitation of value on the bills of lading therefor. Upon hearing the complaint at Edmonton, Alta., Nov. 28, 1919, the complainant and the railway company being represented at the hearing, and what was alleged, and upon reading the submissions filed, the Board orders that the complaint be dismissed.

Unloading Charges at Halifax.

30,619. Feb. 2.—Re application of Dominion Atlantic Ry. for permission to file a tariff providing for unloading charges at the port of Halifax, N.S., on export freight. Upon hearing the matter at Ottawa, Dec. 21, 1920, the Canadian National Railways, the applicant company, and the Nova Scotia Shippers' Association being represented at the hearing, and what was alleged; and upon reading the submissions filed, the Board orders that the applicant company be permitted to file a tariff providing for unloading charges at Halifax, on export freight traffic, of 1½¢ per 100 lb. on perishable freight, and 3¢ per 100 lb. on other freight; the said tariff to be made effective on one day notice, but not earlier than Feb. 4, 1921.

The Chief Commissioner, Hon. F. B. Carvell, gave the following judgment, on which the above order was based:—On Dec. 21, 1920, application was made by the Dominion Atlantic Ry. through E. G. J. Comeau, General Freight Agent, asking this Board to approve the publication of a tariff by it authorizing a terminal charge at Halifax of 1½¢ per 100 lb. on apples and potatoes, unloaded direct from cars to vessels, and 3¢ per 100 lb. on other traffic. In its application it stated that, had receiving notification from Canadian National Rys., dated Nov. 27, 1920, providing for certain changes in the handling of export traffic in the port of Halifax as follows:—

"The management having decided that it is desirable that the conditions of handling export traffic in the port of Halifax should be uniform with other Canadian ports, the following changes are authorized, and will become effective Jan. 1, 1921. It has in the past been the custom of the port for steamship lines to take delivery of export freight from the cars, and under these conditions the railway has not collected side wharfage from vessels landing or receiving cargo on which the railway receives a road-haul tariff. Effective Jan. 1, export freight will be discharged from cars and placed on wharf shed floors by the railway, except traffic handled under domestic, commodity, or mileage rates, also shipments of extraordinary dimensions, or packages exceeding 6,000 lb. each in weight, which will only be handled by special contract. Simultaneously, free side wharfage will be discontinued, and from that date side wharfage will be assessed in accordance with rates authorized in our current wharfage tariff, this to apply to all vessels, both sail and steam, regardless of the class of cargo they are receiving or discharging. It is hoped that under this arrangement the railway will benefit by obtaining more prompt release of cars at the wharboad than has been possible heretofore."

Exception was taken to the proposal almost immediately by the Nova Scotia Shippers' Association, and, as a result, notification was sent to practically all parties concerned that the application would be considered at a sitting of the Board in Ottawa on Dec. 21 last, at which the Canadian National Rys., the Dominion Atlantic Ry., and the Nova Scotia Shippers' Association were represented.

It seems that heretofore, at the deep water wharves in Halifax, no side wharfage has been charged on ship loading or unloading alongside thereof, and the Canadian National Rys. decided that in future side wharfage must be paid. It seems there has been an understanding between the railways and the ship owners that, because no side wharfage was charged, the ship stevedores would unload apples and potatoes direct from the cars to the vessel, and as soon as the above order was issued, the ship owners refused to carry out this arrangement any longer, and decided that the railway companies must do the unloading themselves, placing the goods either in warehouses or on the wharf ready to be handled by the stevedores. The railways contend that the tariffs with which they have filed as above stated would be a reasonable charge therefor. They also contend that heretofore the shipper has received the benefit of the above arrangement, stating that the export rate was from 15% to 25% lower than the domestic rate to Halifax, on perishables such as potatoes and apples. It, therefore, becomes a question as to whether the additional costs incurred upon the traffic should be absorbed by the railway company or borne by the shipper.

Shortly after the hearing, we were asked by the Shippers' Association to defer action, as they intended having a meeting with the interested parties early in January, for the purpose of settling the matter among themselves, alleging that it was almost a priori necessary that these perishable commodities be unloaded direct from the cars into the ship. We, therefore, waited, and finally a meeting was held on Jan. 15. On Jan. 18, we received a letter from the railway company, through the C.P.R. at Montreal, enclosing copies of letters addressed to both the Shippers' Association and the Dominion Atlantic Ry. on Jan. 15 by Furness Withy & Co. Ltd. stating positively that, at a conference of all the shipping interests held in Halifax on the 15th ultimo, it was felt that the question of unloading cargoes ex cars for export was a matter to be dealt with by the railway; and notifying the Dominion Atlantic Ry. that, after Jan. 31, they would require all shipments of apples to be delivered to them ex cars.

We are in receipt of a telegram from Mr. Craze, representing the Shippers' Association, in which he states that, at a conference between that Association and the General Manager of the Dominion Atlantic Ry. on Jan. 15, it was mutually agreed that the Shippers' Association should absorb the railway's share of liability and expense for unloading charges at Halifax, and that the railway would withdraw the application for the tariff for unloading apples and potatoes. This information was immediately communicated to the railway company, which, while admitting that there was such a discussion, has denied that any such agreement was reached. Mr. Craze suggests that the matter be left in abeyance

until the Board could meet at Kentville and discuss the matter further. With this request I am unable to agree. The whole question is brought up by the fact that the Government Railways are demanding some rental or dues for the use of their wharves, the same as is demanded elsewhere in Canada. As a result, the Dominion Atlantic Ry. is compelled to pay a certain amount for unloading produce which it had not been paying in the past. If the tariff before me was just and reasonable, and no person had ever attacked it, and I can see no reason why it is not just and reasonable, then the extra burden should not be borne by the railway. Therefore, I think the tariff should be allowed.

I am afraid that nothing but trouble would result from leaving the matter in the unsatisfactory condition in which it would be placed were the railway company compelled to operate under agreements with the shippers, rather than under legal tariffs, because one can easily imagine a set of circumstances under which some fruit shipper might not be on hand to unload and take care of his shipments, and in case of damage by frost, as is very likely to occur in Halifax during the winter, trouble and litigation would be placed before the Board, and therefore I feel that the only logical proceeding is to have a fixed tariff and once that has been settled, then the shippers and the railway company are at liberty to make any arrangements which to them may seem reasonable.

If the Shippers' Association wishes to argue that the rate of 1½¢ per 100 lb. is not just and reasonable, this Board will willingly hear them and grant such relief as they are entitled to. The tariff as filed should be allowed, effective Feb. 4, 1921, and an order should go dismissing the complaint.

This judgment was concurred in by Assistant Chief Commissioner McLean, and Commissioners Boyce and Rutherford.

Express Classification Approved.

30,626. Re application of Express Traffic Association of Canada, on behalf of Express companies subject to the Board's jurisdiction, for approval of Express Classification for Canada no. 5, C.R.C. no. A.T. 712, effective Feb. 9. Whereas the said Classification has been published and filed to give effect to the changes authorized by the Board's judgment of Feb. 2, 1921, and its general order 327, Feb. 2, 1921, the Board orders that the said classification be approved.

Quebec, Montreal & Southern Railway Freight Tariff.

30,688. Feb. 22.—Re application of Quebec, Montreal & Southern Ry., under C.R.C. no. 5, for approval of its Standard Freight Mileage Tariff, C.R.C. 738, effective Mar. 6. Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the tariff be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Freight Rates from Simcoe.

The Board's Chief Traffic Officer, Jas. Hardwell, made the following report Jan. 28. This is an application that the Town of Simcoe be given the benefit of the so-called "town" tariff class rate scale, lower, as a whole, than the standard tariff; that is to say, the Ontario distributing scale referred to in order 3258, July 6, 1907 (International and Toronto Board of Trade Rates Case) as schedule A, which subject to the various hori-

zontal increases since granted, is still in force. That order did not add to or subtract from the list of distributing points then existent; it only remodelled the rate schedule itself so as to remove anomalies complained against. It is true that other centers have since been given special class tariffs from time to time, but while "special" these are not on the "town" tariff or schedule A basis. For illustration, take Parry Sound, one of these added centers. Toronto is one of the originals, and as schedule A operates in both directions, the rates from Toronto to Parry Sound are applied reversely from Parry Sound to Toronto as the starting point for the new tariff, and between Parry Sound and the intermediate stations the rates are proportionally scaled downward without regard to schedule A. In other words, without knowing the precise basis, if there really is one, these new tariffs may be regarded as a compromise between schedule A and the Standard Maximum Tariff. The following are the schedule A distributing points west of and including Toronto:—Aurora, Barrie, Brantford, Bridgeport, Chatham, Collingwood, Depot Harbor, Doon, Dundas, Elora, Fergus, Galt, Guelph, Hamilton, Hespeler, Ingersoll, Kitchener, London, Meaford, Merritt, Midland, Newmarket, Niagara Falls, Oranburg, Owen Sound, Paris, Petrolia, Point Edward, Port Dalhousie, Preston, St. Catharines, St. Marys, St. Thomas, Sarnia, Stratford, Thorold, Toronto terminal, Walkerville (group), Waterloo, Welland, Warton, Windsor, Wingham, Woodstock.

There can be no question that these so-called "town" tariffs discriminate in favor of the centers which have them, and without a doubt they give as a result the greater bulk of the higher classes of freight moving within Ontario. They had their origin in the competition between the Grand Trunk and the Great Western of former days. So far back as 1874 the only places common to the Grand Trunk and Great Western which were favored with special distributing tariffs were those I have marked with an asterisk in the above list.

The strength of the Grand Trunk's objection to the application lies in the fact—or so it seems to me—that the real "town" tariff points are the same now as they were at the time of the International Rates Case, and it may be assumed with some certainty that an addition now of Simcoe, or any other place having at least a good claim, would give a superior to other similar applications. Dominion Cannery has a plant at Delhi. Given the "town" scale at Simcoe, a later application to include Delhi might not illogically be expected. Mr. Watson stated that Tillsonburg gave his company a greater tonnage than Simcoe. Tillsonburg is not a "town" tariff point, but the lower basis could not well be denied if it was given Simcoe. These places are in the same G.T.R. section as Simcoe. The discrimination might, of course, be rectified by abolishing the "town" tariffs, as such, in favor of a uniform class tariff everywhere within each territory of the various scales. There might be three ways of doing this: by raising the distributing scale to the level to be set as a step which would undoubtedly be strenuously opposed by the manufacturing and jobbing interests; or by making the distributing scale the standard, thus reducing what is now the standard; or by a compromise between the two. Clearly, however, a system that in a lesser degree has been established for over half a century would demand

very careful consideration.

It should be understood that the application of the town of Simcoe is by no means so far reaching of itself as might appear on its face. In the first place the "town" tariff and the standard are identical up to 35 miles. Secondly, to and from all points east of Toronto, Simcoe is already on the same footing as all other points west of Toronto, under the grouping system outlined in the International Rates Case. This was admitted by applicants. Further, since the rates of the "town" tariffs apply in both directions, that is to say, as well as from the distributing centers, it follows that Simcoe has the advantage of those rates to all the points west of and including Toronto, enumerated in the list given above; also, under the long and short haul principle, to directly intermediate stations not in the list until the standard rates thereto become the lower. For example: he list class rate from Simcoe to Barrie, which has a "town" tariff, is 66¢. The three next intermediate points are Thornton, Cookstown and Beeton, which are not "town" tariff points. The standard rate to Beeton is 70¢, and to Cookstown and Thornton 73½¢, but they get the benefit of the standard rates thereto become the lower at this point, reading as follows: "Rates to and from intermediate points: Shipments between points on the G.T.R. System . . . not specified herein will be charged standard mileages rate . . . subject to rates shown (herein) as maximum between stations directly intermediate."

Mr. Hardwell's exhibit 2 gives other examples. Thus, the standard list class rate from Simcoe to Forest is 73½¢ (distance 113 miles, not 110 as stated), but the actual rate is that of the Sarnia "town" tariff, viz., 63¢. The standard rate to Belle River is 77½¢, but the rate that would, or should, be paid is that to Windsor, viz., 70¢. The only additional advantage that Simcoe would secure, if its application were granted, would be the substitution of the "town" scale for the standard tariff to and from other points west of Toronto over 35 miles distant which do not fall within this arrangement. It is my opinion that on the eve of a general enquiry into the entire rate structure of the Dominion, the time is not favorable for the introduction of any complicated changes, but that an arrangement that has obtained for many years.

Commissioner Boyce on Feb. 5 gave the following judgment, which was concurred in by Assistant Chief Commissioner McLean—This case has been heard before the late Mr. Commissioner Goodlove and myself on the 28th inst. and our judgment was reserved. Shortly thereafter, and while the necessary reports were being prepared for purposes of the Board, the case was called by death of the Board's Chief Traffic Officer. It is an extraordinary circumstance that all the business transacted and all the reports submitted with reference to this case should have been destroyed by the fire which broke out in the Board's office on the 28th inst. The Board's Chief Traffic Officer, who was the only person in the office at the time, was not present and his papers were not saved. The Board, therefore, has no record of the case and no way of knowing what the result of the case would have been. The Board, therefore, has no way of knowing what the result of the case would have been. The Board, therefore, has no way of knowing what the result of the case would have been.

The Canadian National Ry. have been directed by the Board of Railway Commissioners to stop trains at 6:00 a.m. at Chaffey's Locks, Ont.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—F. T. CUTTLE, heretofore Assistant General Claims Agent, has been appointed Insurance Agent. Office, Montreal.

J. H. EDWARDS, heretofore Assistant Freight Claims Agent, has been appointed Freight Claims Agent. Office, Montreal.

R. V. ROBINSON, General Claims Agent, in charge of freight claims and insurance, Montreal, has resigned, effective March 31, and his position has been abolished.

Canadian Pacific Ocean Services Ltd.—H. H. BORTHWICK has been appointed Passenger Agent, Dundee, Scotland, vice R. Ferguson.

W. H. POWELL, heretofore Passenger Agent, Southampton, Eng., has been appointed General Agent, Passenger Department, London, Eng., vice G. Gribbon, who has left the service.

A. A. WRAY has been appointed City Passenger Agent, London, Eng., vice C. E. V. Rutter, retired.

Canadian National Rys. — G. CANFIELD is reported to have been appointed Locomotive Foreman, Hornepayne, Ont.

D. H. CHIVERS, heretofore in Grand Trunk Pacific Ry. service, has been appointed Car Foreman, Regina, Sask., vice C. R. Stokes, transferred.

E. A. CLARK, heretofore Resident Engineer, Campbellton, N.B., has been appointed Division Engineer, Truro, N.S., vice R. H. Smith, Resident Engineer, transferred.

G. M. HEMSWORTH, heretofore City Passenger and Ticket Agent, Victoria, B.C., is reported to have been appointed Travelling Representative, Passenger Department, Vancouver, B.C., with territory covering C.N.R. lines west of Edmonton, Alta., Grand Trunk Pacific Ry. lines and Grand Trunk Pacific Coast Steamship Co.

J. M. HORN, heretofore General Freight Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, Man., has been appointed General Freight Agent, Canadian National-Grand Trunk Pacific Rys., including Grand Trunk Pacific Coast Steamship Co., with supervision of territory Lucerne, B.C., and west, vice A. BROSTEDT, temporarily assigned to other duties. Office, Vancouver, B.C.

E. M. JOHNSON, Special Engineer, Western Lines, Winnipeg, is now, since the return of J. W. Porter, Special Engineer, to his former position, devoting himself principally to the preparation of frog and rail standards.

W. T. McLAUGHLIN, Travelling Car Agent, Maritime Division, Moncton, N.B., is reported to have been transferred to Toronto, with territory extending from Montreal to the Pacific coast.

K. G. POLYBANK has been appointed Division Engineer, Hornepayne, Ont., vice E. R. Logie.

J. W. PORTER has returned to his position as Special Engineer, Western Lines, Winnipeg, Man.

R. H. SMITH, heretofore Resident Engineer, Truro, N.S., has been appointed Division Engineer, Campbellton, N.B., vice R. A. Black, Resident Engineer, transferred.

J. F. SPIEGEL has been appointed Assistant Master Mechanic, Superior Di-

vision, Ontario District, vice R. J. Rheame. Office, Hornepayne, Ont.

C. R. STOKES, heretofore Car Foreman, Regina, Sask., has been appointed Car Foreman, Hudson Bay Jet, Man.

Division Engineers.—The title of Resident Engineer, on Eastern Lines, has been changed to Division Engineer.

Land Surveys Department.—Lt. Col. F. F. CLARKE, who was appointed recently as Chief Land Surveyor, as mentioned previously in Canadian Railway and Marine World, has organized his department as follows:—Eastern Lines, JOHN CONGDON, Nova Scotia Land Surveyor, Dartmouth, N.S.; S. E. OLIVER, Quebec Land Surveyor, Montreal; E. G. FITZGERALD, Ontario Land Surveyor, Toronto. Western Lines, A. S. WEEKES, Chief Land Surveyor, Western Lines, Winnipeg; W. F. BEMISTER, Assistant Chief Land Surveyor, Western Lines, Winnipeg; G. B. BEMISTER,

Ernest E. Lloyd,
Assistant Comptroller, Canadian Pacific Railway.

Manitoba Land Surveyor, Winnipeg;

WM. McPHILLIPS, Assistant Manitoba Land Surveyor, Winnipeg; E. C. BROWN, Saskatchewan Land Surveyor, Grand Trunk Pacific Ry., Winnipeg; J. H. BURD, Saskatchewan and Alberta Land Surveyor, Edmonton, Alta.; J. E. GRAY, Alberta Land Surveyor (temporary), Edmonton; J. M. CHRISTIE, British Columbia Land Surveyor, Vancouver.

Canadian Pacific Ry.—B. ARNUM has been appointed Assistant Auditor of Agencies, Montreal, vice W. H. Blacklater, retired from the service.

A. B. CALDER, heretofore Assistant General Passenger Agent, Montreal, has been transferred to the executive staff.

H. J. DALTON, heretofore Assistant Auditor of Agencies, Montreal, has been appointed Auditor of Disbursements, vice E. E. Lloyd, promoted. Office, Montreal.

W. DIXON, heretofore Road Foreman of Locomotives, Trenton Division, Ontario District, Trenton, has been appointed Assistant Superintendent, Woodstock

Division, New Brunswick District, with office at Woodstock, N.B., vice A. E. Stewart, resigned on account of ill health. We are officially advised that it is not the present intention to fill his former position.

J. H. FOX, heretofore City Freight Agent, Vancouver, B.C., has been appointed District Freight Agent, Edmonton, Alta., vice F. W. Sterling, resigned.

J. KEATING is reported to have been appointed chief steward, Chateau Frontenac, Quebec, Que., vice E. W. Tribe, promoted.

E. E. LLOYD, heretofore Auditor of Disbursements, Montreal, has been appointed Assistant Comptroller, vice W. J. Moule, deceased. Office, Montreal.

G. S. LYTLE, heretofore Car Service Agent, Saskatchewan District, Moose Jaw, has been appointed acting Trainmaster, Moose Jaw Division, Saskatchewan District, Moose Jaw.

A. E. McAMMOND has been appointed Chief Dispatcher, Kenora, Ont., vice W. E. Cline, whose appointment as Car Service Agent, Saskatchewan District, Moose Jaw, was announced in our last issue.

E. L. SCOTT is reported to have been appointed Superintendent of Telegraph Traffic, Western Lines, vice J. Fletcher, retired. Office, Winnipeg.

E. W. TRIBE, chief steward, Chateau Frontenac, Quebec, Que., is reported to have been appointed Inspecting Steward for the hotel system.

R. W. URWIN has been appointed Assistant Auditor of Agencies, Montreal, vice H. J. Dalton, promoted.

Delaware & Hudson Co.—H. M. GARGAN has been appointed Superintendent, Champlain Division, vice M. F. Leaney, transferred. Office, Plattsburg, N.Y.

M. F. LEANEY, heretofore Superintendent, Champlain Division, Plattsburg, N.Y., has been appointed Superintendent, Susquehanna Division, vice J. K. McNellie, transferred. Office, Oneonta, N.Y.

J. K. McNEILLIE, heretofore Superintendent, Susquehanna Division, Oneonta, N.Y., and formerly General Superintendent, Canadian Government Rys., Moncton, N.B., has been detailed to the General Manager's office, Albany, N.Y.

Edmonton, Dunvegan & British Columbia Ry.—J. H. FOX, heretofore City Freight Agent, C.P.R., Vancouver, B.C., has been appointed District Freight Agent, vice F. W. Sterling, resigned.

Grand Trunk Ry.—I. N. CLARK, heretofore Master Car Builder, Ontario Lines, Ont., has been appointed General Car Inspector, Ontario Lines. Office, London, Ont.

H. DEER, heretofore Assistant Secretary, has been appointed Secretary of the company, vice H. H. Norman, deceased. Office, London, Eng.

W. GILLESPIE, heretofore General Foreman, Scrap and Reclamation Yards, Montreal, has been appointed General Car Inspector, Eastern Lines. Office, Montreal.

H. HULATT, heretofore Consulting Manager of Telegraphs, has been appointed Manager of Telegraphs, Western Lines, and his former position has been abolished. Office, Montreal.

J. LIVINGSTON, heretofore Storekeeper, Stratford, Ont., has been appointed Storekeeper, London, Ont., vice A. Tory, retired from the service, as announced in our last issue.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding and Railway, Harbor and
Canada Contractors' Interests.
Official Organ of various Canadian Transportation Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
Proprietor and Editor.

AUBREY ACTON BURROWS,
Business Manager.

Assistant Editors,
JOHN KEIS, DONALD F. KEIS
and EDWIN WINFIELD

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York.

Member of

J. B. MacGREGOR has been appointed Assistant Superintendent of Telegraphs, Western Lines. Office, Battle Creek, Mich.

W. A. 'TITT, heretofore General Master Car Builder, Montreal, has been appointed Master Car Builder, London shops, London, Ont., vice I. N. Clark, transferred, and his former position has been abolished. Officers heretofore reporting to him, now report to J. C. GARDEN, acting General Superintendent, Motive Power and Car Department, Montreal.

N. H. SEIGEL, heretofore leading electrician hand, has been appointed outside foreman, with jurisdiction over the electrical department, power house and outside gangs. Office, Stratford, Ont.

The position of General Travelling Car Inspector, Montreal, heretofore held by D. C. MESSERROLL, has been abolished.

Timiskaming & Northern Ontario Ry. G. W. LEE, Commissioner and General Agent, North Bay, Ont., having been appointed Chairman of the Commission, as announced in our last issue, the position of General Agent at North Bay has been abolished.

Wooden Packing for Frogs.

The Chief Railway Commissioner, Hon. F. B. Carvell, gave the following judgment Feb. 15:—In the matter of authorizing the use of the Hart type of wooden packing for frogs, wing rails, guard rails, and switches, under the Railway Act, 1919, sec. 282, sub sec. (4). So far as I can learn, this case originated by a letter from Frank Lee to the Board's Chief Engineer, dated April 2, 1919, suggesting that the use of the Hart blocking at frogs and guard rails be made permissible. Considerable correspondence took place and there were interviews between the Chief Engineer and representatives of railway men interested, and finally it was thought advisable that a public hearing be held at which all parties could be heard. This took place in Ottawa on Feb. 1, inst., at which the Canadian Pacific and the Canadian National Ry. and the New York Central and the Michigan Central Railroads were represented, as well as the Brotherhood of Locomotive Firemen and Enginemen. It was admitted by all parties, and strongly asserted by our own technical officials, that the Hart type of packing for frogs would be an advantage in many cases over that at present in use, and, therefore, while I do not feel we should make it compulsory, I think its use should be approved by this Board upon all railways under our control.

Following this judgment, the Board issued general order 329, Feb. 18, ordering that the use of the Hart type of wooden packing for frogs, wing rails, guard rails and switches on railways be authorized.

Surcharges on International Passenger Traffic.

An Ottawa press dispatch says that an application of the Railway Association of Canada, which has been set aside for hearing before the Board of Railway Commissioners at Ottawa on Mar. 2, requests that surcharges on international passenger traffic be granted upon the following bases:—

(1) From all Canadian points along the International Boundary, 100% of the rate of exchange determined along the

line adopted in regard to freight.

(2) A surcharge of 75% of the rate of exchange from points within about 50 to 60 miles from the boundary.

(3) A surcharge of 50% of the rate of exchange from points within about 80 to 90 miles from the boundary.

(4) A surcharge of 25% from all other points.

(5) No surcharge will be made on tickets via direct route to United States border points.

Canadian Railway Club's Annual Dinner.

The Canadian Railway Club's annual dinner at the Windsor Hotel, Montreal, Jan. 29, was very largely attended, and most successful in every way. The President, W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., occupied the chair, and among others at the head table were Hon. F. B. Carvell, Chairman, Board of Railway Commissioners; Professor Stephen Leacock, McGill University; Geo. Hodges, Assistant to Vice President, Eastern Lines, C.P.R.; Lt. Col. Wilgar, Queen's University, Kingston; several past Presidents of the club, viz. H. H. Vaughan, consulting engineer, Montreal; A. A. Goodchild, General Storekeeper, C.P.R.; W. McNab, Chairman, Valuation Committee, G.T.R.; R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.; T. C. Hudson, General Master Mechanic, Canadian National Ry.; J. Hendry, the club's Secretary. W. A. Booth; W. B. Butler, President, Canadian Car & Foundry Co., and Acton Burrows, Proprietor, Canadian Railway and Marine World.

The principal speakers, in addition to President Winterrowd, were Hon. F. B. Carvell, who responded to the toast of the railways; Professor Leacock, for the guests, and W. W. Butler, for the supply men.

C.P.R. Passenger Officials' Conference.

The principal passenger officials of the C.P.R. in Canada and the United States held their annual conference at Quebec during the last week in January, visiting Montreal on their way home. The attendance included representatives from Los Angeles, San Francisco, Seattle, Portland, Minneapolis, Chicago, St. Louis, Cincinnati, Pittsburgh, Cleveland, Detroit, Buffalo, Boston, New York and Atlanta in the U.S., and from Victoria, Vancouver, Nelson, Calgary, Edmonton, Regina, Brandon, Winnipeg, Toronto, Montreal, Quebec and St. John's, the conference being held under the chairmanship of E. F. E. Usher, Passenger Traffic Manager. It is said that prospects of tourist traffic from the U.S. during the year are bright, and that the line between the two countries already shows signs of pressing off, as far as travel is concerned. During the evening the delegates took an active part in the winter sports which were at their height in Quebec. They had a snowshoe race, with A. D. Seymour, General Traffic Agent, with a sailing match won by the crew of the boat "The Boat" and a figure sking contest on the Dufferin Terrace played very popular, and the skating rink in the Chateau Frontenac courtyard was also frequent. On the last evening a number of new scenic pictures, illustrating various parts of Canadian life, were shown at a social gathering at which several members of the Quebec Government were present.

Arbitration to Determine Value of Grand Trunk Railway Stocks.

The arbitration to determine the value of certain G.T.R. stocks, to be taken over by the Dominion Government, opened in the G.T.R. board room, in Montreal, Feb. 1, before the arbitrators, Sir Walter Cassels, Judge of the Exchequer Court, chairman; Sir Thos. White, representing the Dominion Government; and W. H. Taft, ex-President, United States, representing the G.T.R. Co.

The Government was represented by W. N. Tilley, K.C., Toronto; Pierce Butler, St. Paul, Minn.; H. A. Lovett, K.C., Montreal; Hector McInnes, K.C., Halifax; and E. L. Newcombe, Deputy Minister of Justice, Ottawa. The G.T.R. was represented by W. H. Biggar, K.C., Vice President and General Counsel; A. W. Atwater, K.C., and E. Laffeur, K.C., Montreal, and F. H. Phippen, K.C., Toronto.

Under the agreement between the Dominion Government and the G.T.R. Co., ratified by the Dominion Parliament at its 1920 session, the Government undertook to guarantee the payment half yearly of dividends at 4% a year on the company's guaranteed stock, and the interest on the debenture stocks as and when payable. It also undertook to buy the following stocks from the shareholders:

First preference stock 5 1/2%	\$3,420,000
Second preference stock 5%	2,530,000
Airid preference stock 4 1/2%	7,165,955
Ordinary or common stock	29,955,937

\$37,073,492

The agreement provided that the value, if any, to the holders of the preference and common stocks should be determined by three arbitrators, the value so determined, to be not greater than an amount on which the annual dividend at 4% on the aggregate face value of the then present guaranteed stock, and the new guaranteed stock taken together, would be \$5,000,000, i.e., the value shall not exceed \$64,166,666.66. The fixing of this limit is not to be taken by the arbitrators as any admission, or indication, that the value to be determined is the amount so fixed, or any other amount.

This means that the arbitrators cannot award a larger sum than is represented by \$5,000,000 capitalized at 4%, and as out of this amount \$2,432,500 has to be taken to fulfill the Government guarantee of \$60,712,500 of present guaranteed stock, there remains \$2,567,500, or \$64,166,666 capitalized at 4% that may be awarded the holders of the preference and common stocks. As these amount to \$180,362,000, at par of sterling exchange, the utmost the holders of these securities can obtain is a little more than one-third their face value. The arbitrators are also empowered to be directed to determine in what proportion their award is to be distributed among the holders of the first, second and third preference, and the common stock.

The first witness called on the G.T.R.'s behalf was Howard G. Kelley, President, whose evidence as to the system generally, and whose cross examination, occurred at the whole of the sittings on Feb. 1, 2 and 3.

H. H. Vaughan, consulting engineer, Montreal, formerly the C.P.R.'s chief mechanical official, was called on Feb. 5, to give evidence as to the physical value of G.T.R. properties. Counsel for the Government objected that such evidence was inadmissible, claiming that the arbitrators were not called upon to deal with the physical value of the property, but with its value as a going concern. Coun-

sel's argument on this point occupied the whole of that day's sitting. When the proceedings were resumed on Feb. 7, Sir Walter Cassels said that he thought such evidence should not be received, as he considered it legally inadmissible, and did not see how it could have any bearing on the questions to be decided, and if it were taken he could not see how it could have any weight in regard to the value of the stock. He therefore decided against admitting Mr. Vaughan's evidence, or other evidence, along similar lines. Mr. Taft took the ground that, as a matter of fairness to the shareholders, the evidence should be allowed to be given, in order to show the physical value of the property. Sir Thos. White took very similar ground to Sir Walter Cassels, the result being a division of the arbitrators, two to one against submitting evidence as to the physical value of the property or as to replacement costs. G.T.R. counsel took exception to the decision and asked for an adjournment, to enable them to consider the situation. On the arbitration resuming on Feb. 9, G.T.R. counsel again tendered evidence as to the physical value of the property, but were not allowed to put it in, and it is said that this tendering was done for the purpose of enabling an appeal to be made against the arbitrators' majority decision, the statute under which the arbitration is being held providing that should the award not be unanimous, either party may appeal therefrom, on any question of law, to the Supreme Court of Canada, and to the Judicial Committee of the Imperial Privy Council, if the committee grants leave.

T. H. Curtis, consulting engineer, Chicago, then testified for the G.T.R. as to the condition of rolling stock, shops, yards, etc., and H. H. Vaughan was then called again, dealing principally with similar questions.

J. B. Berry, consulting engineer, Chicago, who made a complete examination of the whole G.T.R. system, gave evidence at great length, his testimony, which started on Feb. 10, and cross examination occupying 8 days.

F. R. McQueen, of Minneapolis, Minn., gave evidence on Feb. 19, as to his inspection of G.T.R. elevators over the whole system.

On Feb. 22, G.T.R. counsel again brought up the question of the exclusion of evidence as to physical value of the properties, when Sir Thos. White stated that he considered that the company's net earnings, and what they would be in future as far as could be ascertained, should form the basis of the value of the stock. Sir Walter Cassels said he wanted to know the earning power of the system as a going concern, and Mr. Taft stated that even under the majority's ruling he thought the value of the Chateau Laurier, for instance, might be given, it not being part of the actual railway. Mr. Laffeur, of the G.T.R. counsel, then said they were seriously considering whether they could go on with the presentation of their case. After the adjournment of the sitting a conference of G.T.R. counsel was held, and a cablegram was sent to the company's Chairman in England, Sir Alfred Smithers, explaining their dilemma, and it was decided to mark time at the arbitration as much as possible till the appeal.

Walter S. Kelley, brother of H. G. Kelley, President, G.T.R., gave evidence on

Feb. 23, as to the Rail & River Coal Co., of which he is Manager, and the property of which in Ohio is owned by the G.T.R. T. P. Williams, Deputy Mine Inspector of Ohio; W. R. Woodford, President of the Rail & River Coal Co., and F. H. Ray, a coal mining expert of Columbus, Ohio, also testified, etc., to the value of the property.

Jno. Pullen, President, Canadian Express Co., gave evidence on Feb. 23, as to that company's business, and W. W. Williamson, General Auditor, Canadian Express Co., also gave evidence.

W. D. Robb, Vice President in charge of transportation, construction and maintenance, G.T.R., gave evidence on Feb. 24 and 25, dealing particularly with the company's motive power, shops, etc.

Major F. L. Bond, Chief Engineer, G.T.R., gave evidence, Feb. 25, as to the condition of track, bridges, etc.

Canadian National Railways Earnings.

The following figures show the gross earnings for the system, monthly during 1921, compared with those of the same months in 1920:

	1921	1920
January	\$8,781,835	\$7,247,562
February	8,822,500	8,868,880
March	8,487,108	8,542,232
April	7,732,823	8,878,149
May	4,865,590	4,337,750
June	4,365,500	4,131,000
July	5,168,500	4,377,390
August	5,900,700	4,991,150
September	6,402,000	5,260,000
October	7,620,000	5,759,400
November	7,602,700	5,393,000

\$59,043,823 \$47,992,359

Canadian Northern Railway System.

	1920	1919
January	\$4,200,700	\$4,026,000
February	3,862,500	3,868,880
March	3,487,108	3,542,232
April	4,732,823	3,878,149
May	4,865,590	4,337,750
June	4,365,500	4,131,000
July	5,168,500	4,377,390
August	5,900,700	4,991,150
September	6,402,000	5,260,000
October	7,620,000	5,759,400
November	7,602,700	5,393,000

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross Earnings	Expenses	Net Earnings	Increases or decreases
Jan. \$19,914,569	\$13,238,628	\$	555,941	\$967,571
Feb. 13,557,104	12,843,281		713,873	\$267,242
Mar. 15,715,937	13,756,711		1,957,766	418,721
Apr. 16,416,416	13,674,244		2,742,172	525,422
May 16,459,986	13,262,044		3,197,942	164,182
June 16,480,574	13,849,757		2,630,817	\$359,604
July 17,875,761	13,674,244		4,201,517	\$1,377,218
Aug. 17,994,769	15,793,956		2,200,813	\$1,677,553
Sept. 20,095,287	16,106,632		3,988,655	\$1,883,265

Russian Locomotive Repairs.—A contract is reported to have been signed between the Russian Government and Sir W. G. Armstrong Whitworth & Co., Newcastle-upon-Tyne, Eng., for the overhauling and repairing of practically all Russian locomotives, but its carrying out depends upon the signing of a trade agreement between Great Britain and Russia. The number to be repaired is not stated, but it is expected that the contract will extend over a number of years.

Board of Conciliation re Canadian National Railways Employees' Political Activities.

Canadian Railway and Marine World for February gave very full particulars of the dispute between the Canadian National Rys. and its employees, respecting President D. B. Hanna's order that employees becoming candidates for the Dominion Parliament or a provincial legislature could not remain in the employees' employ. As therein stated, the employees applied to the Labor Department for a board of conciliation for investigation under the Industrial Disputes Investigation Act, 1907, and named D. Campbell, barrister, Regina, as their representative. The C.N.R. management having declined to nominate a representative, the Minister of Labor named H. McGuigan, of Toronto, to represent the C.N.R. and appointed J. M. Godfrey, Toronto, as chairman of the Board, which opened its sittings in Toronto Jan. 17, and presented a report dated Jan. 29, signed by its three members, as follows:

The board of conciliation established by you under date of Dec. 10, 1920, to enquire into the dispute between the management of the Canadian National Rys. and their employees, being members of the various railway employees' organizations, beg to report as follows:—Upon the board being completed, it was ascertained that its hearings could be conveniently held at Toronto, and Jan. 17 was fixed for the commencement of its proceedings.

The board proceeded on that date and the employees were represented by H. E. Barker, Canadian National Western Lines, Order of Railway Conductors, Winnipeg; S. M. Barry, Senior Vice President, Order of Railway Conductors; J. M. East, Deputy President, Order of Railroad Telegraphers; E. A. Ball, Assistant Vice President, Brotherhood of Locomotive Firemen and Engineers; A. Johnston, Assistant Grand Chief, Brotherhood of Locomotive Engineers; A. R. Mosher, President, Canadian Brotherhood of Rail Employees; H. W. Harper, representing chemists; R. J. Tallon, President, Division 4, Railway Employees Department, American Federation of Labor; W. E. Turnbull, Grand Vice President, United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers; A. Hay, Vice President, Brotherhood Railway and Steamship Clerks; A. J. Ryall, General Chairman, Canadian National Rys. Western Lines, Brotherhood of Railroad Trainmen; R. C. MacDonald, General Chairman, Canadian National Eastern Lines, Order of Railway Conductors; Jas. Murdoch, Vice President, Brotherhood of Railroad Trainmen; G. K. Work, Vice President, Brotherhood of Locomotive Firemen and Engineers; J. P. Merigan, representing boiler makers and helpers; J. W. Bruce, representing plumbers, steamfitters and helpers; John Noble, representing International Brotherhood of Electrical Workers; J. W. J. Smith, General Chairman, Brotherhood of Railway Carmen of America; P. Woods, representing United Brotherhood of Maintenance of Way Employees; G. A. Stone, General Chairman, Canadian Government Railways, Brotherhood of Locomotive Engineers; L. Beuloin, representing Brotherhood of Railway Carmen of America; T. M. Spooner, General Chairman, Canadian Northern System, Brotherhood of Locomotive Firemen and Engineers; W. G. Atkinson, General Chairman, Canadian Government Railways, Brotherhood of Locomotive Firemen and Engineers;

J. J. Trainor, representing Order of Railway Telegraphers, Eastern Lines, C.N. R.; W. H. Phillips, General Chairman, Order of Railroad Telegraphers, Western Lines, C.N.R.; W. G. Powlesland, General Vice President, International Brotherhood of Blacksmiths and Helpers.

A. J. Hills, Assistant to President, Canadian National Rys., attended, unofficially, on behalf of the management. At a later date President Hanna also attended, on invitation by the Board.

Upon opening up the matters in dispute it was found that practically all of the employees of the railways, to the number of upwards of 58,000, were directly concerned. The locality of the dispute is the various railways throughout Canada now operated under what is generally known as the Canadian National Rys. The dispute arose as the result of a telegram sent on Sept. 23, 1920, to D. B. Hanna, President, Canadian National Rys., by J. A. Robinson, an official of the Independent Labor Party in New Brunswick, as follows:—

"Have you any objection to any C.N.R. employees becoming candidates for the New Brunswick Legislature, and if so could you give reasons? Please wire reply immediately."

To this telegram Mr. Hanna replied on Sept. 25, 1920:—

"Your message yesterday. Under no circumstances can an employee continue as such with the Canadian National Rys. and become a candidate for legislature, provincial or Dominion. The moment he does so he automatically severs his connection with the railway. The reasons are too obvious for discussion."

While these telegrams appeared in the press, and were given considerably publicity, no formal order was issued in writing to the employees and bulletined according to regular railway practice. In fact up to the present the order has not been promulgated in accordance with the procedure usually recognized in connection with the operation of railways. The representatives of the employees' organizations took no steps in connection with the so-called order, as they claimed it was not an order or rule binding on them until issued in the regular way in writing and properly bulletined. The order came up for specific application in connection with the three employees whose cases are referred to us for report.

In June, 1920, G. H. Palmer was elected, as a candidate of the labor party, to the Manitoba Legislature for Dauphin constituency. At the time of his election he was a train dispatcher at Dauphin in the Canadian National Rys. employ. Before the road was taken over by the Government he had been an employee of the Canadian Northern Rys. for many years.

A. E. Moore, who was returned at the same election as the labor representative for Springfield, was a painter in the Canadian National Rys. shops in Winnipeg. He had also been a Canadian Northern employe.

Jas. Higgins, a boiler maker in the Canadian National shops at Leaside, near Toronto, early in Sept. 1920, accepted the nomination of the labor party to contest a bye election in Northeast Toronto for the Ontario Legislature. This election was held on Nov. 7, 1920, and he was defeated. These shops were owned before Government ownership.

It was admitted that these three men were employees, not of the Government, but of a company whose capital stock is owned by the Government. Mr. Hanna and his associate directors are still, in

fact and in law, directors of the (Canadian Northern Rys. Co.

Messrs. Palmer and Moore had applied for and received leave of absence to contest their constituencies. It was not shown that at the time the leave was requested their purpose was to take part in the election. It was, however, stated, and not denied, that their candidatures were a matter of public notoriety and well known to the officials of their respective divisions. After the election, both men returned to their duties and continued in the employ of the company until Nov. 1920. There is no evidence or suggestion that after the election they failed in any way to faithfully and efficiently perform their duties or that their positions as members elect of the Manitoba Legislature had in any way injuriously affected the railway or interfered with the proper performance of their duties. Early in Nov. 1920, Messrs. Palmer and Moore were called before their superintendents, and notified that unless they agreed to resign as members of the Legislature they would be dismissed from the company's service. They refused to do so and were forthwith dismissed.

Mr. Higgins did not quit work after accepting the nomination, but continued to perform his duties until about 10 days before the election, when he applied to his foreman and was granted leave of absence to conduct his campaign. A few days later he was surprised, when notified by his foreman, that his acceptance of the nomination had resulted in his automatic dismissal from the company's service. Immediately after the election he reported for work and was refused.

These dismissals resulted in a combined protest against President Hanna's order, by the various railway employees' organizations, followed by a request for a conference with him, which was arranged and was held in Toronto Dec. 3, 1920. After a lengthy discussion, Mr. Hanna refused to recede from his position or modify the order. The employees then applied for a board under the Industrial Disputes Act and the board was established.

The board is of the opinion that the cases of Messrs. Palmer, Moore and Higgins can be dealt with apart from the determination of the principal question in issue. In fact, the management made little effort to justify these dismissals, and intimated that if the question of principle were conceded, these cases could be satisfactorily adjusted. It would seem that when President Hanna sent the telegram replying to Mr. Robinson on Sept. 23, 1920, he believed that all employees of the Canadian National Rys. were civil servants, or, in any case, subject to the same restrictions as civil servants. It is difficult to believe that at the time he sent this telegram he could have known, or if he knew could have fully considered the legislation of Parliament dealing with this question enacted in the session of 1919. All civil servants are under what is known as the Civil Service Act of 1919. This act contains the following provisions in sec. 2:

"No deputy head officer, clerk or employee in the civil service shall be debarrd from voting at any Dominion or provincial election. If the law of the province in which the said election is held does not give him the right to vote but no such deputy head officer, clerk or employee shall engage in partisan work in connection with any such election, or take any public receipt or in any way deal with any money for any party funds."

The following amendment to that act was passed in 1919, as sec. 3Aa:—

"The provision of this act shall not apply to positions in connection with the Government railways, or any railway owned or controlled by His Majesty."

The effect of this legislation is that Messrs. Palmer, Moore and Higgins were not civil servants, and were in exactly the same position, so far as the law is concerned, as the employees of a privately owned railway.

Mr. Hanna further claimed that in sending his resignation of Sept. 25 he was simply repeating a long established rule of the Canadian Northern Ry. The employees on the other hand emphatically stated that they were never given notice of any such rule and Mr. Hanna admitted that the rule had never been issued in regular form. As evidence that there was no such rule on the Canadian Northern, it was shown that Mr. Casey, a locomotive engineer, was twice given leave of absence to contest Saskatchewan constituency in elections for the Saskatchewan Legislature. It was also shown that, before the telegram of Sept. 25, 1920, there was no intimation of any such rule on the Canadian National Rys. This is evidenced by the fact that in the Ontario general elections of Oct. 1919, Mr. Sweezy, a yardman at Capreol, was given leave of absence to contest the Sudbury constituency. It fact Mr. Hanna admitted that no employee of the Canadian Northern had ever been refused leave of absence to offer himself as a parliamentary candidate.

Applying these facts to the cases of Messrs. Palmer and Moore, we find that these men had the legal right to stand as candidates for the Manitoba Legislature. There was also no rule of the railway in June 1920, which prohibited them from doing so. They applied for leave of absence in the regular way, and this leave was granted by duly authorized officials of the company. After the election, they returned to their employment with the company, and no suggestion has been made that they did not, up to the time of their dismissal, perform their duties faithfully and efficiently. It is admitted by the management that under the agreement between the company and its employees no employee can be summarily dismissed without cause.

The facts in connection with Mr. Higgins' case are slightly different. It is clear, however, that at the time he became a candidate in Northeast Toronto there was no rule prohibiting him from accepting the nomination. He also received leave of absence in the regular way, and at no time did any act which could result in his summary dismissal from the company's service.

It seems also to the two members of the board who have had practical experience in railroading, that the whole proceeding with regard to the so-called order is irregular. Such an order could only be made a rule of the road by promulgation to the employees in writing and by being bulletined in the regular way. This has never been done and it is doubtful if even now the order has any binding effect on the employees. The board therefore, in view of all the facts, recommends that Messrs. Palmer, Moore and Higgins should be reinstated without loss of seniority, and be paid for time actually lost by reason of their dismissal. With regard to the fourth question in dispute, viz., the employees' request for the withdrawal of the order, Mr. McGuigan, representing the employees, holds somewhat different views from the other members of the board and will make a separate report on this point.

Majority Report by J. M. Godfrey and D. Campbell.

The following report to the Minister of Labor was made on the same date by J. M. Godfrey, chairman of the board, and D. Campbell, representing the employees:—In the consideration of the fourth question submitted to them, viz., the request of the employees for the withdrawal of the order, the board has heard much evidence and the able and exhaustive argument of both sides. They feel that no good purpose can be served by a minute analysis of the evidence and the arguments, or by an expression of their opinion in a detailed way as to the various matters submitted to them. They have been influenced in coming to this conclusion by the practical solution offered as a settlement of the dispute, and in their opinion a full discussion would consequently be largely of an academic character. It appeared early in the proceedings that the reality of the difference between the position taken by the management and the employees. Mr. Hanna based his position on the following pronouncement made by Sir Robert Borden in Parliament, at the time the railways were being taken over by the Government:—

"As to the immediate future, I have already said that I do not intend to operate the Canadian Northern Ry. system directly under a Department of the Government; it is our intention to operate it for the present through the corporate machinery by which it has been operated in the past. There will be a reconstituted board of directors. We shall endeavor to get the best men we can and we shall not interfere with them. We shall leave the administration and operation of the road to be carried out by that board of directors, and we shall use every means available to the Government (and if necessary, that I desire to Parliament to that purpose) in order that anything like political influence, political patronage or political interference (if the word patronage is to be taken in its sense) shall be absolutely eliminated from the administration of that road."

Mr. Hanna stated that at the time he and the other associated too often it was understood that this was to be the policy of the management and that it was only on this condition that they accepted office. The employees stated that they agree absolutely with this policy, and are prepared to co-operate to the utmost with the management to prevent political interference or the exploitation of the railways for political purposes. The employees regard this policy to preclude such matters as appointing friends of the party in power to positions on the road, the establishment of a political patronage list in connection with the purchase of supplies, the influencing of employees in elections by officials, superintendents, etc., and also as a prohibition against the exercise by the management of its powers in favor of, or against, any political party. But they maintain that this policy does not involve the prohibition of any employee under any circumstance offering himself as a candidate in parliamentary elections. They further maintain that the Government and Parliament should not be interested any such prohibition inasmuch as when the matter was considered by Parliament in the session of 1919 they were specially excluded from the disabilities of the Civil Service Act and were in fact confirmed in all the civil rights which they had enjoyed as employees of a privately owned railroad.

The employees agree that there is no rule which entitles them to leave of absence as a matter of right and that the management may refuse leave of absence for proper cause, if in its opinion it would be against the interest of the railways to grant such leave of absence. They claim, however, that leave of ab-

sence has practically always been granted except for three reasons: (1) When there is a shortage of men. (2) When the applicant desires to enter the service of another road. (3) When the applicant desires to engage in the liquor business. They agree that in some cases an employee could not efficiently perform his duties with the company and at the same time pursue a parliamentary career. In these cases the management would be quite within its rights to refuse leave of absence. But they also state that there are many classes of employees whose occupations are of such a character that this disqualification would not apply. They give as illustrations of this the cases of Messrs. Palmer, Moore and Higgins. If leave of absence were granted to these men, their positions could have been filled by others, and on their return they could have resumed their duties without detriment to the company. They do not believe any evil results have been occasioned to the Canadian Pacific Ry. Co. because four of its employees have been permitted to engage in parliamentary careers. Of these, two have attained cabinet rank, the Minister of Labor in the Dominion Government, and the Minister of Mines in the Ontario Government.

In view of the really insignificant difference between the management and the employees, and their sincere agreement on the principle that there should be no exploitation of the company for political purposes, the board believed that some working arrangement was possible which would solve the difficult problem seemed obvious that the common purpose could best be attained if the irritation caused by the order were eliminated and the two parties vitally interested in the successful operation of the roads were brought together in hearty and sympathetic co-operation. The board accordingly recommended in an effort to bring about, by conciliation and reasonable compromise, a practical working arrangement which would secure the maintenance of the policy agreed upon and yet recognize that which the employees regard as their basic and legitimate rights. The employees finally made the following proposal on Jan. 20: "Memo suggested by the employees after having received and considered the memo said to have been issued by the company and handed to the chairman on Jan. 19, 1921: The representatives of the organizations concede, without reservation, that the first essential requisite for service with the Canadian National Rys. is unstinted and continuous loyalty in such service and that this must be evidenced and continue in the service. Loyalty being the first requisite for employment, it should be held that an employee cannot continue in service while undertaking to exploit for political purposes the operation of the railways, but to accept nomination in the ordinary way, or to be elected to a public office, should be regarded in itself as no direct or facie evidence of disloyalty. It is claimed that no posted or written rule was violated by the two members of the Manitoba Legislature who ran for and were elected to such positions while in the employ of the Canadian National Rys., and that they should, therefore, now be reinstated without loss of seniority for such time as they may have lost as employees of the railways, on account of the order of dismissal issued in their cases. The same principle should be recognized in the case of the employee who ran for the Ontario Legislature and was defeated in Northeast Toronto. If an employee is re-

quested by his fellow citizens to become a candidate for, or is elected as, a member of Parliament, it must be understood that the service of the railway must not be embarrassed by his aspirations for political preferment, and that only in such cases where this may be shown to be the case can he, with the sanction of the company's officials, and the committee of his fellow employees, be given leave of absence."

It should be noted that this proposal recognizes the principle that in the consideration of applications for leave of absence, the interests of the company must be regarded as paramount. The company being fully safeguarded, it is the board's opinion that this solution of the dispute can be accepted by the management, without abandoning the principle enunciated by the Government. It should at least be given an honest and sincere trial. We therefore recommend the acceptance of the employees' proposal.

F. H. McGuigan's Report.

F. H. McGuigan, who was appointed by the Minister of Labor to represent the C.N.R. management on the board of conciliation, the management having refused to nominate anyone, reported to the Minister as follows:—While earnestly desiring agreement with my colleagues and a unanimous report, it seems to me advisable to say that I am decidedly of the opinion that it would be most unwise to dispose of question 4, as proposed by the employees on Jan. 20, as shown in the appendix to the board's report, which is so ingeniously vague as to be susceptible of as many different interpretations as interested political aspirants have capacity to devise, and, if adopted as a rule of the railways, would result in impairment of discipline, and become a source of frequent and endless disputes. In addition, it would be most unwise to give to the great majority of honest and efficient officials, and other employees having no desire for parliamentary honors or other Government positions, who, continuously, year after year, conscientiously perform their daily duties. Any general rule, providing equal rights in promotion to the very few employees politically inclined, and serving the railway only at such times periodically as best suited their own personal interests, and who, if elected to Parliament, might advocate policies and support measures in direct opposition to the interests and views held by the great majority who devote their entire time and energies to the service and interests of the railway alone, would be manifestly unfair.

On the important question of political control, influence or interference in the operations or management of the Canadian National Rys., leading representatives of the employees emphatically proclaimed their earnest and hearty approval, and pledged President Hanna their support against any efforts in that direction, admittedly agreeing with the declaration of opinion of the vast majority of the thinking people of the Dominion, that political domination or interference in the management or operations would result in laxity of discipline, and general demoralization of the service, to an extent which would eventually reduce earnings and correspondingly increase the already heavy tax burdens of the Canadian people who own these railways. Unfortunately, despite this seeming unity of opinion on the main proposition, the employees made vigorous protest against President Hanna's declaration of policy, as outlined in his telegram of Sept. 25, 1920, to J. A. Robinson, of Moncton,

which is quoted in the board's unanimous report. Representatives of the employees contend that if this policy were enforced it would restrict their political freedom, and deprive them of their right of representation in the Dominion and provincial parliaments, which they hold to be the inalienable right of all citizens. This contention was clearly shown to be without foundation, as they were unable to sustain this by any rule or schedule, or to establish that their rights as citizens were in the slightest degree affected by President Hanna's declaration of policy. While some three or four individual cases were cited of railway employees being elected to Parliament, also filling other important Government positions, and still holding their seniority rights in railway service, it was shown in each case to be by special arrangement, unsupported by any rule or schedule obligations on the part of the railway.

President Hanna's telegram of Sept. 25, 1920, simply outlined what he understood to have been the Government's policy, as several times declared and elaborated by Premier Borden in speeches before Parliament during 1918, when consideration was being given by that body to taking over and operating these lines. On the other hand, leading representatives of the employees positively and emphatically stated that within the same period, Premier Borden granted them an interview, during which he gave them absolute assurance of an entirely different nature.

Careful consideration, during and since the hearings, of all evidence and other matter submitted to the board, coupled with many years experience in the operation of railways, and familiarity with operating rules, including also the schedules of employees' organizations in all branches of the service, leads me to the conclusion that President Hanna was clearly within his rights in his declaration of policy; and also that it would be a commendable act of justice to reinstate the three men dismissed, as their offense was evidently due to the fact that this policy had not been brought to the employees' attention in the usual manner, by general posting on bulletin boards, or in the books provided at terminals, shops, stations and offices for such purposes.

If the railway management accepts the recommendation of the board regarding the reinstatement of these three men, it should remove the real grievance, leaving open only the question of the declaration of President Hanna's declaration of policy, a question of outstanding importance which, I understand, Parliament alone has the power to decide. Therefore, believing that satisfactory adjustment ensuring continuance of the cordial relations and co-operation, which has always existed between the officers and employees of these railways, must certainly be in the best interests of all concerned, I earnestly recommend that the matter be given the most serious consideration and, if deemed necessary, be finally disposed of by special legislation.

The Canadian National Railways Management's Action.

The arbitrators' reports given above were, on their receipt by the Labor Department at Ottawa, sent to D. B. Hanna, President, Canadian National Rys., who acknowledged them on Feb. 4. The C.N.R. directors considered them at their meeting on Feb. 10, and on Feb. 11, Mr. Hanna wrote the Labor Department respecting them as follows:—Summarized these reports are:—"Unanimous report,

reviewing the case in considerable detail, and recommending the reinstatement of the three men directly affected, on the ground that they were not fully informed as to the policy of the management in respect to political candidature."

"Majority report, recommending the proposal made by the employees that an employee be given leave of absence to become a political candidate, with the sanction of the company's officials and the committee of his fellow employees, only in such cases where it can be shown that the service of the railway would not be embarrassed by his aspirations for political preferment."

"Minority report, sustaining the right of the railways to determine the policy in question and recommending that the matter be decided by Parliament, and if necessary finally disposed of by special legislation."

"The board of directors, at its meeting yesterday, gave careful consideration to these reports, and while not accepting any one of them, desires to point out that both the majority and minority reports find that the granting of leave of absence for political purposes is a question that rests with the management, the majority report stating 'the management may refuse leave of absence for proper cause if in its opinion it would be against the interest of the railroad,' and the minority report (referring to cases on other railways) states that 'it was shown in each case that it was by special arrangement, unsupported by any rule or schedule obligations on the part of the railway.'"

"The board of directors has felt all along that it was quite within its rights in deciding to withhold leave of absence to enable employees to become candidates for election to the members of Parliament. Its position is now supported by findings of fact by both the majority and minority reports. In view of the above the acceptance of the men's proposal would be merely agreement on the part of the management that cases might arise where the policy laid down could be departed from. This would be leaving open the very door it is desired to keep shut."

"The board of directors, with a desire to do justice to the individual employees affected, is prepared to reinstate in the service with wages for lost time the two employees, Messrs. Palmer and Moore, who were elected to the Manitoba Legislature, and Mr. Higgins, the employee from Lewistown. It will require investigation to see just what actual loss has been sustained. The directors will also authorize the management to grant leave of absence, without pay, to the two first mentioned employees to attend their parliamentary duties during the life of the present Legislature. The management is prepared to take this step. In view of the contention made by the men that the individual employees concerned had acted in ignorance of the views of the management on this question, and that a semblance of official approval had been given to their political candidature by the fact that they had been granted leave of absence, with the knowledge of officers that they were to be candidates for election. The management, however, is only prepared to take this action upon the distinct understanding that the question of policy involved is not in any way affected. The management must withdraw its retroactive effect, so far as these three men are concerned. That there may be no misunderstanding, we once again re-affirm our position that no employee can continue in the service and

accept nomination from any political party, Federal or provincial. This is the policy laid down by the directors in this matter, and our officers will be advised accordingly."

An Employees' Representative Heard From.

H. E. Barker, Winnipeg, telegraphed the Deputy Minister of Labor Feb. 12 as follows:—"Your wire date re C.N.R. dispute. Owing to fact that employees representatives scattered over such a wide territory, considerable delay experienced in ascertaining their attitude on findings of board of conciliation, but, as the unanimous finding on questions 1, 2 and 3 recommends reinstatement of the three men involved, without loss of seniority, and with pay for time lost by reason of their dismissal, and as the majority report recommends the acceptance of proposal made to board by the employees committee in connection with question 4, I will take responsibility for stating that the unanimous findings on questions 1, 2 and 3 and the majority finding on question 4 are acceptable to the employees. This has the approval of such representatives as I have been able to get in

Pacific Type Locomotives for Reid Newfoundland Co.

The Reid Newfoundland Co.'s main line extends from St. John's to Port aux Basques, 546 miles, and the various branches bring the company's total mileage up to 903. The gauge is 3½ ft. and most of the track is laid with 50 lb. rails. The character of much of the country is extremely hilly and the motive power used in passenger and freight service is designed to operate on grades of 2% and curves of 14 degrees. Much of the passenger traffic is handled by Baldwin engines of the 10-wheel (4-6-0) type, the most recent of which were built in 1917. The company has had built recently by the Baldwin Locomotive Works 6 Pacific (4-6-2) type locomotives, which are designed to meet the requirements of heavier traffic. Following is a brief comparison between the 10-wheels and the Pacifics:—

Ten-wheel type.	Pacific type.
Cylinders—17 x 22 in.	17 x 24 in.
Valves—balanced slide	Piston, 8 in. diam.
Boiler type—straight top	Straight top Belpaire
Diameter, in.	56 in.
Working pressure—160 lbs.	170 lbs.
Firebox, length—89½ in.	66 3/16 in.

cylinders are fitted with cast iron bushings.

The frame have single front rails, with extra heavy bumpers designed to resist snow bucking. The equipment includes M.C.B. couplers, Westinghouse air brakes, electric headlights, air sanders and steam heat.

The extreme height of the locomotives is 12½ ft. and the width 9¼ ft. The tenders are of the 8-wheel type, having a capacity of 3,600 U.S. gall. of water and 9 tons of coal. The frames are made of steel channels, with steel plate bumpers. The trucks are of the arch-bar type, with cast steel bumpers and chilled cast iron wheels.

The Pacific type locomotives embody many features which make for economy and efficiency in operation, and which were lacking in the 10-wheelers. High pressure replaces low pressure, the wide firebox replaces the narrow, superheated steam replaces saturated steam, the brick arch is introduced, and piston valves re-

Pacific type (4-6-2) Locomotive, Reid Newfoundland Co.

touch with. We will be glad to receive advice as soon as possible concerning attitude of C.N.R. management, so that arrangements can be made if necessary for get employees committee together for purpose of taking further definite action."

Sizes of Signaling Flags.—The Railway Association of Canada has issued the following circular:—Replies to the Association's letter of Dec. 18, 1920, being favorable to the adoption of bunting signaling flags 18 x 18 in. in size, it is recommended to member railways that flags of these dimensions be adopted as standard for use as combined white and green flags for flag stations, classification, marker, caution, and hand-stop signals. Flags for car inspectors are required to be 22 x 28 in. in size, under Board of Railway Commissioners' general order 258. The advisability of seeking amendment of this order to permit use of flags 10 x 14 in., is under consideration.

Coal vs. Oil for Locomotives.—At the International Railway Fuel Association's last annual meeting at Chicago, figures were presented relating to comparisons made on the Santa Fe System where one half of the locomotives have been constructed or converted to burn oil. It was stated that the life of a boiler fired with coal is about 10% greater than one fired with oil, and that the life of the tubes is about 40% higher in the coal burners.

Firebox, width—29 in.	60½ in.
Tubes, diameter—2 in.	5½ and 2 in.
Tubes, number—184	18 2 in. 11
Tubes, length—12 ft.	16 ft.
Heating surface, firebox—106 sq. ft.	35 sq. ft.
Heating surface, tubes—1,148 sq. ft.	1,858 sq. ft.
Heating surface, firebrick tubes—12 sq. ft.	12 sq. ft.
Heating surface, total—1,254 sq. ft.	1,963 sq. ft.
Heating surface, superheater—340 sq. ft.	340 sq. ft.
Grate area—18 sq. ft.	27½ sq. ft.
Driving wheels, diam.—50 in.	52 in.
Driving journals, main—7 x 8 in.	7½ x 8 in.
Driving journals, others—7 x 8 in.	7½ x 8 in.
Engine truck front, diameter—26 in.	30 in.
Engine truck, back, diameter—30 in.	30 in.
Wheel base, driving—11 ft. 0 in.	10 ft. 0 in.
Wheel base, total, engine—20 ft. 5 in.	27 ft. 3 in.
Tender—47 ft. 9 in.	50 ft. 8 in.
Weight, on driving wheels—72,700 lb.	78,000 lb.
Weight, total, engine—92,100 lb.	115,000 lb.
Weight, total, engine and tender—148,000 lb.	199,000 lb.
Tender, tank capacity—2,800 U.S. gall.	3,600 U.S. gall.
Tender, fuel capacity—5 tons	9 tons
Tractive force—17,300 lb.	19,250 lb.

The Pacific type locomotive boilers are of the straight top type, with Belpaire fireboxes, and are equipped with superheaters. The boilers are designed to carry a pressure of 200 lb., although the working pressure used in service is 170 lb. The machinery is designed for a boiler pressure of 190 lb., should it be found desirable subsequently to raise the pressure. Brick arches are installed and are supported on tubes. The front of the firebox crown is supported on two rows of expansion stays and the tubes are welded into the back tube sheet. The cylinders are 17 in. in diameter with a 24 in. stroke and the steam distribution is controlled by 8 in. piston valves, operated by Walschaert valve motion. The

place the D slide valves. Being representative of the refinements which are recognized as indispensable in modern design, and which make for a degree of economy in operation otherwise unobtainable, it is considered desirable to specially point out these features as demonstrating what the Reid Newfoundland Co. is doing in the way of having its power up to date.

C.P.R. Toronto Freight Offices.—A press report stated recently that the C. P.R. had practically closed its Parkdale freight station and offices, and placed the same under the direction of Superintendent W. Coulter, with headquarters at the C.P.R. freight offices at King and Simcoe Streets. We are officially advised that the freight facilities at Parkdale have not been closed, and that, as far as the public is concerned, the business will be carried on there just the same as heretofore. A re-arrangement of the freight office work has been effected temporarily whereby some of the clerical positions have been abolished, and the work is being taken care of at the main office at King and Simcoe Streets. A similar arrangement has been put into effect at the West Toronto freight station.

Freight Rates Investigation.—The Board of Railway Commissioners will, it is said, commence at Vancouver, about April 1, the hearing of the case relating to the differentials in freight rates, as between the east and the west.

Orders by Board of Railway Commissioners for Canada.

Co., Bruce County, Ont., and rescinding orders 12,794 and 24,129.

30,653. Feb. 10.—Approving change in aspect of C.P.R. distant signals at Batiscan bridge, mile 102.5, Three Rivers subdivision, Que.

30,660. Feb. 11.—Approving agreement between Bell Telephone Co. and Princeton & Drumbo Telephone Co., Oxford and Brant Counties, Ont.

30,661. Feb. 14.—Authorizing Grand River Ry. to open for traffic new second track from Preston to Hayes, Ont., 1.3 miles.

30,662. Feb. 14.—Approving revised location of Canadian Northern Pacific Ry. Lumbly Branch, mile 19 to 11.1, through Lots 23, 24 and 88, Secs. 20 and 21, Range O.V.Y.D., B.C.

30,663. Feb. 15.—Authorizing G.T.R. to use bridge carrying Henry St. over G.T.R., Whitby, Ont.

30,664. Authorizing G.T.R. to build spur for Ontario Cement Co. on Lot 23, Con. 1, North Oxford Twp., Ont.

30,665. Feb. 15.—Authorizing Saskatchewan Highways Department to build highway crossing over C.P.R. in n.w. 1/4 Sec. 11, Tp. 41, Range 25, west 3rd meridian, Sask.

30,666. Feb. 14.—Approving location and details of C.P.R. station at Dill Pit, Sudbury Division, Ont.

30,667. Feb. 15.—Extending for 30 days time within which agreement may be entered into between Vancouver Harbor Commissioners, Great

Northern Ry. and C.P.R. for occupation of lands and building at tracks in Vancouver, B.C., as required under order 30,649.

30,668. Feb. 16.—Authorizing C.P.R. to build spur for Standard Paint Co. of Canada, LaSalle, Que.

30,669. Feb. 17.—Authorizing Canadian Northern Quebec Ry. to build Y at mile 44.61, Northfort Subdivision, Arundel Parish, Que.

30,670. Feb. 17.—Approving Supplement 15 to Canadian Freight Classification 16, showing revised and increased ratings on liquors, except malt liquors, and eliminating clause respecting owner's risk of breakage; and dismissing protests.

30,671. Feb. 17.—Extending to July 1, time within which G.T.R. may build spur for Windsor Petroleum & Refining Co., Tecumseh, Ont.

30,672. Feb. 16.—Authorizing G.T.R. to build branch from south of Francis St. across Francis St., on its line north of Francis St., London, Ont.

30,673. Feb. 16.—Declaring that G.T.R. crossing at Erie St., Stratford, Ont., is protected to Board's satisfaction.

30,674. Feb. 17.—Ordering Canadian National Ry. to clean out and lower ditch on west side of Letellier, Man., instal 12 in. corrugated pipe at 2 points, as well as a plank bridge; and install a 24 in. corrugated pipe under tracks at north end of station grade.

30,675. Feb. 16.—Declaring that G.T.R. crossing over Stone Road, east of Niagara, St. Catharines & Toronto Ry. crossing, Niagara Falls, Ont., is protected to Board's satisfaction.

30,676. Feb. 16.—Declaring that Canadian National Ry. crossing west of west switch, Martintville, Man., is protected to Board's satisfaction.

30,677. Feb. 17.—Ordering that gates installed and braked be kept open 6.30 a.m. and 6.30 p.m. daily at G.T.R. Lottridge St. crossing, Hamilton, Ont., be now operated for the full 24 hours; watches to be kept open 6.30 a.m. and 6.30 p.m. daily at G.T.R. crossing, Hamilton, Ont., to rearrange traffic.

30,678. Feb. 17.—Ordering C.P.R. to rearrange traffic at crossing.

30,679. Feb. 14.—Declaring that C.P.R. crossing at east end of yard, Coleman, Alta., is protected to Board's satisfaction.

30,680. Feb. 17.—Authorizing G.T.R. to build spur for Ontario Public Highways Department on Lot 75, Con. 1, North Oxford Twp., Ont.

30,681. Feb. 18.—Extending to July 1, time within which C.P.R. may build spur for Western School Supply Co., Regina, Sask., under order 30,288.

30,682. Feb. 18.—Approving plans showing location and details of Great Northern Ry. station buildings at Crescent, B.C.

30,683. Feb. 18.—Approving location of Canadian National Ry. 3rd class station building at Lake Lenore, Sask.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel & Bridge Co.—The North Vancouver Board of Trade is reported to have passed a resolution asking the company to have prepared plans and estimates of the cost of a bridge across the Second Narrows of Burrard Inlet, Vancouver, as a basis for negotiations with the Dominion and British Columbia Governments for the erection of the bridge. It is desired that the plans provide for a double track railway on the level of the C.P.R., and an upper deck for general traffic purposes. (July, 1919, pg. 381.)

Esquimalt & Nanaimo Ry.—H. E. Beasley, General Superintendent, is reported to have stated that during 1920, \$90,000 was expended in filling two big trestles on the Alberni line, and \$55,000 in filling four trestles on other parts of the line; eight miles of light track between Victoria and Westport, and a line with 80 lb. rails; a new station was built at Nanaimo at a cost of \$30,000, and additional facilities at the wharf there had cost \$20,000. The 10 mile extension to the Great Central Lake was completely graded, and the concrete footings for the bridge across the Stamp River are ready for the steel work. A number of commercial sidings and spurs were put in during the year at various points.

With regard to work for this year, Mr. Beasley is also reported to have said while estimates of the cost of work proposed to be done had not been approved, the work would probably include the laying of track on the 10 mile extension to Great Central Lake, and a good deal of filling of temporary trestle work on the whole line. A number of other betterments would probably be put in hand, but no plans for the further expansion of the line were under consideration. The revival of the lumber industry might make it desirable, however, that some expansion might be considered late on in the year.

Piles are reported to have been delivered at the site of the Johnson St. bridge, Victoria. The Dominion Government has started some blasting work near the site of the bridge, and will do some dredging nearby, but the City Engineer expects to be able to proceed with the concrete work for the bridge at the beginning of March. (Feb., 1921, p. 82.)

Flinflin Mining District.—The construction of a railway into the district in which the Flinflin mine is situated is

one of the questions before the Manitoba Legislature this session. The proposed railway would not only give access to the Flinflin mine, which, it is claimed, has been proved to be rich in copper, gold and silver, but would pass through a district believed to be rich in minerals. Authority for the making of a survey has been given by the Legislature, and \$15,000 has been appropriated therefor. As previously stated in Canadian Railway and Marine World, a survey is now being made by Canadian National Ry. engineers, and the line if built will be operated by the C.N.R.

The Flinflin mine is 68 miles from Pas by airline, and a railway by the most feasible route would be approximately 85 miles long and would, it is said, involve a construction expenditure of about \$2,500,000. A trial line is now being run from mile 7 on the Hudson Bay Ry., the route following a gravel ridge to Lake Athapapuskow, and then running through a greensand belt, in which discoveries of minerals have been made. We are officially advised, in connection with the survey now being made, that there will be a deviation in the northern part of the route from that mentioned in Canadian Railway and Marine World for February.

A report on the mining prospects of the area is said to have been prepared by R. C. Wallace, Commissioner for Northern Manitoba, for presentation to the Legislature in connection with the discussion on the building of the railway. (Feb., pg. 82.)

Fort Fraser to Ocean Falls, B.C.—A press report states that the Ocean Falls Pulp & Paper Co. proposes to start construction, at an early date, of a railway from the pulp mills at Ocean Falls, to a junction with the Grand Trunk Pacific Ry. at Fort Fraser, B.C.

Fort Smith Ry. Co.—Griesbach, O'Connor & O'Connor, and Griesbach, Cameron & Ogilvie, solicitors, Edmonton, Alta., gave notice recently that application would be made to the Dominion Parliament to incorporate a company with this title to build a railway and pipe line from Smiths Landing, on Slave River, Alta., to Fort Smith, also on Slave River. We are advised that the project has been abandoned.

Hudson's Bay Co.—An Edmonton press report states that the H.B. Co. is looking into the question of building a light railway across the portage between Smith

Landing (Fort Fitzgerald) and Fort Smith, both on Slave River, Alta., and that A. Brabant, the company's Fur Commissioner, has stated that while no construction will be done this year, preliminary arrangements are being made and that work will be started next year.

Kettle Valley Ry. Co.—A press report states that Grant Hall, Vice President, C.P.R., on a recent visit to Victoria, discussed with the British Columbia Government matters in connection with the projected line along the Okanagan valley from Penticton to the International Boundary. This is the line upon which a short section from Penticton to the north end of Dog Lake was graded during 1920.

The Dominion Parliament is being asked to increase the company's bonding powers for the branch line from Summer Creek or One Mile Creek to the Copper Mountain and Mount Voight mining claims, 15 miles southwest of Princeton, B.C. (Jan., pg. 16.)

The Magdalen River Ry. Co. is applying to the Quebec Legislature to strike out of its charter the following paragraph added to sec. 16 in 1908: "Provided that such company shall not construct any siding or branch line within the limits of the River Magdalen Seigneurie upon land now owned by Frank Ross." The line authorized to be built was to start from the Roman Catholic Church in Magdalen River Seigneurie, through certain specified lots and wild lands owned by Frank Ross, to the Little Falls, and then east of the Magdalen River to a junction with the proposed inland section of the Atlantic, Quebec & Western Ry. (Mar., 1919, pg. 135.)

Mayo Valley Ry. Ltd.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the junction of the Mayo and Stewart rivers, in Yukon Territory, northerly, following the valley of the Mayo River to its junction with Duncan Creek, thence along Duncan Creek valley to its junction with Lightning Creek, thence via Lightning Creek and Crystal Creek valleys to the McQuesten River, thence to connect with and include McQuesten, Ladue and Beaver River valleys. An alternative route suggested is from Gordon's Landing on Stewart River via Janet Lake to the junction of the Mayo River and Duncan Creek, with authority to build and operate a branch line.

The Montreal Central Terminal Co. is

applying to the Dominion Parliament for an extension of time for the construction of its projected tunnel and bridge, to connect Montreal with the south shore, the connecting railways, and the railway terminals in Montreal. (June, 1920, p. 297.)

Pacific Great Eastern Ry.—The British Columbia Railway Department's annual report was laid before the Legislature Feb. 8. A press summary of it says it deals with the question of alternative routes for the extension of this line from the present projected terminus at Prince George, northerly and easterly to the British Columbia-Alberta boundary, that the estimated length of the line from Prince George to Swan Lake, via the River, is 316 miles, and the estimated cost is \$18,000,000. An alternative route of 426 miles would be as follows: Vanderhoof to Hudsons Hope, 296 miles; Hudsons Hope to Pine River, 48 miles; Pine River to Swan Lake, 82 miles. (Feb., p. 83.)

Port Canada Docks Ry. Co.—The New Brunswick Legislature is being asked to extend, for three years, the time within which this company may build the railway authorized by the statutes of 1915, chap. 73, as amended by the statutes of 1918, chap. 92. The Canadian Terminal Ry. Co. was incorporated in 1907 to build a railway from L'Etang Harbor to St. Croix, N.B.; in 1915 its title was changed to Port Canada Docks Ry. Co., and in 1918 an extension of time for construction was granted. (July 1918, p. 285.)

Central Ry. Co.—The Dominion Parliament is being asked to extend the time within which the following branch lines may be completed:—From Scotts station, Beauce County, Que., to the southern extremity of the Quebec Bridge and thence eastward along the south bank of the St. Lawrence River for 5 miles; from near Leeds station, through Thetford, Broughton, Leeds and the counties of Lotbiniere and Levis, to a connection with the mentioned line at St. Lambert, Levis County, 55 miles. The company is also applying for increased bonding powers in respect to these two lines. (Jan., p. 16.)

Timiskaming & Northern Ontario Ry. In connection with the suggestion that the present divisional point to Englehart be abandoned, and a new one established at Liskard, we are officially advised that the commissioners do not propose to take any action at present, but that it will be considered later on, when the question of the electrification of the line may come up. (Feb., p. 83.)

Western Dominion Ry. Co.—The Dominion Parliament is being asked to extend the time within which he company may commence and complete its projected line from the International Boundary in Range, 23, west 4th Meridian, via Cardston and Pincher Creek to Lundbreck, on the C.P.R. Crownst line, thence to Calgary and Edmonton, Alta., and Fort St. John, B.C., with branch lines into the Southern Alberta coal fields. The company was granted a two years extension in 1919. (July 1919, p. 382.)

Railway Lands Patented.—Letters patent were issued during January in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Northern Ry.	2,554,616
Canadian Northern Western Ry.	9,300
Canadian Pacific Ry.	18,124
Grand Trunk Pacific Branch Lines Co.	18,124
Kettle Valley Ry.	344,753

Total 2,911,157

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has built recently at Angus shops, Montreal, five machinery flat cars, 41 ft. 8 in. long, with a limit load capacity of 165,800 lb.

The Lake Superior Paper Co. has received one 6-wheel switching locomotive, with cylinders 19 x 24 in., from Montreal Locomotive Works.

The C.P.R., between Jan. 14 and Feb. 10, received 10 steel dining cars, 162 refrigerators, and 5 machinery flat cars, 80 tons capacity, from its Angus shops, Montreal, and 668 steel hopper bottom box cars, 60 tons capacity, from Canadian Car & Foundry Co., Fort William, Ont.

The G.T.R., between Jan. 13 and Feb. 13, received 15 express refrigerator cars from Canadian Car & Foundry Co., 104 automobile cars, 80,000 lb. capacity, from American Car & Foundry Co., St. Louis, Mo., and 553 automobile cars, 80,000 lb. capacity, from American Car & Foundry Co., Madison, Ill.

The Canadian Car & Foundry Co., between Dec. 15, 1920 and Jan. 2, delivered the following rolling stock:—38 sleeping car frames, 591 box cars, 50 tons capacity, to C.P.R.; 198 refrigerator cars to Canadian National Ry.; 12 express refrigerator cars to G.T.R. and 159 bogies for Union of South Africa Railways. The sleeping car frames and express refrigerator cars were delivered from the Montreal plant, and the bogies, refrigerator cars and box cars from the Amherst, N.S., and Fort William, Ont., plants, respectively.

The Canadian National Ry., between Jan. 12 and Feb. 5, received the following additions to rolling stock:—6 Mikado (2-8-2) locomotives, out of an order of 15, from Canadian Locomotive Co., leaving 4 still to be delivered; 1,240 box cars, out of an order of 1,500, from National Steel Car Corporation, leaving 36 still to be delivered; 39 refrigerator cars, completing an order for 600, 135 steel cars, out of an order for 350, from Canadian Car & Foundry Co.; 86 box cars, completing an order for 500, from Eastern Car Co.

A London, Eng., paper stated recently that Canadian financiers had made a contract some time ago with the Roumanian Government for the supply of locomotives, and had these made in Germany at a price three times what the Roumanian Government could themselves have bought them in Germany. This contract, it was stated, was carried out under the terms of the credit guarantee, for the Roumanian Government by the Dominion of Canada after the signing of the armistice. The Minister of Finance has stated that the credit authorized by the Dominion Government to Roumania at the time of the armistice was for \$25,000,000, and that under this credit no locomotives of any kind had been delivered.

Trotzky, a Former C.P.R. Employee.—In speaking at a recent Canadian Club dinner in New York, Hon. N. W. Rowell, M.P. for Durham, Ont., said: "E. W. Beatty is the only young man of prominence Lord Shaughnessy has produced. Our guest may not be so proud of it, but when Trotzky lived in New York he also worked for the C.P.R. here." Lord Shaughnessy added:—"True, and we still owe him \$40."

Railway Finance, Meetings, Etc.

The Canadian Pacific Ry. Co. is applying to the Dominion Parliament for authority to issue bonds, debentures or other securities collateral to, or in lieu of, its consolidated debenture stock.

The directors on Feb. 14 declared a dividend of 2% on preference stock for the half year ended Dec. 31, 1920; and 2½% on the common stock for the quarter ended Dec. 31, 1920, the latter being at the rate of 7% per annum from revenue and 3% per annum from special revenue account.

Central Ry. of Canada Finance.—The affairs of the unfortunate Central Ry. Co. of Canada figured in the Exchequer Court at Ottawa, Feb. 17, when C. N. Armstrong, of Montreal, appealed against the decision of the referee in the liquidation proceedings disallowing prior consideration for his claim of \$109,941. Armstrong was appointed Manager of the railway when the company was being forced at \$10,000 a year for 10 years, and his claim includes salary and other things. The referee refused to give prior consideration to the claim, and the Exchequer Court dismissed the appeal with costs, holding that a company would not be justified in paying a manager of a railway which does not operate and therefore has no revenue.

New York Central Rd.—There has been deposited with the Secretary of State at Ottawa an executed amendment (dated Aug. 12, 1920) to a lease dated June 15, 1917, between the Guaranty Trust Co. of New York, a trustee, and New York Central Rd. Co., being an amendment to second lease under the New York Central Rd. Equipment Trust of 1917.

The Thousand Islands Ry. Co. is applying to the Dominion Parliament for authority to change the date of its annual meeting of shareholders as fixed by its special act to such date as may be determined in a bylaw to be passed by the directors, and for other purposes. The company is controlled by the G.T.R. Co.

Timiskaming & Northern Ontario Ry. The Treasurer of Ontario is reported, in making a financial statement in the Legislature recently, to have said that during 1920 \$100,000 had been received from T. & N.O.R. earnings, and that it was expected \$500,000 would be received from that source during 1921.

Highest Railway Stations in the Provinces.

The highest railway stations in the several provinces, etc., with their elevations in feet above sea level, are stated by the Conservation Committee to be as follows:

Mountain Park, Alta.	G. T. R.	5,000
Stephen, Alta.	C. P. R.	4,900
Seneca, Sask.	C. P. R.	4,800
Robinson, Yukon	W. P. & N. Y. R.	4,700
Erskine, Man.	N. S. R.	4,600
Boundary, Que.	C. P. R.	4,500
Dundalk, Ont.	C. P. R.	4,400
Adams, N. B.	C. P. R.	4,300
Edmund, N. S.	C. P. R.	4,200
North Wain, N. B.	C. P. R.	4,100

Canadian National Ry., a press report states, owing to the necessity of reducing operating expenses and because of decreased traffic, has recently decided by the reduction of the number of passenger trains being run on branch lines in Manitoba, Saskatchewan and Alberta. The new time schedules became operative Feb. 20.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—
 W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Ottawa, Mar. 3, 1875.
 John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.
 G. M. Baillie, Assistant Superintendent, London Division, Ontario District, C.P.R., Windsor, Ont., born at West St. John, N.B., Mar. 31, 1879.
 A. B. Buckworth, General Manager, Pacific Great Eastern Ry., Vancouver, B. C., born at Birmingham, Eng., Mar. 2, 1876.
 Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.
 H. S. Carmichael, ex Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., born at Glasgow, Scotland, Mar. 7, 1874.
 F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.
 W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.
 A. E. Cox, General Storekeeper, Western Lines, Canadian National Rys., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.
 Senator N. Curry, Chairman, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., Mar. 26, 1851.
 C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., born at Battle Creek, Mich., Mar. 27, 1883.
 H. G. Dring, European Passenger Manager, Canadian Pacific Ry., London, Eng., born at Easton, Northamptonshire, Eng., Mar. 8, 1881.
 Patrick Dube, Secretary - Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.
 M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commissioners, and Secretary, American Association of Port Authorities, Montreal, born there, Mar. 13, 1885.
 W. R. Fitzmaurice, Superintendent, New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., born at Bedford, N.S., Mar. 19, 1870.
 H. C. Groat, General Superintendent, Ontario District, C.P.R., Toronto, born at Wausau, Wis., Mar. 14, 1881.
 J. Halstead, Division Freight Agent, C.P.R., Winnipeg, born at Bracebridge, Ont., Mar. 2, 1877.
 R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.
 A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, born at West Springfield, Mass., Mar. 10, 1865.
 H. T. Hazen, acting Chief Engineer, Eastern Lines, Canadian Northern Ry. System, Toronto, born at Truro, N.S., May 14, 1870.
 J. I. Hobson, Treasurer, Canada Steamship Lines, Montreal, born at Guelph, Ont., Mar. 30, 1872.
 N. J. Holden, President, The Holden Co., Montreal, born at Nobleton, Ont., Mar. 22, 1866.
 A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Smithers, B.C., born at Rawdon, Que., Mar. 23, 1869.
 Frank Lee, Engineer, Maintenance of Way, Western Lines, C.P.R., Winnipeg,

born at Chicago, Ill., Mar. 7, 1873.
 J. M. McKay, Superintendent, Saskatchewan Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., Mar. 13, 1868.
 J. B. McLaren, General Auditor, G.T.R., Montreal, born at Perth, Ont., Mar. 5, 1878.
 M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.
 H. H. McLean, Passenger Traffic Manager, Canadian National - Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Toronto, born at Seadown, N.B., Mar. 9, 1872.
 W. T. Moodie, Superintendent, Division 3, Central District, Canadian National Rys., Port Arthur, Ont., born at Glasgow, Scotland, Mar. 10, 1882.
 L. F. Muncey, Superintendent, Canadian National Rys., Kamloops, B.C., born at Kensington, P.E.I., Mar. 15, 1876.
 Peter Paton, ex Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, now President, Mackenzie, Milne & Co., Ltd., Sarnia, Ont., born at New Lovell, Ont., Mar. 13, 1868.
 F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.
 J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.
 L. G. Roblin, Master Mechanic, Prairie District, Canadian National Rys., Saskatoon, Sask., born in Prince Edward Island, Mar. 24, 1864.
 G. L. Smith, Manager and Secretary, Montreal Warehousing Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.
 G. L. Snelling, Secretary - Treasurer, Ottawa Electric Ry., Ottawa, Ont., born there, Mar. 2, 1880.
 W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.
 F. E. L. Sturdee, General Agent, Passenger Department, C.P.R., Seattle, Wash., born at St. John, N.B., Mar. 29, 1876.
 G. W. Vaux, General Agent, Passenger Department, Union Pacific R.R., Toronto, born at Montreal, Mar. 21, 1866.
 A. Watt, Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Smithers, B.C., born at St. Louis, Que., Mar. 5, 1874.
 T. Weldon, Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., Montreal, born at Dorchester, N.B., Mar. 6, 1876.
 D. O. Wood, General Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, born at Kleinburg, Ont., Mar. 16, 1864.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the western division, during January, and for 5 months ended Jan. 31, 1921 and 1920:—

	Jan. 1921	5 mos. to Jan. 31, 1921	5 mos. to Jan. 31, 1920
Canadian National Rys.	8,027	41,125	30,791
Canadian Pacific Ry.	5,763	81,142	14,263
Grand Trunk Pacific Ry.	8,270	15,507	50,328
Great Western Ry.	—	—	—
(Duluth)	11	157	475
Total	17,071	137,981	95,947

Tractive Power of Cordoba Central Railway Locomotives.

Canadian Railway and Marine World for October 1920 gave particulars of 15 Mikado (2-8-2) locomotives, ordered by the Cordoba Central Ry., Argentine Republic, from Montreal Locomotive Works, of which the following were some of the principal details:—

Weight on drivers	121,500 lb.
Wright, total	163,000 lb.
Cylinders, diam. and stroke	21½ x 24 in.
Driving wheel, diam.	48 in.
Boiler type, length and width	27 ft 6 in. x 7 ft 6 in.
Boiler, diam. inside first ring	65 in.
Boiler pressure	180 lb.
Firebox, length and width	21½ x 62½ in.
Heating surface, tubes	1,458 sq. ft.
Heating surface, flues	561 sq. ft.
Heating surface, firebox	1,417 sq. ft.
Heating surface, total	2,266 sq. ft.
Superheating surface	570 sq. ft.
Grate area	35.6 sq. ft.
Tractive power	27,730 lb.
Factor of adhesion	4.38

One of our subscribers in the Province of Quebec, wrote us recently as follows: "Referencing to the details respecting locomotives for Cordoba Central Ry. given in your Oct. 1920 issues. Will you kindly inform me how the tractive power of 27,730 lb. is arrived at, with the size of cylinders, driving wheels, and boiler pressure as given by you, and also whether 85% of boiler pressure is used in figuring the tractive power of superheated steam as well as for saturated steam?"

We referred this inquiry to the Montreal Locomotive Works, which replied as follows:—"We are unable to give you any information, except that the Cordoba Central Ry. specified that the basis for figuring the tractive power should be 66 2/3% of the boiler pressure."

Canadian Railway and Marine World can advance no reason as to the Cordoba Central Railway should base calculations for tractive power of its locomotives on 66 2/3% of boiler pressure, when 80% or 85% is practically always taken for this purpose. A. J. Wood, M.E., Associate Professor of Railroad Mechanical Engineering, Pennsylvania State College, in his book, "Locomotive Operation and Traffic Control," says:—"Instead of obtaining at the track 100% effective boiler pressure, there are losses in transmission of the steam to the cylinders, drop in pressure near the end of the stroke, and internal friction of the moving parts, which combine to reduce the effectiveness of the steam at boiler pressure by some 15 to 20%. To obtain the rated tractive power, the theoretical tractive force is therefore multiplied by a constant, usually 0.85, but 0.80 may be used as a more conservative value."

G. R. Henderson, M.E., in his book, "Cost of Locomotive Operation," in calculating the tractive force of a locomotive of stated dimensions and boiler pressure, says:—"When we allow for drop in steam pressure, and internal resistance, we find that the available tractive force at the circumference of the drivers is only 0.8 of the theoretical tractive force."

Theft Charges.—H. Avery, formerly station agent at Louvain, Sask., has been committed for trial by the Provincial Police Magistrate, on two charges, one of stealing \$562.27 from the Grand Trunk Pacific Ry., and the other of stealing \$607.41 from the Canadian Express Co.

Canadian Crossed Ties for India.—A cargo of cross-tied railway ties, consisting of approximately 3,800,000 ft., left Vancouver, B.C., recently, for Calcutta, India, on the Canadian Government Merchant Marine s.s. Canadian Inventor.

Steam Railway Operating Statistics for Year Ended June 30, 1919.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings from operation, the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operation of the line to the extent of the figures given. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items. The figures in the first column, "First track mileage," include the first track of main line, branches and spurs of lines represented by the respective companies' capital stock, the lines of proprietary companies, the lines operated under lease, and lines operated under contract, but not lines operated under trackage rights, the mileages of which are included in those for the respective owning companies. There were 23 companies operating under trackage rights over 1,073.89 miles of other companies' tracks, the principal being: Canadian Northern, 170.22 miles; Canadian Pacific, 93.90 miles; Grand Trunk Pacific, 122.09 miles; Midland of Manitoba, 69.02 miles; Pere Marquette, 137.84 miles; Vancouver, Victoria & Eastern, 92.13 miles; Wabash, which does not own any line in Canada, 245.40 miles. In addition to the \$3,895.64 miles of first track operated, there were 2,543.17 miles of second track, details of which are given under "Notes to Steam Railway Statistics" on the following page. The figures, in brackets, after the names of railways in the following table refer to paragraphs in "Notes to Steam Railway Statistics, on the following page.

The figures in the last column of the table show the net earnings or loss from the operation of the various railways, and their necessary adjuncts. Many companies have income from other sources, and in some cases carry on business apart from their railways; these revenues are brought together in the "Income account," and from them are deducted taxes, rents for lease of other lines, etc., interest or funded debts, sinking funds, etc., leaving, in the final analyses, the net corporate revenue available for dividend, or the gross deficit for the year. Another table, containing these figures, will be published in Canadian Railway and Marine World's next issue.

Name of Railway	First track mileage	Passenger earnings	Freight and switching earnings	Gross earnings from operations	Maintenance of way and structures	Maintenance of equipment	Traffic and transportation expenses, etc.	General expenses	Net operating earnings
Alberta & Great Waterways	113.20	\$34,159	\$87,362	\$129,713	\$22,367	\$28,217	\$82,624	\$10,458	—\$19,992

Notes referring to the figures in brackets in column one above, appear below under 'Notes to Steam Railway Statistics.'

Notes to Steam Railway Statistics.

The following notes refer to the statistical table on this and the preceding pages:—

(1) The following companies have not reported on their earnings, etc., are included in those of the operating companies, and some of the lines are not being operated. Caraque & Gulf Shore Ry., Detroit River Tunnel, Inverness Ry. & Coal Co., Kent Northern Ry., Klondyke Mines Ry., Magnetawan Ry., Northern New Brunswick & Seaboard Ry., North Shore Ry., Nosbonsing & Nipissing Ry., Phillipsburg Ry. & Quarry Co., St. Clair Tunnel Co., Thousand Islands Ry.

(2) The Caraque & Gulf Shore Ry. was taken over by the Dominion Government as from June 1, 1920, and is being operated as part of the Canadian National Ry.

(3) The Detroit River Tunnel is operated by the Michigan Central Rd., which controls the Canada Southern Ry.

(4) The Inverness Ry. & Coal Co.'s line was operated by a receiver up to the summer of 1920, when the property was taken over by a new company, and its title changed to Inverness Ry. & Collieries Ltd. No particulars except mileage are available.

(5) The Klondyke Mines Ry. is not being operated.

(6) The Magnetawan Ry. Co.'s earnings are included in those of the Grand Trunk Ry.

(7) The Northern New Brunswick & Seaboard Ry. has not been operated for some years, and in 1917 the New Brunswick Legislature authorized the purchase of the rails for use on the St. John & Quebec Ry., but we were advised in Nov. 1917 that the rails had not then been

lifted.

(8) The rails of the North Shore Ry. were reported in Mar. 1919 to have been lifted and sold.

(9) The Nosbonsing & Nipissing Ry. is still retained in the track mileage shown, notwithstanding that the railway was abandoned and the track taken up in 1913. We have therefore deducted its mileage from the total mileage figures at the end of the table.

(10) The St. Clair Tunnel Co. is owned and operated by the Grand Trunk Ry.

(11) The Thousand Islands Ry. is operated by the Grand Trunk Ry.

(12) In the statistics for the year ended June 30, 1918, a table dealing with international lines was given, but is omitted in the statistics for the year ended June 30, 1919. This table gave details regarding the Detroit River Tunnel, International Bridge Co., St. Clair Tunnel, the Pullman Co., and for the year ended June 30, 1918, also included the Van Buren Bridge Co.

(13) In order to arrive at the net earnings from operations, the figures in a column headed "Transportation for investment," have been deducted from the total amount of the operating expenses as given in cols. 5, 6, 7 and 8 of the table, before the net operating earnings in col. 9 were arrived at. The following are the amounts to be deducted:

Alcoms Central & Hudson Bay	\$ 242.82
Brandon, Sask., & Hudson Bay	62.53
Canada Southern	2,976.38
Crows Nest Pass	96.97
Grand Trunk System	1,358.94
Manitoba Great Northern	10.14
Nelson & Fort Sheppard	43.08
Red Mountain	9.44
Timiskaming & Northern Ontario	1,348.19
Vancouver, Victoria & Eastern	25.78
Wabash	789.42
Total	\$7,553.60

Second Track:—Following are the particulars of second track, in addition to the first track mileage given in column 1 of the table on this and the preceding pages:—

	Miles.	Miles.
Canada Southern	24.04
Canadian National	1.25
Canadian Northern	74.85
Intercolonial	5.31
Transcontinental	81.39
Canadian Pacific	1,429.40
Grand Trunk	728.48
Grand Trunk Pacific	25.97
Montreal & Atlantic	6.50
Quebec Ry., Light & Power Co.	9.50
Sydney & Louisbourg	1.00
Temiscouata	1.70
Toronto, Hamilton & Buffalo	14.67
Vancouver, Victoria & Eastern	5.15
Total	2,548.17

International Railways.—The following table gives particulars of operations of companies which are of an international character, operating across the international boundary. The Detroit River Tunnel is owned by the Michigan Central Rd.; the International Bridge Co., and the St. Clair Tunnel are owned by the Grand Trunk Ry., and the Pullman Co., operates sleeping and parlor cars over some Canadian railways.

	Total revenue	Total operating expenses	Net operating earnings
Detroit River Tunnel	\$1,050,000		\$1,050,000
International Bridge Co.	431,332	\$101,712	\$29,619
St. Clair Tunnel	312,095	120,845	85,249
Pullman Co.	788,259	674,281	114,017
Van Buren Bridge Co.	41,533	8,695	32,927
Total	\$2,623,259	\$1,011,445	\$1,611,814

The C.P.R. Social and Athletic Club of Vancouver held a concert and dance at the Hotel Vancouver, Feb. 2.

Proposed Electrification of Timiskaming & Northern Ontario Ry.

In a recent interview, G. W. Lee, the recently appointed Chairman of the Timiskaming & Northern Ontario Ry. Commission, is reported to have stated that the electrification of the entire line is under consideration. The electrification it is stated, is estimated to cost \$9,000,000, and it is believed it would make the line entirely self sustaining, as the present heavy cost of coal would be done away with, the passenger and freight service made more efficient, and the cost of maintenance reduced.

We are officially advised that the question will be taken up by the Commission shortly, but that at present there is nothing definite to be said about it.

Among the Express Companies.

The Canadian National Ex. Co. has opened an office at Yorkton, Sask., in charge of W. M. Bowman. Deliveries are being made locally by motor truck.

The Board of Railway Commissioners' order of Feb. 2, authorizing a general increase in express rates, is given in full, elsewhere in this issue, under "Increases authorized in express rates by Board of Railway Commissioners."

The Dominion Express Co. is applying to the Dominion Parliament for an extension of its powers, to include the carriage of goods outside of, as well as within, Canada, and for authority to increase its capital stock.

The Dominion Express Brotherhood of Employees local division 24 held a very successful dinner and smoker at their rooms in St. John, N.B., recently. There was a musical programme and speeches by the company's officials, and by Grand President Paton of Montreal.

The Dominion Express Co. announced recently that, in conjunction with Aircraft Transport & Travel Ltd., it has inaugurated aerial services twice daily between London, Eng., and Paris, France, and daily between London, Eng., and Amsterdam, Holland. The fare charged on both lines is £10 10s. single, £18 18s. return, including motor car service at both ends. Parcels are taken at 2s. a lb. up to 10 lb., over 10 lb. at 1s. 3d. a lb. The company has arranged a special life and accident insurance for this service to cover risks up to £5,000.

William Campbell Muir, whose appointment as General Manager, Canadian National Express Co., Winnipeg, was announced in a recent issue, and whose portrait appeared in our last issue, was born at Clinton, Ont. Apr. 3, 1866, and entered express service in Nov. 1884, since when he has been, to 1886, clerk, American Ex. Co., Toronto; Apr. 1887 to Feb. 1897, clerk, Dominion Ex. Co., Winnipeg; Feb. 1897 to Oct. 1901, agent, same company, Winnipeg; Apr. 1902 to Jan. 1903, Superintendent, Canadian Northern Ex. Co., Winnipeg; Jan. 1903 to Aug. 1907, Auditor, same company, Winnipeg; Aug. 1907 to July 1910, Superintendent, same company, Winnipeg; July 1910 to Oct. 1919, General Superintendent, same company, Winnipeg; Oct. 1919 to Dec. 1, 1920, General Superintendent, Canadian National Ex. Co., Winnipeg.

Blake Arthur Latta, whose appointment as Traffic Supervisor, Canadian National Express Co., Regina, Sask., was announced in a recent issue, was born at Latta Mills, Ont., Mar. 27, 1890, and entered transportation service in June

1905, since when he has been, to Sept. 1906, agent and operator, Central Ontario Ry., Trenton, Ont.; Oct. 1906 to July 1907, agent, Canadian Northern Ry., Piney, Man.; Aug. 1907 to July 1908, operator, Canadian Northern Telegraphs, Winnipeg, Man.; Aug. 1908 to Apr. 1909, agent, Grand Trunk Pacific Ry., Pope, Man.; Apr. 1909 to Apr. 1911, agent, Grand Trunk Pacific Ry., Edson, Alta.; July 1911 to Mar. 1919, agent, Canadian Northern Express Co., and local manager, Great North Western Express Co., Fort Frances, Ont.; Mar. 1919 to Dec. 1920, chief clerk to Superintendent, Canadian National Express Co., Winnipeg.

Telegraph, Telephone and Cable Matters.

The Marconi Wireless Telegraph Co. is reported to have bought 40 acres of land about 8 miles west of Winnipeg on which to erect a high-powered wireless telegraph station.

Canadian National Telegraphs have opened an office at Hughes, Ont., and closed offices at Carpenters, Winona and Willet, Ont., Burbank, Saunders and Stony Plain, Alta.

Following are recent appointments of chief operators, Canadian National Telegraphs: W. J. Pitfield, Toronto; H. C. Milne, Winnipeg; R. Carmichael, Edmonton, Alta.; J. R. Rochon, Port Arthur, Ont.; S. A. Matthews, Capreol, Ont.

J. McMillan, Manager of Telegraphs, C.P.R., made a tour through the west during February studying existing facilities, with the view of improving and speeding up the service generally; as well as looking over the ground for extensions to the system.

The district traffic, commercial and plant superintendents, and superintendents of railway service, Canadian National Telegraphs, had conference in Toronto recently, when the various features of the new management were outlined.

W. G. Barber, who was promoted recently from the position of District Commercial Superintendent to be General Commercial Superintendent, Canadian National Telegraphs, was given a gold watch and chain and gold penknife by the managers at the larger Ontario offices recently.

A. H. Morse, Managing Director, Marconi Wireless Co. of Canada, addressed the Engineering Institute of Canada's Montreal branch, Feb. 17, on radio telegraphy and telephony, giving an outline of fundamental principles and latest developments, with practical demonstrations.

Dominion Government radio telegraphers have asked for a board of conciliation to deal with requests which they will make in the near future. It is stated that the employees received a plan in connection with the recent civil service reclassification, but claim that their rates of pay are below those received by Marconi operators.

Napoleon Sauve, of Sarnia, Ont., retired Feb. 2 after 41 years' service as lineman for the Great North Western Telegraph Co. He commenced service with the company at St. Anne de Bellevue, Que., in 1868, and worked on building the first telegraph line between Dundas and Hamilton, removing to Port Edward in 1871 and living there until the completion of the Sarnia tunnel, when he removed to Sarnia.

The following service changes are reported from Canadian National Telegraphs, Montreal District:—D. McWilliams, appointed Manager at Quebec City, vice G. C. Vaudrin, transferred. Miss W. M. Whitman appointed Manager at Berlin, N.H., vice Miss D. J. Oleson, resigned. G. A. L. Wilkes, of Moncton, N.B., appointed Manager at Bathurst, N.B. Miss B. Morrin, Manager, Brockville, resigned charge after an absence of two months due to illness.

John Christie, who died at his home in Montreal recently, aged 84, was one of Canada's pioneer telegraphists. He was born in Scotland and when six years old was brought to Bowmanville, Ont., with his family, where they settled on a farm. In 1864 he entered the G.T.R. service and during the next nine years was agent at Cobourg and Bowmanville, Ont., and St. Lambert, Que. He then became Inspector, Great North Western Telegraph Co., at Montreal, in which position he remained until retired in 1905.

A. B. Smith, who died suddenly at Montreal, Feb. 6, aged 71, entered the Montreal Telegraph Co.'s employ in 1862. After spending a number of years in the Montreal office as an operator, he was moved to Hamilton, Ont., and in 1869 became chief operator there. He served as military operator on the occasion of the Fenian raid at Hemmingford, Que., and also at the time of the Fenian raid on the Niagara frontier, for which services he was given medals by the Militia Department. In 1872 he was appointed Telegraph Inspector, Great Northwestern Telegraph Co., and in a few years was appointed Superintendent of Construction.

In 1903 he was appointed Manager of Telegraphs, Grand Trunk Pacific Ry., and built the company's telegraph lines from Winnipeg to Prince Rupert. In 1912 he was appointed Manager of Telegraphs for the entire G.T.R. system with office in Montreal, retiring in 1915, owing to ill health. One of his sons is A. Dwight Smith, Sales Manager, Montreal District, Northern Electric Co.

The Canadian National Ry. has, during the past two years, made considerable advance in the use of train telephone dispatching equipment, and have equipped approximately 2,000 miles of main line with the most modern apparatus. The dispatching equipment was installed, and is used solely, for the handling of train movements, but a recent test made, between Winnipeg and Montreal via Toronto, gave excellent results and the transmission over the distance, approximately 1,000 miles, was very good, considering the numerous repeating apparatus used and that there have also been made between Montreal and Toronto, and it was noted by engineers of several other telegraph companies that the service was unusually good, notwithstanding the fact that considerable noise from the city of the report and that it is a remarkably small number of high tension power lines. It is now possible for trains to pass in both directions with the exception of all trains, by the use of portable telephone sets.

The Canadian National Ry. management is at present considering under the act of passing a bill for a train telegraphing system from Montreal to Vancouver in 22 hours, the same time as is taken by the C.P.R.'s fast train. The suggestion also made that it might be possible for the C.N.R. to make the trip in 25 hours.

Electric Railway Department

Canadian Electric Railway Association's Annual Meeting at Ottawa.

The Canadian Electric Railway Association's annual meeting at Ottawa, Jan. 31 and Feb. 1, was most successful, and had the largest attendance of any in the Association's history. In addition to about the same number of officials of privately owned electric railways as usual, there was a representation of officials of municipally owned railways, and also a number of supply men, the Association's constitution having been changed at the previous annual meeting, so as to admit to membership electric railways owned by governments and by municipalities, and to associate membership representatives of supply houses, etc. The arrangements for the meeting were most carefully prepared and carried out by the President, A. Gaboury, Superintendent, Montreal Tramways Co.; the Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; the Honorary Secretary-Treasurer pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; and Major F. D. Burpee, Manager, Ottawa Electric Ry. and a member of the executive committee, Messrs. Gale and Burpee having special charge of the local arrangements, the details of which were carried out remarkably well. The greater portion of the meetings were presided over by President Gaboury, Vice President Gale occupied the chair for a portion of the time.

First Day's Meeting.—At the opening of the morning session on Jan. 31, Mayor F. H. Plant, of Ottawa, welcomed the members, and the President replied. Routine business was then dealt with, after which the President gave his address, outlining changes made in the constitution and bylaws and mentioning the papers to be read, particularly referring to traffic regulations, for which he bespoke most careful consideration.

A. Eastman, Honorary Secretary-Treasurer, presented his report, in the course of which he said: "Those who are familiar with the history of the Association from its inception know that its life and the good work accomplished were due to the untiring efforts of our present Honorary Vice President, Acton Burrows, who was the Honorary Secretary-Treasurer for 14 years. During the year 1918-19 Mr. Burrows asked to be relieved of the work, but was prevailed upon to remain in harness until the end of 1919. Pending arrangements to appoint a permanent Secretary-Treasurer, I agreed to act temporarily. Conditions prevented the contemplated arrangements being carried out, and as no appointment was made I continued to act, but have been unable to give the Association's work the time it required and deserved." Mr. Eastman then tendered his resignation and assured the Association of his hearty support and co-operation for the future.

Amendments to the bylaws, prepared by the executive committee, were adopted, one of the principal changes being to separate the office of Secretary-Treasurer, and provide for the election of a Treasurer from among the officials of member railways, the Secretary to be appointed by the President to be paid.

A draft of rules respecting the installation and maintenance of electrical sup-

President, Ottawa Electric Ry., and Honorary
President, Canadian Electric Railway Association.

George Kidd,
General Manager, British Columbia Electric Ry.,
and Honorary Vice President, Canadian Electric
Railway Association.

ply and signal lines, prepared by the Hydro Electric Power Commission of

Ontario, was submitted, and the appointment of a committee to consider them was left to the incoming President.

It was announced that the Kitchener & Waterloo St. Ry., owned and operated by the City of Kitchener; the London & Port Stanley Ry., operated by the London Ry. Commission; and the Toronto Transportation Commission, which has been appointed to take over and operate the Toronto Ry. for the city, had applied for membership, also that a number of supply houses, etc., had applied for associate membership.

H. H. Couzens, General Manager, Toronto Transportation Commission, in response to a request from the President, expressed his pleasure at being present, and said that one of the things that had struck him particularly during the eight years he had been in Canada was the difference of opinion and bitterness between the publicly and privately owned interests. It had always been his endeavor that there should be no difference in opinion between men responsible for operating enterprises, whether publicly or privately owned. They had exactly the same problems and could help one another in their solution. Perhaps those under public ownership were a little apt to be judged, and possibly prejudiced, by the utterances of some people associated with public ownership, possibly from a political standpoint, but speaking for himself he said that anything he could do to help in solving common problems would be willingly done.

A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, spoke of the Board's work generally, as relating to electric railways, and particularly referred to its management of the London St. Ry., to which he had devoted considerable time.

After the morning session a get-together luncheon was held at the Chateau Laurier.

At the afternoon session, Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., read a paper on "Practical operation of a service at cost contract," which is given in full farther on in this issue. The paper was very fully discussed, the principal speaker being Dr. L. A. Herd, one of the members of the Montreal Tramways Commission, others being Major F. D. Burpee, A. B. Ingram, and C. L. Wilson. Lt. Col. Hutcheson answered a number of questions and gave considerable information in addition to that contained in his paper.

Other papers read during the afternoon were "The safety car," by J. C. McCune, District Engineer, Westinghouse Traction Brake Co., and "Adaptability of the safety car to Canadian snowy climate," by H. E. Weyman, Manager, Lewis County Ry. These papers were discussed by D. M. Campbell, A. Eastman, H. L. Andrews, A. B. Ingram, and C. C. Curtis.

Dinner.—In the evening, those attending the annual meeting, and a number of guests, went, by special cars on the Hull Electric Co.'s line, to the Ottawa Golf Club, where they had a most enjoyable dinner, the Association's Honorary President, Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., presiding. The toasts were the

London St. Ry. Wages and Operation. A press report says that it is likely that the company and its employees will compromise on the wages question, the company accepting an offer of 4s. an hour, instead of the 4s. 6d. for which they asked originally, and that this arrangement is being made.

Practical Operation of a Service at Cost Contract.

By Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.

When the contract between the City of Montreal and the Montreal Street Ry. Co. was made in 1892, the area of the city to be covered by the contract was nine square miles, and the population to be served 216,000. Contracts, dated 1891, with the municipalities of St. Cuneoged and St. Henry, for 50 years, were then in effect. Subsequently, from time to time, contracts were made between the Montreal St. Ry. Co., or other companies absorbed by it, and 27 other municipalities, 20 of which were terminable between 1920 and 1961 and seven interminable. Since 1892, fourteen of these municipalities have been annexed to the City of Montreal, making the area of the city, in 1917, 50.24 square miles, and the population to be served, 800,000.

In the outside municipalities zone fares were collected which would yield to the company from 5c. to 25c. a passenger. The maximum fare, under the city contract, was 5c., with reduced rates by tickets. Contracts made 25 or 30 years ago, when the industry was in the experimental stage, did not provide for conditions that were constantly changing, because of the rapid growth of the community, due to a large extent to the facilities for transportation given by electric railways. An indication of the growth of the street railway business in Montreal is shown in the statement of assets and liabilities of the company for 1892 and 1920 farther on in this paper.

The wonderful development of the city, between 1910 and 1917, brought many demands from the public for extensions and improved service. These were complied with by the company to a very reasonable degree and far beyond the contract requirements. However, satisfactory relief could not be given unless new extensions were made in annexed territory, and the city, not having a contract covering this territory, could not call upon the company to build. This led to negotiations between the city and the company and several conferences were held between 1910 and 1917, with the object of making a new contract to cover the entire system, but because of the hostile attitude of certain members of the civic government no progress was made.

Many prominent citizens appealed to the Quebec Legislature to have the matter taken out of the hands of the civic authorities and placed with a commission of business men who would study conditions and prepare a contract that would safeguard the interests of the city and of the shareholders. In 1917, the Legislature appointed a commission of five, who immediately commenced study of the question, and after hearing the views of the municipalities interested and of public bodies of the city, such as the Board of Trade and the Chamber of Commerce, it was decided that a franchise on the service at cost plan was the most equitable basis upon which street railway contracts could be made. Up to this time the company had not felt the stress of the war, but because of the necessity for heavy financing to build and equip extensions, was agreeable to negotiate on this basis. The commission took several months to study the subject and visited many cities in Canada and the United States, during which time a valuation of the company's physical assets was made. A contract was finally entered into on Jan. 28, 1918, and was

ratified by the Quebec Legislature and became effective on Feb. 9, 1918, for a period of 35 years, expiring Mar. 24, 1953. The important features of this contract provide:—

1. For the appointment of a commission of control by the Legislature (designated as the Montreal Tramways Commission), composed of three members, for the purpose of administering the affairs of the contract, and that an appeal can be taken from any decision of the Tramways Commission to the Quebec Public Service Commission, whose decision shall be final except on questions of law.

2. For the establishment of a guarantee fund, by the company, of \$500,000.00, in amounts of not less than \$100,000.00 a year, to be used to meet all liabilities incurred by the company, prior to the coming into force of this contract, and to provide for the payment in each year of any portion of excess expenditure

Lt. Col. J. E. Hutcheson,
General Manager, Montreal Tramways Co.

hereinafter referred to, also for the payment of any penalties imposed on the company, and to guarantee the fulfillment of all obligations assumed by it under this contract.

3. For the disposition of gross revenues in the following order:—(1) Operating expenses and taxes; (2) Maintenance and renewals fund; (3) Return upon capital value; (4) City rentals; (5) Contingent reserve fund; (6) Division of surplus on basis of 20% to the company; 50% to a tolls reduction fund, and 30% to the city. This disposition is illustrated by the accompanying diagram. It also provides that if at the end of any year, the amount in the tolls reduction fund shall exceed \$1,000,000, the commission may, and whenever the amount in the said fund shall exceed \$2,500,000, the Commission shall reduce the fares or tolls on the tramways system.

4. Operating Expenses and Taxes.—The Commission is required to fix each year an allowance per car mile to be

used for the payment of all operating expenses (exclusive of maintenance, renewals and depreciation) and all taxes levied against the company or its property, and in so doing it shall base its action on the actual and necessary expenses incurred during the preceding year, with such adjustments as may be foreseen to be necessary on account of modifications of service, changing costs, or any circumstances tending either to increase or diminish the necessary expenses of operation.

5. Operating Profit.—If at the end of any year the Commission shall find that the company has kept within the operating allowance, or has not exceeded same by more than 2½% of its amount, it shall permit the company to take out of gross revenues, as a charge prior to all other charges (except operating expenses and taxes) a sum equal to ¼ of 1% of the total average capital value, for that year, which shall belong to the company. Should the company's expenditures exceed the operating allowance, plus the above mentioned 2½% during any year, the excess over such allowance and percentage shall be known as excess expenditure and shall be taken from gross revenues, up to an amount not exceeding ¼ of 1% of the average capital value for such year, and the operating profit shall be reduced accordingly. If the excess expenditure exceeds the ¼ of 1% mentioned above, the company shall receive no operating profit, but shall pay out of the guarantee fund the amount by which the excess expenditure exceeds the ¼ of 1%. The company has the right, however, in anticipation of such excess expenditure to submit to the Commission a detailed statement in explanation thereof, at any time during the year, or immediately upon the close of the year. If the Commission finds, within 60 days after the close of the year, that the excess expenditure, or any part thereof was necessary or unavoidable, it shall permit the company to take out of gross revenues the additional amount required to cover the excess expenditure, or any part thereof, and shall award the company the full amount of the operating profit.

6. Maintenance and Renewals Fund.—It is provided that the entire plant and property of the company, shall, at all times, be maintained at the highest standard of operating efficiency, and for the purpose of maintenance, renewals, replacements and substitutions made necessary by wear and tear, age, obsolescence, inadequacy, accident or other cause, a sum is set aside per revenue car mile and is known as the maintenance allowance. If at the end of any year it shall appear to the satisfaction of the Commission that such maintenance allowance is insufficient, it shall be increased for the ensuing year, and from year to year as may be necessary. If, on the other hand, the Commission shall find that the maintenance allowance is excessive, or that the maintenance and renewals fund is larger than prudent management requires, it may reduce such allowance to any extent it may see fit, provided it shall not be so reduced as to cause a reduction in the maintenance and renewals fund, except temporarily, below \$500,000. Should the fund be so reduced below such sum, then the Commission shall increase the maintenance

allowance in an amount sufficient to restore the fund to at least \$500,000.

7. Return Upon Capital Value.—The capital value of the company as on Dec. 31, 1917, was fixed at \$36,286,295.00, and it is provided that the company shall receive in quarterly payments, a sum equal to 6% per annum on such value, as well as on all additional capital expenditures made from that date. It also provides that during the continuance of the war, or within two years after its close, the company shall receive an additional return of 1% per annum on additional capital expenditures, such return not to be paid for a period extending more than five years beyond the close of the war. On all moneys furnished by the company for working capital, it shall receive interest at the rate of 6% per annum. It shall also receive, for the purpose of covering the expenses to be incurred in procuring additional capital, \$181,431.47 annually, which is the equivalent of $\frac{1}{2}$ of 1% on \$36,286,295.00. It is further provided that this sum shall be expended solely for the purpose of discounting and commissions, printing and engraving, exchange, legal and other expenses incidental thereto, when issuing bonds or debenture stock, when issuing stock, for printing, engraving, transfer and registration fees, and listing on stock exchanges. Any surplus in this account, as well as the interest on the income therefrom, shall belong to the company, but shall be kept in a special account and not distributed until the termination of the contract.

8. City Rentals.—It is provided that the city shall receive over and above all other amounts to which it may be entitled under the contract or otherwise, \$500,000.00 a year, payable quarterly.

9. Contingent Reserve Fund.—It is provided that 1% of the gross revenues be paid annually into a contingent reserve fund, until it shall reach \$500,000.00. Such fund shall be used whenever it may be necessary to make up any deficiency in the payments to be made under paragraphs 1 to 4 hereof, inclusive, in the order of priority herein established. The allowances provided for in such paragraphs and in this paragraph are to be cumulative in the order established.

10. Insufficient earnings.—If the gross earnings are insufficient in any year to provide the sums payable under accounts 1 to 5, inclusive, and if the amount in the contingent reserve fund is less than \$300,000.00, it is provided that the Commission shall appropriate from the tolls reduction fund, the amount necessary to bring the contingent reserve fund up to \$500,000.00, all deficits provided under accounts 1 to 4 inclusive being made up. In the event of there not being sufficient moneys available in the tolls reduction fund, then the Commission shall forthwith increase the tolls to the extent necessary to provide at least sufficient gross revenue to meet all the demands provided for under accounts 1 to 5 inclusive.

Results of Operation Under Contract. From the date of the coming into force of the contract, Feb. 9, 1918, to Oct. 3, 1918, the company continued to operate under the rates of fare in existence at the time the new contract was entered into, which were:—6c. cash; 6 tickets for 25c. (good 5 a.m. to midnight); 25 tickets for \$1 (good 5 a.m. to midnight); 8 tickets for 25c. (good 5 a.m. to 8 a.m. and 5 p.m. to 7 p.m.); 1 ticket for 25c. (scholar every day, 5 a.m. to midnight); 10c. cash after midnight, with zone rates for outlying territory. The results obtained from the above rates of fare from

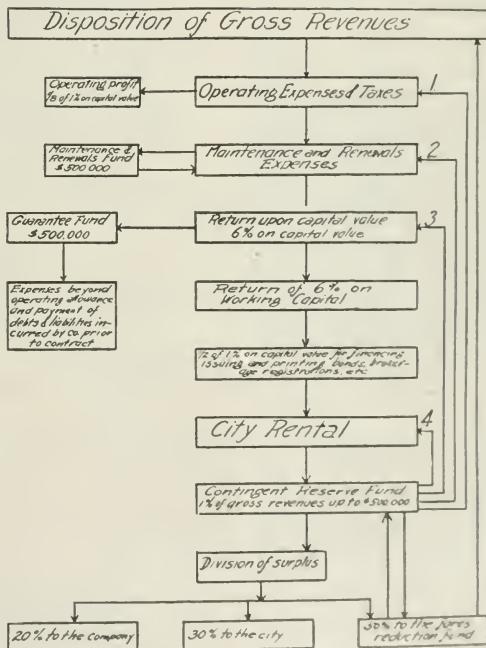

Feb. 10 to Sept. 30, 1918 (7 2-3 months) were as follows:—

Passenger earnings	\$4,771,662.34
Miscellaneous earnings	102,269.12
Gross earnings	\$4,873,931.46
Operating expenses and taxes	2,800,810.66
Maintenance and renewals	745,347.55
Return on capital value	1,421,163.43
Financing allowance	115,279.41
City rentals	817,694.63
Contingent reserve fund	46,739.31
Total charges	\$5,449,034.39
Shortage	\$ 675,102.93
Revenue passengers carried	116,571,723
Car earnings per passenger	4.09c.

New rates of fare established on Oct. 3, 1918, and continued in force until Oct.

Contingent reserve fund	98,727.47
Total charges	11,006,310.41
Shortage	\$1,143,004.94
Revenue passengers carried	201,919,829
Car earnings per passenger	4.09c.

On Oct. 26, 1919, the rates of fare established, which continued in force until Sept. 1, 1920, were as follows:—7c. cash; 5 tickets for 30c. (good 5 a.m. to midnight); 44 tickets (book) for \$2.50 (good 5 a.m. to midnight). Book tickets cannot be purchased on cars, only at company offices; 7 tickets for 25c. (scholar) 8 a.m. to 6 p.m. (Sunday excepted); 15c. cash after midnight and other rates for outlying territory. The results obtained from these rates of fare from

26, 1919, were as follows:—6c. cash; 5 tickets for 25c. (good 5 a.m. to midnight); 6 tickets for 25c. (good 5 a.m. to 8 a.m., good 5 p.m. to 7 p.m., Sundays excepted); 7 tickets for 25c. (good 8 a.m. to 6 p.m., Sundays excepted); 15c. cash or tickets after midnight, and other rates for outlying territory. The results obtained from these rates of fare from Oct. 1, 1918 to Oct. 31, 1919 (13 months) were as under:—

Passenger earnings	\$9,704,967.77
Miscellaneous earnings	186,277.60
Gross revenue	9,891,245.37
Operating expenses and taxes	5,699,281.01
Maintenance and renewals	704,570.88
Return on capital value	405,300.81
Financing allowance	106,166.40
City rentals	841,667.00

Nov. 1, 1919, to Aug. 1, 1920 (10 months), were as under:—

Passenger earnings	11,884,792.92
Miscellaneous earnings	186,277.60
Gross revenue	12,071,070.52
Operating expenses and taxes	6,000,000.00
Maintenance and renewals	704,570.88
Return on capital value	405,300.81
Financing allowance	106,166.40
City rentals	841,667.00
Contingent reserve fund	98,727.47
Total charges	9,158,332.56
Shortage	2,912,737.96
Revenue passengers carried	1,000,000.00
Car earnings per passenger	4.09c.

On Sep. 1, 1920, the rates of fare established and presently in force were as

under:—7c. cash; 4 tickets for 25c. (good 5 a.m. to midnight); 50 tickets for \$3, (good 5 a.m. to midnight). Book tickets cannot be purchased on cars, only at company's offices; 7 tickets for 25c. (scholar) 8 a.m. to 6 p.m., Sunday excepted; 15c. cash after midnight, and other rates for outlying territory. The results obtained from these rates of fare from Sept. 1 to Nov. 30 (3 months) were as under:—

Passenger earnings	\$2,907,094.70
Miscellaneous earnings	\$1,764.56
Gross earnings	\$2,908,859.25
Operating expenses and taxes	1,537,878.97
Maintenance and renewals	588,939.83
Return on capital value	571,402.46
Financing allowance	45,357.87
City rentals	125,000.01
Contingent reserve fund	29,858.50
Total charges	2,898,186.14

Balance	\$90,373.11
Revenue passengers carried	47,741,940
Car earnings per passenger	6.08c.

While substantial increases have been made in the company's gross revenues, the expenses have also increased. During the first period the charges to be met out of revenue amounted to a daily average of \$23,386.41, against an average daily revenue of \$20,918.16. During the second period the average daily charges were \$27,868.96, an increase of 19% over the previous period and were in excess of the average daily revenue by \$2,887.84 a day. During the third period, the average daily charges were \$31,456.26, an increase over the previous period of 12%, and were in excess of the average daily revenue by the amount of \$132.65 a day. During the fourth period ended Nov. 30, 1920, the average daily charges were \$31,851.50, an increase over the previous period of 1.26%, and were less than the average daily revenue by \$553.55 a day.

Increases in employes wages, which were to a large extent responsible for the increased charges, were granted as follows:—

Effective June 1, 1918—Approximate amount of increase for one year, 1918, or	\$ 700,000.00
Effective July 1, 1919—Approximate amount of increase for one year, 1919, or	1,100,000.00
Effective July 1, 1920—Approximate amount of increase for one year, 1920, or	815,000.00

From the coming into force of the contract, Feb. 10, 1918, to June 30, 1920, the end of our last fiscal year, the results obtained are as follows:—

Gross earnings	\$22,354,680.57
Operating expenses and taxes	12,585,161.61
Maintenance and renewals	4,288,078.24
Allowances to company	5,795,411.81
Total	\$22,667,251.66
Balance—Dr.	\$ 312,571.09
Payable when carried	
City of Montreal rental	\$1,192,694.80
Contingent reserve	225,546.05
	1,416,240.85
Shortage	\$1,728,811.94

It will be seen that while the present rates of fare have produced a margin of revenue over expenses for the three months they have been in force, there is a considerable shortage resulting from the previous operations at the lower rates of fare to be made up. It is hoped, general conditions permitting, that this shortage can be gradually made up without the necessity of any radical increase in the present rates of fare.

Statement of Operations from July 1, 1919, to June 30, 1920.

Gross receipts	\$10,782,470.09
Operating expenses and taxes	\$5,849,011.89

Total expenses \$11,147,170.29

Deficit \$ 364,700.20

After more than two years trial, it is my belief that the plan now in operation in Montreal is working out to the advantage of the citizens. It is true that the rates of fare have been increased but had they not, the company would have been obliged to greatly curtail the service and defer maintenance in order to make the revenue pay operating expenses. Notwithstanding the deficits of 1918, 1919 and 1920, the company never for one day deprived the public of the customary good, clean and up to date service. In this way we held the good will of our patrons who are perfectly willing to pay whatever satisfactory transportation costs.

Street railways throughout the country, like steam railways, have been placed in a critical position over which the management had no control. The rates in effect, prior to the war, while sufficient to at least pay expenses, were found woefully inadequate after 1916 to provide for the service the public demanded, and maintain their property in anything like proper condition. In this regard I would call attention to the Montreal Tramways Co.'s table of traffic statistics from 1910 to 1920, given herewith, which indicates operating and maintenance expenses increasing from 16.7c. in 1910, to 35.33c. a car mile for the year ended June 30, 1920. This will be further increased in 1921 to 40c. a car mile, due to an increase in wages made July 1, 1920.

It is true that relief has come to many companies by public utilities commissions granting increased fares, but action was so long delayed, due to the public sentiment, that many properties were forced to cease operating or to fall into the hands of receivers. During 1920, 450 miles of electric railways were dismantled and 308 miles abandoned. A report just completed shows that 548 cities in Canada and the United States, representing more than 90% of the riding population, are paying fares ranging from 5c. with 1c. for transfer, to a flat rate of 10c. The largest groups are:—

Cities paying 10c.	112
Cities paying 8c.	6
Cities paying 5c.	174
Cities paying 6c.	124

The conditions, which I have referred to, have tended to break down the credit and stability of the electric railway industry. Unless the confidence of investors in the securities of public utilities is restored, the public must, in some way, assume the responsibility and provide funds for the carrying on of an essential public service. Lack of confidence in public utilities investments, at the present time, is very serious, embarrassing the companies and depriving the public of adequate or satisfactory service. The question then is, whether the need for local transportation can best be met by public ownership and operation, or by private ownership and management with public control. If the public was convinced that municipal government is qualified to carry out the management of public utilities it would probably take the decision that I would say that there should be no objection provided a

fair valuation of the property is allowed. It is my opinion, however, that the operation and development of a street railway property requires men trained in the arts and science of the business, and who are absolutely free from local political influence, to handle the many problems of the service.

Municipal ownership is urged by some as a panacea against increased fares. It does not matter by which plan the street railway is managed, the cost of the service must be found, either from those who use the cars or by taxation. For this reason I believe the public interests would be better served by private ownership and management with public control appointed by Dominion or provincial authority. Under this plan the public pays for the service it gets, the rates of fare to be automatically adjusted, up or down, to meet changing operating conditions. The principal features are: fair valuation of property; fair return on capital value; private ownership and management; public supervision and control; city's right to purchase at any time upon an agreed basis; the fundamental basis of a service at cost contract is a fair valuation of the physical assets of the company.

It is plainly evident that whether the public shall decide to operate its railways, whether it assumes greater control over them, or whether it allows them to remain in the hands of private individuals, the revenue must be such as to provide for the full cost of service. It costs a lot of money to run street cars under present conditions, and in my opinion the logical way to get it is from the fare boxes.

General Statement, Montreal Street Railway Co., 1920.
ASSETS—
Construction of railway, etc., to Sept. 30, 1920 \$571,765.71

Real estate and buildings \$44,966.79
Rails, track materials, stores, etc. 16,389.82
City of Montreal and other open accounts 132,267.49
Equipment, cars, horses, sleighs, etc. 365,107.93
Cash on hand and in bank 25,136.49
\$1,451,634.23

LIABILITIES—
Capital stock \$900,000.00
Bonded debt, 5% 292,000.00
Special loans for extensions, etc. 141,842.78
Unclaimed dividends 2,000.79
Bailleur-de-fond mortgages 5,221.61
Sundry creditors 28,683.24
Contingent account 45,795.87
Profit and loss account 36,900.00
\$1,451,634.23

Montreal Tramways Co.'s General Balance Sheet, 1920.

ASSETS—
Cost of road and equipment to June 30, 1919, \$1,980,353.58
New construction for the year 492,641.30
Less value of discarded property 375,836.24

Total	\$2,527,674.42	1612.7	\$2,540.69
Aver. per season	\$180,548.19	115.2	\$1,616.95
Maximum	\$268,799.92	161.9	\$2,416.67
Minimum	\$122,428.66	85.6	\$818.46

The above figures do not include the city's proportion of expense of snow removal, which is about 70% additional.

Publicity and Public Relations.

By A. W. McLimont, Vice President, Winnipeg Electric Railway.

"Today the majority of Canadian street railway companies may be said to be standing at the crossroads. To the left a broad and easy way leads on to the graveyard, where obsolete and bankrupt transportation systems rust, while to the right a narrow and rugged path runs to a place where modern transportation systems operate on a financially sound basis, because the communities they serve are interested in their problems and will co-operate with them in mutual interests. There is no question which path we wish to take. We all want to continue to serve the public. How then shall we reach this Utopia of street railways? My answer is: I believe it is the duty of a street railway manager to let the public know the facts about any phase of the street railway business that concerns them. I believe we should lay our problems before our patrons, not as supplicants, but as one business man presents a mutual problem to another, with a view to securing assistance in solving it. I believe when we ask the public to pay the increased fares necessary to enable us to render adequate service we should tell the reasons why. We are vendors of transportation, a "place utility" as the economist would say, as important to society as any manufactured product and as the manufacturer sells his product so must we sell transportation. I believe the public is square, and that once we induce people to think and talk about street railway problems, public

opinion in our favor will become such a powerful factor that the authorities will give the street railways a square deal.

Right Public Relations.—Let us first consider right public relations: To secure them it is essential that our equipment be clean. It is essential that we shall keep faith with our employees and treat them fairly. We must be truthful. We, and the members of our organization, must be good citizens of the community in which we live. We must "boost" when boosters are needed, and work for the public good whenever that is possible. And above all, we must make up our minds that it is our business to endeavor to determine how we can best serve the public.

Proper publicity requires: That any statements we give to the press, or to the public, in any form shall be the truth. That we shall live up to what we have already stated we believe about right public relations, because proper publicity and right public relations go hand in hand. That we shall practice what we preach. We must lay our problems before everyone interested in them if we are eventually to secure a square deal for the properties we represent. When we tell people the physical property of the railway is run down, because revenues are inadequate or that the street railway is paying unfair and burdensome taxes, we are met with the question—"Who knows about it?" How can you expect to get redress if you don't

tell the public the facts?" Therefore we try to tell the public the facts and interest the public in us and our problems.

Means of Informing and Interesting the Public in Street Railway Problems. The Winnipeg Electric Railway Co. decided the best way to do this was: Through a publicity agent, charged with the duty of establishing and maintaining friendly relations with newspaper men. Through birds distributed to interested persons and organizations. Through poster advertising pasted on street car windows. Through an official publication of information to the street cars. Through paid advertisements in the newspaper. By use of large advertising cards or frames posted on the outside of our street cars.

Let me elaborate these few suggestions a little. The Winnipeg Electric Railway was established in May, 1915, in charge of H. C. Hawes, a young newspaper man. To the newspaper men which fell to the department was: To establish good relations with the newspaper men, largely through personal contact with the owners and reporters. To prepare every two weeks an issue of "The Public Service News," a pamphlet for free distribution through boxes in the street cars. To prepare advertising and a publicity matter pertaining to the company. Considerable progress has been made towards establishing better relations with

the newspapers. It is our policy to work closely with them and see that they are given accurate and reliable news. They appreciate the same and generally treat the company fairly. "The Public Service News" is issued every two weeks and has now reached a circulation of 40,000 an issue. It has proved a powerful influence in the bettering of public relations. Generally speaking, it is the aim of the Publicity Department to keep the name of the company prominently before the public, to see that all new developments and items of general interest pertaining to the company are recorded in the local press, and through co-operation with organizations promoting worthy causes, to better public relations.

When we were asking the city to pass a bylaw eliminating the unfair jitney competition to our transportation service, we prepared a brief with reference to the question entitled "Statement of the Problems of Street Transportation as it affects the City of Winnipeg," and had a large number of copies distributed to those interested. This brief was widely read and quoted and no doubt was a factor in the final elimination on May 1, 1918, of jitney competition to our transportation service.

From time to time as various questions concerning the street railway arise, we print an official statement, bearing my signature as Vice President of the company, on large posters and paste them on the car windows, sometimes as many as four posters to a car. The Rolling Stock Department is responsible for placing the posters on the cars, and the work is done at night when the cars are in the barns. By this method we are able to reach all the car riders over night. We also use car window posters to announce charitable entertainments or special sporting or other events in which our organization is interested. A number of safety first drawings have appeared on window posters and have helped prevent accidents. I feel sure you will be interested in our "Jay Walker" series, samples of which accompany this paper.

Since the first copy of the Winnipeg Electric Public Service News was issued, 2,400,000 copies have been printed and distributed free, mostly through the "Take One" boxes in our cars. We also have a mailing list of about 1,000 names to which it goes each fortnight. In this official organ we endeavor to set our operating and other problems before the public. We never "knock." If we can't boost we try our best to keep still. Each new issue of the Public Service News is announced by a window poster in the cars, and our experience is that the available supply is soon exhausted.

The properly written and attractively set up paid newspaper advertisement is in my judgment one of the best, if not the best, medium for reaching the members of the community. This method of publicity is necessarily expensive and we only use it for special announcements. For instance, when the Manitoba Public Utilities Commission granted us an increase in fares last autumn, the city started an action in the courts to upset the increase and have the Public Utilities Act declared ultra vires. We desired to convince our patrons and the public generally that the verdict of the Commission was a fair one and that the city was not justified in opposing it. We therefore ran a series of full page advertisements in all the daily papers, and most of the weeklies in Winnipeg, explaining the whole matter. These advertisements, together with window pos-

ters in the cars on the same subject, and articles in our own Public Service News, threw much needed light on the situation, and we believe influenced local public opinion in our favor.

The Winnipeg Electric Ry. problem was one of the issues in the Winnipeg election this year. The Mayor for 1921 was elected by a large majority. His platform is that he favors a round table conference, rather than litigation, so far as the railway is concerned, and before he was elected he gave the voters clearly to understand that he favors granting the railway a fare that will ensure adequate wages and enable us to procure the necessary capital to carry on.

On the outside of each standard passenger car in Winnipeg we have placed five metal holders. Each holder takes an advertising card 22 x 26 in. The privilege of placing these cards on the street

A. W. McLimont,
Vice President, Winnipeg Electric Ry., and member
Executive Committee, Canadian Electric Railway Association.

cars is leased to a local advertising company on a percentage basis; the railway retaining, of course, space for its own use. Only cards advertising traffic producing events are permitted to be thus displayed by the advertising company, but the railway displays such slogans as "Street Cars Can't Dodge," "Please Have the Exact Fare Ready," etc., which are printed on the backs of the regular advertising cards, and are used in the company's card space. Cards are placed in these frames on the outside of the street cars at night by the Rolling Stock Department, and it is possible to change all the cards over night. Photographs of sample of cars carrying these cards are submitted for your inspection.

Meetings of Heads of Departments.—I have confined my remarks up to this point to various means which our company is employing in informing and interesting the people of Winnipeg in the street railway problem there. The success which we have had in this direction is not, however, fully attributable to the means which I have thus far explained. Much of it is, I am sure, due to the re-

sults obtained indirectly from the attitude of the various members of my organization. I refer particularly to their apparent desire and aim to serve the public efficiently. As a means of getting my entire organization striving to serve the public well, weekly meetings of the heads of departments are held in the directors' room. At these meetings everybody is made to feel as free from restraint as possible in order that a frank discussion can be held of difficulties in each other's departments which may be overcome through consultation with the heads as a whole, and also that suggestions may be received by the organization from anyone upon any subject that is of interest to the company. I am sure every manager who holds periodical meetings of heads of departments along the lines I have suggested finds beneficial results. Better co-operation is obtained among the departments, through the men becoming better acquainted personally, and more or less familiar with the workings of each other's department. There is no amount of printed matter that can obtain the same co-operation and efficiency as can the personal contact of the members of an organization meeting in a free discussion of their many problems. At these meetings I have repeatedly impressed upon my organization the fact that they must work under the principle that we are like a factory producing things for the public to buy. We produce cubic feet of gas, kilowatt hours of electricity for light, heat and power, purses, and furnish car miles for transportation. I tell them that these services must be produced in the most efficient manner, and at the least possible cost, in order that they may be sold to the public at an acceptable figure. I point out that we must have our customers like our service and the things we sell, in order to obtain support and patronage, and that without satisfying customers we cannot expect to be successful any more than any other commercial enterprise.

I feel certain that it is largely through such means as I have related that the Winnipeg Electric Ry. has been successful in having its fares increased three times within the past two years, and that jitney competition, which for a time seriously threatened to upset the street railway service, has been abolished. Moreover, there has been no disagreement with the company's railway employees of sufficient importance to warrant the employees to strike, the only strikes which have occurred were sympathetic ones and were not entered into because of disagreements with the company.

In conclusion, I wish to reaffirm my faith in the statement that the public is square, and that eventually Canadian street railways will be given a square deal if the public is given the facts. I am not pessimistic in my view of what the future has in store for the street railway business, because I believe the proper publicity, coupled with a sincere desire to give efficient service will help our reaching the street railway's Utopia. At any rate it will prevent our business from going to the graveyard, where obsolete and bankrupt transportation systems rust.

Major F. D. Burpee's Views.

Major F. D. Burpee, Manager, Ottawa Electric Ry., said:—I have been very much interested in Mr. McLimont's paper, because we, in Ottawa, have been trying to win and hold the good will of our customers, in a somewhat similar

way. Aera for January contains two splendid articles on street railway publicity, one by M. B. Lambert, of the Westinghouse Co., and the other by B. J. Mullaney, of the Illinois Committee on Public Utility Information. Both of these should be read by anyone interested in this subject.

Speaking entirely without local application, the street railway industry has always experienced more or less marked hostility from the press, public officials and the public. It has become a popular pose to regard us with suspicion. There is always the feeling that in knocking us one is taking the side of the under-dog, the poor individual against a rich autocratic soulless corporation, sometimes termed "a malefactor of great wealth," a double barrelled insult to those of us who are trying to get along on a 5c. fare. That is the usual state of mind of jurists when they listen to the arguments in a street railway damage case. And in the past we railway men have helped the growth of that unfriendliness by doing little to offset it. How many managers, when their companies have been attacked in the press, have dismissed the matter by saying "What's the use of getting into an argument? We have to ride anyway." Or, if they did reply, only made matters worse by sarcasm, or evasion. The public love a scrap, and the more bitter it is, the more news value it possesses. It amuses them for the time, but it does permanent harm to the railway company. We can't all be perfect. Let us admit that complaints are sometimes justified. Being reasonably sure of a certain revenue, have we always considered it necessary to work for the friendship of our customers?

Mr. Lambert, in his article, observes that the absence of public good will is the biggest obstacle in the path of the electric railway industry. He defines public good will as "confidence in the company, its officers and its employees; a desire to use it progress and power; and a willingness to co-operate with it in every possible way." The hostility we have experienced in the past is mainly due to lack of knowledge of our business, and the difficulties and problems we have to contend with. The attitude of the press and public officials exists because they think it is a reflection of the feelings of the people. There is no doubt we can remove that spirit of unfriendliness, and substitute for it good will and co-operation, if we go about it the right way, and keep everlastingly at it.

I will again quote from Mr. Lambert: "Good will is created and built up in innumerable ways. It is a continuous performance on the part of everyone associated in any way with the railway company, and every employee fully appreciated the importance and great value of maintaining and strengthening the good will of the public and kept this uppermost in their minds each day, the progress and prosperity of their company and themselves would be greatly enhanced."

There is a triangle of interest in every street railway. The public, our customers; the company, by which I mean those who direct the policy and operations of the railway; and the employees, those who carry out the policy and direction of the company. Good service is necessary for the welfare of the community. The most efficient service and the greatest prosperity for all can only be obtained with the full co-operation of these three.

Has it ever occurred to you that every

company has, in its staff of employees, hundreds of excellently placed agents, that only need a little training to be a most effective force in winning and holding the friendship of our patrons? For every request for information received at the company's office, hundreds are being daily preferred to our conductors, and, to some extent, to our motormen. We can train our employees so that they will be thoroughly imbued with the importance of making friends, and that to have good will of their passengers will make their work much easier, and be a valuable asset to them as well as to their company. We have tried to impress on every member of our staff that discourtesy is the unforgivable sin. Every request for information or assistance, every complaint, whether justified or unreasonable, is an opportunity to make a friend or to conciliate an enemy. It is most important to resist that human inclination to answer criticism with sarcasm or smartness, and if we do so, we play right into the hands of our enemies, and confirm them in their convictions.

To successfully educate our employees to win the good will of the public, we must first win the good will of the employees. We can teach them courtesy by receiving all complaints and suggestions from them in that spirit, and show them that their comfort and welfare is always being considered. We should give them all the information we can, and encourage them to keep informed of the details of our business and the local transportation problems, so that they can intelligently meet the public, as agents of the company. We should encourage them to take a pride in their work, so that they all will pull together to produce good service, which is, after all, the best means of winning the good will of the public. For some years back we have published a leaflet for our employees, called the "O.E.R. Bulletin." It was primarily intended to repeat in permanent form the important bulletins appearing in the previous month, but to this has been added articles dealing with the most efficient methods of operation; the prevention of accidents; and the importance of handling our customers so as to win and retain their friendship. This publication goes to our men with their pay on the twentieth of each month, and I am satisfied it is carefully read and appreciated. It is an excellent means of imparting to them our general policy, and enlisting their co-operation.

Mr. McLintock has described the various means used in Winnipeg to remove public hostility by educational propaganda. Many of us cannot afford so elaborate a programme, but we can all do something, and must suit the will to the purse. We must first recognize that the public is an interested party, and give voice to all the information we can give.

The public press forms an excellent medium of keeping in touch with the public. It brings us in close contact with the newspaper people, and gives us an opportunity to discuss their attitude and policy toward our business. Letters of complaint or criticism appearing in the press should always be answered.

If the cause of complaint can be removed, so much the better, but from a publicity standpoint it is essential that an answer be published. The complainant may be voicing the sentiment of hundreds of others, and a good occasion is provided to reach all of them.

When on the subject of complaints, let me point out that while we don't like to receive them, they do afford chances

that should not be overlooked for making friends. Every complaint by letter, telephone or verbally given, can often be handled so as to make a friend of the complainant. If the complaint is justified, it should be admitted and corrected. If it is unreasonable, it can be explained away. The important thing is to receive it politely and show that it is being promptly considered.

Whatever means of publicity are adopted, one that should not be overlooked is the publication of a small leaflet distributed directly to passengers on the cars, such as the Winnipeg Public Service News. It reaches the people we are most concerned with, the car riders. It gets into their hands at a time when they have nothing to do, and is doubly welcome because it provides them with some entertainment during that time. Such a publication must, above all, be truthful. It must be readable. The articles it contains must be written from the standpoint of the car rider. It must be entirely free from sarcasm, bitterness, or jokes at the expense of the public. There are plenty of subjects to write about: accident prevention; means by which the car rider can help to improve the service to his own advantage; facts about the industry in other places; local transportation problems and their solution; explanations of the technique of our business; and dozens of other topics.

Mr. Mullaney says in this connection that "Matter which utility managers think is 'great stuff' is probably poor stuff. The utility manager is seldom a good judge. He sees only one side of the case, and his judgment of the other side is obscured." Mr. Mullaney says: "To be effective, educational publicity must 'come clean,' both in methods and motives. Facts, not arguments, should be the foundation of all publicity effort."

We have been issuing a publication of this kind for the last 18 months. Copies of the last number greeted you on your arrival. We plan to issue one in our cars every Saturday morning, and they are all gone by noon. We do not use a box, but hang them in bundles, by string, from the strap rail and ventilator rods, where they can be easily seen. As an example of the utility of our little sheet, I will mention that last year we cut out 25% of our city stops. Before doing so, we announced the change in several issues of the O.E.R. News, and explained the improvement in the service that would result. There were no complaints, because our patrons knew why it was done and therefore approved.

I am a firm believer in company publications for the public and our employees, but they should not be undertaken unless with the intention of doing permanent good. If they are maintained to accomplish some definite object, and then dropped, it will only increase the suspicion and hostility that have in the past magnified our difficulties and hindered us in our operations. Nothing should at any time be published that we cannot stand behind. If our readers were to hold the idea that we are trying to "pull something over" all our work for good will and co-operation will be nullified.

Finally, let me realize that the friendship of those we serve is the most valuable asset we can possess. It is very susceptible to charge, and will grow or decrease according as we, and our officials and employees, work to acquire or hold it. It can only be permanently retained by constant effort, but will repay us a hundred fold for all the time and money we can devote to it.

Electric Railway Operating Statistics for Year Ended June 30, 1919.

The figures in the following table are reproduced from statistics issued by the Dominion Bureau of Statistics at Ottawa. The following abbreviations are used in the names of railways: E., electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for the net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given.

The figures in the first column of figures show the first main track mileage. In addition, the lines reported having 482.36 miles of second track, and 220.92 miles of sidings and turnouts.

Notes to Electric Railway Operating Statistics.

The following notes refer to the statistics on this and the preceding page:—

(1) Brandon Municipal Ry., the Fort William Municipal Ry., and Pictou County Electric Co. did not report.

(2) The British Columbia Electric Ry. reports that 150.67 miles of track operated is leased. This is principally from subsidiary companies and some from the C.P.R.

(3) The Cape Breton E.R. operates over 19.03 miles of leased track.

(4) The London & Lake Erie Ry. & Transportation Co. ceased operations Oct. 15, 1918, and we were officially advised in June 1919 that the whole of the rails had been taken up and sold. We have therefore deducted its mileage from the total given in the table.

(5) The Pictou County Electric Co. advised us in 1919 that it had 9.10 miles of first track, so we have added these figures to the total for other lines given in the table.

British Columbia Electric Railway Subsidiary Company's Application to Dominion Parliament.

As stated in Canadian Railway and Marine World for February, the Vancouver, Fraser Valley & Southern Ry. Co., a subsidiary of the British Columbia Electric Ry. Co., gave notice recently of its intention to apply to the Dominion Parliament for legislation to enable it, among other things, to take over the whole of the B.C. Electric Ry. Co.'s properties, consisting of city and interurban railways in Vancouver, North Vancouver, New Westminster and Victoria, and its light and power systems, with the exception of its power plants and gas properties. We are advised that it is proposed to change the name of the Vancouver, Fraser Valley & Southern Ry. back to the British Columbia Electric Ry. Co., or similar name.

It is to place the company under the Dominion Board of Railway Commissioners' jurisdiction, and by that means obtain the stability as regards fares and rates which will enable the company to raise new capital. At present the company is temporarily under the Board of Railway Commissioners, having been placed under Dominion control in 1919 by an act of Parliament which was not intended to apply to electric railways. The Dominion Parliament, at its 1920 session, passed

an amending act to return the B.C. Electric Ry. Co. to provincial jurisdiction in July 1921. Owing to the abolition of the B.C. Public Utilities Commission, this would thrust the company back on its original franchisees, which provide for a 5c. fare, although a 6c. city fare and a 7c. suburban fare are now charged. The alternatives before the company are the negotiating of new franchise rates with half a dozen cities and municipalities, or obtaining authority from a commission. The latter course has taken the form of the application for a Dominion charter in the absence of a provincial commission. The company is pointing out that new capital will be urgently required during the next year or two, and that it will be impossible to obtain it if its fares are not on a stable basis.

The company's application to the Dominion Parliament has been considered by the Vancouver and Victoria city councils and a conference of representatives of all municipalities within which the company operates was held on Feb. 10, at which it was decided to oppose the company's bill, and to ask the B.C. Government to re-establish its Public Utilities Commission. Negotiations between the municipalities and the company's management followed and a Vancouver press dispatch of Feb. 20 says that as a result of a decision of officials of municipalities in which the company operates to take immediate steps to pass such bylaws as will maintain existing conditions under which the railway operates, including street railway fares, General Manager Kidd announced that the application to the Dominion Parliament referred to above would be withdrawn, and that present conditions will continue until June 30, 1922.

Increases in Electric Railway Freight and Passenger Rates

British Columbia Electric Ry.—In July 1919, under an agreement with the Vancouver City Council, the cash fare on the company's lines in Vancouver was increased from 5c. to 6c., and in 1919 the B.C. Legislature confirmed this fare until such time as the Public Utilities Commission, then appointed, would fix the fare. The Commissioner began his investigation, and before it had proceeded very far it was discovered that under an amendment to the Dominion Railway Act the company's lines had been placed under the Board of Railway Commissioners' jurisdiction. The B.C. Public Utilities

Commission was abolished in 1920, and the question of the Board of Railway Commissioners' jurisdiction over the company is before the Supreme Court of Canada. A press dispatch states that an arrangement has been made with the Vancouver City Council under which the 6c. fare will continue in operation until July 1922.

Fort William Municipal Ry.—Port Arthur Civic Ry.—A bill was introduced in the Ontario Legislature recently to provide that notwithstanding any provisions to the contrary, in special or general acts, the cities of Fort William and Port Arthur may charge on their respective municipal railways such fares over and above 5c. as they may from time to time fix by bylaws.

A press report states that it is expected that the appeal against the Ontario Railway and Municipal Board's order restoring the 5c. fare on these lines will be held over pending the consideration of the bill introduced in the Ontario Legislature as stated above.

Guelph Radial Ry.—A bill was introduced in the Ontario Legislature recently to authorize the company (which is owned by the city) to charge cash fares up to but not exceeding 7c., to sell 4 tickets for 25c., and between 11 p.m. and 5 a.m. to charge double the maximum single fare.

London St. Ry.—The London, Ont. City Council's finance committee had before it on Feb. 16 a suggestion from the company for the operation of the railway on the service at cost plus. Alderman Watts is reported to have said that the company's Secretary had suggested the formation of a committee, composed of the mayor and two aldermen, to have administrative control of the railway as far as expenditures are concerned, with power to revise fares every six months if necessary. The mayor suggested that before negotiations were entered into the company should first be asked to submit with its estimates.

Another report says that application is to be made to amend the Ontario Railway Act so that increased fares may be put in force, and that such, as well as the service at cost plan will be opposed by the labor party.

New Brunswick Power Co.—We are officially advised that on Jan. 10, the company put in operation a new schedule on its electric railway at St. John's, increasing fares from 5c. cash or tickets to a cash fare of 10c., three tickets for 25c. or 14 for \$1. The company has no special school children's, workmen's or night rates.

Sherbrooke Ry. & Power Co.—We are officially advised that the Quebec Public Service Commission has given judgment on this company's application for authority to increase its passenger fares. It having been shown that the company had an operating deficit of \$23,823.92 for the year ended Sept. 30, 1920, exclusive of interest, fixed charges, depreciation or return on the investment, the Commission authorized the following increases, to take effect Feb. 14: Cash fares, 6 a. m. to midnight, 10c, instead of 8c, as heretofore; tickets, 6 for 50c., instead of 4 for 25c. as heretofore. No changes were made in the following fares: Mid-night to 6 a.m., 15c.; children under 14, cash 4c., or 8 tickets for 25c.; transfers free.

Toronto Suburban Ry.—The Board of Railway Commissioners has approved the company's standard freight mileage tariff C.R.C. 4, effective Feb. 6, 1921.

Waterloo-Wellington Ry.—We were officially advised recently that two trips a day—morning and evening—were being made on the line and that there might be some development in the situation shortly, as the people along the line are willing to pay a 7c. fare. In Dec. 1920 the company, with the consent of the municipalities, increased its fares, the increase to be operative until the end of April, and that, following an investigation, the Ontario Railway and Municipal Board issued an order Dec. 30, 1920, directing the company not to charge any fare in excess of those authorized under the Ontario Railway Act. The company restored the original fares, and reduced the service.

The London & Lake Erie Ry. & Transportation Co. is asking the Dominion Parliament to authorize it or the Fidelity Trusts Co. of Ontario, the bondholders trustee, to sell and dispose of the company's right of way, lands, buildings, property, terminals, gravel pits, works, rolling stock, equipment and other accessories thereof, and to confirm sales of the lands and property already made. The company ceased operating in Oct. 1918, and sales of rails, overhead wiring, rolling stock, etc., were made in 1919 and 1920.

Chatham, Wallaceburg & Lake Erie Ry.—The Chatham, Ont., Chamber of Commerce is reported to have appointed a committee to obtain signatures to petitions to the Ontario Government to take over the Chatham, Wallaceburg & Lake Erie Ry., and have it operated by the Hydro Electric Power Commission of Ontario.

Regina Municipal Ry. Wages.—A press report states that the Street Railway-men's Union has presented a new wage schedule in two sections, one providing for an all round increase of 5c. an hour, bringing the maximum pay for motormen or conductors up to 60c. an hour, for two-man cars, and the other for a maximum of 72½c. an hour for joint operation under the one-man system.

London St. Ry. Co.—The following are the directors and officers elected recently:—President, C. Currie, Cleveland, Ohio; Vice President, C. H. Ivey, London, Ont.; Manager, C. B. King; other directors: R. R. Alexander, Cleveland; P. W. Broderick, Toronto; W. M. Spencer, and R. G. Ivey. The Secretary-Treasurer is L. Tait.

The Winnipeg City Council defeated the motion by 9 to 5, a motion to ask the Manitoba Government to abolish the Public Utilities Commission.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	Nov. 1920	Nov. 1919	1920	1919
Gross	\$806,633	\$733,981	\$2,841,052	\$2,838,592
Expenses	214,108	219,567	1,259,830	1,259,830

Net	17,680	13,901	99,074	128,910

Edmonton Interurban Ry.—The proposed purchase of the 1.5 mile section of the Edmonton Interurban Ry., which the city rents from the company, has been under consideration by the Edmonton, Alta., City Council. It appears that the Edmonton Interurban Ry. Co.'s track from Calder to St. Albert, about 8 miles, has been taken up, and that the section to Calder is the only part of the line remaining. Under agreement with the Edmonton City Council, the Edmonton Radial Ry. operates the line under rental, and the company now desires to terminate the arrangement by selling the line to the city. It was reported to the city's utilities committee, when the matter was under discussion recently, that since Sept. 1915, when the city took over the operation of the line, it had paid out about \$6,000 in rental and maintenance. The city's officials and the company's representatives are reported to be negotiating as to terms, the company asking \$14,500, and the city offering \$13,000. (Feb., pg. 92.)

Moncton Tramways, Electricity & Gas Co.—The Eastern Trust Co. has received tenders from bondholders to sell bonds at not exceeding \$195 and accrued interest to exhaust \$17,800 at the end of the sinking fund under the terms of the trust deed.

The Oshawa Ry. Co. is applying to the Dominion Parliament to authorize the directors to pass a bylaw fixing the date of the annual meeting of shareholders on some other day than that provided in the company's special act, and for other purposes. The company is controlled by the G.T.R. Co.

Port Arthur Civic Ry.—A press report states that the January receipts were \$17,625.17 against \$15,361 in Jan. 1920.

Regina Municipal Ry.—A press report says that at a meeting of the Regina, Sask., City Council, Feb. 1, it was reported that considerable track had been built at a cost of \$127,605, which was not being operated, but on which debenture charges had to be met, and that the annual charge against the Regina Municipal Ry. for paying between the tracks was \$14,435.39. The City Commissioner promised to report later more fully on these matters, and also as to rolling stock not in use. (Aug., 1920, pg. 450.)

Toronto Civic Railway:—

	Jan. 1921	Jan. 1920
Revenue	\$30,232	\$41,989
Passengers carried	3,925,790	2,492,296

Toronto Railway.—The Toronto Finance Commission received to Feb. 22, tenders for the purchase of \$2,500,000 of serial 6% bonds of \$1,000 each, to be issued for the acquisition and rehabilitation of the Toronto Ry. It is stated that the bonds will be for 20 years, and that no provision will be made for redemption until after the third year. The reason given for this is that it will relieve the burden on the railway during its rehabilitation and have a tendency

to keep fares down.

The maturity dates of the bonds are annually on Dec. 1, from 1921, when \$68,000 becomes due, to 1941, when a final payment of \$205,000 will become due. The bonds were sold to a syndicate composed of A. E. Ames & Co., Amelius Jarvis & Co., and Wood, Gundy & Co., Toronto, at 98.94, the cost of the money to the city being 6.10%.

Toronto Ry., Toronto & York Radial Ry. and allied companies:—

Surplus after deducting fixed charges 76,816.42

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—It is reported that the company will not lay a second track on Cook St., Victoria, until the city council arranges to pave the street. The company is reported to be moving its tracks to the north side of a section of Esquimalt Road, preparatory to the city paving the roadway. (Dec., 1920, pg. 672.)

Hamilton Cut-off.—N. Cauchon, consulting engineer, Ottawa, is reported to have advised the Hamilton City Council to request the Hydro Electric Power Commission of Ontario to undertake the construction of the Red Hill cut off, as the city and the province have planned to provide work for the unemployed. The Ontario Legislature in 1919 authorized the building of a cut off from the Red Hill to Burlington Jct., as a special piece of work, the understanding being that it would be done by the Hydro Electric Power Commission of Ontario, and that it would ultimately form part of the Commission's system of electric railways converging on Hamilton. (April, 1919, pg. 190.)

Frontier Electric Ry.—A U.S. press report states that North Tonawanda, N. Y., aldermen have approved of the Frontier Electric Ry. Co.'s application for an extension of time for the construction of its proposed freight line between Buffalo and Niagara Falls. Under the new arrangement the railway will have to be completed by Aug. 1, 1927. The Pennsylvania Rd. and the Delaware, Lackawanna & Western Rd. are reported to be interested in the construction of the line, which will be used in the transportation of freight by electric locomotives between Buffalo and Niagara Falls.

Hamilton Radial Electric Ry.—In connection with the reconstruction by the Dominion Government of the Burlington traffic bridge over Burlington channel, the Hamilton Radial Ry. Co. applied to the Board of Railway Commissioners for authority to build a temporary deviation of its line in Saltfleet Tp., Wentworth County. In refusing the application, the Chief Commissioner stated that the company desired to use the G.T.R. tracks, immediately alongside its line, for about a mile, during the rebuilding of the

bridge. After some negotiations the company withdrew its application, and on Dec. 16, the Burlington Town Council called the Board's attention to the fact that the company was stopping its cars about 150 yards from the bridge site and transferring the passengers to the opposite side of the channel, and asked that the diversion originally asked for be granted. The Board called on the H. R. Ry. Co. and the G.T.R. Co. to appear and show cause why the original application should not be renewed. Evidence put in showed that it would cost about \$5,000 to make the connection between the two railways, and that the actual cost of maintenance, etc., to the H.R. Ry. Co. would be about \$2,000 a month. It was further shown that the H.R. Ry. was being operated at a loss, the deficit for 1920 being \$36,000. If the company was forced to carry through the diversion project the deficit would be greater than the company could bear, or should be called upon to. An order to compel the diversion of the tracks would be unjust and therefore would not be made.

Montreal Tramways Co.—The question of the construction of an electric railway on Montreal mountain is reported to have been again under consideration by the Montreal Tramways Commission and the Montreal Administrative Commission. The report states that the plan which finds favor is that of the Shakespeare Road route, running off Cote des Neiges road. This would involve building three-quarters of a mile of track, would link up with the cars running on Cote des Neiges road, and transfers would be given. This route is considered the most practicable from the engineering point of view, as it would require less time and money than alternative plans. The scheme to run a line along Mount Royal Ave. has been abandoned as too costly and too difficult, as it would require the construction of a short tunnel. The proposal that the Canadian National Ry. could run an incline railway from the station is also regarded as impracticable. (Feb. pg. 92.)

Niagara, St. Catharines & Toronto Ry. A large extension to the company's car barns at St. Catharines, Ont., is nearing completion. The main building is 188 x 103 ft., with a two story extension for offices, etc. The building is of brick, with wood columns and beams. It is exceptionally well lighted, the side walls having large metal frames and sash and the roof has long rows of skylights. The four lines of tracks will accommodate 12 cars. There is a basement under a portion of the building, with boiler room and storage space. The plant is being equipped with the most up to date electric car barn appliances. This building was designed by Geo. C. Briggs, Supervisor of Buildings for the Canadian National Ry., and built by the C.N.R. Construction Department under his supervision.

Transcona.—The question of the provision of an electric railway service between Winnipeg and Transcona is reported to have been brought before the Transcona Town Council, Feb. 5, by Councillor Goodyear, who urged that immediate consideration be given to it.

Winnipeg Electric Ry.—A press report says that a conference has been arranged between members of the city council and representatives of the Winnipeg Electric Ry. Co., and the Midland Ry. of Manitoba, with respect to the construction of a subway on Portage Ave. West, at St. James. (Nov., 1919, pg. 616.)

Mainly About Electric Railway People.

Thomas Ahearn, President, Ottawa Electric Ry. Co., Ottawa, who has been elected Honorary President, Canadian Electric Railway Association, was born at Ottawa, Ont., July 1, 1855, educated there, and was for some time telegraph operator in Ottawa and in New York State. He became local manager, Bell Telephone Co., Ottawa, in 1880, and in 1882 formed a partnership with Warren Y. Soper, as Ahearn & Soper, electrical engineers and contractors. They built and equipped several large electrical works in Canada, including long distance telephone lines between Pembroke and Quebec, via Ottawa and Montreal, several land telegraph lines through Nova Scotia for the Commercial Cable Co., and telegraph lines for the C.P.R. across the Dominion. He was one of the founders of the Chaudiere Electric Light & Power Co. in 1886, which was merged into the Ottawa Electric Co. in 1905. He was also one of the founders of the Ottawa Electric Ry. Co., which, it is stated, solved the problem of operating an electric street car service on wheels throughout the winter. He is also President, Ottawa Car Manufacturing Co., Ottawa Traction Co., Ottawa Electric Co., Ottawa Gas Co., Ottawa Light, Heat & Power Co., Ottawa Investment Co., Ottawa Land Association, Capital Mica Co.; Vice President, Wallace Realty Co.; a director of Canadian Westinghouse Co., Bell Telephone Co., Ottawa Building Co., Merchants Bank, Northern Electric Co., Bankers Trust Co., and a member of the American Institute of Electrical Engineers, Old Time Telegraphers Association, Telephone Pioneers of America, and associated with numerous industrial organizations in and around Ottawa.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., read a paper on "Some engineering features of tramway operation" before the Canadian Railway Club in Montreal Feb. 8. It was very similar to his paper on the same subject which was published in Canadian Railway and Marine World for June 1920.

Major F. D. Hurpee, Manager, Ottawa Electric Ry. Co., Ottawa, Ont., who has been elected Vice President, Canadian Electric Railway Association, was born at Ottawa, Ont., Apr. 25, 1876, and commenced railway work in 1891 on District 4, Eastern Division, C.P.R., Ottawa, and transferred to Ottawa Electric Ry. service in 1893, since when he has been, to 1896, stenographer; 1896 to 1898, cashier and paymaster; 1898 to Aug. 19, 1902, conductor, during which time he also acted as assistant to the Secretary-Treasurer, and to the Superintendent. In Aug. 1912, on the resignation of Lt. Col. J. E. Huteheson, to become General Manager, Montreal Tramways Co., he was appointed Superintendent. He enlisted in the 26th Battalion, C.E.F., in 1916, and acted in recruiting the battalion, and sailed for England as second in command in May 1917, with the rank of Captain, where the battalion was eventually broken up. He then transferred to the Canadian Railway Troops, reverted to the rank of lieutenant and went to France July 7, 1917, and was engaged at points all over the British front, becoming Captain and then Major. He returned to Canada early in 1919, and resumed his duties as Superintendent, Ottawa Electric Ry., in March of that year, and in 1920 was appointed Manager.

Frank L. Butler, who recently retired

as Manager, Winnipeg Electric Ry., to take charge of the Georgia Ry. & Power Co.'s railway department, was entertained at dinner at Winnipeg towards the end of January and presented with a gold watch for a number of friends, on leaving for Atlanta, Ga. Prior to leaving Winnipeg he was also presented with a Shriner's ring and a diamond brooch for Mrs. Butler, by Winnipeg Electric Ry. officials.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., who has not been very well recently, and Mrs. Dubee, left Montreal, Feb. 2, for California, expecting to be away for about two months.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., who has been elected President, Canadian Electric Railway Association, was born at Quebec, Que., Oct. 9, 1882, and prior to 1907 was Assistant Engineer, Canadian Rubber Co.'s electrical plant; 1907 to Nov. 1908, Superintendent of Power, Hull Electric Co.; Nov. 1908 to 1909, acting General Superintendent, same company; 1909 to June 1914, General Superintendent, same company; June 1914 to Jan. 1917, General Manager, same company; and from Jan. 1917, Vice President and General Manager, same company. He has been a member of the C.E.R.A. executive committee for several years and was Vice President of the Association for 1920. He is a member of the Engineering Institute of Canada's council.

George Kidd, General Manager, British Columbia Electric Ry., Vancouver, B.C., who has been elected Honorary Vice President, Canadian Electric Railway Association, entered B.C. Electric Ry. service July 1, 1906, since when he has been, to Mar. 1911, Secretary of the company, London, Eng.; Mar. 1911 to May 6, 1914, Comptroller and Assistant to General Manager, Vancouver, B.C., and from May 6, 1914, General Manager, Vancouver, B.C.

Chas. Laurendeau, of Montreal, was elected a director of the Detroit United Ry. at the annual meeting Feb. 1.

D. K. Lewis, who has been appointed Electrical Engineer, Winnipeg Electric Ry., succeeding L. Trott, as stated in Canadian Railway and Marine World for January, graduated from Clemson College, South Carolina, in 1910, having specialized in electrical and mechanical engineering. He entered the General Electric Co.'s testing department at Schenectady, N.Y., and was transferred to the engineering department at the Chicago office, where for the last year he was a construction foreman installing apparatus in the Western States. He enlisted in the U.S. Army in April, 1917, and upon being discharged in Dec. 1918 was appointed assistant engineer, The Dodge, Des Moines, and Southern Ry., Boone, Iowa, where position he held until going to Winnipeg in Dec. 1919.

A. W. McInnis, Vice President, Winnipeg Electric Ry., Mr. and Mrs. Betty McInnis, returned to Winnipeg early in February after spending a short time at the Cape Coast.

John O'Hare, formerly Local Manager, St. John, N.B., office, Parsons Works & Co., shipwrights, etc., has been appointed Secretary-Treasurer New Brunswick Power Co., St. John, succeeding H. M. Hopper, resigned.

O. M. Smyth, heretofore in Nova Scotia Tramways & Power Co.'s service at Halifax, N.S., has been appointed Superin-

tendent of Light & Power, Cape Breton Electric Co., Sydney, N.S.

John Whitsell, heretofore General Superintendent, Chicago & Interurban Traction Co., Chicago, is reported to have been appointed Operating Manager, Winnipeg Electric Ry., vice F. L. Butler, resigned to enter the Georgia Railway & Power Co.'s service.

C. J. Yarrath, City Commissioner of Saskatoon, Sask., is reported to have been appointed Commissioner of Utilities and Public Works and Joint Commissioner of Finance for Edmonton, Alta., at a salary of \$9,000 a year.

Electric Railway Notes.

The Sherbrooke Ry. & Power Co. has ordered one Birney safety car from the United States.

Montreal Tramways Co.'s employees union is reported to have passed a resolution protesting against the city authorities enacting that daylight saving time be used during the ensuing summer.

The Board of Railway Commissioners' reference to the Supreme Court with respect to the Board's jurisdiction over the British Columbia Electric Ry. came before the court at Ottawa, Feb. 15, when judgment was reserved.

The British Columbia Electric Ry. is inaugurating the skip stop in Vancouver. It has already been placed in operation on the Kerrisdale line, and public opinion is being canvassed as regards its general adoption. Up to the date of our recent advice 95% of the communications have been favorable.

The Winnipeg City Council has authorized F. A. Cambridge, City Electrician, to visit New York to study the electrolysis problem for the purpose of determining what further steps the city should ask the Winnipeg Electric Ry. to take. It is reported that the company has done all that it agreed to do to eliminate the trouble.

A special commission is reported to have been appointed to enquire into the relations between the City of Halifax and the Nova Scotia Power & Tramways Co., its members being A. J. Campbell, K.C., Chairman; R. McColl, nominated by the City Council, and T. S. Rogers, K.C., nominated by the company.

The Hull Electric Co. is having one of its single truck cars overhauled and remodeled, by the Ottawa Car Manufacturing Co. When completed it will be about 31 ft. over all, it will weigh about 22,000 lb. and have two 40 h.p. motors. The single door entrance and exit will be of standard design. The car will be fitted with all the safety appliances and will be ready for service about the middle of March.

The Toronto Transportation Commission was reported to be about to place an order for 50 motor cars for use on the Toronto Ry., when it is acquired from the company on the expiry of the franchise in September. While local reports indicate that the necessary cars will be on hand, when required, we have been advised that the type and number to be ordered has still to be decided on by the Commission.

Winnipeg City Council's committee on public safety had under consideration, recently, the question of negotiating with the Winnipeg Electric Ry. for arbitration of the various differences between the city and the company. It was agreed, with one dissentient, to lay the question

over until the Court of Appeal decides on the matter now before it relative to the Manitoba Public Utilities Commission's jurisdiction.

The Regina, Sask., Municipal Ry. management proposes to remodel its double truck cars to one-man cars of the McCauley type, at an estimated cost of \$400 each. A royalty of \$50 a car will be paid to T. H. McCauley. A seniority list of conductors and motormen is being prepared, and they will be given an opportunity of training in their spare time to take charge of the converted cars. It was expected that the first of the converted cars would be put in operation by the end of February.

An Ottawa alderman gave the following notice of motion recently:—"That in order to relieve the pressure during rush hours, the Board of Control be instructed to call for tenders for the construction of 25 large street cars, which may be handed over to the Ottawa Electric Ry. for use until the expiry of the franchise, at an annual rental sufficient to cover the interest and sinking fund on the cost of construction and depreciation of same."

The British Columbia Electric Ry., on its mainland lines, entering in Vancouver, carried 58,484,932 fare passengers in 1920, against 49,005,620 in 1919. Nearly 3,500,000 of the increase is accounted for by the general strike during June 1919, when most of the system was not operated for 25 days. The rest of the increase has been due to increase in population. In face of this increase in traffic, the company points out that its net earnings are now lower than at a corresponding time last year, owing to recent wage increases without corresponding increases in fares.

The Montreal Tramways Co. is reported to have notified the Montreal city officials and business men recently that it would cease to carry freight after Feb. 21. It is said that this decision was made by a director of the Montreal Administrative Commission. Subsequently the Montreal Tramways Commission directed the company to continue to carry freight and took up the matter with the Montreal Administrative Commission, which authorized the continuance of the traffic subject to certain modifications. Lt. Col. J. E. Hutcheson, General Manager of the company, has pointed out in a letter that the company started to carry freight in 1907, and subsequently an understanding was arrived at by which the practice was continued. The company had never applied for permission to carry freight under article 83 of its contract, but had carried it for the convenience of the public. As the Administrative Commission had taken a position that could not be accepted, the company had no other alternative but to stop carrying freight.

Winnipeg Electric Railways Annual Report and Meeting.

Following are extracts from the report presented at the annual meeting in Winnipeg, Feb. 9:-

The net earnings for 1920 increased \$949,221.54 over 1919. Notwithstanding the heavy increase in wages and other operating expenses, the net income increased \$498,720.12.

The year 1920 began with prices of commodities and labor climbing upward at a rapid rate, and while it did not seem

possible that this ascent could continue indefinitely, the first half of the year had elapsed before there appeared any sign of the peak having been reached. In July a board of arbitration awarded increased wages to the employees, such increase being made retroactive to May 1. As a result of the company's application to the Manitoba Public Utilities Commission, increased rates were granted and an appraisal of the physical value of the company's property was arrived at. The increased rates and fares authorized assisted in offsetting the increased operating expenses which had resulted from the rising costs of material and labor.

In April the company's South Main St. car barn, together with 21 cars and other equipment, were destroyed by fire. Something over \$300,000 was recovered from insurance. A new fireproof, fully modern car house has been erected on the site of the old one and all rolling stock destroyed has been replaced. The company has continued making extensive improvements in its departments and in that connection expended during the year more than \$900,000. This includes replacing property destroyed by fire.

The company's different utilities all show a satisfactory growth over 1919. The gross earnings exceeded those of 1919 by \$949,221.54. After payment of all fixed charges, and making provision for depreciation, the company made a net profit of nearly \$600,000, which is substantially the best showing of any year since 1914. For the purpose of retiring as far as possible the company's floating liabilities, a new issue of preferred and common shares was authorized, which are being placed on the market and it is expected will all be disposed of shortly.

The company has continued its policy of improving the public with adequate service, and seeks to establish and maintain good relations with the public, realizing that the welfare of its utilities is a matter of public consequence, which policy the directors believe has met with a marked degree of success.

Gross earnings from operations.....\$5,233,700.65
Operating expenses, before charging depreciation 3,428,897.43

Net operating revenue 1,804,803.22
Miscellaneous income 76,700.11

Income available to meet fixed charges, etc. 1,881,503.33

From which the following deductions are made:

Interest charges on debenture stock, bonds, notes, etc.\$716,215.85

Extinguishment of discount on securities 26,786.76

City percentage and car license taxes 181,249.01

Taxes 127,239.43

Miscellaneous non-operating expenses 2,942.31

Other income deductions..... 3,045,754.74 1,084,928.10

Net income as shown on accounts maintained, excluding depreciation..... 796,575.23

Deduct depreciation..... 201,050.60

Net income transferred to surplus 595,525.23

Surplus brought forward from 1919 as adjusted 1,314,420.29

Net income for year transferred 595,525.23

Dividend on 7% cumulative preferred stock 4,444.16

Sinking fund accumulation 60,000.00

Surplus carried forward\$1,845,501.36

The following were elected directors: Sir Augustus Nanton, President; A. W. McLinton, Vice President; Hugh Sutherland, G. V. Hastings, J. D. McArthur, G. W. Allan, K.C., M.P., A. J. Nesbitt, W. J. Bulman and W. R. Bawlf.

The other officers are: F. Morton Morse, Secretary; L. Palk, Assistant Secretary; J. S. Mackenzie, Treasurer.

... against the projected draft... and gold...

as far as the French law has already gone, but, on the other hand, it would not allow of the evasions which the French law permits. After considerable discussion, the full Commission dealt with each point of the Hipwood draft, and, finally, by a majority vote recommended the following articles for acceptance by the conference: (Clauses 1 and 2 only are given herewith).

"Preamble: The principle laid down in the Treaty of Peace, viz., the adoption of an 8-hour day or a 48-hour week as the standard to be insisted at, where it has not already been attained, is reaffirmed.

Article 1. The effective working hours of all persons of both sexes and of every age, without distinction of nationality or race, excluding masters and officers who do not keep watch, employed on board a vessel of whatever nature, public or private, including vessels used for the purposes of technical instructions, shall be limited either to eight hours in the day or to 48 hours in the week, or an equivalent limitation calculated over a period of time other than a week, subject to the following provisions and exceptions contained in the following article:

Article 2. (1) On foreign going, mechanically propelled vessels of 2,000 tons or over, and, within not more than one year after the ratification of the present convention, employment at sea shall be divided into two main departments, be organized in three watches.

(2) On these vessels the working hours at sea shall be 48 hours a week; but the watch shall be continued by the crew, who will receive compensatory rest or payment, or by means of extra hand shipped, so that no person shall be provided for one day's rest in seven.

(3) Overtime that might be ordered by the master, outside the circumstances provided for in article 6, shall not exceed 14 hours a week or 60 hours a month. These extra hours, if worked, shall be paid for as compensation.

(4) On these vessels, in port, the working hours for all ratings shall be 44 a week. Overtime, if any, shall be compensated as paid."

The Director of the International Labor Office, Albert Thomas, realizing that it was most doubtful that the draft convention would receive the necessary support for ratification, endeavored to have it referred back to the Commission with a view to effecting some sort of compromise.

His move, however, was denied, and the conference decided that the draft convention should be referred to the drafting committee and then back to the conference for the final vote. The final decision depended upon the attitude of certain government delegates who were known to be wavering. The Swedish Government delegates, at the last moment, received instructions to vote for the convention, and the Indian delegates, having used the ship owners' vote in support of article 5 referring to Indian seamen, refrained from voting one way or the other, as they considered they had received satisfactory terms for the Lascars and were afraid of losing this advantage by voting against the other articles and thus offending the seamen's delegates, who might have moved an amendment, which probably would have been carried, to put Lascars on a level with white seamen. The Indian ship owner delegate followed the lead of his Government delegates. The loss of these five votes, upon which the ship owners had been relying, rendered the position extremely critical, but owing to the Spanish and Portuguese Governments' delegates, who were known to be voting against, the convention failed by a fraction of a vote to secure the requisite two-thirds majority, the final voting being 48 for and 25 against. Had the conference adopted the proposal as a hard and fast principle, the results would have been disastrous to the shipping industry, as it would ultimately compel ship owners to carry extra crews, or as an alternative, the heavy payment of overtime.

Arising out of this conference, a Joint Maritime Commission was set up, consisting of five members each from the ship owners' and seamen's groups. Thos.

Robb had the honor of being appointed on this Commission to represent Canadian ship owners. The object of this Commission is to act in an advisory capacity to the International Labor Office, and it held its first meeting at Geneva on Nov. 8, when matters arising out of the Geneva conference were considered. It also dealt with hours of labor on shipboard, and made a recommendation that this debatable question be reopened and that representatives from the International Shipping Federation be appointed to meet representatives from the seamen's organizations during the third week in January at Brussels to further consider the subject, and if possible, come to some mutual working agreement.

St. Lawrence Waterway's Project.—The International Joint Commission, during the past year, has been conducting a searching investigation throughout the United States and Canada into the benefits to be derived by both countries in constructing a deep waterway from Montreal to the head of the Great Lakes, sufficiently large to permit ocean going vessels proceeding inland and west of Montreal. Your executive committee considered this project fully and went on record as being strongly opposed to it, as, in their opinion, the time will never come when ocean going vessels will proceed further inland than Montreal, as the delays occasioned travelling through locks, the high cost of operation, and the equally high cost of upkeep would make it anything but a profitable undertaking. If Canada must have deeper canals to accommodate the ever growing commerce, consideration should be given to the proposed Georgian Bay Canal scheme, which was before the public some years ago. The advantages of constructing this canal are many; the principal and foremost is that it would be entirely in Canadian territory and not subject to international control; a waterway would also be in Canadian territory, and the distance, compared with the present St. Lawrence canals, much shorter. Canada, in her present unsatisfactory financial condition is, in my opinion, not ready to spend large sums on canal construction. In comparing the advantages and disadvantages of the two canals, the Georgian Bay Canal, without doubt, would be the most profitable one for Canada to undertake.

Labor conditions on the docks were satisfactory, and the agreements entered into with our longshoremen, shipliners and checkers last spring were carried out. At St. John and Halifax, agreements have been renewed on practically the same terms and conditions as the present agreements. If Canada is to be a wharf labor at our Canadian ports, in my opinion, have now reached their maximum, and with the low earnings of the steamship companies, wages and other operating costs must come down to a more moderate level, otherwise ship owners will have no alternative than to lay their ships up. I confidently expect that when the expiration of affairs is placed before the laboring classes, they will treat it in a broad minded manner and meet the situation.

Our labor bureau on the docks was of great assistance to masters in tracing desertions from ships, providing substitutes and looking after crews generally. A total of 165 men were apprehended for various breaches of discipline, and a total of 621 substitutes were supplied.

Harbor Matters.—Your executive has been considering the advisability of recommending to the harbor commissioners the re-adoption of the rules passed

in 1912, for governing traffic within Montreal harbor, which for some reason or other were never enforced. I hope that with the co-operation of all interests concerned, a modern system of control will be established this coming season.

The new wharfage tariff put in force by the Montreal Harbor Commissioners during the early part of the year was severely criticized by the commercial and shipping interests, and a certain amount of ill feeling caused through the stand taken by the commissioners in declining to co-operate with the interests in having the tariff adjusted on a more equitable basis. Towards the close of the season, a slight modification was made, which although not entirely satisfactory, covered at least some of the items which the commercial interests took strong objection to. The interests concerned in developing trade appreciate that additional revenue is required to meet the heavy operating costs, and were not adverse to an increase in rates, provided it was fairly distributed over all commodities shipped on a few to produce the increased revenue.

Sick Mariners' Dues.—The Government introduced legislation during the last session of Parliament, increasing the sick mariners' dues from 1½c. to 2c. a ton. Your executive strongly opposed, not only the increase, but also the principle of the act. For many years, we have been striving to have this tax removed, as it discriminates against ships trading to the provinces of Quebec, British Columbia and the Maritime Provinces. For example, a ship trading between Ontario and the U.S. is not compelled to pay sick mariners' dues, and is also exempt from paying U.S. tonnage dues, by reason of the reciprocal privileges extended to U.S. ships at Ontario ports. On the other hand, a ship on a voyage between Quebec and ports in the United States is not only compelled to pay sick mariners' dues, but is also mulcted for the U.S. tonnage dues, owing to our Government levying dues against their ships arriving at ports in this province. We have repeatedly made it plain that by asking for the repeal of this tax, we are not in any way asking the Government to assume the responsibility of caring for our sick and injured seamen; all we ask is to be permitted to look after our own seamen as we are compelled to do by the Shipping Acts, and not tax the trade for looking after people in whom we have no interest.

United States Merchant Marine Act, 1920.—The Merchant Marine Act of 1920, which was passed by the U.S. Congress in June last, has been the subject of severe criticism on the part of foreign interests, but also from certain U.S. interests as well. The objects of the act, as expounded by its author, Senator W. L. Jones, is to lay the foundation of a policy that will build up and maintain an adequate U.S. merchant marine in competition with the shipping of the world. In brief, the act empowers government shipbuilding and directs the sale of the Shipping Board vessels to private U.S. operators on easy terms; authorizes the lending of public funds to private operators who wish to build new ships; exempts operators, under special circumstances, from payment of excess profits taxes; provides for discriminatory inland freight rates on goods which are transported in U.S. ships; authorizes the repeal of commercial treaties so that discriminatory tariff duties may be imposed in favor of goods imported in U.S. bottoms; closes U.S. ports to foreign ships which

discriminate against U.S. shipping; authorizes the Shipping Board to issue orders in council which will have the effect of law for protection of U.S. ships; grants modified mail subsidies; creates a strictly U.S. classification society; encourages U.S. insurance and standardizes ship mortgages in order to encourage the building up of a market for shipping securities. In a speech made recently by Senator W. L. Jones, before the Academy of Political Science, he is quoted as saying:—

"We do not seek to crush Britain's marine, but we do desire to build up a marine to be the major part of our sea carrying and that part of the world's peace and safety. If one nation grows in power and standing among nations, this is necessary for our commercial growth, our national defence, our national independence and our national peace and safety. If one nation dominates the shipping of the world, it holds the destinies of all peoples in its grasp."

One natural result of the building up of a mercantile fleet by the U. S. has been to create competition between the U.S. and British lines, as British steamships have always operated in U.S. overseas trade and have, in fact, played an important part in building up her great export business. The British shipping interests have nothing but the most friendly feeling towards their U.S. friends, and ask nothing more than a fair fight for the inevitable competition which circumstances have forced upon them. In glancing through the clauses of the Jones Act, however, one cannot feel that the spirit of good will is reciprocated by the U.S. and if the discriminatory clauses in the act are enforced, it means that the British and other nations will have to protect their interests by adopting retaliatory measures. I believe there is room for all shipping, and if such is not the case at present, more would be gained by each nation co-operating with the other with a view to increasing the trade of the world until there is sufficient employment for all ships. The policy adopted by our U.S. friends is a dangerous one, and may spell ruin to their mercantile marine if persisted in. The U.S. as a shipping country is still in its infancy, and will find in due time that the long and varied experience of the British mercantile community, much of it gained in times of adversity, counts more than acts of Congress. The act, which was to come into operation within 90 days after its sanction, has, I understand, been postponed indefinitely, no doubt to give the Government an opportunity to further study the discriminatory clauses contained therein.

Pilotage.—The pilots in the Montreal and Quebec districts made arrangements for further increases in the tariffs of these districts which your executive refused to agree to. In order to relieve the pilots of a portion of their travelling expenses, which they have to bear out of their earnings, your executive agreed to grant them a bonus or travelling allowance of \$10 a voyage on ocean going vessels in the Montreal district, and \$17.50 a voyage on ocean going regular liners, and \$10 on ocean going tramps in the Quebec district, it being understood that this bonus or travelling allowance would continue in force for one year only.

An important case dealing with the pooling of pilots earnings was decided by the British Privy Council during the year. One of the Quebec pilots was sued by the Corporation for money ordered by him which they claimed was due them under the old Corporation law of 1862. The pilot contended that the old law of 1862 was repealed by the statute passed in 1914. The case was argued be-

fore the Superior Court of Quebec, when it was dismissed. It was then appealed to the Court of King's Bench, which rendered judgment in favor of the Corporation. As the action of the Corporation was questioning the legality of the Dominion statute, the Government took the case in hand and appealed it to the Privy Council, which has rendered judgment in favor of the pilot. The decision settles definitely the status of the 1914 statute, and gives the Quebec pilots the right to retain their own earnings should they desire, but whether they will make use of the opportunity is difficult to forecast.

Aids to Navigation.—The value of the radio direction finding stations established by the Canadian Government at Cape Canso, Chebucto Head and Cape Race was so well spoken of by shipmasters that your executive requested the Government to establish additional stations at Belle Isle, Point Amour, Heath Point, Cape Ray, Fame Point, Grand Manan and Cape Sable. The Government has so far voted funds for the erection of a station outside of St. John harbor, and for one at Belle Isle, and I anticipate that further appropriations will be voted in the near future for the erection of the other stations mentioned. The opinions received from masters trading to the St. Lawrence are loud in praise of these stations as an aid to navigation, and their value cannot be over estimated. Another aid to navigation which has come to the front recently is a system of sound signals from a cable laid at the bottom of the sea or river. This cable method of navigating was demonstrated recently at New York with good results. The device consists of a cable, 16 miles long, laid in the center of the channel, which is energized with an alternating current from shore. Ships taking advantage of it must be equipped with audiphones or listening devices attached to the hull. Approaching the channel, the sound waves emitted by the cable can be heard for some distance and the increasing or decreasing strength of the sound enables the ship to be steered until she is right over the source. It is then a simple matter to follow the course through the channel, despite storm or fog which would make the marking buoys invisible or would tend to confuse the warning notes of automatic bell and whistle markers. This device was demonstrated to the Canadian Government as far back as 1904, but no action was taken. It was used extensively by the British Admiralty during the war, and in view of it tending to further safeguard navigation, I think our Government should investigate it thoroughly with a view of adapting it for use at the entrance of our harbors.

Federation Tonnage.—The total tonnage (both regular and tramp) entered in the Federation for 1920 was 929,307 gross tons, compared with 900,882 gross tons for 1919. The regular line tonnage increased from 514,831 to 684,408 tons, and the tramp tonnage decreased from 386,051 in 1919 to 244,899 gross tons for this year. Of the total tonnage entered, 128,642 were of Canadian registry—116,124 being regular line tonnage and 12,518 tramp tonnage. The following table shows the tonnage entered for 1919 and 1920:—

	1919	1920
Regular tonnage	514,831	684,408
Tramp tonnage	386,051	244,899
	900,882	929,307

Conclusion.—As in years gone by, our relations with the respective government departments have been most cordial, and

I wish to extend our thanks to Hon. C. C. Ballantyne, Minister of Marine and Fisheries, to A. Johnston, who I regret to say has resigned from the position of Deputy Minister of Marine; to G. J. Desbarats, C.M.G., Deputy Minister of the Naval Service, and to the many other officials of the Government too numerous to mention, for their courteous attention given to the many matters which we have had occasion to bring to their attention.

The World's Shipbuilding Statistics to Dec. 31, 1920.

Returns compiled by Lloyd's Register of Shipping, which only take into account merchant ships of 100 tons and upwards the construction of which has actually been commenced, show that there were 921 ships of 3,709,916 tons gross under construction in the United Kingdom at the close of the quarter ended Dec. 31, 1920. The particulars are as follows:—

Steam	No.	Gross Tonnage
Steel	822	3,476,781
Ferro-concrete	2	1,000
Wood and composite	5	1,135
Total	829	3,478,816
Motor		
Steel	54	209,000
Ferro-concrete	2	1,000
Wood and composite	1	100
Total	57	211,100
Sail		
Steel	37	7,000
Ferro-concrete	—	—
Wood and composite	—	—
Total	37	7,000
Total steam, motor and sail	921	3,709,916

The tonnage now under construction in the United Kingdom is about 22,000 tons less than that which was in hand at the end of last quarter, and about 714,000 tons more than the tonnage building 12 months ago. The December figures include 64 steamships and motor ships of 1,000 tons and above, with a total tonnage of 422,355, intended to carry oil in bulk.

At the end of December the following merchant ships were under construction abroad, i.e., outside of the United Kingdom:—

	No.	Gross Tonnage
Steam, steel	182	1,000,000
Steam, wood	—	—
Motor, steel	—	—
Motor, wood	—	—
Sail, steel	—	—
Sailing, wood	—	—
Total	182	1,000,000

The following figures are also for merchant ships under construction in Canada:

	No.	Gross Tonnage
Steam, steel	—	—
Steam, wood	—	—
Motor, steel	—	—
Motor, wood	—	—
Sail, steel	—	—
Sailing, wood	—	—
Total	—	—

Masters' and Mates' Certificates.—It is stated that during 1920, 270 certificates were granted to young men from Quebec by the Maritime Provinces, who were fitted at masters and mates for coastal and ocean service. The majority of them were trained in the navigation schools at Halifax, Yarmouth, St. John and Quebec.

Canadian Shipbuilding During 1920.

During 1920 Canadian shipbuilding yards had, for the most part, a fairly busy year, the tonnage launched being equal to approximately 200,000 d.w. tons. Probably 90% of this represented tonnage for the Canadian Government Merchant Marine. So, in a sense, 1920 may be termed a clean-up year, an unfortunate feature being that owing to lack of orders it may mark the cleaning up of a number of yards.

Vancouver, with 72,000 d.w. tons, claims the palm for the weight of tonnage launched during the year. Of this, J. Coughlan & Sons are credited with approximately 61,000 tons. Not only did they turn out the largest amount of tonnage, but they beat the next largest plant in Canada by nearly 10,000 tons. This of itself demonstrates the extent to which the shipbuilding industry has been developed on the Pacific coast. That the Pacific coast yards are also very efficient may be seen in the circumstance that the lowest tender received for the building of vessels for the Canadian Government Merchant Marine was from a B.C. firm.

Canadian Vickers Ltd. plant at Montreal, with a little over 50,000 tons to its credit, also had a busy year. Its record since the outbreak of war, that of approximately 300 ships turned out, is a splendid tribute to the high state of efficiency attained by Canadian shipbuilding plants.

Halifax Shipyards Ltd. was a new entrant upon the scene during the year, having two ships of 3,300 d.w. tons to its credit, Canadian Mariner and Canadian Explorer. The extensive nature of this plant and its very complete equipment is an assurance that it has been built to occupy a permanent place in Canadian shipbuilding industry. The launching of Canadian Mariner, the first steel ship to take the water at Halifax, was naturally considered a most important event in the history of the city, and confident predictions are made that a bright future lies before the port in this department of industry.

Plants on the Great Lakes launched approximately 33,000 d.w. tons, of which 13,160 is credited to Port Arthur. Collingwood had 5,000 tons and Toronto 8,500 tons. The difficulties that forced the Dominion Shipbuilding Co. into liquidation kept down the tonnage at the latter port.

Lloyd's Register of Shipping Returns for the quarter ended Sept. 1920, places Canada seventh among the nations with 170,625 gross tonnage under construction. Of these 46 were steel ships with a tonnage of 158,628. There were also 15 wooden sailing ships, tonnage 10,940, and three wooden steamships, tonnage 1,057.

The prospect before the Canadian steel shipbuilding industry just now is not bright. Indeed, probably 40% of the yards have been closed, and unless new orders are received, and there are few in prospect, some of the largest and best equipped will have to shut down. While it had the opportunity the industry made a very creditable showing, but the conditions that made this possible no longer exist. The impetus imparted to shipbuilding during the war, so stimulated it in almost all countries, that, if anything, there may be an excess of tonnage over the world's present requirements. On this subject opinions differ, but the prevailing opinion is that the tonnage built in ocean races, together with the tying up of a large number of ships, tells its

own story. Having largely been brought into existence through abnormal conditions, the Canadian industry has naturally suffered through return of normal times, and at present there are no certain indications of an improvement.

Confronted with the prospect of a lack of orders, and thus of empty plants, the Dominion Parliament, at its 1920 session, at the earnest solicitation of the shipbuilding interests, authorized the granting to shipbuilders of Government credits up to \$20,000,000 for financing orders from foreign interests. The directors of certain plants had, as the result of enquiries, become convinced that they could secure orders from France for considerable tonnage if arrangements could be made for the financing of the same. It was represented that certain French companies were willing to place orders, but that the rate of exchange prevented them from doing so. Hence the credits scheme was proposed to tide over the settlement until such time as the rate of exchange would become normal. The arrangement provided that the foreign purchaser should advance 25% of the price in cash; that the shipbuilding concern interested should make arrangements for the financing of the second 25%; and that the Government should advance the remaining 50%. But, though provision was made, the expected orders from France did not materialize. During the summer application was presented on behalf of Mexican interests for large credits, on this account, but at that time Mexico did not look like a good risk, and no action was taken. To date none of this credit has been used.

During the year the shipbuilding interests applied to the Dominion Government for a bonus to aid shipbuilding; strong arguments were advanced in support of it, but the Government decided that the public would not receive the proposal with favor. At present there seems to be little hope from this source.

During the year there was a thorough cleaning up of the Canadian Shipping Register, with the result that while a large tonnage of new vessels was added, to say nothing of transfers made to the Canadian Register, still the total has been kept considerably below what it otherwise would have been. In the past shipowners had been very lax in reporting either ships lost or those transferred to other registers. A report on practically all ships on the register was made during the year, with a result that nearly 100,000 gross tons were removed. As it stands today the register represents a thoroughly reliable statement of tonnage actually operated.

The gross tonnage on Canadian Register at the end of 1920 was approximately 1,630,000 tons. At the end of Nov. 1920 there were 4,375 steamships on the register representing 1,105,000 gross tons, while 3,729 were sailing ships with a gross tonnage of about 514,100 tons. This means that during the year Canada increased her gross tonnage by nearly 140,000 tons. This is very satisfactory, but the increase would have been fully 100,000 tons greater, had the circumstances relating to the register been those of previous years. It is further to be noted that while during the 11 months ended Nov. 30 there was a net loss of 469 ships from the register, still there has been decided gain in the proportion of steel to sailing tonnage, for while the sailing tonnage has remained

practically stationary, the steam tonnage has been increased by possibly 120,000 tons.

The number of ships registered during the 11 months ended Nov. 30 was 406, of which 270 were steam and 136 sail. The net gross tonnage of steamships registered was 180,922 tons, and of sail 31,457 tons. During November the largest number of registrations were made, the gross tonnage put on during the month being about 33,211.

The number and tonnage of new ships built and registered in Canada during the 11 months ended Nov. 30, 1920, was unusually large, viz., 292. Of these 190 were steamships with a gross tonnage of 123,065. The new sailing ships added numbered 102, but the gross tonnage was only 18,130.

The number of ships removed during the 11 months up to Nov. 30 was 889, divided as follows:—sail 538, steam 351, the gross tonnage being 105,360 tons. Thus the number of ships removed was equal to about 10% of the total now on the register.

The tonnage of ships built and registered in Canada has steadily grown since 1914, when it was 56,710 tons gross. This year it will probably total 170,000 tons. The number of ships built during the year has decreased, showing that a larger class is being turned out from Canadian yards. The 1920 tonnage built and registered will be approximately equal to that of 1919.—Special correspondence, Liverpool Journal of Commerce.

Merchant Marine Up-keep Costs.

The following is taken from the Dominion Marine Department's report for the year ended Mar. 31, 1920:—The profits of a merchant marine are, of course, partly dependent upon the cost of its maintenance. The following is an approximate comparison of the cost of wages and board per month between a British, a United States, a Canadian, and a Japanese steam merchant ship of similar tonnage and dimensions; cost of British ship for wages and board per month \$3,645.09, of the United States \$6,711.10, of the Canadian \$2,303.50, and of the Japanese \$1,245.50. The pay of the master of the Canadian ship was \$250 a month, that of the master of the Japanese ship \$100 a month; able seamen on the Canadian ship received \$16.20 a month, on the Japanese ship \$9 a month.

Taking the U.S. cost of operating, which is by far the highest, as representing 100%, the British is 54%, the Canadian 34%, and the Japanese 17%; it is apparent that the U.S. merchant marine is operated under a great disadvantage as compared with the Japanese, and to a lesser extent with the British and the Canadian; the Canadian operating costs are 20% less than the British, 66% less than the U.S., but nearly double those of the Japanese. It is altogether likely when the period of competition sets in that the United States will lower her cost of operation, otherwise she will be heavily handicapped.

The Mathews Steamship Co., Toronto, has been granted supplementary letters patent, under the Ontario Companies Act, increasing its capital stock from \$250,000 to \$2,000,000, by the creation of 17,500 shares of \$100 each.

The Shipbuilding Industry's Position.

The Liverpool, Eng., Journal of Commerce says:—The situation in the shipbuilding industry both at home and abroad is perhaps more difficult to appraise than at any previous period. A year ago the United States still retained the predominant position in regard to the amount of tonnage under construction, but even at that time the British industry was pressing hard upon the heels of its new rival, and it appeared at that time, powerful rival. It is a rivalry which we need no longer fear. The quarterly returns which have been issued by Lloyd's Register during this year have made it clear that whilst the shipbuilding industry in the U.S. is a declining one, that of the United Kingdom is assuming its old position of being the most important in the world.

Viewed from this standpoint, the position is not at all satisfactory. We have built and are building a majority of the world shipping. Yet when the statistics for the last quarter of 1920 are studied in detail they reveal some facts which are calculated to cause great anxiety to those engaged in this important industry. The fortunes of both employers and employed are, it is clear, being imperilled. The figures will bear a little examination. The merchant tonnage now building in the United Kingdom amounts to 3,708,916 tons. This is a figure considerably in excess of that which was recorded 12 months ago, but it is significant that it reveals a decrease as compared with Sept. 1920. The position in relation to rival shipbuilding countries is that the yards of the United Kingdom are, as in the pre-war period, building more merchant shipping than all other countries in the world. As against the total figure, just quoted, which stands to the credit of the United Kingdom, the tonnage building in all other countries is less than 3,500,000 tons. The decline in the aggregate of shipping under construction is, compared with the world total, quite insignificant, but it seems probable that it may be the beginning of a rapid shrinkage in the activities of the shipbuilding industry. One fact which is brought out in the returns, and which is calculated to arouse great apprehension as to the future of the industry, is that as compared with the total tonnage under construction the amount completed has been small. Expressing this in actual percentages, it appears that from 1913 to 1920 the average tonnage completed during each quarter was over 23% of the total work in hand, in 1920 it was only between 12 and 13%. These are figures which tell a depressing story. They are also a significant reminder of the main reason why the cost of building ships has advanced by such rapid strides, and employment has been reduced in the industries of taking measures to impress upon the workers the futility of deliberate slow working in the hope of promoting employment. It is true that the tonnage launched during the December quarter of 1920 was a record for the United Kingdom, but it is quite obvious that it could easily have been very much higher had the percentage of output to the total work in hand been maintained at the old level. One of the special features brought out in the returns is that the demand upon shipbuilders at present is to a considerable extent confined to the building of oil tankers, both in Great Britain and in the U.S. The returns, in

which steamships and motor ships are now separately recorded, also bring out quite clearly the growing popularity of the motor ship.

The great lesson to be derived from these figures is that unless steps are taken to reduce the cost of shipbuilding, by an increase of output, without any further rise in wages, the industry is threatened with a slump of an unprecedented character. It would not be correct to assume, as some are inclined to do, that the falling off in orders for new tonnage is the result of over-building. A cursory examination of the situation, and this impression would be deepened by a more searching analysis, indicates that, notwithstanding the considerable additions made to the world's merchant fleets during 1920, the tonnage in service is still below the figure which would have been reached had the growth of the world's mercantile marine proceeded on normal lines. There is no escape from the conclusion that the main reason for the indisposition to order new ships is the enormous cost of construction and the rise in the expenses of ship operation in face of falling freights. Fairly active conditions in British shipyards during the next few months are probably assured, but if an attempt is made to forecast the prospects beyond that time the outlook is a gloomy one.

Newfoundland Steamship Services, Etc.

The Newfoundland Board of Trade in its report for 1920 dealing with local and foreign transportation says:—During the year the council had to report on inadequate steamship service with foreign ports. For 1920 a satisfactory British service was given by Furness Withy & Co.'s steamships. The U.S. services by the Red Cross Line from New York and the Federal Line from Boston, amply cared for the freight demands to and from these ports. The services from Halifax and Sydney by the Red Cross Line, Farquhar & Co. and Furness Withy & Co. were continued. Canada Steamship Lines Ltd., and Canadian Government Merchant Marine gave satisfactory freight service from Montreal for the summer, and arranged to operate a winter service from Halifax and St. John. The inauguration of the C.G.M.M. West Indies Service from Halifax offers greatly improved facilities for the rapid marketing of Newfoundland products. The council recognizes the difficulty transportation companies had during the past six years in replacing steamships having satisfactory passenger accommodation, and notes that the Red Cross Line is contemplating the building of suitable steamships, and trusts 1921 will see a better passenger service to Newfoundland from Great Britain, Canada and the U.S. Generally speaking there was little complaint for 1920, unfortunately due in part to the trade depression during the autumn and the consequent lessened demand for supplies.

Under the Shipping Department the council formerly operated by Bowring Bros. Ltd., was continued, the steamships Prospero and Portia running regularly throughout the season. While the freight service was apparently satisfactory, it is claimed that the passenger branch is not equal to the standard set by the former contractors.

The Reid Newfoundland Co.'s railway and steamship services were, for the past six months of the year, operated under a railway commission. Additional steamships were placed on the various Bay routes and though the council realized the difficulty of procuring satisfactory ships for such service, it feels compelled to record the unavailability of such as were engaged during 1920.

During the 1920 session of the Legislature power was taken, authorizing expenditures for additional terminal facilities at St. John's and Port aux Basques. Work has been commenced at Port aux Basques, but no progress has yet been made at St. John's. The Railway Commission has decided to use Argentia as a terminal port instead of Placentia, and work is proceeding at Argentia. Port Union has become the terminus of all northern steamships operated by the Commission, but there is a consensus of opinion in the north that the former Bay terminals and St. John's give a more satisfactory service.

The loss of goods in transit was so large as to become a serious problem to the trade. The council has repeatedly had the question before it and has had the co-operation of importers and steamship representatives. As illustrating what the tax has now become to importers, we cite the rate covering pilferage only from New York which is now 1% compared with ½% a year ago, and much lower rates in previous years. It is believed losses can be greatly lessened if importers insist that all goods be shipped in packages sufficiently strong to stand the heavy handling they get in transit. Many of the packages imported are made from refuse board and are entirely unsuitable. Locally there was a decided increase in complaints of shortages and the council is of opinion this matter should receive the attention of all local transportation companies.

Local marine underwriters report a fair year, but not sufficiently good to more than offset losses of 1919. The number of ships on the Atlantic was smaller than usual. The rates of insurance were advanced considerably, taking effect January 1, 1921, the advance being first made at Lloyd's, London, Eng.

During the last session of the Legislature a bill was brought in, making it necessary for all foreign going ships over 100 tons to register with the Government, the line clearly marked and easily distinguishable. Since this act was passed some 140 ships have been marked. As far as can be ascertained a close watch is being kept to see that ships are not overloaded. When this was done clearance was withheld until sufficient cargo had been discharged to lighten the ship.

J. R. Booth Ltd. has been incorporated under the Dominion Companies Act with \$10,000,000 authorized capital and office at Ottawa, Ont., to acquire the business carried on heretofore by John R. Booth, as lumberman, pulp and paper manufacturer, mine owner, agricultural, land owner and farmer, and in connection with such business to carry on a general transportation business by land and water, and its own and operate ships of every kind and register the Ottawa River and its tributaries and on other Canadian rivers and lakes. J. R. Booth, who is chiefly concerned in this company, was the builder and owner of the Canada Atlantic Ry., now a part of the G.T.R. The other incorporators are C. J. Booth, J. F. Booth, Mrs. Andrew W. Fink, and Westworth Green, Ottawa.

Marine Engineers' Wage Scale, Etc., for the Great Lakes.

The National Association of Marine Engineers of Canada have issued the following minimum wage scale and classification for steamships operating in the Great Lakes district, as adopted by the Great Lakes executive committee representing Port Arthur, Sault Ste. Marie, Collingwood, Owen Sound, Midland, Toronto, Kingston, Sarnia and St. Catharines councils, Jan. 18, and approved by the National Executive Committee.

Conditions of Employment.—All engineers shall be furnished first class transportation, including berth and meals, from the lake ports nearest their homes to the steamships on which they are to be employed, when going to fit out, and after the steamship goes out of commission, first class transportation, including berth and meals, shall be furnished to the lake port nearest the homes of the engineers.

All references to tonnage to be construed as gross tons. In all references to monthly conditions 30 days to constitute a month.

All ratings in all classes to include board and accommodation excepting passenger ferry steamships.

Overtime at the rate of 75c. an hour for all time over 12 hours shall be paid engineers on ships carrying only one engineer.

Any special conditions of employment not covered by the provisions of this wage scale to be submitted to the Great Lakes Executive Committee through the Business Manager for adjustment.

Passenger Steamships.—Class 1.—All passenger steamships of 3,000 tons or over. Chief engineer, \$2,400 a season. Second engineer, \$180 a month.

Class 2A.—All passenger steamships of 1,250 tons and under 3,000 tons, running less than six months. Chief engineer, \$2,100 a season. Second engineer, \$150 a month.

Class 2B.—All passenger steamships of 1,250 tons and under 3,000 tons, running less than six months. Chief engineer, \$1,900 a season. Second engineer, \$150 a month.

Class 3.—All lake passenger steamships under 1,250 tons and all passenger steamships confined to river service requiring second class engineer. Chief Engineer, \$1,650 a season. Second engineer, \$140 a month.

Class 4.—All passenger steamships from 45 n.h.p. to 25 n.h.p. Chief engineer, \$150 a month. Second engineer, \$110 a month.

Class 5.—All passenger steamships under 25 n.h.p. Chief engineer, \$125 a month.

Freight Steamships.

Class 1.—All freight steamships of 5,000 tons or over. Chief engineer, \$2,400 a season. Second engineer, \$180 a month.

Class 2.—All freight steamships of 3,000 tons and under 5,000 tons. Chief engineer, \$2,200 a season. Second engineer, \$160 a month.

Class 3.—All freight steamships under 3,000 tons requiring second class engineer. Chief engineer, \$2,000 a season. Second engineer, \$150 a month.

Class 4.—All freight steamships not otherwise classified and requiring third class engineer. Chief engineer, \$165 a month. Second engineer, \$130 a month.

Tug Steamboats.

Season not less than eight months.

Class 1.—All tugs requiring second class engineer. Chief engineer, \$185 a

month. Second engineer, \$145 a month.

Class 2.—All tugs from 75 n.h.p. to 50 n.h.p. Chief engineer, \$170 a month. Second engineer, \$140 a month.

Class 3.—All tugs from 50 n.h.p. to 25 n.h.p. and all h.p. tugs over 15 n.h.p. Chief engineer, \$165 a month. Second engineer, \$130 a month.

Class 4.—All tugs under 25 n.h.p. and not embraced in class 3. Chief engineer, \$150 a month. Second engineer, \$120 a month.

Special Class.—Harbor tugs (other than dredge tugs) operating exclusively in Welland Canal and carrying only engineer. Engineer, \$160 a month. Overtime clause not to apply to this class.

Ferry Steamboats.

All passenger ferry steamboats operating from Sault Ste. Marie, Ont., and requiring second class engineer. Chief engineer, \$185 a month. Second engineer, \$175 a month. For season of not less than 10 months.

All other passenger ferry steamboats requiring second class engineer. Chief engineer, \$175 a month. For season of not less than 6 months.

All passenger ferry steamboats requiring third class engineer. Chief engineer, \$150 a month. For season of not less than 6 months.

Canadian and United States Steamship Operation on the Great Lakes.

In speaking on restrictions imposed by the Seamen's Act on U.S. vessels on the Great Lakes, as well as on the oceans, A. A. Schantz, President, Detroit & Cleveland Navigation Co., is reported to have said recently: "A straw which shows the way the wind is blowing is the fact that the Canadian freighter W. Grant Morden carried 34,157 gross tons of ore from Duluth, to the steel plant at the Canadian Sault on one trip last season. This huge cargo stands as the very largest ever carried on the Great Lakes, regardless of the commodity, and is equal to 15,883 tons. Last season the Northern Navigation Co., operating a line of boats from Detroit to Duluth, and the Detroit-Wallaceburg Line, both Canadian owned, made money, while Detroit owned boats were being put out of commission because they were losing money. Canadian costs of steamship operation, so far as wages and sustenances are concerned, are on the average 66% less than those of the United States. The Canadian Marine Department gives the monthly cost of wages and board on similar sized ships as follows: U.S., \$6,711; British, \$5,646; Canadian, \$2,503.

Small Warships Lengthened for Peace Service.

Convoy and patrol boats built during the war by Great Britain have been lengthened to make them adaptable for use in merchant service. As built for the war they were 170 ft. long, and they have been lengthened to 213½ ft. The work was done in some instances in dry dock, in others on launching ways, up which a vessel was hauled on a cradle. No special difficulties were met in the work. In addition to transforming the hull, the operation of change to merchant service involved reduction of the boiler capacity, rebuilding of the bow portion of the ship (originally shaped

like the stern in profile, to deceive an approaching enemy, and extensive changes in superstructure, etc. As rebuilt, the ships are of about 1,600 tons displacement and have a normal speed of 10 knots.

Decrease in Steamship Prices.

Turner, Davidson & Co., London, say: "The value of steamships has undergone an extraordinary change since the beginning of 1920. Then there was nothing uncommon in a price of £40 to £50 a d.w. ton for new steamships of 4,000 to 7,000 tons capacity. Today similar tonnage can be purchased for less than half these figures, and one new ship about 4,000 tons has actually been withdrawn from auction when only £8 10s. a ton was offered, practically a pre-war price.

"A large number of foreign owners, owing to the financial stringency and the adverse course of exchange, have been compelled either to cancel contracts, at a heavy sacrifice, or to assign same at prices very much below original cost. Second hand tonnage has depreciated pro rata, and freight markets all round having slumped, it is impossible for owners of expensive ships, and in many cases of moderately valued ones, to make ends meet. The market will no doubt sooner or later adjust itself when tonnage is laid up."

Proposed Great Lakes-Transatlantic Route.

An unconfirmed press dispatch from Detroit, Mich., states that C. D. Hoban, President of Great Lakes Transatlantic Route Development Co., and local representative of the Newfoundland Railway and Train Ferry Syndicate, working in conjunction with certain British interests, whose names are not stated, has announced that in the near future, a syndicate of British capitalists will carry out a scheme whereby the transportation of commodities from Detroit to Liverpool will be effected in 15 days, with only one transshipment in the case of perishable goods and two for non-perishable goods. This, it is stated, will be accomplished by the shipment of goods in six combination bulk car ferries designed for river service, to Bay of Islands, Nfld., where the cars will be landed and run over the railway to a port on the eastern coast of the Island, where they will be unloaded, and delivered to transatlantic steamships, for shipment to Liverpool, Manchester or Cork. The car ferries will, it is stated, be of such dimensions as will make them suitable for passage through the St. Lawrence canal, with dimensions, approximately, 265 ft. long, 45 ft. beam, and 14 ft. draft, and the ocean steamships will average 8,000 tons.

Esquimalt Drydock Site.—A dispute arising out of the valuation of land at Esquimalt, B.C., expropriated for building the Dominion Government drydock, came before the Exchequer Court at Victoria at the end of January, judgment being reserved. The Government, it appears, tendered the Hudson's Bay Co., the owners of the land, \$32,620 for the 162.21 acres expropriated, the company claiming that the land was worth an additional \$10,000. During the case various estimates as to the value of the land were given, ranging from \$250 to \$5,000 an acre.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following has been delivered to Canadian Government Merchant Marine for operation:

Jan. 20, s.s. Canadian Fisher, Marine Department contract 15, builder's yard no. 7, approximately 5,100 d.w. tons, built by Tidewater Shipbuilders Ltd., Three Rivers, Que., except the interior fittings, etc., which were put in by Halifax Shipyards Ltd., Halifax, N.S. This is the first ship of the fleet to be provided with accommodation for 30 passengers. She sailed from Halifax Jan. 25, with a full passenger list and a general cargo, for Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras.

The s.s. Canadian Leader, Marine Department contract 53, builder's yard no. 80, approximately 8,390 d.w. tons, was delivered to the Marine Department by Canadian Vickers Ltd. at Montreal, Dec. 21, but will not be taken over by Canadian Government Merchant Marine for operation until the opening of St. Lawrence navigation.

Vancouver Dock.—Canadian Government Merchant Marine is reported to have leased the Dominion Government dock at Vancouver at an annual rental of \$60,000. The dock was built by the Dominion Public Works Department in 1915 and was then handed over to the Vancouver Harbor Commission for administration. All revenues and expenditures were received and paid by the Commissioners, but they paid no rental, or interest on capital, to the Marine Department, which was originally responsible for its administration. Under this arrangement the Harbor Commissioners were unable to fix a lower scale of wharfage rates, etc., than was current at other wharves privately owned. Since the C.G.M.M. has leased the dock, a new scale has been put into effect, bringing the rates on a parity with those charged by other wharves. The lease is an annual one and it is stated that it is expected that on the completion of the Ballanryne pier, probably in 1922, all wharfage charges will be entirely eliminated, the necessary harbor revenue being produced entirely by levying a rate on cargoes.

Atlantic Freight Rates.—Canadian Government Merchant Marine has announced a reduction in general cargo rates between Canadian Atlantic ports and Great Britain. The rate on general cargo from Halifax and St. John to Great Britain was 50c. a cu. ft. or \$1 per 100 lb. The new rate is 40c. a cu. ft. or 75c. per 100 lb.

Canadian Vickers Ltd., Montreal, delivered the steel cargo steamship Canadian Leader, Marine Department contract 53, builder's yard no. 80, approximately 8,390 d.w. tons, to the Marine Department, Dec. 21, 1920. She will not be taken over by Canadian Government Merchant Marine for operation until the opening of St. Lawrence navigation.

Davie Shipbuilding & Repairing Co., Lauzon, Que., advises that the construction of the steel cargo steamship, Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, the keel of which was laid May 14, 1920, has been delayed on account of having to wait for steel, and that a launching date has not been fixed.

Halifax Shipyards Ltd., Halifax, N.S.,

which is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Cruiser and Canadian Constructor, Marine Department contract 58 and 59, builder's yard nos. 3 and 4, each approximately 10,500 d.w. tons, expects to launch Canadian Cruiser in the latter part of April, or early in May, and Canadian Constructor about two months later.

See also Tidewater Shipbuilders Ltd.

Harbour Marine Co., Victoria, B.C., advised us recently that it could not give an approximate date for delivery for the steel cargo steamship Canadian Traveler, Marine Department contract 30, builder's yard no. 2, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, which was launched Sept. 29, 1920, it having been decided to install a refrigeration plant on the ship.

Port Arthur Shipbuilding Co., Port Arthur, Ont., advises us that the steel cargo steamship Canadian Harvester, Marine Department contract 61, builder's yard no. 45, approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, of which was laid March 30, 1920, and which was launched Nov. 20, 1920, will probably be delivered about the middle of May.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—Canadian Railway and Marine World for February gave particulars of the arrangements made by the Marine Department with Wallace Shipbuilding & Drydock Co., North Vancouver, to complete, on a time and material, plus 8% basis, the two steel cargo steamships Canadian Reaper and Canadian Thrasher, each approximately 8,100 d.w. tons, which the Prince Rupert Drydock & Engineering Co. was building when it failed. A Prince Rupert press dispatch of Feb. 9 stated that the liquidator, W. E. Hodges, had returned there from Ottawa, and had stated at a meeting of creditors that the Marine Department required the assembled material lying in the yards for the completion of the two ships. This he had refused to agree to and a deadlock has resulted. He had also instructed Capt. Saunders, who is spoken of as the Government representative at the yard, to leave it, and had notified the Wallace Shipbuilding & Drydock Co. that no person would be permitted to enter the yards to work on the two ships, but that bona fide drydock repair workmen would be allowed access. Canadian Railway and Marine World was advised from Ottawa recently that Henry A. Butt, overseer, would represent the Marine Department during the completion of the ships.

A later Prince Rupert press dispatch of Feb. 22 says that by a judgment of Mr. Justice Murphy, a clause in the contract between the Marine Department and the Prince Rupert Drydock & Engineering Co. has been interpreted as a lien embracing not only the two ships in process of construction, but also the shipyard's plant and equipment. As a result, W. E. Hodges, the trustee appointed by creditors, whose business went into bankruptcy, will be required to return nearly \$100,000 worth of materials, which he removed from the yards to a private warehouse in Prince Rupert. The decision will be appealed, and will come up in the higher court next month.

See also under General Shipbuilding Matters Throughout Canada on another page.

Tidewater Shipbuilders Ltd., Three Rivers, Que.—The steel cargo steamship Canadian Fisher, Marine Department contract 15, builder's yard no. 7, approximately 5,100 d.w. tons, which was built by the company, was launched Jan. 25, and, in order not to be delayed by closing of navigation on the St. Lawrence, was taken to Halifax to make her interior fittings, including accommodation for 30 passengers, put in by Halifax Shipyards Ltd., was delivered to the Marine Department, and transferred to Canadian Government Merchant Marine, Jan. 20, for operation. She loaded a general cargo and took on a full list of passengers at Halifax, and sailed Jan. 25 for Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—It is reported that the steel cargo steamship Canadian Skirmisher, Marine Department contract 56, builder's yard no. 104, approximately 8,390 d.w. tons, being built for Canadian Government Merchant Marine, will be launched about Mar. 10. The keel was laid Oct. 14, 1920, and work has been retarded to some extent by bad weather.

Great Lakes Levels.

The U.S. Lake Survey reports the monthly mean stages of the Great Lakes for January in feet above mean sea level as follows:—Superior, 602.08; Michigan and Huron, 579.92; St. Clair, 574.98; Erie, 571.69; Ontario, 245.54. Lake Superior was 0.17 ft. lower than in Dec. 1920, 0.04 ft. higher than Jan. 1920, 0.03 ft. above the average January stage of the last ten years, 0.70 ft. below the high stage of Jan. 1901, and 1.30 ft. above the low stage of Jan. 1890.

Lakes Michigan and Huron were 0.15 ft. lower than Dec. 1920, 0.12 ft. lower than Jan. 1920, 0.03 ft. below the average January stage of the last ten years, 2.75 ft. below the high stage of January 1886, and 0.84 ft. above low stage of Jan. 1896. During the last ten years the January level has averaged 0.2 ft. lower than the December level, and the same as the February level.

Lake Erie was 0.10 ft. higher than Dec. 1920, 0.69 ft. higher than Jan. 1920, 0.36 ft. above the average January stage of the last ten years, 1.56 ft. below the high stage of Jan. 1886, and 1.00 ft. above the low stage of Jan. 1896. During the last ten years the January level has averaged 0.1 ft. lower than the December level, and 0.1 ft. lower than the February level.

Lake Ontario was 0.14 ft. higher than Dec. 1920, 0.23 ft. higher than Jan. 1920, 0.13 ft. above the average January stage of the last ten years, 2.06 ft. below the high stage of Jan. 1886, and 1.74 ft. above the low stage of Jan. 1896. During the last ten years the January level has averaged about the same as the December level, and 0.1 ft. lower than the February level.

Colonial Marine Underwriters Ltd. has been incorporated under the Dominion Companies Act, with \$150,000 authorized capital, and office at Montreal, to carry on business as merchant and carrier by land, air and water, ship, tug and barge owner, insurance broker, and any business in connection with ships or shipping, or the carriage of passengers and merchandise.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for and which orders are to be carried out in that column, not preceded by an asterisk, show the approximate total deadweight, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices, not preceded by an asterisk, show the approximate total deadweight, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed. Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for changes from specifications, additional equipment, accessories, etc. The following contractions are used in the column giving the type of the vessels to be built: a.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p. pass; b. bridge; f.c's, forecastle.

Contract	Name	Builder	Yard	Long tons	Price per ton	Total	Type	Classification	Speed	Keel laid	Launched	Delivered

General Shipbuilding Matters Throughout Canada.

B.C. Yacht & Boat Builders Ltd., Victoria, B.C.—The second of the two 75 ft. motor patrol boats for the Marine Department's B.C. coast patrol service, was launched Jan. 17. The first, which was launched Jan. 4, is practically ready for service. They are each equipped with 100 h.p. Fairbanks-Morse engines, and have auxiliary deck hoists for buoy and other work. One of these boats is to operate in local waters, and the other is to be stationed at Prince Rupert.

A Vancouver press dispatch of Feb. 4 stated that there was a temporary stoppage of the work of completing the two boats, due to changes in the specifications made by the Marine Department, some of which were taken exception to by the builders. This, it is stated, necessitated a new contract which was at that time at Ottawa awaiting ratification. In the meantime a number of men employed on the work were laid off. Both boats were said to be in the water with engines installed. The work still to be done is mainly the superstructure and installation of fittings.

Canadian Allis Chalmers Ltd., Bridgeburg, Ont.—The shipbuilding plant which has been operated during the last three years by this company at Bridgeburg, was closed at the end of January. While it was in operation two steel cargo steamships were built for the British Government under orders from the Imperial Munitions Board, and two steel cargo steamships for the North American Steamship Co. and South American Steamship Co., Toronto, respectively.

Dominion Shipbuilding & Repair Co., Toronto. In connection with the winding up of this company's affairs, it is stated that the liquidator, Osler Wade, Toronto, is pressing a claim of \$887,105 against Christopher Hannevig, New York, of Hannevig & Co. bankers, exchange, shipping and insurance brokers, etc., which company is reported to have failed. C. Hannevig is reported to have stated that the position in which the company finds itself was chiefly due to the delay of the United States Shipping Board in adjusting obligations, and that credits would be paid in full.

Halifax Shipyards Ltd., Halifax, N.S. Montreal press dispatch, Feb. 21.—Directors of Halifax Shipyards Ltd. have approved of the terms on which the enterprise is to be consolidated with the Dominion Steel Corporation and the Nova Scotia Steel & Coal Co., and, in common with the two larger enterprises will in the course of the next ten days or so formally submit the proposal to the shareholders of the Halifax company.

Harbour Marine Co. Ltd., Victoria, B.C.—The steel car ferry tow barge which this company is building for the C.P.R. service between the mainland and Vancouver Island, was launched Jan. 25, and work was continued at the company's wharf, on the erection of the deckhouse. Her dimensions are—length 270 ft., beam 42 ft., depth moulded 12 ft., and she has a single deck, equipped with three tracks with capacity for 18 standard railway cars. Her cost will be approximately \$200,000.

The company was reported in a Victoria press dispatch recently to have decided to close down its plant and remove the machinery to the Victoria Machinery Depot Co.'s plant. Harbour Marine Co. Ltd. is a subsidiary of the Victoria Machinery Depot Co. and was formed to

take over Marine Department contracts 29 and 30, for building two steel cargo steamships of approximately 8,390 d.w.t. tons each, for Canadian Government Merchant Marine. The first of the ships, Canadian Winner, was launched June 29, 1920, and delivered to C.G.M.M. for operation Nov. 29, 1920. The second, Canadian Traveller, which was launched Sept. 29, 1920, is being completed at the V.M. D. Co.'s plant.

The Lunenburg Marine Railway Co.'s annual meeting was held at Lunenburg, N.S., Jan. 25. The report for the past several months, since the reorganization of the company, showed a substantial profit on the operation of the plant. Since the construction of an additional marine railway last year, making a total of three marine railways, the company can deal with ships up to 1,200 tons. The directors for the current year are: W. Duff, M.P., President; H. W. Adams, Vice President; A. H. Zwicker, Managing Director and Treasurer; E. Spindler, Manager; B. C. Smith, R. Silver, and E. R. Mulholland. H. H. MacIntosh is Secretary.

National Shipbuilding Corporation, Three Rivers, Que.—A petition in bankruptcy against this company has been granted.

A report of the liquidator on the failure of the National Shipbuilding Corporation, and its subsidiary company, Three Rivers Shipyards Ltd., states that besides the plant at Three Rivers, there is an equity in a shipyard and canal company at Vicot, La. The total assets are placed at \$930,355, with creditors' claims amounting to \$3,095,126. The question of the reorganization of the business, it is stated, might be regarded as more theoretical than practical. The report adds:—"The whole story of the organization of this company indicates lack of proper financial and technical foresight. Apparently none of the executive officers or directors of the two companies appear to have had sufficient previous experience in shipbuilding, and they seem to have undertaken tremendous contracts and operations without any proper regard to capital, costs or consequences. The contracts which this company had could never be executed with any degree of profit, and certainly cannot now. The yard in Three Rivers as an eight-way proposition in any event would not have been successful."

North Vancouver, B.C.—A press report states that the owners of the Queensboro shipyards, New Westminster, B.C., have applied to the North Vancouver city council for a lease of two waterfront lots immediately west of St. Andrews Ave., with the option of purchasing the property at any time. It is stated to be the intention to establish a shipbuilding yard there, at an approximate cost of \$20,000, to give employment to about 50 men.

Port Arthur Shipbuilding Co., Port Arthur, Ont., advises that the steel cargo steamship of approximately 3,000 d.w.t. tons capacity, yard no. 45, which it is building for private owners, will probably be launched in April, providing the weather will permit.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—At a recent meeting of creditors at Prince Rupert, the receiver, W. E. Hodges, reported that the secured claims against the company were \$362,480; preferred wages claims,

\$112,000; unsecured creditors, \$2,512,000; total liabilities, \$866,480, to meet which there seemed to be net amounts due of \$941,590, out of which the cost of completing the steel cargo steamships of approximately 3,000 d.w.t. tons each, Canadian Reaper and Canadian Thrasher, for Canadian Government Merchant Marine will have to be paid. Following is a local paper's summary of the receiver's report:—

The plant and premises will have to be used by the contractor (W. A. S. Shipbuilding & Drydock Co., North Vancouver) to complete the ships, for which a very substantial rental should be charged. The inventory of repair material and sundries around the yard runs into a considerable sum. I am having an inventory prepared which is not yet complete. The estimated value is from \$100,000 to \$125,000, from which an allowance must be made for realization. There is a claim in the lease which provides that on its termination the lessors may purchase the improvements made by the lessees at a value to be agreed upon, which means that whatever sum can be recovered under this clause will be available to satisfy the claims of the creditors. In the contracts for the construction of the ships, clause 21 provides that the contractors agree to deposit with the Minister of Marine a guaranty bond of an approved company equal to 10% of the contract price of each ship, as a guarantee for the faithful performance of the work contained in the contract. I have been unable to ascertain definitely the position with regard to this, but I am informed that there is approximately \$100,000 on deposit in the hands of the Bank of Montreal in lieu of the guaranty bond on one ship. I am also advised that the guaranty company has repudiated its liability on the other ship. As the merchants gave credit to the company on the strength of the existence of these bonds, it is, in my opinion, the duty of the Government to make good if the bonding company does not. Furthermore, I believe that the \$160,000 above referred to as being on deposit was in reality provided out of the first payment under the contract, and should have been available for payment to the creditors, and the guaranty bond, under clause 21 of the contract, should have been provided besides. In addition, I believe that during 1920, Newman Frb. bought up the minority stock of shareholders for \$75,000. If he used the company's funds to pay for this, and I believe he did, it is undoubtedly recoverable at law. But the question must be very carefully considered as to whether it is advisable to embark upon any law suits of this description before legal action is taken. I am however, inclined to get some information at Ottawa, which will enable me to prepare this, and myself in deciding how to deal with regard to the New York office. I regard that action to be the peculiar responsibility attached to this matter, and I intend to prepare to present the report at the next meeting with a financial statement after the information contained in this report has been received. I propose that I will again send a report to the creditors by mail, giving them all the information with regard to the progress of the liquidation which may be of interest.

The Grand Trunk Pacific Co. and Prime Albert is undergoing heavy financial overhaul at his plant and certain reports are also being delayed.

Victoria (B.C.) Shipowners, Ltd., Victoria, B.C.—In connection with the recent announcement that work had been suspended on 3 out of 4 bargaintines being built at the Choberg Shipyard, Victoria, under Dominion Government aid, as announced in our last issue, C. Choberg announced Feb. 2 that the stoppage was entirely due to the necessity for getting the first of the four, which has been named S. F. Tolmie, into service as soon as possible. This ship is now practically ready for sea, and it was expected that the work on the other three would be proceeded with before the end of February.

Wallace Shipyard & Drydock Co., North Vancouver, B.C.—Work is reported to be proceeding according to schedule on the steel steamship under construction for the C.P.R. British Columbia Coast Service. The construction of the double bottom is practically completed.

Yarrows Ltd., Victoria, B.C.—The steam trawler James Caruthers, which was damaged in collision with the U.S. s.s. Surveyor in Queen Charlotte Sound, towards the end of 1920, has been repaired at this yard. The work included the placing of about 60 new plates, a new keel and new stem bar.

The company has the contract for re-repairing the Standard Oil Co.'s steamship Atlas, which ran ashore in Wrangell Narrows in Dec. 1920. This work was expected to be completed by the end of February.

Canada Steamship Lines Dividends.

The directors of Canada Steamship Lines Ltd., at a meeting in Montreal Feb. 21, declared the usual quarterly dividend on the preferred stock and issued the following notice:—"No action was taken in respect to dividend on ordinary shares, and while the earnings of the year have been excellent, the directors, pursuing a conservative policy, have decided to conserve the company's resources and to await developments on certain financial proposals now under consideration to capitalize the greatly increased assets of the company. This, when consummated, will, in the opinion of the directors, be greatly to the interest of the company."

The financial proposals mentioned are said to be in connection with efforts which President J. W. Norcross has been making to interest English capital in the company. For several years the company has built up its tonnage without resorting to new borrowing, and in spite of the fact that earnings for 1920 are stated to compare well with those of previous years, the company is short of working capital.

Canada Steamships common dividend began at 4% in Feb. 1919, and was raised in Dec. 1919 to 7%.

The Quebec Steamship Co. is applying to the Dominion Parliament for amendments to its act of incorporation, including the increase of its authorized capital to \$10,000,000, removing restrictions as to its issue, to allow the company to hold stock in other companies, to enlarge its powers, and to fix the head office at Montreal. The company is a subsidiary of Furness Withy & Co., having been acquired from Canada Steamship Lines Ltd. last year.

Mainly About Marine People.

C. A. Barnard, K.C., Montreal, has resigned his position as a director and Vice President of Canada Steamship Lines Ltd., but remains as counsel.

G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, Ltd., Montreal, sailed from Vancouver, Feb. 10, on the C.P.O.S. s.s. Empress of Asia on a three months tour of Japan, China and the Philippine Islands, during which he will probably visit Peking and Korea.

Hon. W. F. Coaker, Minister of Marine and Fisheries for Newfoundland, arrived in London, Eng., early in January, en route to Portugal, Spain, Italy and Greece, which countries buy large quantities of dry codfish, Newfoundland's staple product.

F. C. Cuttle, heretofore Assistant Claims Agent, Canada Steamship Lines, has been appointed Insurance Agent, Office, Montreal.

Jno. P. Doherty, Export Freight Agent, Canadian Government Merchant Marine, Montreal, was married at St. John, N.B., Feb. 2, to Miss M. E. Connolly.

A. M. Dollar, President, Canadian Robert Dollar Steamship Co., Vancouver, B. C., left for Great Britain recently for the purpose, it is stated, of obtaining two additional steamships.

C. Duguid, Naval Constructor, Marine Department, has returned to Ottawa, after a two months official trip to Great Britain.

J. H. Edwards, heretofore Assistant Freight Claims Agent, Canadian Steamship Lines, has been appointed Freight Claims Agent, Office, Montreal.

M. P. Fennell, Jr., Secretary, Montreal Harbor Commissioners, returned to Montreal, Feb. 18, after having spent two months visiting various ports in Europe.

G. H. Flood, Purchasing and Contract Agent, Marine Department, has returned to Ottawa after an official trip to Great Britain.

V. N. Hart has been appointed harbor master, Guelphborough, N.S., vice J. H. Dillon, resigned.

F. S. Isard, Director of Finance and Comptroller, Canada Steamship Lines, left Montreal early in February for London, Eng., on official business.

John S. Leitch, Managing Director, Collingwood Shipbuilding Co., Collingwood, Ont., has also been appointed Assistant to President, Halifax Shipyards Ltd., Halifax, N.S. H. B. Smith, Toronto, is President of both Collingwood Shipbuilding Co. and Halifax Shipyards Ltd.

Capt. K. McKenzie, a Great Lakes mariner, was killed at his home at Tiverton, Ont., Feb. 14, by an acetylene gas tank explosion.

J. McL. Mitchell, Shore Superintendent, Pacific Steamship Co., Vancouver, B.C., was married Feb. 10, to Alice J. Murphy, sister of E. Parr, agent, White Pass and Yukon Route, Vancouver.

J. A. Olive, local manager, Furness Withy & Co., St. John, N.B., was presented with a gold watch and chain by the office staff, Feb. 14, on leaving the company's service to become Secretary-Treasurer, New Brunswick Power Co.

Engineer Commander T. C. Phillips addressed the Engineering Institute of Canada's Ottawa branch recently on ship propulsion.

Jas. Playfair, President, Great Lakes

Transportation Co., and Mrs. Playfair, left Midland, Ont., about the middle of February, en route to England.

R. V. Robinson, General Claims Agent, in charge of freight claims and insurance, Canada Steamship Lines, Montreal, has resigned, effective Mar. 31, and the position of General Claims Agent has been abolished.

C. E. V. Rutter, who has retired as City Agent, Canadian Pacific Ocean Services Ltd., London, Eng., after about 48 years service with the company and the Allan Line, was presented recently with a silver salver and an illuminated album containing the names of subscribers to the presentation, from the company's officials throughout the United Kingdom. He retains connection with the company, as he will represent it in the Steamship Owners' Protection and Indemnity Associations and in the Chamber of Shipping.

Capt. H. Smith, who died at Victoria, B.C., Feb. 7, aged 80, was intimately connected with navigation and marine development around Vancouver Island ever since 1868. In a local marine history, he was credited with holding all records for continuous long service in the Pacific northwest. He was born in New York, and was granted a master's certificate in Atlantic waters, later transferring to Puget Sound as master of the s.s. Eliza Anderson. He was for some years in R. P. Rithet & Co.'s service, and subsequently was Superintendent of the outer wharves at Victoria, which position he held until his retirement from active service about five years ago.

Senator Lorne C. Webster, President, Webster Steamship Co., etc., has been elected President, Montreal Board of Trade.

A. A. Wright, who was elected President of the Dominion Marine Association, at its annual meeting in January, as stated in Canadian Railway and Marine World for February, is President of Tidewater Shipbuilders Ltd., Three Rivers, Que., and Vice President and Managing Director of Davie Shipbuilding & Repairing Co., Lauzon, Levis, Que. By a mistake he was referred to in our last issue as being Vice President and Managing Director of both of those companies.

New Type of Naval Searchlight.

The United States Naval Communication Service has set the electrical industry the task of designing a searchlight to be used for invisible messages for naval purposes. The line of research followed by the General Electric Co.'s engineers has been to use a cylindrical light core, and to render it invisible by the employment of infra red rays. The research will be followed with special interest by all associated with the fighting sea services. The General Electric Co. has done a good deal of work on searchlights. It has been shown that an incandescent searchlight of 7,000 candle power is a practical proposition, and experiment has also demonstrated that searchlight lenses, if supplied with mirrors curved on non parabolic lines, will conserve the large losses associated with the use of parabolic lenses. It is believed that the power of existing searchlights can be at least doubled.

Atlantic and Pacific Ocean.

Canadian Pacific Ocean Services' s.s. Montcalm, 16,200 tons, which is being built by Fairfield Shipbuilding & Engineering Co., Govan, Scotland, and which was expected to be ready for operation in February, has been delayed by a strike of joiners at the shipyards.

F. H. Clendenning, Foreign Freight Agent, Canadian Pacific Ocean Services, Vancouver, B.C., is reported to have stated that the steamships Mattawa and Methven, running in the Orient service, have been laid up pending an improvement in the trans-Pacific freight situation.

The French s.s. Victorieux, 4,321 tons, was, according to a Marconi message received at Cape Race, Nfld., Feb. 11, abandoned at sea, her crew having been taken off by the British s.s. Cranford, bound from Galveston to Liverpool. The s.s. Victorieux was owned by the French Government and operated by the Star Line. She was formerly the German s.s. Uckermark.

The White Star Line's s.s. Calgary, sister ship of the same company's s.s. Regina, both of which are approaching completion, is reported to have had her name changed to Doric. These ships are to be 16,314 tons gross, and the s.s. Regina is expected to be on the route to Montreal about the end of the summer. The company's new s.s. Laurentic, 17,400 tons, designed especially for the St. Lawrence service, is also reported to be well advanced towards completion. It is said she will be the largest ship to enter Montreal.

The British s.s. Bristol City, bound from Bristol to New York, ran short of fuel when about 240 miles direct south from Cape Race, Nfld., and in response to a wireless, Canadian Government Merchant Marine's s.s. Sheba was dispatched to her assistance. The s.s. Bristol City was later reported to have reached a point 61 miles from Louisburg, N.S., making three or four knots an hour, and burning her woodwork. She had, however, encountered heavy ice and was making no progress. The C.G.S. Stanley was immediately sent out to assist and she was taken into Louisburg under her own steam.

J. M. Jacquet, a Belgian, naturalized in Canada, entered suit against Canadian Pacific Ocean Services Ltd., for \$10,000 damages for delay in his cargo passage, which he claims to have booked on the s.s. Grampian for Paris. It is claimed on behalf of the C.P.O.S. that passage was refused on the intervention of the Belgian Consul General, on the ground that plaintiff's French passport had not been visé, and obligations under the international law were also pleaded. On the opening of the case at Montreal, Jan. 25, the court ordered the plaintiff to prove that he had the right to proceed with the action.

The Royal Mail Steam Packet Co. is reported to have been appointed agent at Vancouver for the Holland-America Line, with Capt. R. G. Parkhurst in charge of the local office. The first ship to be placed on the route between Holland and North American Pacific ports will be the s.s. Eendyk, which was expected to leave Europe towards the end of February, and sail via the Panama Canal. Later in the spring a full trans-Atlantic passenger service will be operated, in addition to a freight service out of Vancouver, and it is stated that 9 steamships with approximately 15,000 d.

w. tons capacity, are being specially built for this traffic.

The Cunard Co. intends to proceed with its shipbuilding programme. The company's fleet now consists of 22 ocean-going steamships, representing in total 228,468 tons gross. An additional gross tonnage of 214,200 is due for delivery before the end of this year. The allied lines—the Anchor, the Brocklebank, the Commonwealth and the Dominion—represent a gross tonnage of 445,906. An additional 129,800 tons are being built this year, viz., 11 ships. Subject to any unforeseen delays, the Cunard Co. will control 1,015,374 tons gross by the end of Dec. 1922.

Maritime Provinces and Newfoundland.

The schooner Marjorie McGlashen, from St. John's, Nfld., with a cargo of fish, became a total wreck near Malaga, St. John's, Nfld., Jan. 13.

St. John's, Nfld., press dispatch states that the Red Cross Line had reduced its freight rates between St. John's and New York, via Halifax, by 15%.

The s.s. Bristol City, which was taken into Louisburg, N.S., recently, by the s.s. Kamouraska, has been libelled by the Dominion Coal Co. on a claim for \$25,000, for salvage services.

The concrete ship Permanencia, while on her maiden voyage from Sydney, N.S., to Fortune Bay, Nfld., was damaged, and had to lay up at Rose Blanche, Nfld., where she was surveyed.

The Newfoundland schooner Elizabeth Fearn, in ballast from Bahia for St. John's, Nfld., struck on the northhead of Quidi Vidi, Nfld., Feb. 11, and became a total wreck. She was of 246 tons, and owned by Campbell & McKay.

It is stated that during 1920, thirty-one ships were added to the Lunenburg, N.S., fishing fleet, at an approximate cost of \$1,000,000. In 1920 there were 117 ships, which made a total catch of 291,474 quintals, with an average price of 2.488 quintals, of an estimated value of \$2,000,000.

The s.s. Stadium, owned by C. T. White & Son, Sussex, N.B., is reported to have been sold to F. Ellis, St. John's, Nfld., for towing and wrecking work there. She was built at Shelburne, N.S., in 1912, and is screw driven by engine of 28 h.p. Her dimensions are—length 78.6 ft., breadth 20.6 ft., depth 9 ft., tonnage 118 gross, 49 net.

The Cape Race Shipping Co., St. John's, Nfld., at an extraordinary meeting of shareholders recently, passed a resolution to the effect that it having been proved to the meeting's satisfaction that the company cannot by reason of its liabilities continue its business, the same be wound up voluntarily. T. Cook, M. Burke, F. J. Roil, W. Dwyer and G. E. Taylor were appointed liquidators.

The schooner Peter McEntyre, which was launched at Moss Glen, N.B., Nov. 11, 1920, is being completed at the McAvity wharf, St. John's, N.B., and will, it is expected, be ready for sea early in March. Her dimensions are, length overall 162.3 ft., length over keel 146 ft., breadth overall 13 ft., depth of hold 19 1/2 ft. On completion she will load lumber for Las Palmas, Canary Island.

The County Board of Revision and Appeal heard a large number of appeals from shipowners at Lunenburg, N.S., Jan. 25, against the assessment on ship-

ping. During the war the assessment was practically doubled, and as a result of the fishing industry being somewhat dull, and freights at a low level, it was estimated that a considerable reduction should be made. The board made large allowances in the assessment.

A company is reported to be organizing for the establishment of a steamship service between Pictou, N.S., and Charlottetown, P.E.I., formerly operated by the P.E.I. Steam Navigation Co. Those interested in the company are said to be W. N. McDonald, Sydney, N.S.; H. H. McDonald, Montreal, Q.; and Dr. U. S. McDonald, New York, and it is stated that the s.s. Contango, 100 tons, equipped for passenger and freight service, has been bought for the route.

A Halifax press report states that Canada Steamship Lines Ltd. are starting a combined passenger and freight service between Montreal and Boston calling at Quebec, Antigonish, Halifax and St. John's. It is stated that the ships to be used will be of about 5,000 tons, with accommodation for about 250 passengers and 4,000 tons of cargo. The ships are, it is said, at present being operated by the Canadian Transatlantic Co., for which Canada Steamship Lines is agent, on the route between Canada, Plymouth, Eng., and Havre and Bordeaux, France. As an alternative, it is said, the company may operate ships between Halifax and Boston, making connection with ships for Montreal, at Halifax.

The United States Shipping Board's wooden steamship Bassan, which has been in considerable trouble of late, stranded in St. Pierre, Micoudin, Nfld., Feb. 7, and was expected to become a total loss. Her career on her last voyage was as follows, sailing from Norfolk, Va., with coal for Botwood, Nfld., in Sept. 1920, during a storm of Cape Race she sprang a leak through loosening of her planks. She was taken in tow and ordered to seek shelter in the harbor. After some temporary repairs she was refloated and while being taken to St. John's, Nfld., she went ashore at Trepassay, and after being damaged with considerable difficulty she was taken to St. John's, where she was put up, and after being taken in tow by tug she again developed leaks and eventually stranded at St. Pierre.

Dakin and Betts, of Pictou, N.S., are reported to be forming a company with capital of \$50,000, of which \$40,000 will be paid up, to operate a steamship service between Pictou, N.S., and Charlottetown, P.E.I. It is stated that they have an option on the s.s. Speedy II, owned formerly by the Dominion Government, and that they hope to obtain subsidies for a daily service between Dominion, Nova Scotia and Pictou, Edward Island Government. The s.s. Speedy II was built at Leith, Scotland, in 1906, and is a screw driven by engine of 88 n.h.p. Her dimensions are, length 116 ft., breadth 26.6 ft., depth 10 1/2 ft., tonnage 222 gross, 145 net. She was built as a private yacht for the late Rancey Barratt, a Scotch African millionaire, and subsequently was owned by the Dominion Public Works Department.

The Newfoundland Government, which recently brought a claim against the United States Shipping Board's s.s. Bassan for \$75,000 for salvage services, has been awarded \$1,000 by the Newfoundland courts, with an additional \$100 to cover damages to the Newfoundland Government's s.s. Porcupine, which towed the s.s. Bassan into port. The s.s. Bas-

sam, while en route from Norfolk, Va., to Botwood, Nfld., with coal, in Sept. 1920, sprang a leak. This was controlled, and she reached St. Mary's Bay, Nfld., with the aid of the s.s. Portia. Later she went to Trepassay, where she grounded while anchoring. After being refloated she proceeded to St. John's, Nfld., and her cargo of 2,500 tons of coal was discharged. She left St. John's in tow of the steam tug Ballenas Jan. 23, and on the following day again sprang a leak and returned to port for repairs.

Province of Quebec.

The Quebec Legislature has included \$25,000 in its estimates for this year, to assist the steamship services of the north shore and the Magdalen Islands.

The Dominion Public Works Department received tenders to Feb. 21, for a license to operate a ferry across the Ottawa River, between Fawcett, Que., and St. Thomas d'Alfred, Ont.

Ontario and the Great Lakes.

The name of the s.s. John J. Noble, owned by Booth Fisheries Canadian Co., Toronto, has been changed to Sailor Queen.

The City of Toronto's steam tug G. R. Geary steamed across Toronto Bay Feb. 3, which is stated to be the earliest date in any year for the movement of craft in the bay.

The Great Lakes Transportation Co. is reported to have arranged to put on a steamship service between Fort William and Port Arthur, Ont., and Hamilton, Mich., on the reopening of navigation.

A deputation from Hamilton waited on the Minister of Public Works at Ottawa, Feb. 15, to ask that the Hamilton harbor development plan be approved as soon as possible, so that work on the waterfront may be proceeded with at once.

Muskoka Lakes Navigation & Hotel Co. has declared a dividend of 6% for the year ended Jan. 31, 1921. The company is reported to have had a very successful year, and to be free of debt. The directors for this year are: Hugh C. MacLean, F. F. Brentnall, A. McD. Macdonnell, Andrew MacLean, G. T. Somers, Lt. Col. R. S. Wilson.

The Detroit & Windsor Ferry Co. will, according to a Windsor press dispatch, build two docks at the foot of Ouellette and Ferry Sts., Windsor, at a cost of about \$500,000, and, in addition, put on a new ferry steamship with accommodation for 60 automobiles on the main deck, and 2,500 passengers on the upper deck. The dimensions of the new ferry steamship are given as, length 175 ft., with an additional 10 ft. in width over the company's s.s. Britannia. It has been decided to make representations to the Canadian and U.S. Governments that customs inspections be made during the passage across the river, thus doing away with congestion on landing.

British Columbia and Pacific Coast.

The C.P.R. steamships Princess Ena and Tees were laid up during January for the balance of the winter, and their crews paid off, there being little freight movement.

The C.P.R. s.s. Princess Maquinna lost a blade from her propeller on a trip down from the west coast, during January,

and was docked at Yarrows Ltd., Esquimalt, for its replacement.

The Vancouver Dredging & Salvage Co. commenced work on the salving of the tug Marvis, which was sunk in collision with a gravel scow, in 150 ft. of water in the Second Narrows, during January.

The Board of Railway Commissioners has refused the Slokan District Board of Trade's application for the re-establishment of a daily lake service by the C.P.R., on the Slokan, Nelson & Nakusp routes.

The C.P.R. is reported to have given a contract for approximately 25,000 tons of coal a month to Canadian Collieries Ltd., Vancouver Island, for use on its coast steamships converted recently from oil burners.

The C.P.R. s.s. Princess Beatrice, which sailed from Vancouver, Feb. 9, ran ashore the following morning at Steep Island. The passengers were landed at Jedidah Island and the ship was refloated and proceeded to Tucker Bay.

The Board of Railway Commissioners has dismissed the Slokan District Board of Trade's application for the re-establishment of a daily lake service by the C.P.R. in connection with its Slokan, Nelson and Nakusp lines. The Chief Commissioner held that the Board has no jurisdiction over service, or character of service on steamboat lines.

The North Vancouver Ferry Commission's ferries nos. 2 and 3 are being repaired. No. 2 is having a new stern post fitted and engine overhauled, as well as general repairs to the hull. No. 3, in addition to other repairs, is having a considerable portion of her deck replaced. One of the ferries from West Vancouver is being used while the other two are under repair.

The C.P.R. Co.'s application for the limitation of its liability under the Admiralty law, to the amount paid in passenger fares and for freight carried, and the amount realized from salvage, in connection with the loss of the s.s. Princess Sophia on Vanderbilt Reef, Lynn Canal, Oct. 25, 1919, came before Federal Judge J. Patterson at Seattle, Wash., recently. Claims have been filed in the U.S. courts in connection with the death of 200 persons, for approximately \$2,000,000.

The Canadian Robert Dollar Steamship Co. is reported to have bought five barguinettes owned formerly by German interests and during the war intrusted to the U.S.A. at Rosalia, Cal. They are named Adolph Vinnen, Egon, Hans, Schurbeck and Thielbeck, and are being altered at Santa Rosalia, to make them suitable for lumber carrying, after which their names will be changed to follow the usual custom of the new owning company. The company is also reported to have bought the former German freight steamship Kurland, from the British Ministry of Shipping. She is a new ship and one of those delivered to Great Britain by Germany under the terms of the peace treaty. She is about 16,000 gross tons, and it is said will be placed in service between New York, Vancouver and Oriental ports.

The Northern Navigation Co. has decided not to run its s.s. Waubic between Penetanguishene and Parry Sound this year. The Penetanguishene, Midland and Parry Sound Boards of Trade have held meetings to consider the matter, and make suggestions to the company as to a continuance of the service.

Organization of Canadian Navigators Federation.

At a meeting held in Ottawa recently it was decided to amalgamate the Canadian Merchant Service Guild, Great Lakes Division and British Columbia Division; the National Organization of Masters, Mates and Pilots of America (as far as Canadian members are concerned); and the Masters, Mates and Pilots of the Atlantic Coast, under the name of the Canadian Navigators Federation, the membership to be confined to Canadian certificated officers.

The Canadian Navigators Federation is divided into Eastern Division, Quebec Division, Great Lakes Division and Western Division. The Eastern Division includes all waters east and south of Quebec Province, including Nova Scotia, New Brunswick and the whole Canadian Atlantic coast. Headquarters, Halifax, N. S. The Quebec Division includes all waters in that province. Headquarters, Montreal. The Great Lakes Division includes all waters west of Quebec Province to Alberta's eastern boundary, and is divided into the following districts: Collingwood, Port William, Kingston, Midland, Owen Sound, Port Arthur, St. Catharines, Sarnia and Toronto. Headquarters, Toronto. The Western Division includes Alberta, British Columbia and the Pacific Coast. Headquarters, Vancouver. Each division has a board of managers, composed of the vice presidents from each of its districts. It elects its own officers and manages its own business, which is attended to at its headquarters by the division secretary.

The officers of the Great Lakes Division are: President, Capt. Alex. McIntyre, Collingwood; Treasurer, F. A. Cook, Toronto; Secretary, Capt. L. Simpson, Owen Sound, with office in Toronto; Trustees, Capt. Edward Robinson, Goderich; Capt. Jas. Tyndall, Midland; and Capt. Jas. Woolner, Collingwood. The office is at 99 Sun Life Building, Toronto.

The Secretary of the Western Division is Capt. A. Goodlad, 1105 Rogers Building, Vancouver, B.C.

Vancouver Harbor Commission.—The Board of Railway Commissioners has been asked by the Vancouver, B.C., Harbor Commission to grant it running rights over a portion of the Great Northern Ry. lines in connection with a line between the Dominion Government wharf, and the Ballantyne pier, put under contract recently. The line proposed to be built by the Harbor Commission is "to begin on the C.P.R. right of way, south of the Dominion Government wharf, thence west along the north side of the right of way to near Vernon Drive, thence curving slightly and running south of the two spurs lying opposite the B.C. Sugar Refinery to opposite Bayview Ave., thence curving and running northeasterly across the Great Northern Ry. dock spur, at grade, to Ballantyne Pier."

Grand Manan Fisheries Ltd. has been incorporated under the New Brunswick Companies Act, with \$49,000 authorized capital and office at Grand Harbor, N.B., to take over the fishing business carried on by S. D. Guptill, M.L.A., Grand Harbor, and in connection therewith to own and operate ships and to carry on a general fisheries business. The incorporators are S. D. Guptill, M. L.A., Grand Harbor, N.B.; W. B. Sellwood, Eastport, Me.; and W. R. Dresser, Calais, Me.

The s.s. Nascope's Ninth Annual Voyage to Hudson Bay.

By Capt. Edmund Mack, Superintendent, Bay Transport, Hudson's Bay Co.

The s.s. Nascope, flagship of the Hudson's Bay Co.'s fleet of supply ships operating in Hudson Bay, sailed from Montreal, July 23, 1920, on her 9th annual voyage. Commanded by Capt. G. H. Mead, the Nascope last summer and autumn steamed 8,000 miles into the ice-infested waters of the sub-polar regions, and back, provisioning Hudson's Bay posts in the Labrador, Ungava and the Bay districts, completing her round of duty with the return to St. John's, Nfld., Oct. 18.

Missionaries, police, government officials and explorers look to the annual voyage of the Nascope or the Pelican as their only means of transportation from Canada ports to the vast territories lying athwart the Arctic circle northeast and west of Hudson Bay. Such men, scores of whom are called by duty into

Capt. Edmund Mack

the land where H.B.C. fur posts are the sole civic and commercial centers of a sparse and savage population, are carried thence by our ice breaking ships. And when their work is finished we bring them home again. Each summer the Nascope and her sister ships victual the north against the rigors of another winter. They carry the comfort, sustenance, good cheer, letters and news of the great world outside to the brave men who stand guard at the company's lonely outposts on the fringe of the Arctic sea; in winter they busy themselves in other waters until ice-locked straits which bar them from the Bay are open again or until the passage may yield to the punch of their armored prows and steel ribbed hulls.

In 1920, as in every other year that I have been with the Nascope on her round of duty in Eskimo land, men of the company's service and throngs of natives at the posts, strain eager eyes toward the horizon, watching for the first sign of the Nascope's smoke. As she swings to anchor for just once each year in each of these far off ports, men, women, children and dogs crowd the beaches. Always is the welcome warm and hearts are light when our ship comes in. The H. B. C. ship and her crew are the perennial summer Santa Claus to these people in the land of the reindeer and polar bear. The arrival at a post is the signal for the beginning of hard labor, unloading food and wares for the post; but into the period of our brief visit is always crowded a whole season of joy and merry making. Eskimo women roll barrels and pack boxes from wharf to warehouse; everybody joins gladly in the work of unloading supplies. Then, as we weigh anchor, the people wave farewell and go back to their silent

life, to work and wait, with accustomed stolidity, another day of joy and feasting when the Nascope shall once again show her funnel above the green waters of the Bay's horizon.

The passenger list of the Nascope on leaving Montreal, July 23, included the Eskimo murderer, Oungwak and his imprisoned captor, Sergeant Douglas, R.C.M.P., who bores the long arm of British law far into the Arctic regions last year in his search for the man-killing huskie. A

The Nascope in Ice Fields Off Wolfstenholm.

magistrate and three other policemen were members of the party escorting the murderer back to Chesterfield Inlet for trial. Of our departure from Montreal, Jock Doherty, second engineer of the Nascope, and ship's poet, sings:—

We sailed away at break of day,
The sun smiled down as if to say:
"Enjoy me now while you've the chance,
For soon I'll hide my countenance";
And sure enough next day the fog—
Well, you'll see it mentioned in the log.

Capt. Mead carefully nosed the steamer along through dense fog. For hours, near Cape Race, the blatant shriek of the foghorn came to us from out the void, giving the captain the location of the cape. Stealing up the coast at low speed, we put safely into St. John's, Nfld. Here we took aboard Ralph Parsons, District Manager, H. B. C., Labrador District, and added to the Nascope's bunkers her final supply of coal. Well did we know that every pound of steam

Landing Cargo, Port Burwell

power might be required to punch our big icebreaker through the freezing straight of the northland. We cast anchor, July 29, and sailed away to months of duty that were to be tinged with adventure at every turn and yet, unhail, flavored with most unromantic, grueling work. Again, we harken to our doughty engineer as he sings:

A few days' uneventful trip
And then the ice sets in its grip
Combined with fog we plough right through

Until Port Burwell comes in view
We strain our eyes for every man
But fail to see the Pelican

The harbor at Burwell was churning full of ice, in which it was almost impossible for our steam launch to make headway during the transfer of supplies for the post. The unloading of a year's supplies was accomplished with greatest difficulty over the slippery ice. With duffles replacing shoes, however, the men were able to gain a footing on the ice and accelerate the task of removing cargo to the shore. And the second engineer, with light Gaelic heart, chattered cheerily:

The cargo finished, we staid away
And plough through ice for all that day
We see a walrus and a seal
Disport themselves—and seals are dead!
Our pipe, to fire a shot o'er water—
To hit them is another matter.

We steam along for weary hours
Through fields of ice, past icy towers
And scan the coast for our landmarks
Which you won't find upon the charts
And keep the cameras busy too
Because there's nothing else to do

Steaming into Lake Harbor (Baffin's Land), much to our astonishment we found anchored there the Pelican, another of the H. B. C. supply fleet. She was crippled, we learned, having been rammed by an iceberg which wrecked a blade of her propeller. She had fortunately been got safely into Lake Harbor under sail, with the assistance

of the men of the post and a motor boat, The Pelican, although now a veteran in the H. B. C. service, 20 years ago sailed the seven seas as a British man-of-war, sister ship to the famous Condor. With her hull of heavy teakwood, the Pelican is well equipped for duty as an H. B. C. ice punching supply vessel. With the aid of reinforcements arriving aboard the Nascope, Capt. R. Berger and Chief Officer L. W. Jones of the Pelican were working to effect repairs to their ship. And Chief Engineer Doherty, who is well known to the stam of our crew, hailed

Capt. H. Mead

A hurried examination of the Pelican's hull showed that the damage was not serious. When at low tide the water was shallow, the ship was able to move forward. The repairs were completed in a few days.

The Pelican was able to move forward at low tide. The repairs were completed in a few days.

The unloading of the Pelican was rendered extremely difficult and hampered by the uncommonly great rise in the tide in that region. The difference in the two levels is approximately 10 ft. Several times at low tide, during the placement work on her propeller, the

Pelican lurched perilously to starboard, as we had run her stern upon the beach at high tide, and the receding waters left her suspended at in a position which, without dry dock facilities, was hazardous to both ship and repairers.

Putting out of Lake Harbor on August 12, the Nascope steamed for Wolstenholme. As the bard of our boat so aptly scans it:

Next Wolstenholme or Eric Cove,
A place with which we're not in love;
The harbor's open to the sea;
On either hand high cliffs you see;
The Post lies snuggled in the valley,
Down which winds blow continually.

The Pelican Beached for Repairs.

their hitch to the launch and flung them upon the stony beach in sorry wreckage. The crew endeavored to salvage the boats and waded the icy waters until numbed with cold. Night came on and still we labored at the wreck by the beams of a searchlight. On the following day some of the crew again waded into the breakers and spent some hours in a final desperate attempt to get the cargo boats off the rocks. They were compelled to abandon the lashed boats eventually to the further fury of the waves, though they succeeded in salvaging the steam launch.

On August 16, we sailed from Wolstenholme, bound for Coat's Island, with the schooner Nannuck (White Bear) in tow. The Nannuck was to redistribute the supplies allotted her from our cargo to the company's outposts among the Eskimos of that district. The Nannuck

H.B.C. Store, Lake Harbour, Baffin's Land.

is skipped and manned by the company's Eskimos, and ably handled by them under all circumstances. As our versatile engineer muses now in satirical vein:

Nannuck is dropped at Coat's Island bleak—
A lonelier spot would be hard to seek—
But such like trials will men incur
When they go out in search of fur.
On woman's dress a part will go,
But not for warmth—just for show.

And then romps on with rhyme in cheerful tune:

So now at last we're southward bound
To a little spot in Charlton Sound;
We steer our course past rocks and shoals
And try to find the deepest holes,
Past islands called the Bears and Twins,
With nerves on edge like bears and pines.

But sounds a note of wild alarm:

Till Weston Island we draw near,
A reef extends far miles from here,
Which for the unwary form a trap,
It is not marked on any map;
With ease the ship a hurdle jumps,
And the cook exclaims, "What ho, she bumps!"

Arrived at Charlton, Aug. 21. Here I left the ship and proceeded to Moose

Mrs. J. S. C. Watt, Capt. Mack, Capt. Mead, "Lotfy" Stewart and staff at Wolstenholme.

Factory to inspect the company's schooner Fort Churchill, which was lying-in there. At Moose I found that the mechanical science of civilization had sailed into this first outpost of the wild north in the form of a hydroplane of the Ontario Government. Before the airman took flight for the south I mailed letters home to Montreal via his plane, this mail going out in 24 hours, whereas, ordinarily, 12 days are consumed.

Receiving aboard a new passenger, Dr. R. B. Stewart, of the Indian Department, Sept. 1, we steamed for Churchill. One of those dense fogs which had troubled us for a large part of the voyage, cast a pall upon the coast as we neared Churchill anchorage, completely obscur-

H. B. C. Depot, Charlton Island.

ing the company's two forts, which, in fair weather, are distinguished landmarks of the historic place. For three days we hovered off the port, unable to navigate the Nascope to her accustomed berth at Churchill. At last the great fog lifted and, as the second engineer records in his inimitable way:

At last we enter and clear the bar;
It's the most dangerous harbor here by far.
We anchor in a certain place
Just clear of that mad river's race;
Its current runs at quite right knots,
Even at half, it's swift in spots.

Forthwith the year's supplies for the post were put ashore. The coastwise auxiliary schooner, Fort York, was filled with cargo for York Factory, Trout Lake and Weenusk Posts, on the west shore to the southward. Members of the R.C. M.P. whom we had carried from Montreal with their prisoner here found that the motor boat which they had expected to be there for their use, had been wrecked on the way into port. To our passenger list were added before sailing from

Gateway, Old Fort Prince of Wales, Churchill

Churchill on Sept. 7, C. Harding, H. B. C. District Manager at York Factory, also Sergeant Thompson.

Arriving at Chesterfield, Sept. 14, the

Nascope landed supplies for Repulse Bay and Baker Lake. The new motor tug, Caribou, was launched, to begin her duties in northern waters by towing these supplies to their destinations. Passengers who embarked at Chesterfield were Father Turquetil, Father Puget and Br. Gerard of the Roman Catholic Mission.

Back to Churchill we steamed on Sept. 21, to put Mr. Harding ashore before starting on the return leg of our voyage. Headed for Wolstenholme again, we ran into the great ice floes driving down Fox Channel, Sept. 23. We were none too early to avoid being locked in the Bay for nine months. Fox Channel is where the "choke" come earliest. Putting on steam, the Nascope smashed and butted through the ice and raised Wolstenholme on Sept. 24, buffeted by the usual stiff gale off the big Cape. Here we learned that the Pelican had again disabled her propeller in the ice fields. She was un-

H. B. C. Storehouse, Chesterfield.

able to proceed south and perform her allotted duty of erecting a new trading post to be named Port Harrison. It was decided that the Nascope should assume the task. We loaded lumber and supplies, and, as the gifted Doherty runs on in verse:

What cargo she has left we load,
And turn back again upon the road
To erect a new department store
Upon some ill-frequented shore.
We can't just find the place somehow—
"Port Harrison, Oh, where art thou?"

The cargo's landed in a tent,
The architects o'er plans are bent:
To build the stores they have begun,
Each day we count them one by one:
The dwelling house is a work of art
The swiftest mansion in this part.

The Nascope Punching Through the Ice of Fox Channel.

The stores are built, so off we set.
We leave some men the turn to get:
We wish them luck—our wish sincere—
And hope to call another year.
At last we're on the homeward track
It's past the time that we're due back.

We sailed from Port Harrison, Oct. 4, leaving L. A. Learmouth, a veteran of the service, as manager of this newest H. B. C. post. Touching again at Wolstenholme, Oct. 6, we steamed straight for Lake Harbor and took aboard as passengers there the Rev. Fleming, Anglican missionary for Baffin's Land, and Mr. Melton of Cape Dorset. On Oct. 8, the Nascope, in the teeth of a heavy gale, laid her course for Port Burwell.

All passengers were miserable from seasickness until we made port. At Burwell we picked up J. Livingstone and W. McGibbon, bound from Port Chimo, Ungava, to Scotland, on leave of absence from the H. B. C. service—their first time out in seven years. Rev. S. M. Stuart, of the Anglican church, also came aboard at this port.

On Oct. 13 we sailed from Burwell and moving through Gray's Straits breasted the Atlantic. Meeting a heavy

New H. B. C. Post at Port Harrison.

sea, the Nascope pitched, rolled and bucked until sea sickness again overtook many of our passengers. Steaming into the harbor at St. John's, Newfoundland, Oct. 18, the eventful 1920 voyage of the Nascope into the Bay came to an end. As we took train for Montreal we saw the last of the Nascope, ready to sail for Savannah to load cargo for Bristol and Glasgow.

The foregoing is reproduced from The Beaver, a publication issued by the Hudson's Bay Co., in the interests of its staff.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

British Columbia, Vancouver Island.—A light has been established on beacon at first narrows, on edge of shoal off mouth of Franklin River in Alberni Canal. It is a five pile dolphin, surmounted by a white wooden circular day mark and lantern, showing an occulting white acetylene gas light from a lens lantern.

Juan de Fuca Strait.—The District Communication Superintendent of the U. S. Navy Yard, Puget Sound, has announced through the Branch Hydrographic Office at Seattle, Wash., that radio station has been established on Swiftsure bank light vessel and is now in operation. Watches will be maintained in accordance with the regulations, and the operator will listen in for five minutes at the beginning of each hour from 8 a.m. to 9 p.m., inclusive. This station will be able to handle traffic on wave lengths of 300, 378, 476, 600, 756 and 952 meters. Personal and commercial messages will not be handled. Local weather forecasts will be sent broadcast on 600 and 952 meters at 8 a.m., 12 noon, 4 and 8 p.m. daily.

New Brunswick, Chaleur Bay.—The light at Petit Rocher will be moved, without further notice, to a new position at bend in breakwater, 185 ft. from its former position. Mariners are warned that the light not being on the end of the breakwater they must give it sufficient berth to clear the breakwater when entering the harbor.

Bay of Fundy.—The two conical buoys placed by U.S. authorities in 1918, north-west of Campobello Island, have been discontinued.

Nova Scotia, Cape Breton Island.—The Public Works Department has dredged berths as follows:—McKinnon's wharf; on the north and south sides the berths have been dredged to a least depth of 16 ft. from the outer corner of the

wharf shoreward for 150 ft., and for a width of 40 ft.; Ingraham's wharf, on the north side the berth in front of the coal shed is 95 ft. wide, with an average length of 60 ft. and was dredged to a least depth of 15 ft.

Quebec, Saguenay River.—On the reopening of navigation, the 6th order electric fixed white light, on the east side of the river, about one mile above Grosse Roche, will be replaced by an occulting white acetylene gas light, shown from a lens lantern, which will be unwatched.

United States Shipping and Shipbuilding Notes.

The U. S. Bureau of Navigation reports 92 sailing, steam, gas and unriggered ships, of 208,967 gross tons, built in the U. S., and officially numbered during Jan. 1921.

The U. S. Navigation Bureau states that on Jan. 1 U. S. shipyards were building, or under contract to build for private owners, 375 steel ships, of 1,067,293 gross tons, compared with 293 steel ships of 1,123,946 gross tons on Dec. 1, 1920.

The National Merchant Marine Association meeting at Washington, D.C., recently, adopted eight resolutions embodying policy for development and maintenance of U. S. merchant marine, as follows:—Immediate and faithful enforcement of Merchant Marine Act of 1920; placing Shipping Board personnel on permanent basis; extension of government aid to U. S. shippers; establishment of new mail, passenger and cargo routes, so that private capital may eventually gain control; cessation by Shipping Board of practices of allocating ships to services already established; creation of equitable plan of relief for U. S. shippers engaged in competitive trades with foreign vessels; permanent enrollment of competitive officers and men of merchant marine into Naval Reserve; maintenance of Great Lakes naval training station.

Alberta & Arctic Transportation Co. Ltd. has been incorporated under the Dominion Companies Act with authorized capital of \$750,000, and office at Toronto, to take over part of the assets of the British Columbia Express Co., and also of the Lamson & Hubbard Canadian Co. Ltd., and to carry on a general shipowning, navigation and transportation business. It also has power to own and operate elevators, wharves, docks, oil tanks, pumping stations, tank cars and ships and pipe lines, for retaining substances. The incorporators are: A. Hutchison, C. Millar, G. R. Sprout, J. C. Thomson, W. T. Jones, and W. W. McKeown of Toronto, and W. J. West, Ashcroft, B.C.

Pictou Harbor.—A Dominion Government proclamation, dated Ottawa Jan. 26, declares the harbor of Pictou, N.S., to be a public harbor, the harbor including and consisting of all the water space and beach, up to high water mark, within a line drawn from Logan point to Roaring Bull point, as far up as the tide elbs and flows, and extending in the East River to the southerly boundary of the Town of New Glasgow.

The Sannie Transportation Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$2,000 authorized capital, and office at Vancouver, to own and operate ships of every description, and to carry on a general transportation business for passengers and freight.

Canadian Pacific Ocean Services Ltd. Management.

It was apparently assumed in England recently that the C.P.R. would again take over the direct traffic management of its ocean steamship line, as the Montreal Gazette's London correspondent cabled Feb. 16 that Sir Thos. Fisher, General Manager, C.P.O.S., had said in commenting on the matter "It will probably mean a reduction in the staff, but not the disappearance of the principal figures in the Canadian Pacific Ocean Services." The correspondent added:—"Sir Thomas said that the new arrangement was rather in the direction of increased efficiency. The understanding is that the C.P.O.S. organization will continue to operate the C.P.R. fleet, but that in all other respects things will return to the status which they were in prior to 1916, when the Allan Steamship Line was absorbed."

Montreal papers stated that the C.P.R. and C.P.O.S. officials, when interviewed on the matter, were reticent, but did not deny that changes were contemplated, and a Montreal press telegram of Feb. 17 said that G. M. Bosworth, Chairman, C.P.O.S., who is on his trip to the United States, would retire on his return, and that C. E. Ussher, Passenger Traffic Manager, C.P.R., would become a C.P.R. Vice President, in charge of Ocean Services. Canadian Railway and Marine World has been unable to obtain any definite information further than that the arrangement referred to by Sir Thos. Fisher is under consideration, but that apparently no changes are contemplated in the management and that no new positions are to be created.

Tank Steamships for Molasses Trade. The Pure Can Molasses Co. of Canada Ltd., which is operating steamships between the West Indies and Canadian ports in the molasses trade, will, in addition to the s.s. Julian Kew, the details of which were given in a previous issue, the steamships Thevenet, R. Reynolds, and the British steamships Imira, Rochelle and Manx Isles. The Delmira was built at Sunderland, Eng., in 1908, of steel, and is a screw driven, an engine of 341 h.p., and has the following dimensions, length 122 ft., breadth 45.2 ft., depth 22.2 ft., draught 14.30 gross, 2,211 net; the s.s. Manx Isles was built at Glasgow, Scotland, in 1910, of steel, and is a screw driven, an engine of 248 h.p., and has the following dimensions, length 142 ft., breadth 44 ft., depth 21.2 ft., draught 13.90 net; the s.s. Rochelle was built at Aberdeen, Scotland, in 1911, of steel, and is a screw driven by engines of 125 h.p., and has the following dimensions, length 146 ft., breadth 46 ft., depth 21.50 net, 1,187 gross, 994 net.

The International Mercantile Marine Co. has announced that it is to be sold to the U. S. S. Franklin D. Roosevelt, a former U. S. S. Albatross, a battleship, which was converted into a transport, and is now in the service of the U. S. Navy. It was a matter of British nationality, which was changed in 1917, but was prevented from being sold to the U. S. Government. An agreement to sell these ships to British interests was drawn up, and on the formal request of the President was not concluded, the directors voting that the President's wishes be complied with, and the agreement officially cancelled.

Electric Drive for Merchant Ships.

The electric drive on a merchant ship has been tested successfully, and it has been learned that the United States Shipping Board will equip 10 large freighters with it, hitherto untried on commercial vessels. For the first time in Maritime history, a large freighter, with its shaft driven by electricity, was put to the test when the Shipping Board's s.s. Eclipse sailed from the South Brooklyn yard of the Tobo Yacht Basin and cruised out to sea past Ambrose Channel.

The Eclipse, an 11,800 d.w. ton cargo carrier, built on the Pacific Coast and originally outfitted with a turbine engine, made a speed of 11½ knots, ploughed through the water without creating noticeable vibration, and made a marked impression upon the group of shipping men invited to attend her trials.

While Admiral Benson, shortly after he assumed direction of the Shipping Board, announced that the U.S. might be expected to blaze the field as regards the adoption of the latest types of propulsion, it was not learned until recently that the Board had placed a contract with the General Electric Co. for 10 sets of generators and motors. These will be installed immediately.

The fact that the Eclipse was being converted into an electrically driven steamer was known only to a very few, it will come as a surprise to the shipping world at large to learn that such progress has been made. The electric drive—strictly a U.S. invention—has been tested out on American bargains, but has never before been installed on a merchant ship. It is said that the electric drive is a little more expensive than turbines, but it is said to be far more simple to operate, and promises to reduce the cost of repairs to a minimum.

The conversion was accomplished by a rather simple installation. An ordinary generator, driven by a steam turbine, and similar to the generators found in an ordinary inland power house, generates the current, which is transmitted to a power motor. This is about 12 ft. in diameter, and is attached directly to the shaft. While the electric drive is more expensive than the turbine or the reciprocating steam engine, it is predicted that the cost will be brought down if any considerable number of installations were made.—Journal of Commerce, New York.

Editor's Note.—We think that the New York Journal of Commerce is in error in referring to the s.s. Eclipse as the first freighter to have its shaft driven by electricity. Canadian Railway and Marine World for Sept. 1912 stated that the Montreal Transportation Co. had ordered, in England, a ship for the lake and canal trade, which would be a departure from the customary means of propulsion, as electricity would be used the first time for a ship of such a size. A description and plans of the ship were published in Canadian Railway and Marine World in Nov. 1912, with drawings of the Diesel engines, and the means of driving the propeller by electricity. It was also stated in the same issue that electric ship propulsion would shortly receive its first trial, as a naval fuel ship, Jupiter, equipped for such driving, had been launched in the U.S. Navy Yard at Mare Island. Our issue of Aug. 1913 referred to the launching of the s.s. Tyne-mount at Newcastle-on-Tyne, Eng., for Montreal Transportation Co., and in Feb. 1914 it was stated that this ship had

sailed from the Tyne on her maiden voyage to Santander, Spain. We were advised subsequently that the ship had not been accepted by the Montreal Transportation Co.

We are informed that the Montreal Transportation Co. did not accept the ship, owing to defective working of her machinery, that the company which had the contract for building her became insolvent, that she was bought by Swan, Hunter & Wigham Richardson Ltd., who removed the electric system and replaced it with a steam plant, and that she ultimately came out to Canada in 1915 as the s.s. Port Dalhousie, and was operated by Forwards Limited, of Kingston, Ont., and afterwards went into ocean service and was sunk during the war.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will be entered into with conditions that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Whiting Corportion, Harvey, Ill., has issued "Ladies," catalogue 156, describing and illustrating its complete line of foundry ladles, including a new style, helical, worm geared, crane ladle, and a new style teapot spout ladle, having the spout inside the bowl.

Diamond State Fibre Co. of Canada Ltd. will move, early in April, to new premises, 10 Wiggle Building, Carlaw Ave., Toronto, where it will have about double the space now occupied. A show room will be equipped for displaying the company's products, and a private railway siding will facilitate prompt shipments. T. J. MacFadden, who has been in the company's head office at Toronto for some months, is now covering western territory.

The Independent Pneumatic Tool Co., Chicago, Ill., is now offering for sale a special Torq rotary wire brush for use on the no. 71 portable pneumatic grinder and no. 6 electric grinder. The brush attachment, it is stated, makes two tools in one, as the no. 71 grinder can be used with emery wheel, and with very few changes the brush attachment can be added. The brush which is attached to the no. 6 electric grinder is smaller, because of a higher number of revolutions per minute and requires a few attachments not necessary on the no. 71 pneumatic grinder.

Transportation Conventions in 1921.

The names of persons given below are those of the secretaries, unless otherwise mentioned:—
Mar. 15 to 17.—American Railway Association, Division 4, Engineering, Chicago, Ill.; E. H. Frick, 411 South Dearborn St., Chicago, Ill.
May 11.—Railway Accounting Officers' Association, Atlantic City, N.J.; E. R. Woodson, 1,116 Woodward Ave., Washington, D.C.
May 23 to 26.—Master Boiler Makers' Association, St. Louis, Mo.; H. D. Vought, 95 Liberty St., New York.
May.—International Railway Fuel Association, Chicago, Ill.; J. G. Crawford, 702 East 51st St., Chicago, Ill.
June 8.—Railway Accounting Officers' Association, Atlantic City, N.J.; E. R. Woodson, 1,116 Woodward Ave., Washington, D.C.
June 22 to 25.—American Railway Association, Division 5, Mechanical, Atlantic City, N.J.; V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.
June 20.—American Association of Freight

Agents; R. O. Wells, Illinois Central Rd., Chicago, Ill.
June 20.—American Train Dispatchers' Association, Kansas City, Mo.; C. L. Darling, Northern Pacific Ry., Spokane, Wash.
Aug. 24 to 26.—American Association of Railway Station Agents, Kansas City, Mo.; J. Rothschild, Union Station, Kansas City, Mo.
Sept. 20 to 22.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.; J. C. Andrews, Chicago & North Western Ry., Sterling, Ill.
Oct. 4 to 6.—Maintenance of Way Master Painters' Association, Buffalo, N.Y.; E. E. Martin, Union Pacific Rd., Kansas City, Mo.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:

American Association of Port Authorities. M. F. Fennell, Jr., 57 Common St., Montreal.
Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m., E. A. Pinkston, Belleville, Ont.
Canadian War Demurrage Bureau—W. J. Collins, Manager, 160 St. Nicholas Building, Montreal.
Canadian Electric Railway Association—A. Eastman, 70 Bond Street, Toronto.
Canadian Freight Association (Western Lines)—G. C. Ramsay, 909 Shaughnessy Bldg., Montreal.
Canadian Freight Association (Western Lines)—W. E. Armstrong, 100 Dundas St. W., Toronto.
Canadian Railway Board of Adjustment No. 1.—R. Chapple, 263 St. James Street, Montreal.
Canadian Railway Club—W. A. Booth, 131 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.
Canadian Traffic League, A. H. Thorpe, 25 Balmaw Road, Toronto.
Domestic Marine Association—F. King, Counsel, Kingston, Ont.
Domestic Ticket Agents' Association—E. de la Hoek, London, Ont.
Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hill Hill, Montreal.
Club of Railway Men—W. A. Booth, 131 Charron St., Montreal.
Engineers' Club of Toronto—E. B. Wolsky, 94 King Street West, Toronto.
Engineering Institute of Canada—F. S. Keith, 176 Randolph St., Montreal.
Express and Transfer Association of Canada—C. N. Ham, Montreal.
General Agents and St. Lawrence River Rate Committee—L. E. Storey, 310 G.T.R. General Offices, Montreal.
Hydro Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.
International Water Lines Passenger Association—M. K. Nelson, 89 Chatham Ave., Buffalo, N.Y.
Niagara Frontier Summer Rate Committee—James McLaughlin, Hamilton, Ont.
Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.
Railway Association of Canada—C. P. Riddell, Montreal.
Shipping Federation of Canada—Thos. Robb, Manager, 102 St. Sacrament Street, Montreal.
Transportation Club of Toronto—W. A. Gray, 257 Roxton Road, Toronto.
Transportation Club of Vancouver—C. E. Blaney, Travelling Passenger Agent, Canadian Pacific Ocean Services Ltd., Vancouver, B.C.

Sydney Drydock Project.—The question of the proposed drydock at Sydney, N.S., came before the city council recently on an application of the Sydney Foundry & Machine Works Ltd., for the closing of a road, in connection with the proposed construction. The company stated that it was prepared to proceed immediately a subsidy in aid was granted by the Dominion Government, under the Dry Dock Subsidies Act. The council appointed a committee of three to arrange an interview with the Government, to urge the importance of granting a subsidy.

THE VICTORIA ROLLING STOCK & REALTY CO. OF ONTARIO LIMITED.

NOTICE is hereby given that the Annual Meeting of the shareholders of the Victoria Rolling Stock & Realty Company of Ontario, Limited, will be held at the offices of Messrs. Oiler & Hadden, 100 Queen Street West, on Wednesday, March 2, 1921, at twelve o'clock noon, for the reception of the Annual Report and election of directors for the ensuing year.

By order,
G. C. CHISHOLM,
Secretary.

Toronto, February 21, 1921.

Canadian Railway and Marine World

April, 1921

Some Phases of Railway Operation in Canada.

By Grant Hall, Vice President, Canadian Pacific Railway.

Grant Hall, Vice President, C.P.R., Montreal, addressed the New England Railroad Club, in Boston, Mass., recently, as follows:—I have no doubt that all of you here will appreciate that a railway such as the Canadian Pacific, extending as it does from ocean to ocean, going through such a diversified territory, presents a good many problems that to the operating man are decidedly interesting, if nothing else. Our main line proper extends from Montreal to Vancouver, 2,880 miles. Montreal, for about seven months in the year, is our ocean port. Our line extends further along the banks of the St. Lawrence River to the City of Quebec, 180 miles. A portion of the shipping in summer is taken care of at Quebec, because water conditions are not always satisfactory for the bigger ships to come up to Montreal. In winter, West St. John, N.B., is our port, our line extending from Montreal about 487 miles east to St. John, and to the southeast, as you call it, or south, as we call it, to Newport, where we connect with the Boston & Maine R.R. Altogether we have something like 13,770 miles of the C.P.R. We add to that a little over 6,000 miles when we take in the lines which we consider our subsidiaries, or which run in very close connection with us in the United States. We also have ships on the Atlantic and Pacific Oceans, running in connection with the railway, with a fleet of coastal vessels on the Pacific, numbering in all about 54. Then we have a further number of 26 ships on our British Columbia inland waters and the Great Lakes. All these ships, of course, are run directly not only in connection with the railway, but they are practically run as a part of the railway, except what are commonly called the deep sea ships on the Atlantic and Pacific, which could not possibly run on a time table such as we are supposed to run a railway on.

We have, in winter, our greatest troubles. At the eastern end of the line we have snow problems about the same as you have yours in this eastern territory, though perhaps between St. John and Montreal they may be more severe and continuous and the snowfall slightly heavier. Where our line skirts the north shore of Lake Superior, a rather bleak country, we have a heavy snowfall, and then following across the prairies the temperature ranges as low as 60° below zero in winter. Then, crossing five ranges of mountains, we have at last reached the Pacific Ocean.

Not very long ago it was necessary for me to speak to a commercial organization. It was indirectly connected with a subject that interests us and also interested you not so very long ago, viz., the increase in freight rates, or increase in remuneration for the work we have to do. I asked them if they had any idea just what the average locomotive was called upon to perform in its work on a railway. We were in a rather large hotel. I asked the manager how many boilers he had down stairs. I may say

that in connection with this hotel the heating and lighting plant is also a central plant for other concerns. He said he had six boilers down stairs of 300 h.p. each, 1,800 h.p. in all. I turned to those gentlemen and said, "I think I am not far out in saying that any locomotive that takes the average passenger train tonight on any railway in this country, with the thermometer hovering around zero, with an average train of 10 cars, will have to develop in horsepower per hour just about as much or perhaps a little more than this gentleman's six boilers are doing down stairs." I said, "When you come to take that into consideration, and think that you are depending upon one man to perform that, going through space, under all sorts of climatic conditions, I don't think that you are giving the railways the credit that they are entitled to." I understand there are some technical gentlemen here tonight. My figure may be a little off, but I don't think it is very far. If it is, I think it is on the safe side.

We find it necessary on the C.P.R. for that stretch of territory to have 187 snow ploughs. There are 37 rotarys. Though our rotarys are practically used in the mountain sections, there have been occasions when we found it necessary to take them further on to the prairies, but very seldom. As a rule, they are simply used for clearing slides, and so on, in the mountain territory. We are very strict in regard to our snow fencing. Snow fencing at all vulnerable points is absolutely something that we must take care of every year. We use temporary snow fencing in the shape of slabs; we use ties that happen to be on the ground, placing them on end, end when we can get permission from the owners of the land near us, we have panel fencing that we put in and remove every spring. We have tried planting trees along the right of way. We have something like 65 miles protected in this manner. The principal difficulty that we have had in that connection, particularly in the western country, is to get a tree that will grow in that territory, and under those climatic conditions, and maintain any kind of foliage in winter. The evergreen in this eastern country of yours, I should think, is especially adapted to it, and I understand some of the eastern railways are using it now.

Our weather reporting system, we think, very complete. Every morning and evening there is a weather report sent over the whole system from each headquarters point. If there is any danger of a heavy snowfall, or if weather conditions are unfavorable, we do not in any case allow our freight trains out. We have it distinctly understood that the train dispatcher, the local superintendent, who must be fully responsible for these things and are held so, must not allow freight trains out on the C.P.R. unless there is every reasonable chance for them to get through. It is considered a very serious matter if a freight train gets out and finds weather condi-

tions existing on the road such that it cannot get through; it is a very serious matter indeed for the superintendent.

In the mountain territory we have also found it necessary to go to the use of snowsheds. Any of you who have ever passed over our lines to the Pacific coast or to the south will know what that means. The Great Northern and some of the railways to the south of us have found it necessary. We had altogether gone to the expense and trouble of building permanent or concrete snowsheds. We have not done that; we have not about seven miles of snowsheds; we were able to eliminate four miles of these when we pierced Mount Donald with a 5-mile double track tunnel. We were able to eliminate 4 miles of these snowsheds by going under the mountain instead of over the top of it.

There is another matter that I would like to mention in connection with the snow troubles, and that is the question of cleaning out sidings. We have a very rigid rule that not only has the main line to be ploughed, but all passing tracks are to be ploughed out at once upon the cessation of a heavy storm. We will not under any circumstances allow cars to be set out on passing tracks. Every operating man knows that there comes a time, through locomotive failure or some other cause, when it is absolutely necessary to clear your main line and put a train on a passing track. The dispatcher's first duty is to start at once everything out of the terminal to clear that passing track, and absolutely no excuse of any man is accepted unless that passing track is at once cleared and kept clear. If you have a single track and heavy business moving over it, every operating man here knows full well the necessity that all your passing tracks be clear, so that there can be no question of a train getting through quickly.

On the C.P.R. we have all classes of freight to handle. The heaviest, if I might say it, the largest or the greatest volume of any traffic that we have, is our grain traffic in the west. The 1915 crop was the heaviest that we were called upon to handle. That was 75,000,000 bush of wheat. The grain belt of western Canada practically extends over 500 miles. The crop is moved to the head of the lakes at Fort William, there elevated, taken across the Great Lakes, there elevated again, and taken from there to the seaboard in cars. The largest portion of this movement has to take place between Sept. 15 and Dec. 15. Some of our friends to the south of us, in days gone by, when our cars were a good deal more scarce than they are now, used to think that we were a little bit stingy in restricting absolutely the use of our cars. Every one of you will appreciate the absolute necessity of getting the largest amount of equipment, of getting the largest number of cars that we possibly can into the western territory prior to Sept. 15, so that the worst possible condition of delay in getting the crop moved to the seaboard by Dec. 15, for as large

a portion as possibly can be moved. In 1915, the period I refer to, when we had our largest crop, we succeeded in moving 142,000,000 bush. of wheat and 31,000,000 of coarse grains to the head of the lakes in that period. The average daily movement into Fort William was 1,018 cars for the three months, and the biggest for any single day 1,521 cars.

There is another matter that we are watching very closely, and that is the tendency that seems to creep into every railway that I have ever had any knowledge of, viz., the running of fast freights. Fast freights mean, as a rule, reduction of tonnage. I am talking now about the regular fast time freight that some of us have tried to run. It means the reduction of tonnage. It means detention to other classes of freight, and the consequent payment for detention to crews in other classes. I have been told several times that the shipper wants fast freight. I am not too sure about that. I cannot take issue with some of my traffic friends here on that point, because perhaps they might with good reason say that I am not as close to the shipper as they are, but I will say this, that any shipper that I ever met would be a good deal better satisfied with regular freight than he would with any fast freight. At present, with wages and cost of material mounting the way they are, it is absolutely necessary, in my opinion, that every railway should get the full use of a locomotive on every trip that it makes over the road, and that cannot be done, in my opinion, with fast freights, and we do not run them. The same thing, I think, applies more or less to fast passenger trains. Some years ago there was a regular craze for the fast passenger train. It resulted in a race on the part of some of the railways to maintain the fastest schedule. As a result of this, in the case of the freight schedules, what the great majority of the people want is a dependable passenger service, where they can be assured of arrival at a destination at a given time, rather than so much speed. The craze that I speak of induced various railways to engage in ruinous competition with each other, establishing train services that were not warranted, in an effort to secure fast travel by what I may term "body-snatching." We have, on the C.P.R., attempted in every case to cut out these so called fast passenger trains and absolutely cut out the fast freight trains. The result of these fast passenger trains was increased cost, and you have two or three passenger trains where there is really only traffic sufficient for one. It always appeared to me that we were successful, in war times anyway, with reasonable conference with the other railways, in always being able to arrange a schedule which would allow each road the traffic which properly belonged to it. That is what we are aiming at on the C.P.R., and that is what I believe is the proper thing for all of us to do.

We have provided ourselves, we think, with excellent repairing plants. I know perfectly well that there are a great many of you that have never been up in our country, and I think that perhaps some information in regard to some of these plants may be of interest to you. We have a large shop at Montreal, another large shop at Winnipeg, and another large shop at Ogden. I won't weary you by giving you the details of all of these shops, but will simply mention the Angus shops in Montreal, which

are the nearest to you. At present we have 32 miles of track inside of the fence at Angus, and inside of the fence are 200 acres. There is an annual pay roll for a normal year there of \$13,000,000. We can repair 720 locomotives each year. We have a building capacity of 50 new ones. The passenger car repairs are 3,000 a year, and the building capacity is 180. The number of freight car repairs is 24,000 a year, and we can build 6,000. The shops are equipped with luncheon and rest rooms, fire fighting and protection force up to date in every respect. Yet at the same time we always find it necessary every 18 months or two years, thereabouts, or every year, to bring in some outside men and let them go over one of these shops to find out if there is anything that we have overlooked to bring it up to date, or that somebody else perhaps has got that we have not.

We have been a good deal interested in the north in the efforts that have been made by the U.S. railways in what I have heard described as your recuperative work after the roads were handed back by the Government. I don't know that it is generally known, but of course the Canadian roads were not placed exactly in that same position. During the war the control of the Canadian railways was not taken over by the Dominion Government. The management of these roads was left for themselves, as it had been, but the different heads of the roads were formed into an association. We were allowed the same authority exactly in maintaining our properties as we had before. The limitation, of course, and the only one that we had, was the drain on the man power, the commandeering of rolling mills, and certain other industries. These really were the only arrears that had to be overtaken by us. It is the transportation of the troops of the Canadian army and its equipment was under way, very expensive moves had to be made at times, but no one, I think, either here or in Canada, begrudged that, because that was an effort that went to advance the allied cause.

The C.P.R., like your eastern railways, has a large portion of its system engaged in handling products of highly organized manufacturing and industrial concerns, while it also carries the onus of pioneering in territories which are being brought under settlement and development. As an illustration of this, I may say that since the fiscal year ended June 30, 1914, we have put into operation or have under construction, 1,645 miles of new railway, in addition to which we have taken over for operation, or on behalf of the owners, a system of lines running into the Peace River country, 450 miles in extent, a total in all of 2,100 miles during the period above mentioned.

I do not suppose that I could say anything in connection with railways in Canada without a few words in regard to our Canadian National Rys. Within the last two years our Government has found it necessary to take over the Grand Trunk, the Canadian Northern, the Grand Trunk Pacific and the National Transcontinental, and the merging of five separate units into one national unit. The experiment of government control in the U.S. is different from the policy followed by our Government, in that your property was only commandeered for the duration of the war, but with the Canadian railways all securities, assets, etc., have been acquired by the Government and the lines are owned by the Government outright. The mileage of these Govern-

ment lines exceeds that of the C.P.R., their mileage being 20,752, and with the exception of the C.P.R., a few provincially owned lines and those forming part of U.S. systems, all Canadian railways have been nationalized. This problem of Government ownership, operating against a privately owned line, will, I have not any doubt, be watched with interest by you. We think that we offer a service on the C.P.R. that really is unequalled in any country, though I have to say it myself, and we insist on the handling of non-competitive traffic with as much care as we do competitive traffic.

Serving the large number of years that I have on the C.P.R., as I have been practically brought up on the road, I am pretty well known to the men from the oldest to the youngest. It has always been one of our prides that we think and feel sure we have loyalty from each one of them, which of course it is absolutely necessary to have if we are going to give that service to the public which they have the right to demand, and it is the object and wish of our executive that everything should be done to make conditions of employment as comfortable as possible. When I look back over the number of years that I have spent on the different portions of the C.P.R., the extreme weather and other conditions that men have been forced up against, the loyalty exercised in all cases contributed largely to the success attained by our road, and one reason certainly is the fact that the men all feel and know that the executive and directors of our company have their interest at heart and will see, as I said before, that everything possible is done to make their living conditions and working conditions comfortable.

Those of you who have read the C.P.R. annual report will have noted with what meticulous care and attention the maintenance of the road is made. There are five of the principal assets that have never been tabulated. First: The efficiency to which I refer, which commences with the vigorous effort that has always been in evidence to improve the condition of the property, reducing grade and revising our lines, enlarging terminal facilities, freight sheds, workshops and machinery, with a continual enlargement of motive power and other rolling stock, has made its facilities as modern and as fully abreast of the needs of its constituency as can be imagined, and these manned with the class of men I have referred to. In this connection I may say that at present we are constructing a larger sleeping car, dining car and other passenger equipment than is operating on any railway on the continent, and are turning out freight cars with a carrying capacity of 60½ tons. Secondly: The esprit de corps or morale of the staff, with jealous regard for the interest of the service as a whole and the zeal and confidence of individual and team service. And thirdly: The enthusiasm, the interest of the service as a whole which prevails in every branch. As we know, these qualities, particularly the one of enthusiasm will carry the man of ordinary abilities past an abler man who lacks them. It was this quality that enabled the citizen soldiers of your country, ours, and those of the allies, to meet and beat the splendidly equipped, trained and officered German army. Thirdly: The courtesy of the staff, I was going to say from the highest to the lowest, but I will say from the oldest to the youngest, as each branch of our service we look upon as of the highest standard,

and no matter with whom employees are dealing, I feel sure the public is always treated with the greatest possible po-

liteness and consideration. I venture to say that this spirit is not surpassed by any corporation in the world, and has

been taught and imbued into every member of our force from the inception of the railway

Regulations for Inspection of Railway Steam Boilers, other than Locomotive Boilers.

The Board of Railway Commissioners passed general order 330, Feb. 16, as follows:—Re suggested uniform regulations regarding inspection of railway boilers, other than locomotive boilers. Upon hearing the matter at Ottawa, Jan. 18, 1921, the Canadian National, Grand Trunk and Canadian Pacific Railways, and the Michigan Central and New York Central Railroads being represented, and what was alleged, in pursuance of the powers conferred upon the Board by sec. 287 of the Railway Act, 1919, and of all other powers possessed by it in that behalf, and upon the report and recommendation of the Board's Chief Operating Officer, the Board orders that railway companies adopt and put into force, not later than June 1, 1921, the Regulations Regarding the Inspection of Railway Steam Boilers, other than Locomotive Boilers, viz.

1. These rules shall apply to all steam boilers and their appurtenances, operated by railway companies within the Board's jurisdiction, except boilers of locomotives, or boilers used solely for heating, which carry pressure not exceeding 15 lb. per sq. in.

2. The chief mechanical officer of each railway company will be held responsible for the general design, construction, and inspection of all boilers covered by these rules. He must know that all inspections are made in accordance with the rules, and that the defects disclosed by any inspections are properly repaired before the boiler is returned to service.

3. The working pressure of each boiler shall be determined by the mechanical engineer, using the formula commonly used in determining safe working pressure, and after a thorough inspection and report by a competent inspector. The minimum factor of safety allowed shall be four. In determining safe working pressure, the maximum allowable stress shall be 7,500 lb. per sq. in., for staybolts and 9,000 lb. per sq. in. for round or rectangular braces supporting flat surfaces.

4. Each boiler shall be given a serial number by the operating railway. A metal badge plate, showing this number and the safe working pressure, shall be attached to each boiler.

5. Specifications of each boiler shall be kept on file in the office of the chief mechanical officer of the railway company. Within one year after this rule becomes effective, each railway company will file report (Form 1) with the chief mechanical officer of the railway company, and a copy with the Board, for each boiler subject to these rules, giving all the data called for thereon.

6. Each boiler shall have at least one safety valve, of sufficient capacity to prevent an accumulation of pressure more than 5% above the working pressure, and shall be connected direct to the boiler. Safety valves shall be set at a pressure not to exceed 8 lb. above the allowed working pressure. Working safety valves on boiler shall be tested each day boiler is in use. Failure of safety valve to open before an excess pressure of 10 lb. has been reached must immediately be reported to the proper authority and repairs made. Not less frequently than once each six months, all safety

valves on boiler shall be tested, and adjustment made if necessary. At this test, as well as at all other tests where the safety valves are adjusted, steam gauges shall be used, one of which shall be in full view of the person adjusting the valves.

7. Each boiler shall have a steam gauge, graduated to at least 50 lb. above the working pressure, connected direct to steam space of boiler, equipped with a suitable siphon, and with no more than one cock or valve between boiler and gauge. This cock to be located near steam gauge. Steam gauges shall be tested at least once each six months, or whenever any irregularity is shown, and shall also be tested before any adjustment is made of the safety valve. Each time gauge is tested siphone pipe and cock must be cleaned and examined.

8. Each boiler shall have at least three gauge cocks, and one at least, so located that the lowest reading shall be at least 3 in. above the lowest safe water line. Each waterglass shall be equipped with a valve at each end of glass, and with a blow-off or drain at bottom of glass. Gauge cocks, waterglass and water column valves, cocks, and connections shall be maintained in an operative condition, free from leaks, and shall be washed once each time boiler is washed. Suitable lights shall be provided for waterglass and steam gauge.

9. Before being placed in service, and not less than once each 12 months thereafter, each boiler shall be subjected to a hydrostatic pressure of 25% greater than the working pressure, and the boiler and appurtenances carefully examined while under pressure. After hydrostatic pressure has been applied, a thorough inspection shall be made of every accessible part of the boiler. Manholes shall be removed to permit of interior inspection. Boiler having lap joint longitudinal seams shall be examined with special care, to detect grooving or cracks at edge of seams. Water tube boilers shall be examined with special care, to detect blistering on the tubes, tubes bending, and leakage or corrosion where tubes are fastened to headers. Soot and cinders shall be cleaned from furnace and combustion chamber, and a thorough inspection made of the brick lining and setting, the fire wall, baffles, and grates. Threaded and flange joints on steam header, steam pipe, and blow-off line shall be examined carefully. After repairs are completed, the boiler must be fired up, safety valves set, and boiler and appurtenances examined. All cocks, valves, seams, pipes, flanges, and joints must be tight under this pressure. All defects disclosed by any of the above inspections must be repaired before the boiler is returned to use. A certified report of the inspection and repairs (Form 2) shall be filed with the chief mechanical officer of the railway company, and a copy sent to the Board.

10. Locomotive type boilers, working under a pressure of 125 lb. or more, should have the staybolts tested at least once each six months. Locomotive type boilers working under a pressure of less than 125 lb., and vertical type boilers, to have staybolts tested annually. No boil-

er shall remain in service with five or more broken staybolts.

11. Boilers shall be thoroughly washed as often as water conditions require. Special care shall be given to water tube boilers, to prevent an accumulation of scale in the tubes, and the tubes must be scraped, if necessary. At washout periods, soot, ashes, and cinders shall be cleaned from furnace and combustion chamber, and brick lining, setting, and fire-wall examined.

11a. Not less frequently than once each six months, an inspection of the boiler under steam shall be made by a competent inspector. He shall test the safety valves, gauge cocks, and waterglass, blow-off valve, examine and test the feed pump or injectors, examine steam pipes for leaks, giving close attention to leaks around threaded joints, see that pipes are well braced, that all valves are operative, examine the setting of the boiler, and the general condition of the boiler room, with special reference to fire risks. He shall report any defects found to the division officer in charge and to the local officer in charge, so that prompt repairs can be made. A certified report of the inspection and repairs (Form —) shall be filed with the chief mechanical officer of the railway company, and a copy sent to the Board.

12. Boilers in batteries, connected to same steam header, shall each have a suitable valve between boiler and header, which must be maintained in an operative condition.

13. Each steam outlet from boiler (except safety valve connections) shall be equipped with a suitable valve, which must be maintained in an operative condition.

14. Injectors and pumps must be kept in such condition that they will feed water into the boiler against the maximum pressure allowed on the boiler.

15. Boilers with any of the following defects shall be withdrawn from service until after proper repairs are made: Cracks in cylindrical boilers or headers, bars or bulges in shells of external fired boilers or unstayed surfaces of internal fired boilers; bulges in arch or water tubes; more than one gauge cock inoperative; safety valve inoperative.

16. Boilers showing indications of heating being low in water or of mud banking shall not be used until after inspected by a competent inspector.

17. Where necessary to plug holes the plugs shall be tied together with a pad not less than $\frac{1}{4}$ in. in diameter and a report of same made to the division officer in charge, who will have proper repairs made.

18. When making internal inspection of one of a battery of boilers, another employee will be stationed outside of boiler, whose duty shall be to prevent steam valves from the battery being opened into boiler being inspected.

19. An annual certificate of inspection shall be posted, under glass, in a conspicuous place if the boiler room certificate shall also show the number of the boiler, the allowed working pressure, the date of inspection, and the signature of inspector. Inspection certificate may be made in triplicate, and copy to be sent to Provincial Inspector of Boilers, if desired.

Repairs, or Maintenance, of Steel Freight Cars.

By S. Lynn, Master Car Builder, Pittsburg & Lake Erie Railroad.

By referring to the various railway publications for the last four or five years, it was noted that the subject assigned the writer of this paper has been discussed in one form or another, either before the different railway clubs, or by papers written for publication, and from the number of articles found, it would appear that almost every angle of the subject had been covered, and in order to prepare a paper that would deviate from those with which you are possibly familiar, I have taken the liberty to wander somewhat from the direct subject and include a brief outline of some features which, while not directly related to steel car repairs, nevertheless are essential to the proper maintenance of equipment. From what has previously been said and written, the subject of the evening may appear to be rather worn out, or an "old chestnut," but from the writer's viewpoint it is not only timely, but is also one of the most important that concerns the railways of both Canada and the United States.

The history of the steel freight car is modern history, as it has been known in general service for less than 25 years. Its development has been gradual, starting with self clearing hoppers and drop bottom gondolas of 80,000 lb. capacity, and extending at the present time to every type of railway service. Heavier motive power, with greatly increased train tonnage, has created a demand for cars of increased capacity. The limit of capacity apparently has not yet been reached, since one of the large car companies has, within the year, built cars of 120 tons capacity.

While no accurate figures are available, it is estimated that approximately 75% of the 2,500,000 freight cars in service in North America are either of all steel, steel underframe or steel center construction. As this number of cars represents an investment of over three billions of dollars, the importance of keeping them in good repair and in service is self evident.

Repairs to steel cars are necessitated by the following causes: deterioration, caused by age and ordinary wear and tear; and abuse, caused by rough handling and damage done in loading and unloading. The latter of these causes will not be discussed in this paper, since such damage varies greatly with the locality, and with the service to which the cars are used, and is a matter for consideration by individual roads and shippers.

Freight cars should be designed of sufficient strength to withstand the shocks incident to modern service, such as the starting and stopping of trains, and necessary handling in yard switching. Some of the earlier cars were designed with a view of decreasing the dead weight, and our experience has proved that the weight had been reduced too low to be consistent with satisfactory service. The tendency for a number of years past has been to increase somewhat the weight of the cars, not by using heavier steel plate for the sides of floors, but by strengthening the sills, and also the sides, by the application of angles along the top of the sides of the cars, and by the application of heavier draft gear.

Cars with wooden center sills and draft timbers have proved inadequate and this has led to the various reinforcement pro-

grammes now in use on many railways as a means of continuing their cars in service. The center sills, draft sills, and draft gears should have sufficient strength to withstand the shocks to which they are subjected, or they will be broken, bent or buckled, with consequent extensive damage to the superstructure.

A casual inspection in almost any classification yard will reveal the fact that repairs to steel cars have been badly neglected during the past few years. Large numbers of cars may be seen with floor, hopper and side sheets badly corroded, and in many cases, rusted and worn entirely through. A close inspection will usually develop the fact that center sills are buckled, either in front of, or between, the body bolsters. This condition is due either to faulty construction, sills of insufficient area, abuse in service, or neglected maintenance. Conditions existing during the recent world war imposed many hardships upon the railways generally, making it almost impossible for them to keep the maintenance of their freight equipment up to pre-war standards. Shortage of labor and materials, coupled with the pooling of equipment, had a tendency toward deferred maintenance, which resulted in merely patching up worn out cars and keeping them in service long after they would have been shopped for rebuilding under a normal maintenance programme. The large percentage of home cars on foreign roads resulted in neglect, since proper material for repairs of foreign cars was not generally carried in stock. This resulted in makeshift repairs, most roads doing only enough work on foreign equipment so that it would haul one more load, in the hope that it would carry that one load off the line and never return. The results of this practice are now most evident, when cars are being returned to the home roads in large numbers and in universal bad order.

In the matter of painting, steel cars have also suffered from neglect. While it may be a debatable question as to whether or not it pays to keep the bodies of open top steel cars well painted, all will agree that it is at least necessary to preserve the identity of the car. The writer believes that the exterior of steel cars should be kept well painted, as by this process at least one side of the steel is protected against corrosion, and, in addition, the exterior painted equipment is a good advertisement for any road. It is obviously impractical to attempt painting the interior of open top steel cars, since the commodities usually carried in such cars consist of coal, coke, iron ore, limestone, furnace slag and mill products, which, in the process of loading and unloading so badly damage the paint that it would be of no purpose as a protective coating. The interior of steel equipment is where corrosion is the most evident, and is probably due to moisture laden with acids from the products of the mines and mills, or to electrolysis caused by impurities existing in the steel itself.

There is also a difference of opinion among mechanical officers as to the maintenance of steel cars. Some recommend patching up the holes, and repairing the damage caused by wear and corrosion, as long as practicable, and when deterioration becomes too extensive to

warrant further patching, the car body is cut up and scrapped, and new bodies built and placed on the old trucks, or, if the trucks are of insufficient capacity, or poorly designed, the entire car is scrapped and replaced with a new unit of equipment. Others maintain that it is better to give the car current repairs, by renewing the parts as fast as they become defective, thereby prolonging the life of the car indefinitely.

It is not the purpose of this paper to try to convert anyone to either of these systems, as both have their merits. So many things must be taken into consideration in a discussion of this subject, that it is impossible to give them more than passing notice here. The reproduction cost of the body, the cost of providing necessary additions and betterments, the condition of the trucks, the capacity of the car, the class of service for which it is intended, and the expectation of future life in service, must also be taken into consideration. Another feature that cannot be overlooked is the repair facilities of the home road and the number of cars awaiting rebuilding. It may develop that several series of cars fail at about the same time, and, with a large number of cars standing out awaiting extensive repairs, amounting practically to rebuilding, at a time when they are badly needed in service, it might be advisable to retire one or two series in favor of new equipment, which could be built by outside companies in much less time than would be required to repair the bad order cars on hand at the shops of the owning road.

Up to this point the steel car has been dealt with in a general terms and I would like now to state a few things that in my opinion are necessary to maintain steel car equipment properly and economically. Shops should be provided at points where heavy repair steel car work is to be performed. They should be well lighted and ventilated, and, in the colder sections of the country, should be properly heated. Overhead crane service is desirable, and, by proper arrangement, eliminates the necessity for material tracks between the working tracks, thereby decreasing floor space. Small wall or jib cranes should be installed to handle yoke riveters, etc. The money expended for shops will repay the investment many times over in a few years and it is a fallacy not to provide them. While I would not say that the cars cannot be repaired outside, under adverse working conditions, I believe that the work can be carried on more successfully where shops are provided.

Shops should be well equipped with suitable machinery, properly located, so that repair parts may be made economically, without any lost motion or backward movement. It is a question whether or not it pays to attempt the manufacture of all steel car parts in the average railway shop. Some of the larger roads buy most of their car repair parts, already punched and pressed into the proper shape ready for application. However, it is necessary to have sufficient machinery to make odd parts, or to extend the supply when exhausted, as it is almost impossible to keep sufficient parts on hand to meet all conditions. Punches, shears, hydraulic presses, heating furnaces, and a good supply of efficient pneumatic tools, are indispensable in the

modern shop and will soon repay the initial cost of installation. Sufficient compressor capacity, with facilities for supplying dry air at all times, is necessary for the economic use of pneumatic tools. Proper facilities should also be provided to take care of the scrap parts that will accumulate, and the shop and surroundings should be kept clean at all times. While this may not seem important to some, nevertheless it has a certain moral effect on the workman which should not be underestimated.

Other facilities must be provided, such as store houses, storage yards, air brake shops, paint shops, oil houses, etc., depending on the size of the shops. The storehouse or material supply house should be located as near the shops as possible, and electric tractor service, or other means, installed for convenient and economical transportation of materials. Fuel supplies and stores should be under direct supervision of the foremen in charge, or, if the shop organization does not permit this, the storekeeper and car foreman should be very close together, and work in perfect harmony.

Another and probably one of the most important factors in repairs to steel cars is the quality and quantity of supervision. Sufficient intelligent supervision must be furnished, or the work will lag, and both the quality and quantity of the output will suffer. The gang foreman who comes into daily personal contact with every man under him is the key-stone of any organization. He forms the contact point between the management and the men, and when this contact is broken the current ceases to flow. These men should be selected from the ranks, if possible, and should be men who have developed ability and initiative in their work and they should also have ability to handle the workmen. While a thorough knowledge of how to perform the work is necessary, this is not the first requisite, ability to handle men, and promptitude in repairs is of qualification. Foremen should be intelligent, and fairly well educated, in order that they may read the rules, blueprints and instructions, and apply them intelligently, and also that they may be eligible for promotion to higher positions as vacancies occur. Wages paid foremen should be sufficiently attractive to create an incentive for the men working under them to fit themselves for their positions. The successful supervisor, in addition to his knowledge of the work, should show loyalty toward his employer, have the courage to enforce discipline, insist on and obtain a fair day's work from every man in the service, and be absolutely impartial in handling his men, in order to obtain and hold their co-operation and respect. He should also have the vision and ability necessary to discover trouble makers and weed them out before the remainder of the organization becomes contaminated. No man should be placed in the position of foreman unless the appointing officer feels that the man selected is capable of developing the necessary initiative and ability to accept any position up to the top of the shop organization, or those men selected for the bottom round of the ladder should be capable of advancing step by step until they reach the top. Most higher supervisory officers have not the time to mingle with the workmen, and they must depend on their foremen to provide the little touches of personality and co-operation that are the life of any organization.

Another important feature is the per-

sonnel of the shops. Wages paid, and working conditions, should be such that they attract capable young men to seek employment in railway shops. Unless this is done, there is a tendency for skilled mechanics to seek more remunerative employment in industrial work. This is particularly true in the large industrial centers. The tendency prior to federal control, in some sections of the United States, due to shortage of mechanics and inability to induce young men to enter the service, has been to hire foreigners from central and southern Europe, men who have never had any mechanical training, and to try to make mechanics out of them. These men come to us wholly unacquainted with our language, our customs, and our laws, and must be assimilated into our organizations. While at first a rather costly proposition, with proper and tactful handling, they usually learn very rapidly, and have become the mainstay of some of our car shop organizations. It is very important that those charged with the handling of these men should be careful and tactful treatment, instill in them the principle of loyalty to their employers, and with proper encouragement and fair dealing on the part of their foreman, the majority of them readily become acquainted with our methods of work. The nationalization of foreigners has become an important subject and it is very generally conceded that they are more easily reached in the shops than in their homes. However, any tendency toward radicalism should be carefully watched, and immediate steps taken to circumvent it.

This outline of facilities, when sufficiently elaborated, should furnish any railway with the proper equipment to keep its steel freight cars in good repair, provided, of course, that sufficient capacity is furnished to take care of its equipment as fast as same is marked out for the shop.

The only commodity a railway has to sell is transportation. Anything that tends to increase the quantity or speed of transportation is a distinct addition to the wealth and resources of the country. Good efficient motive power may be essential, but without freight cars the railways would have little use for locomotives. Estimating that 4% of all the cars in the country are shopped, every year an unnecessary drain in return for that service represents a perdition loss to the railways of approximately \$100,000. The importance of providing adequate shop facilities is self evident.

In the actual work of repairs it is suggested that draft attachments and center construction be sufficiently strengthened, so that the shocks incident to modern service will be absorbed and distributed throughout the car, without causing extensive damage to the superstructure. Center and draft sills should have sufficient area, and should be protected against buckling by the use of cover plates. A common cause of failure is due to bodies of hopper cars not being securely fastened to center sills. A few rivets are driven in inside hopper sheets, to hold the ends of the sills, and the heads corrode and wear off the rivets, allowing them to pull through the sheets. This results in the whole strain being thrown on the body bolsters, which are usually of a wide single plate type, with the result that they are unable to stand up under the strain. The sills start moving back and forth under the strain, and in such condition that permanent repairs become a rather expensive proposition. Sides and ends of steel

equipment should be properly re-inforced, to prevent bulging out under load. Drop door equipment should be kept in proper working order to facilitate unloading. Care should be taken, in repairing trucks, to provide side bearing clearance, and to see that brakes and all running gear are kept in good condition.

A well defined programme of re-inforcement should be outlined and put into operation on all roads. The cost of such additions and betterments is usually insignificant, when the future life and productive service of the car are considered. Money appropriated for such features is a good sound investment, when judiciously used, and should pay large dividends. Many roads make the mistake of repairing their older equipment in kind, as they did not have exacting conditions on their lines. Such equipment should either be re-inforced or kept on their own lines and not offered in interchange, where there is a possibility of it getting out into the large industrial centers and in heavy tonnage trains, when it is almost an impossibility to keep it off the repair tracks. This places an unnecessary burden of expense on both the owner and the handling line. As cars come into the shop for general repairs, a careful inspection should be made, and if the car has not deteriorated to the extent that it is felt advisable to scrap it, it should be repaired in accordance with a well defined re-inforcement programme, as outlined. Otherwise, if this is not done, after considerable money has been spent on the car, it will again, due to inherent weakness, be back on the shop track.

In conclusion, if the railways were provided with the facilities, and a maintenance programme similar to that suggested in this paper was adopted by all roads, and an honest effort was made to maintain the cars in accordance with that programme, the steel cars in the country would give the owner a better return for the money invested, in the way of better service and in increased life of the cars.

The foregoing paper was read before the Canadian Railway Club, in Montreal, recently.

Editor's Note:—In the last paragraph but one of Mr. Lynn's paper he says that "many roads make the mistake of repairing their older equipment in kind." While this is a term frequently used by car men, in talking of repairs to equipment when shopped, it may not be quite clear to some readers. It means that many railways, when making extensive repairs to their older cars, instead of making a study to determine weak parts and re-inforce them, go ahead and make the repairs in kind, i.e., using the same manner of construction as when the cars were built originally. In other words, they perpetuate a weak construction, when a real service is shown that certain parts of the car have weakened, and to use the best present means of re-inforcement and changes in that particular part of the car to make it stronger. Instead of attempting the improvement necessary to strengthen the car, they still maintain it according to the original construction.

Rental of Railway Owned Equipment. The Railway Association of Canada has issued a circular to member companies, recommending standard minimum rates of rental for use of railway owned equipment, loaned to other railways, or to outside concerns.

Steam Railway Income Statistics for Year Ended June 30, 1919.

Canadian Railway and Marine World for March contained a table giving the mileage of steam railways in Canada, with details of the freight and passenger earnings of the operating expenses and net operating earnings or deficits. In the following table the 1st column shows the net revenue or deficit on the railway operations of the several companies; where there was a deficit the figures are preceded by a minus mark, thus —; the 2nd the profit or loss from operations outside railways, and the 3rd the income from all other sources. The 4th column shows the taxes paid, the 5th gives the gross corporate income, from which is deducted the amounts in the 6th column, viz.: rents, interest on funded debt, sinking fund, etc.; the 7th column shows the net corporate income available for special appropriations, dividends on common and preferred stock, or held in profit and loss account. The cents have been omitted in the columns, but are included in the totals.

Name of Railway	Net operating revenue or deficit	Profit or loss from outside operations	Other income from all sources	Taxes deduction	Gross corporate income or loss	Rents, interest, sinking funds, etc.	Net corporate income or loss

Notes to Steam Railway Income Statistics.

In the table of steam railway operating statistics for year ended June 30, 1919, on the preceding page, the item of \$10,629,426.96, shown under rents, interest, sinking fund, etc., for Grand Trunk Pacific Ry., includes a loss of \$2,679,248.13 on G.T.R. separately owned properties, \$2,474,403.55 of which was on G.T.P. Branch Lines. The latter amount is also shown as a loss on G.T.P. Branch Lines.

The following table gives the totals of the several columns of the table on the preceding page, showing the income of the various railways, and its disposal, compared with the corresponding figures for the year ended June 30, 1918.

	1919.	1918.
Net operating revenue	\$57,190,484	\$62,776,500
Net operating deficit	16,080,492	1,511,785
Total operating revenue	\$41,110,392	\$56,264,715
Profit from outside operations	\$1,975,523	\$1,693,114
Loss from outside operations	4,275	3,763
Total profit from outside operations	\$1,971,248	\$1,679,351
Other income from all sources	\$18,501,190	\$19,625,363
Tax deductions	\$5,316,713	\$4,711,262
Gross corporate income	\$66,823,470	\$79,882,333
Gross corporate loss	10,557,352	7,021,687
Total corporate income	\$56,266,118	\$72,860,646
Rents, interest, sinking fund, etc.	\$57,530,798	\$54,324,437
Net corporate income	\$45,919,291	\$49,657,540
Net corporate loss	46,283,997	31,329,311
Total corporate profit or loss	—\$1,263,690	+\$1,823,229

Wanted a "Lower."

"Hello," called a feminine voice, as the Secretary of the Hamilton, Ont., Cemetery Board answered the telephone in his office.

"Give me a lower for to-morrow afternoon," requested the lady.

"Who is it for?" he queried.

"It's for myself. I want a lower berth for the 4 o'clock train," cheerfully replied the voice at the other end of the wire.

"You want a lower berth for 4 o'clock to-morrow afternoon," repeated the Secretary, then added, "Madam, this is the cemetery."

"Oh, my God!" came in terrified tones from the lady; "I thought it was the T. H. & B. Ry."

The cemetery telephone number is 1320 and the T. H. & B. Ry. 7320.

Mount Royal Hotel Co. Ltd.—The organization of this company, which has been formed to build a large hotel, on the old high school site on Peel St., Montreal, and which has an authorized capital of \$9,000,000, is reported to have been completed and to include among its directors the following:—H. G. Kelley, President, G.T.R.; J. K. L. Ross and Hon. W. J. Shaughnessy, directors, C.P.R.; A. D. MacTier, Vice President, Eastern Lines, C.P.R.; J. T. Lorne, General Manager, Delaware & Hudson Co.; G. H. Duggan, President, Dominion Bridge Co.; W. W. Butler, President, Canadian Car & Foundry Co.

Thieves Punished.—Four C.P.R. employees, engaged formerly at the Sortin yards, Montreal, were sentenced on Mar. 8 to five years in St. Vincent de Paul penitentiary, for stealing about \$43,000 of cigarettes from freight cars. They pleaded guilty.

Birthdays of Transportation Men in April.

Many happy returns of the day to:—

F. G. Adams, Assistant General Freight Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at St. John's, Nfld., April 6, 1878.

W. H. Ardley, ex Comptroller, G.T.R. and Grand Trunk Pacific Ry., Montreal, born at London, Eng., April 24, 1858.

Jas. Black, Freight Claim Agent, C. P.R., Vancouver, B.C., born near Seaford, Ont., April 19, 1858.

C. G. Bowker, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Medford, N.J., April 21, 1871.

G. C. Briggs, Supervisor of Buildings, Eastern Lines, Canadian National Rys., Toronto, born at Cockermouth, Eng., April 23, 1886.

Major F. D. Burpee, Manager, Ottawa Electric Ry., and Vice President, Canadian Electric Railway Association, Ottawa, Ont., born there, Apr. 25, 1876.

J. R. Caswell, Division Engineer, Sudbury & Cision, Ontario District, Sudbury, Ont., born at Coldwater, Ont., Apr. 13, 1892.

G. Cobb, Superintendent, Western Division, Reid Newfoundland Co., Bishop's Falls, Nfld., born at Coupar Angus, Scotland, April 21, 1885.

A. V. Collins, Travelling Auditor, Canada Steamship Lines Ltd., Toronto, born at Island Pond, Vt., April 21, 1868.

J. P. Doherty, Export Freight Agent, Canadian Government Merchant Marine Ltd., Montreal, born at Portland, Me., April 8, 1889.

W. A. Duff, Assistant Chief Engineer, Canadian Government Railways (Canadian National Rys.), Moncton, N.B., born at Hamilton, Ont., April 20, 1877.

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal, born at Montreal, April 6, 1875.

Lieut.-Col. F. A. Gascoigne, D.S.O., Secretary, Treasurer, Canadian Pacific Ocean Services Ltd., Montreal, born at Gosport, Hants, Eng., April 2, 1866.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Udcwella, Ceylon, April 12, 1875.

V. A. Harshaw, Manager, Fredericton & Grand Lake Coal & Ry. Co., and New Brunswick Coal & Ry., Fredericton, N.B., born at Mono, Ont., April 26, 1865.

L. M. Hatfield, Assistant Marine Superintendent, Canadian Government Merchant Marine Ltd., Montreal, born at Yarmouth, N.S., April 4, 1880.

E. J. Hilliard, Division Freight Agent, Canadian National-Grand Trunk Rys., Ottawa, Ont., born at Montreal, April 14, 1870.

J. H. Johnston, Stores Department, G.T.R., Montreal, born at Uxbridge, Ont., April 22, 1866.

Capt. A. H. Kendall, M.C., Master Mechanic, Quebec District, C.P.R., Montreal, born at Aspatina, Cumberland, Eng., April 4, 1878.

A. A. Laroque, President, Soreness McNaughton Line Ltd., Montreal, born at Henryville, Que., April 30, 1865.

G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, North Bay, Ont., born at Renfrew, Ont., April 15, 1871.

W. E. McGill, Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, born at Toronto, April 6, 1884.

J. A. Macgregor, Manager, Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta., born at Dufftown, Scotland, April 5, 1873.

G. P. MacLaren, Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, born at London, Ont., April 4, 1878.

B. R. Marales, District Freight Agent, Canadian National-Grand Trunk Pacific Rys., Saskatoon, Sask., born at Guelph, Ont., April 13, 1887.

Paul J. Myler, President, Canadian Westinghouse Co. Ltd., Hamilton, Ont., born at Pittsburg, Pa., April 24, 1889.

J. H. Norton, Assistant General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Shaftesbury, Eng., April 21, 1884.

T. R. Percy, General Agent, Canadian Pacific Ocean Services Ltd., Yokohama, Japan, born in Ireland, April 21, 1888.

G. D. Perry, General Manager, Canadian National Telegraphs, Toronto, born at Whitley, Ont., April 19, 1858.

S. J. L. Potter, Local Treasurer, Eastern Lines, Canadian Northern Ry., Toronto, born at Buntingford, Devonshire, Eng., April 5, 1887.

R. A. Pyne, Superintendent of Motive Power and Car Department, Western Lines, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

Lieut. R. S. Richardson, Superintendent, Canadian National Rys., Fort William, Ont., born at Napanee, Ont., Apr. 9, 1865.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., April 20, 1869.

J. A. Sutton, General Fuel Agent's office, Canadian National Rys., born at Moncton, N.B., April 12, 1894.

J. J. Sullivan, Roadmaster, C.P.R., Lauder, Man., born at Fishers, N.Y., April 29, 1866.

G. M. Thomas, Commercial Agent, Canadian National-Grand Trunk Rys., Windsor, Ont., born at Dundas, Ont., April 21, 1876.

W. S. Tilston, Manager, Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., April 14, 1877.

C. H. Towle, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Enfield, Me., April 13, 1878.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, born at Hope, Ind., April 2, 1881.

W. Woolatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Wexham, Hertfordshire, Eng., April 2, 1865.

Car Service Rules.—F. P. Jones, Superintendent, Car Service, G.T.R., has been having a series of meetings of managers at the company's various terminals to educate them in the proper interpretation and application of car service rules governing the handling of freight cars on the company's lines. Although the rules have been in effect for some time, these appointments have saved a lack of uniform understanding and the mistakes were bound to recur.

Timiskaming & Northern Ontario Ry.—The T. & N. O. Ry. Commission's office at 111 Beach St., Toronto, was closed on Feb. 26 and the staff transferred to North Bay. The Chairman of the Commission, G. W. Lee, has established his office at North Bay previously, and the Secretary-Treasurer, W. H. Maunsell, and the Auditor of Disbursements and Accountant, D. Hanlon, are also now located there with their staffs.

Air-operated Rail Handling Machine.

An air-operated machine, which greatly facilitates the handling of steel rails, and which is similar to others used at different points on the C.P.R. lines, is in use at that company's Toronto shops. In fig. 1, given herewith, the large horizontal gear wheel has its gear teeth

the same way that it would be used on the road, i.e., in connection with a locomotive, compressed air being taken from the main reservoir of the locomotive, by coupling up a hose to the rail loader from the train line connection, and placing the handle of the automatic brake valve in full release position. The expense in connection with a locomotive and crew has been demonstrated to be unnecessary, by

Standard Locomotive Headlight and Cab Wiring, Canadian National Rys.

The headlight, cab lights and classification lights are an important part of locomotive equipment, a failure of which, while the locomotive is on the road, causes a great deal of inconvenience.

in the illustration. This motor is reversible, and its function is to afford power for, and govern, the swinging horizontal movement of the boom. The vertical movement is accomplished by means of the vertical compressed air cylinder,

can load or unload rails very rapidly and efficiently, and is a great improvement over older methods, as concerns speed and economy, in handling steel. We are indebted to J. E. McEwan, Foreman, Material Reclaiming Department, West

run from the terminal box through the handrail to the headlight, classification lights, number light, and snow plough connection. Where headlight is equipped with pilot light socket, as shown in fig. 1, it should be wired in multiple

Fig. 2. Standard Locomotive Headlights and Cab Wiring, Canadian National Railways.

shown in fig. 2, the operation of which is controlled by a valve, conveniently located to the left of the operator, the function of the valve and its pipe connections being to admit air to, and exhaust air from, the cylinder, to raise and lower the boom.

At one time this rail handling machine was used at the West Toronto shops in

Toronto Shops, C.P.R., for this information.

New England railways are reported to have presented evidence to Interstate Commerce Commission to show that they are losing 3.6c. per ton mile on freight, while roads west of the Hudson River are making a profit of 3.2c. per ton mile.

with snow plough circuit.

Wires to the tail light, tender marker lights and water funnel light run, in conduit, from the terminal box back through the switches in cab, thence through a loose steel flexible conduit used between locomotive and tender (this being fitted with a 3-point plug which connects into a q.h.b. receptacle, allowing the loco-

tive and tender to be disconnected without the necessity of severing the wires), and thence through the handrail on the tender. Condulets are fitted at the required places, to permit the various lights on the tender to be applied. The lights in the cab are capable of being detached at any time, without interference with the permanent conduit work. Benjamin 903G plugs are used for this purpose, with steel flexible conduit and asbestos covered cord.

In practically all of the locomotive headlights, 250 watt nitrogen bulbs are used, in place of the arc light which was formerly standard with locomotive electric lighting equipment.

We are indebted to J. Stirling, Foreman Electrician, C.N.R. Leaside Shops, Toronto, for this information.

Freight and Passenger Traffic Notes.

Thomas Cook & Sons, tourist agents, have opened an office at 732 George St., Vancouver, B.C., and it is reported that F. B. Brown, from the company's New York office, has been placed in charge.

The Canadian National Ry. has made a very extensive curtailment of train services. Through trains are not affected, but locals and branch line services have been cut down to the minimum.

The Board of Railway Commissioners will hold a series of sittings at western points in connection with the equalization of eastern and western freight rates as follows:—Vancouver, April 7; Victoria, April 11; Calgary, April 18; Edmonton, April 20; Saskatoon, April 21; Regina, April 22; Brandon, April 23; Winnipeg, April 25.

The Canadian National Ry. freight and passenger staffs at Victoria, B.C., expected to move by the end of March into their new quarters at 911 Government St., the entire building to be occupied by the several departments. The building has been remodelled and refitted at a cost of approximately \$16,000.

The Canadian National Ry., on March 10, restored the train service on the St. John & Quebec Ry. between Fredericton and Centerville, N.B., to what was in effect prior to Feb. 27, when a reduced train service was started. The restored service is a daily, except Sunday, passenger train each way, and a tri-weekly mixed train each way.

The Canadian National Railways announced March 10 that the following train service would be operated on the Hudson Bay Ry. from Pas, Man., to Pitquekney, mile 214:—Leaving Pas at 7 a.m. on the second and fourth Wednesdays of the month, reaching Thickett, mile 185 at 10 p.m., and leaving there at 7 a.m. on the following morning, reaching mile 214 at 9 a.m. The return train leaves mile 214 at 8 a.m. on the second and fourth Fridays of the month, reaching Read at 7 p.m. the same day, and leaving there at 7 a.m. on the following morning, arrives at Pas at 1 p.m. Meals are served at Read, at a public eating house at 75c., with beds at \$1.50; and dinner can be had at Thickett, at 75c. Service at all places on the line is uncertain, and passengers should provide for their needs before leaving Pas. The fare is 5c, a mile, without any reduction for return tickets, and tickets through to points on the H.B.R. are not to be sold by C.N.R. agents.

No Railway Mechanical Exhibits at Atlantic City This Year.

The Railway Supply Manufacturers Association's executive committee has issued the following circular to members, from its headquarters at Chicago:—After a thorough canvass and study of the entire situation, both among the manufacturers composing this organization and the railway executives, your executive committee has unanimously decided it the part of wisdom and good business judgment to postpone the June 1921 R. S.N.A. exhibit at Atlantic City, for the following reasons:

We are all familiar with the present depression in railway and general business, and the attendant desire and demand to curtail expenditures in every possible direction, to strengthen the existing financial situation, with the prime motive of developing greater economy and efficiency in operation.

In the opinion of men of mature judgment in the manufacturing, as well as the railway fields we are confronted to day with the serious situation of not knowing with any degree of certainty as to just when business conditions will improve. Many manufacturing concerns engaged in the production of railway devices and specialties are either shut down or running at an unusually low rate of operation.

While we realize this action is drastic, we feel that present conditions demand it. We are confident, however, that it will meet with full approval of the business interests of the country, and we further believe that the future will warrant our framing plans at a later date for the 1922 exhibit, as in former years.

Hudson Bay Railway Construction.

J. A. Cambell, M.P. for Nelson, Man., moved in the House of Commons, March 16, "That in the opinion of this House, work on the Hudson Bay Ry., which was commenced in 1910 and continued to the end of 1918, should be resumed as early this year as possible, and the project completed without any further delay." He said that the potential value of the line for commercial and other purposes had been generally admitted; that its construction had been repeatedly promised to the western people, and that up to present the Government had expended \$25,000,000 upon it. The construction was undertaken originally to facilitate overseas transportation, but since the line had been under construction it had been shown that the natural resources, not only of the district along the line, but of the Bay itself, would warrant the building of the line for development purposes only.

The Minister of Railways stated that the financial conditions of the country are such that the Government has been prevented from proceeding with any of the Hudson Bay Ry., but many other projects. Many other railways in the prairie provinces were commenced prior to the war, and it is necessary that they should be extended and completed. The Government has not abandoned the H.B. line, but further construction will not be undertaken until financial conditions warrant it. The Government has not started train service twice a week on the 310 miles on which track has been laid, but the revenue has never been sufficient to pay the train crew's wages.

After discussion, T. Hay, Selkirk, Man.,

moved in amendment: "That in the opinion of this House work on the Hudson Bay Ry. shall be resumed as soon as financial conditions permit, and that the possible delay be completed with the least possible delay."

Hon. T. A. C. (rerar, Marquette, Man., said he believed that one day the ocean route from Churchill or Nelson to Liverpool would become one of the great trade routes of the world, and that the H.B. railway would be utilized in a large measure to carry the commerce of America and Europe. He supported the amendment, as he did not think any great harm would be done by postponing the completion of the work until financial conditions were easier.

The amendment was agreed to, but before Mr. Campbell could close the debate, the 6 o'clock rule brought the discussion to a termination, and the matter will appear on the order paper for next week.

Canadian National Railways Earnings.

The following are the gross earnings of the Canadian National Ry. system, monthly during 1920:

	1920	1921
January	\$6,761,883	\$7,100,000
February	5,170,911	5,170,000
	\$11,932,794	\$12,270,000

Approximate earnings for three months ended March 31, \$6,400,000, against \$4,800,000 for March 1920.

Canadian Northern Railway.

The following are the gross earnings of the Canadian Northern Ry. system for 1919 and 1920 respectively:

	1919	1920
January	\$1,200,000	\$1,200,000
February	962,500	962,500
March	1,547,700	1,547,700
April	1,725,000	1,725,000
May	1,483,700	1,483,700
June	1,364,000	1,364,000
July	1,168,000	1,168,000
August	900,000	900,000
September	1,140,000	1,140,000
October	820,000	820,000
November	667,700	667,700
December	8,005,260	8,005,260
Total	\$67,046,000	\$67,046,000

Canadian Pacific Railway Earnings, Expenses, Etc.

The following are the gross earnings and expenses of the Canadian Pacific Ry. compared with those for 1920:

	1920	1921
Jan.	\$11,416,110	\$11,824,000
Inc.	\$40,861	\$40,861

Approximate earnings for February, \$11,000,000, and for three months ended March 31, \$34,000,000, against \$11,000,000 and \$34,000,000 for February and March 1920.

During March the net operating income (credited to 1920)

Grand Trunk Railway Earnings.

The following are the gross earnings of the Grand Trunk Railway for 1920 and 1921:

	1920	1921
January	\$1,200,000	\$1,200,000
February	962,500	962,500
March	1,547,700	1,547,700
April	1,725,000	1,725,000
May	1,483,700	1,483,700
June	1,364,000	1,364,000
July	1,168,000	1,168,000
August	900,000	900,000
September	1,140,000	1,140,000
October	820,000	820,000
November	667,700	667,700
December	8,005,260	8,005,260
Total	\$67,046,000	\$67,046,000

Fred. Miller, of Rogers Mills & Sons, contractors, who have a large contract on the Pacific hauled gravel, and who is a member of the Toronto Transportation Commission, was operated on in Chicago recently for stomach trouble. He had been spending some time in Texas.

Projected Railway to Flinflon Mining District.

A report and recommendations of R. C. Wallace, Commissioner of Northern Manitoba, was presented to the Manitoba Legislature recently, dealing with the proposed construction of a railway from Pas to the mining area of which the Flinflon mine is the central proposition.

On the Flinflon property 25,664 ft. of diamond drilling has been done, checked by cross-cutting and drifting in the 100, 200 and 300 ft. levels; the drilling has been continued to a depth of 900 ft., but the ore body runs below this. It is calculated that the ore body contains 16,000,000 tons of ore, containing gold, silver, copper and zinc. On the basis of an output of 2,000 tons a day, the proposition would carry on for 27 years, and

smelter at Trail, B.C. The line would run through a territory in which there is land available for stock raising, agriculture and garden produce, and the numerous lakes in the area opened up would stimulate the fishing industry. At Cranberry Portage there is a suitable site for a town, which would be the supply post for tourist traffic to Athapuskow Lake, which is an ideal resort for tourists, sportsmen and summer residents.

The report points out that without a railway the copper properties of the district are practically valueless, and if it is not provided the effect on the mining situation and on the development of the north country will be serious. The Com-

missioner to protect the Government in the undertaking until such time as the mine and smelter are in operation. This recommendation is made, the Commissioner says, with a full sense of the issues involved in the Government entering into the field of railway ownership, and after a most careful consideration of the whole situation in all its aspects.

The Manitoba Railway Commissioner in his report for 1919-20, submitted recently, in referring to the proposal, gives details of the survey work. The route being laid out starts at mile 7 from Pas, on the Hudson Bay Ry., and runs westerly to Lake Athapuskow, 53 miles, and from that point along the north side of the lake to the Flinflon mining area, 32 miles, a total of 85 miles. A 4 mile spur has been built by the Dominion Government from the Hudson Bay Ry. along the projected route, in order to obtain ballast from a gravel ridge. The route surveyed recently varies from that surveyed in 1919, which, starting from mile 7 on the Hudson Bay Ry., ran to the southwest end of Goose Lake, and then northerly, comparatively close to the Manitoba-Saskatchewan boundary to the Mandy mine, and the Flinflon property.

The question of the construction of the line had not been brought before the Manitoba Legislature up to the time of writing. A press report states that the introduction of legislation to provide for the building of the railway is dependent upon the Flinflon syndicate of New York depositing \$1,000,000 with the Government as evidence of good faith to develop the mine and provide tonnage for the railway. It is also stated that the syndicate's option on the mining proposition expires April 1, and that it will be taken up, but that development work will be held over for a year, by which time, it is expected, that labor and materials will be cheaper.

CANADIAN NATIONAL RAILWAYS. Eastern Lines, Ontario District.

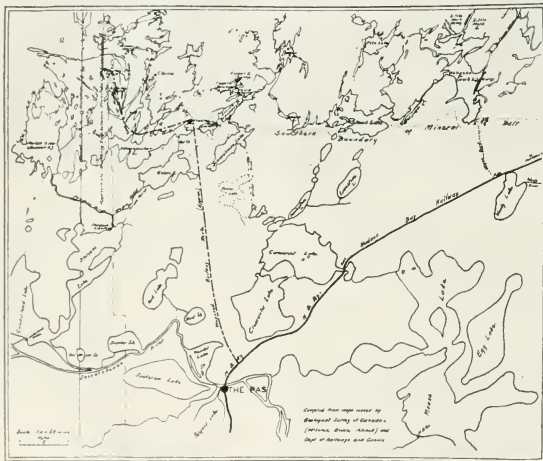

Sealed tenders addressed to the undersigned and endorsed "Tender for Concrete Structures, Ontario District," will be received at this office until twelve o'clock noon, Saturday, April 16th, for the construction of eight structures on the Ontario District.

Drawings, specifications and form of contract may be seen and form of tender obtained at the office of the Engineer, Maintenance of Way, Room 409, Old Union Station, Toronto.

Tenders will not be considered unless made on the form supplied by the Railway Company and accompanied by an accepted cheque on a Chartered Bank for the sum of fourteen thousand dollars (\$14,000.00), payable to the order of the Treasurer of the Canadian National Railway.

Note.—Blue print copies of the drawings may be obtained at the office of the Engineer, Maintenance of Way, by depositing an accepted bank cheque for the sum of ten dollars (\$10.00), payable to the Treasurer, Canadian National Railways, the said cheque being returned if the intending tenderer submits a regular tender.

The lowest or any tender not necessarily accepted.
W. A. KINGSLAND,
General Manager, Can. Nat. Ry.,
Bank of Toronto Bldg., Montreal, Que.

Route of Projected Railway to Flinflon Mining District, Manitoba.

the number of men employed would be about 1,000. The equipment necessary for the operation of the mine, furnaces, etc., would provide an initial traffic of about 60,000 tons. A water power capable of developing the 10,000 h.p. needed for the operation of the property is available at Scoop Rapids, on the Sturgeon-Weir River, 35 miles west of the property, and across the Saskatchewan boundary line, for the development of which a light railway would have to be built. It is estimated that after the initial traffic there would be a daily traffic of 593 tons from the operation of the property. In addition, the railway would carry supplies for a population of about 4,000.

The projected railway would, for 35 miles, from Cranberry Portage to the Flinflon property, run through a mineral belt in which considerable discoveries have been made, but on which very little development work has been done with the exception of the Flinflon property, and the Mandy mine, from which 26,000 tons of high grade copper ore were taken out and transported by wagon to the Hudson Bay Ry. and thence to the

commissioner refers to the construction of the Timiskaming & Northern Ontario Ry., which was built primarily as a colonization road, with the object of opening up Northern Ontario's clay belt. The construction of this line resulted in the discovery of valuable minerals, the output of which from 1903 to 1919 had a total value of \$249,488,555, and produced a revenue to the Ontario Government of \$4,644,045.72. The prospects of the Northern Manitoba area are in the Commissioner's opinion more favorable than were the prospects of Northern Ontario when T. & N.O. Ry. construction was undertaken in 1903.

The Commissioner recommends that the Manitoba Government undertake the building of a railway from Pas to the Flinflon property along the route followed in the preliminary survey completed recently, at an estimated cost of \$2,500,000; provided the Flinflon syndicate will guarantee that the purchase of the property will be proceeded with at once; that the mine and smelter will be operated on the completion of the railway, on a basis of at least 2,000 tons of ore a day, and that adequate security be de-

The Railway Wages Situation.

The railway wages developments in Canada have followed closely those in the United States. For that reason an intelligent appreciation of events in that country is necessary for a full understanding of the situation here.

The first definite tendency for wages to increase by substantial amounts on the United States railways was in 1916, while the properties were still being privately operated. In 1916 and 1917 the total payrolls were increased by \$360,000,000; the average yearly earnings per employee in 1917 were \$1,004, against \$830 in 1915. If figured on the basis of rates in effect in December, 1917, the average would have been \$1,078.

At the beginning of 1918, the U.S. Government placed the operation of all the principal lines under the Railroad Administration, of which W. G. McAdoo was Director General. It was found, on taking charge, that dissatisfaction among railway employees in connection with wage scales. The result was the issuance of the now famous "McAdoo Award," by which wages were raised to a level calculated to offset generously the increase in the cost of living which had taken place to that date. The award was made by general order 27, May 25, 1918, and was retroactive to Jan. 1, 1918. The increases, based on rates of pay in effect on Dec. 31, 1915, were graded, so that the lower paid employees were given greater increases than those more highly paid. The principle of the 8-hour day in railway service, previously obtained by some classes of railway employees by the Adamson law, was recognized. Agreements concerning overtime rates were not changed. By supplements to the award further increases were granted to various classes of employees, notably shompen, clerks and station employees, and shop, locomotive house and track laborers.

During the remainder of 1918, and in 1919, the purchasing power of money, showing no tendency toward stability, railway employees united in demands for increased remuneration, and declared the rates set by the McAdoo award had become inadequate. Negotiations went on for some months, the impatience of some employees giving rise to the outlaw strikes in the spring of 1920. Shortly after the passage of the Transportation Act, the United States Railway Labor Board established under the act's authority, began an function, and after extended hearings, an award was made in July, 1920, providing for increases of pay of railway employees amounting to over \$600,000,000 a year. Before the recent large reductions in staff which were made by U.S. railways, the number of employees was about 1,993,000, and the payroll was about \$3,808,000,000 a year. The average compensation per employee for 1920 was \$1,910, and 39 classes out of 66 earned \$2,000.

In the hearings before the Labor Board, which led to the wage award of July, 1920, the question of rules and working conditions was left over for future consideration, and on the Board's request, the National agreements entered into by several classes of employees and the Railroad Administration, were left in the hands of the Board. In holding hearings concerning these agreements, and as to the formation of boards of adjustment as provided for by the Transportation Act. The employees desire national

boards of adjustment, and all agreements which are national in scope, while the railways desire local boards of adjustment and the immediate cancellation of the existing agreements. The railways state, and cite examples in substantiation of their claims, that these agreements result in large payments of wages which are not earned, and promote waste and inefficiency, which cause the loss of \$300,000,000 yearly. They state that in a country as large as the United States, it is impossible to frame one set of conditions applicable to all parts of it. The employees state that they do not desire, nor ask for agreements which promote waste or inefficiency, and that the railways are attempting to destroy their power of collective bargaining.

On Jan. 31, 1921, on the ground that the railways could not afford to pay the present wages, and that existing conditions do not warrant the continuation of the present rates, the Association of Railway Executives petitioned the Board for authority to reduce the pay of unskilled labor. The Board refused, saying the petition was not legally before it, and pointing out the provisions of the Transportation Act, which require 30 days' notice of an intended change in wages, conference between management and employees, and reference to the Board in case of disagreement. Pending the Board's reply, the Erie Rd. reduced the pay of its unskilled labor from 48 1/2 to 35, 33 and 30c. an hour, but was ordered by the Board to restore the previous rate.

A wage cut by the Atlanta, Birmingham & Atlantic Ry. has attracted wide notice. Officials claimed the road was losing \$100,000 a month, and was forced to put into effect. This action being in violation of the Transportation Act, the Board ordered the former rates restored. Shortly after, a U.S. District Court judge at Atlanta named the President of the road as receiver, and signed an order putting into effect the reduced rates of pay. The 1,500 employees went on strike, and the point as to whether a federal court can override a decision of the tribunal set up by the Transportation Act is at issue.

The Missouri & North Arkansas Rd. put a wage cut into effect on Feb. 1. This road, not being a party to the controversy leading to the Board's July 1920, award, the Board advised the employees to accept the wages under proposed, and set a date to hear the case. The employees, however, walked out.

Daniel Willard, President of the Baltimore & Ohio Rd., in addressing the National Civic Federation of New York recently, said 60% of gross earnings are going to labor, whereas that percentage formerly ran from 40 to 45. Basing their action on this fact, and also on the fact that million net operating income is entirely inadequate, the Pennsylvania, the New York Central (including the Michigan Central and other subsidiaries), the Delaware, Lackawanna & Western, N. Y., N. H. & H., Walabash, Northern Pacific, Great Northern, Denver & Rio Grande, and many other roads have within the past month, in accordance with the requirements of the Transportation Act, notified their employees of an intention to reduce wages, and called them into conference concerning the matter. The employees, while preparing to

oppose the proposed reductions, are also prepared to fight their case before the Labor Board, and have indicated their readiness to participate in a suggested congressional inquiry concerning the entire matter. Such is the extent of developments to date in the United States.

Much publicity has been given to Canadian railway wages of late. In addressing the Ottawa Rotary Club recently, Hon. F. B. Carvell, Chairman, Board of Railway Commissioners, is reported as having stated that the McAdoo award was a most iniquitous piece of legislation, and while in his judgment, the scale of railway wages was fair in itself, the agreements in connection with working conditions, overtime rates, etc., enable employees in many cases to draw more than they earn. In his recent presentation of information dealing with railway matters in the House of Commons, Hon. J. D. Reid, Minister of Railways, stated that the increase in railway wages is such as to justify an immediate discussion between the management and the employees. In reply to Mr. Carvell's statement, Tom Moore, President of the Dominion Trade and Labor Congress, calls attention to the C.P.R. annual statement, and claims that railway employees are not overpaid. A. R. Mosher, President of the Canadian Brotherhood of Railway Employees, states that railway wages were notoriously low before the increases granted were applied, and cites statistics of the Labor Department to show that railway employees are not overpaid. L. L. Pelletier, legislative representative of the Order of Railway Conductors, asks for an enquiry into labor's responsibility for the financial showing of the Canadian National Ry.

The following table traces the growth of railway wages in Canada.

Year ended	No. of employees	Total compensation	Average
June 30 1915	121,142	\$98,211,797	\$812
1915	109,000	100,000,000	917
1917	146,175	129,626,180	887
1918	153,192	158,274,980	1,034
1919	158,777	208,389,910	1,314

Unfortunately, figures for 1920 are not yet available, but the effect of the reduction of the U.S. Labor Board's award, and the application for a complete year of the terms of the McAdoo award, and its numerous later supplements, has been to indicate that railway wages are increased about 40% over those shown for the year ended June 30, 1919, so that the average yearly wage now runs in the neighborhood of \$1,842. The Canadian National Ry. payroll for the year ended March 31, 1920, was \$19,000,000 compared with \$57,223,000 for the year ended March 31, 1919. Hon. J. D. Reid, Minister of Railways, in discussing the matter in the House of Commons recently, stated that out of every dollar earned, 70c was paid to the employees, and 20c for fuel, traction, etc. For all these reasons, while it is the responsibility of the management to

Railway wages have increased in Canada have partially advanced with those in the U.S. The McAdoo award and supplements were applied here, as was the Labor Board's award in 1920. In Canada, there are national agreements with the employees, and management of wage employees, while in the U.S. the roads have national agreements with the employees, maintenance of wage employees, and clerks and station employees. The agreement between the unions and the tra-

ways, as it exists in the U.S., has been subject to some modifications in its application to Canadian lines, while agreements with the train service brotherhoods are along the same lines in both countries.

In view of the facts that the great preponderance of the railway employ organizations' membership is in the U.S.; that rates and wages must necessarily be on the same basis in both countries, and that Canadian roads have found it necessary to base their wage schedules on those in effect in the U.S., it appears probable that if any reductions are made in railway wages, they will be initiated in the U.S., to be followed by corresponding readjustments in Canada.

The Minister of Railways on Railway Wages, Deficits, Etc.

The Minister of Railways, Hon. J. D. Reid, in speaking in the House of Commons on March 8, during a debate on the St. Lawrence waterway, said, in part:—The cost of operation of railways, not only in Canada, but in the United States, has increased so tremendously in the last two or three years that, in my judgment, it is hindering or preventing the future development of our country, and unless some means are taken to decrease the cost of operation of our railways, the development of our country will continue to be hindered. The development of this country and the U. S. has been hindered by the McAdoo award fixing the wages of railway employees. Some action must be taken, and I think the railway employees themselves should look into this matter and endeavor to adjust matters in such a way that the future of this country will not be hindered on account of the enormous cost of operation of railways as is the case at present.

The estimates that have been presented to the House, perhaps, may not and cannot be understood until we are able to explain them in detail, but the fact that \$160,000,000 appears in them does not mean that there has been that loss in connection with the railways, or that it is estimated there will be that loss next year. What it really means is that it has been estimated by those who are in charge of the Canadian National Ry., which include the Canadian Northern, Intercolonial, National Transcontinental and Grand Trunk Pacific, that there will be a loss of some \$50,000,000 during 1921. But in addition to that loss, large amounts are required for construction—betterments that are really charged to capital account—and in connection with the Grand Trunk Pacific a large amount will have to be charged in connection with capital account. As regards the Grand Trunk Ry., which the Government must take over, the Government has to assume responsibility in connection with liabilities that are falling due. It must not, however, be considered that the amount mentioned in the estimates means a deficit of that amount next year. There is no doubt that the Canadian National and the other Canadian railways are meeting with great losses; but the railways in the U.S. are meeting with proportionately much larger losses than our Canadian railways. I mention this simply for the reason that one or two speakers who have touched upon it do not, I believe, understand the situation. Otherwise, they would not have given out the impression that the railways are losing the amounts mentioned in the estimates.

Exchange on Freight Charges Between Canada and the United States.

The Board of Railway Commissioners general order 326, passed Jan. 14, ordered railway companies to file tariffs by Jan. 22 to put into effect Chief Commissioner Carvell's judgment of Jan. 13, which was published in full in Canadian Railway and Marine World for February, pg. 85. The judgment contained the following clause:—

"3. Telegraphic advice will be sent to railway agents in Canada on the last day of each month, specifying the surcharge to be collected from the 1st to the 14th (inclusive) of the following month; and

on the 14th day of each month specifying the surcharge to be collected from the 15th to the last day (inclusive) of such month. Agents must file such telegraphic advice with this tariff. The surcharge must be shown as a separate item on all bills of lading and waybills for outbound shipments and on all freight expense bills."

The rates of surcharges made in accordance with the above, have been as follows, up to date:—Jan. 22 to 31, 8%; Feb. 1 to 14, 7%; Feb. 15 to 28, 8%; March 1 to 14, 9%; March 15 to 31, 9%.

The C.P.R. will, it is reported, start its tourist service to Alaska June 10, with the steamships Princess Alice and Princess Royal.

An Extraordinary Railway Accident in British Columbia.

This illustration is made from a remarkable photograph of a train wreck in the Fraser River canyon, B.C., on Feb. 6. The locomotive, when approaching a sharp curve, struck a rock slide, and with the tender and one car, left the track, and started down the almost perpendicular side of the canyon, towards the river, several hundred feet below, but were miraculously stopped as shown. The locomotive man was killed, but there were no other casualties. The photograph is copyrighted by Francis Dickie, Vancouver.

will be resumed until about May 1

Supplying Information about the Canadian National Railways to Parliament. E. W. Beatty on the Necessity for Immigration.

G. Parent, M.P. for Quebec West, moved in the House of Commons March 14 for a copy of all letters and reports, exchanged between Canadian National Rys. engineers and officers concerning the demolition of the locomotive house at St. Foy, opposite the Quebec bridge; the removal from that place of the mechanical staff to Charney on the other side of the St. Lawrence River, and the proposed demolition of the station on the National Transcontinental Ry. main line at Quebec Bridge. The Prime Minister stated that the motion indicated that the correspondence asked for passed between the Canadian National Rys. directorate and other persons, and would not be in the Government's possession.

F. S. Cahill, Pontiac, Quebec, referred to the matter at a subsequent sitting and asked if it was the Government policy that correspondence between Canadian National Rys. officers would not be produced when asked for. The Premier stated that the C.N.R. directors operate the system just as the directors of any other railway whose stock is not owned by the Government operate their system. The directors' correspondence is in their possession, and it has not been the practice that this Government should ask that all matters of operation be submitted to it, or to Parliament for review; they come before Parliament in the usual way in the directors' report. That is the policy which has been adopted and which now prevails. Correspondence in connection with the operation of the line between the directors and the board of directors is not the same as correspondence between Government departments and others, which, of course, must be brought down upon resolution of the House. He did not see how it would be possible to have such a thing as independent non-political operation of the railway if all correspondence was to be produced. Concluding, he said: "Any matter connected with the operation of the road is, by means of the production of correspondence to be brought before Parliament for review, that means direct political control of the road, and that we are determined to avoid."

On March 22, Hon. W. L. Mackenzie King, moved: "That subject to the reservation that in exceptional cases there may be documents of a confidential character, which, in the public interest, may properly be withheld from publication, the House declares that it is the undoubted right of Parliament to demand and receive copies of all reports, accounts, correspondence and papers in relation to the management of every department of the public service including the affairs of the Canadian National Rys. whether operating directly under the control of the department, or under corporate form." He said that the necessity for moving the amendment arose out of the Government's attitude which had been taken anew this session, in refusing to give information with respect to the C. N.R. in answer to questions asked by members. He declared that the position taken by the Government was one of government ownership of railways, and government control and operation without government responsibility. The Government's attitude was unfair in very many directions, as well as being very prejudicial to the interest: of the taxpayers, and also to the labor employed

on the railways. He contended that the giving of information asked for about the Canadian National Rys. would not, as the Premier contended, lead to its being brought into party politics, because the one and only safeguard against political interference and control was the frankest, freest and fullest publicity in regard to the affairs of these railways. The motion asserted Parliament's right to information, but left it to the Government as to how it was to be supplied.

The Premier, in a lengthy reply, pointed out the dangers and difficulties of the situation which would be created in the event of the amendment being adopted, and said:—"While there is corporate management, there remains the Government's answerability and responsibility for the success of the system. That we cannot dispute. But there is no immediate accountability for the day to day procedure of operation. If there is to be, then our officers, subject to our direction, must operate the road; but our officers subject to our direction are not so operating. The board of directors is independent of government control and direction; and that being so, the Government from day to day cannot be answerable for details of operation, or for what takes place in the ordinary routine of operation between the operating directorate and the patrons of the road."

After a lengthy discussion, the motion was defeated by 117 to 79.

Passage of the Winslow Bill in the United States.

In connection with the Federal control of railways in the United States, the U.S. Government owed the railways over \$600,000,000 when the "guarantee period" ended in Sept., 1920. Owing to the length of time necessary to complete the accounting work involved, it will be months and perhaps years before the whole debt is agreed on. In the meantime, up to end of February, the Treasury Department had refused to pay the railways anything on account, saying it would pay the whole debt or nothing. The railways owe millions of dollars to manufacturing and supply companies, etc., which in turn have borrowed heavily from the banks. The condition thus brought about had seriously hampered and almost bankrupted numerous manufacturing and supply companies, and impaired the ability of banks to extend credit to other customers.

On Feb. 26, President Wilson signed the Winslow bill, authorizing partial payment to the railways by the Treasury Department, on certificates from the Interstate Commerce Commission that at least the amounts stated in the certificates were due.

There is no doubt that the situation existing prior to the passage of the bill was a large contributing factor in the business depression which has existed in the U.S. for some time past. The bill, which has become law, will remove a highly undesirable condition and have a great influence in helping the general business situation. It is said the Interstate Commerce Commission will issue certificates as rapidly as possible, for such sums as are determined from time to time to be due the railways, pending final settlement.

E. W. Beatty, K.C., President, C.P.R., was interviewed recently on the subject of the last yearly deficit for the Canadian National Rys. and is reported to have said that without immigration the prospects of the C.N.R. lines were, in his opinion, hopeless, any legislation which would stem the tide of desirable immigration must inevitably pile up further deficits. It was, he said, an aggressive immigration propaganda that built the C.P.R., and he claimed that Hon. T. A. Crerar, leader of the National Progressive Party, struck the right note when he declared before the Canadian Club in Montreal recently that a wise and vigorous policy of immigration would help solve the problem.

Mr. Beatty added: "I quite agree with those who object to immigration of city-bred continentals of poor physique and doubtful health, who would at once drift into slums, or of large communities of foreign born who frankly declare that they do not intend to assimilate with English-speaking Canadians. But the gates of Canada should be opened once more not only to the British, French and United States immigrant, but also to the Scandinavian and the more desirable type of continental."

Mr. Beatty pleaded also the cause of the skilled mechanic, in addition to that of farm hands and domestics, on the ground that Canadian industry would be handicapped in its progress without them, and he concluded: "Policies which are perfectly appropriate in the case of the United States would not necessarily be applicable to this country. By all means let us exclude the undesirable immigrant, but admit those who in time will contribute to this country's commercial prosperity and economic strength." J. F. Johnston, Last Mountain, Sask., brought the question up in the House of Commons a few days later and said:—"I wish to ask a question based upon an interview given by the President of the C.P.R. in which he is reported to have said something in regard to immigration into this country, giving it as his opinion that the present regulations should be modified. I desire to ask the Government if it is its intention to bring down legislation at this session making the immigration laws less restrictive with regard to the nationality of immigrants coming into Canada."

Prime Minister Meighen replied: "The Government has no legislation under consideration on the subject at present. If any is to be brought down, announcement will be made in due course."

Detroit River Bridge.—A Congressional committee at Washington, U.S., is reported to have given its approval to a bill providing for the construction of a bridge across the Detroit River, to connect Detroit, Mich., and Windsor, Ont., the work to be started within three years and to be completed in seven years. The Canadian Transit Co. is the title under which the promoters of the bridge are applying to the Dominion Parliament for authority to build the bridge. Detroit report states that the promoters expect to have the foundation work completed by the end of next winter, and to be able to begin the erection of the steel work early in 1922.

An Argentine railway is reported to have ordered 10,000 car wheels from the Krupp interests in Germany.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has received 7 mikado type (2-8-2) locomotives, with cylinders 25 in. dia. by 32 in. stroke, from Montreal Locomotive Works.

The Nova Scotia Steel & Coal Co.'s annual report, issued recently, contains the following paragraph: "Canadian railways are still in need of rolling stock, and track material, and it is anticipated that in the near future substantial orders will be given, of which doubtless this company will secure a reasonable proportion."

The Nova Scotia Steel & Coal Co.'s annual report for 1920, in dealing with the Eastern Car Co., states that 1,462 standard gauge freight cars, 10 standard gauge snow ploughs and 157 narrow gauge mine cars were built and delivered during 1920, and that at Dec. 31 there were on order 200 standard box cars, 40 tons capacity, and 500 box cars, 50 tons capacity, specially equipped for grain traffic, as well as some repair work for Sydney & Louisburg Ry.

Canadian National Rys., between Feb. 5 and March 5, received the following additions to rolling stock: 3 mikado (2-8-2) locomotives from Canadian Locomotive Co. out of an order for 15, and 1 received since March 5, completing the order; 36 box cars from National Steel Car Corporation, completing an order for 1,500; 210 stock cars from Canadian Car & Foundry Co., out of an order for 350, and 1 sleeping car from Canadian Car & Foundry Co., out of an order for 18.

The Governor General's car, Canada had its interior seriously damaged by fire recently at Ottawa central station. The damage is estimated at between \$5,000 and \$6,000, the cause of the fire being unknown, but it is under investigation. The car is not a modern one, having been built in 1925, and it is not considered advisable to rebuild it. The Railways Department has handed it over to Canadian National Rys. to convert into a baggage car, or make some other use of it. We are officially advised that it is not the present intention to replace this car, as when an extra car is required for the Governor General, one can be obtained from the Canadian National Rys.

The Railways and Canals Department has ordered 4 four-wheel (0-4-0T) switching locomotives from the Montreal Locomotive Works. Following are the chief details:—

Weight, total	79,000 lb.
Wheel base	7 ft.
Cylinders, diar. and stroke	14 x 22 in.
Driving wheel, diar.	40 in.
Journal	7 x 8 in.
Boiler, type	Straight, top
Boiler, pressure	150 lb.
Boiler, diar. first ring	16 in.
Firebox, length and width	16½ x 50 in.
Reboiler, no. and diar.	112 x 2 in.
Heating surface, tubes	480 sq. ft.
Heating surface, firebox	60 sq. ft.
Heating surface, total	174 sq. ft.
Grate area	16.2 sq. ft.
Tractive power	17,400 lb.
Factor of adhesion	4.5
Reverse gear	Hand lever
Cah	Wired
Water capacity	1 cu. gal.
Fuel capacity	1,000 cu. ft.

Canadian Car & Foundry Co.'s directors' report, presented at the annual meeting recently has the following paragraph: "The value of the orders unfilled at termination of the year (Sept 30, 1920) was approximately \$26,000,000, compared with approximately \$5,500,000

at the close of the preceding year. This large amount of unfilled business practically makes certain a steady output for some time ahead, and, taking into consideration improved labor conditions, and the fact that the bulk of the materials necessary is now on hand, the directors are hopeful that the prospects for the current year will prove satisfactory. The outlook for future business is encouraging. Although financial conditions may delay the placing of orders, there is admittedly a serious shortage of equipment on Canadian railways, and your directors are not neglecting export possibilities.

The Laurentide Co. has ordered one Prairie type (2-6-2) locomotive from Montreal Locomotive Works. Following are the chief details:—

Weight on drivers	138,000 lb.
Weight on engine truck	16,000 lb.
Weight on trailing truck	16,000 lb.
Weight total	170,000 lb.
Wheel base, driving	10 ft.
Wheel base, total, engine	28 ft. 3 in.
Cylin. total, diar. and stroke	47 in.
Journals	$3\frac{1}{2}$ x 11 in.
Truck wheels, diar.	26 in.
Truck journals	$4\frac{1}{2}$ x 8 in.
Boiler, type	Straight top
Boiler pressure	180 lb.
Boiler, diar. first ring	74 in.
Boiler, length and width	102 $\frac{1}{2}$ x 33 in.
Tubes, no. and diar.	314 2 in.
Heating surface, tubes	1,795 sq. ft.
Heating surface, firebox	150 sq. ft.
Heating surface, total	1,954 sq. ft.
Gross area	23.4 sq. ft.
Tractive power	28,200 lb.
Factor of adhesion	4.9
Reverse gear	Hand lever
Cab	Steel plate
Water capacity	1,500 gal.
Fuel capacity	100 cu. ft. coke

Additions to Canadian National Railways Rolling Stock.

J. F. Reid, M.P. for Mackenzie, Sask., asked in the House of Commons, March 4, how many new box cars, stock cars, cabooses, new locomotives, new passenger, day, standard, tourist and colonist cars, were put in operation during 1918, 1919 and 1920? The Minister of Railways gave the following information in reply:—

	1918	1919	1920
Locomotives			
Mikado	60		
Consolidation	60		
Pacific	15	25	
Switching	20	25	20
Medium Pacific			20
Heavy Pacific			10
Santa Fe			15
	185	50	75

Freight			
Box cars	9,128	1,807	1,286
Stock cars	1,111	803	—
Cabooses		15	100
	10,864	2,625	1,415

Passenger		
Tourist cars	—	20
Colonist cars	—	10
Day cars	—	0
Baggage cars	—	0
Mail cars	—	0
Dining cars	1	0
Sleeping cars	11	0
Observation cars	—	0

Locomotive Orders for Canadian National Railways.

W. Duff, M.P., Lunenburg, N.S., asked the following question: "On the 11th of June 1947, the Minister of Railways and Canals announced recently: 'How many locomotives have been built for the Canadian National Railways by the Montreal Locomotive Works since 1941, and how many are under order?'"

contract, to insure if possible the company, but not yet completed? What has been or will be the total cost of all the locomotives? Were passengers called for the building of the locomotives? If not, why not? Is the Minister of Marine and Fisheries a member of any board or committee connected with the Montreal Locomotive Co.? If so, what are the duties or functions of such board or committee in relation to business done with the Government? If not, when did the Minister of Marine and Fisheries cease to be a member of such board or committee?"

The Canadian Railway Association has been asked to advise 227 locomotives have been ordered since 1917 at a cost of \$1,200,000. None under contract at present. Public tenders were called and contract awarded to lowest tenderer. Neither the Government nor Government have any information as to whether or not the shareholders or parties interested in Montreal Locomotive Co. Their interest is to see that the lowest tenderer receives the contract for supplies for Canada National Ry. Information from the Minister of Railways and Fisheries is that he is a director of said company, but not on any committee."

On the following day the Minister corrected his statement and said—"The departmental clerk made it appear that the total amount paid for the locomotives was \$1,329,300, but one cypher was left out at the end. The amount should have been \$13,293,000."

An Efficiency Fiend.

The general manager of a railway in the Eastern States had a reputation for laying off men whenever he found an excuse. As he appeared in the yards one day, two switchmen began to discuss him.

"He don't look like the man we want," he is," said one.

"Why they say when he was at the funeral of Flannery's wife, and the six pallbearers came out carrying the coffin, he raised his head and said: 'Hullo, boys! You can get along without two of 'em'!" - McCall.

Quebec Legislators Want More Passes

The Quebec legislative Assembly passed the following resolution on 19 July: "It was moved by Dr. Desautels, seconded by the importance of creating a new court of appeal and more... to the interests and fairness of our society, that the following be voted: that the Government of Quebec, in any way, be authorized to take any action, at least in the future, to allow the National Assembly to grant a future bill of rights to the province of Quebec." The resolution was adopted by a vote of 104 to 10. The Government of Quebec has not yet taken any action to implement the resolution.

Railway Lands Patented—Twenty-two—

It was found in February the distance railway track in Macedonia, Yugoslavia. Albert and I did not stay at the location.

Mainly About Railway People Throughout Canada.

Dollard Arber, car inspector, C.P.R., Farnham, Que., has been awarded a Royal Humane Society's parchment, for saving the life of a woman who attempted to cross the tracks in front of an express train there in Aug. 1920.

W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., who has been attending sittings of the Grand Trunk arbitrators in Montreal, was attacked with pleurisy and was unable to be present on March 21 and subsequent days.

W. W. Butler, President, Canadian Car & Foundry Co., and Mrs. Butler, left Montreal, March 19, for New York, and sailed by the s.s. Aquitania, for England.

Lt. Col. G. S. Cantlie, D.S.O., formerly General Car Service Agent, C.P.R., Montreal, has been appointed honorary Lieutenant-Colonel of the 1st Battalion, Royal Highlanders of Canada.

J. L. Englehart, ex-Chairman, Temiskaming & Northern Ontario Ry. Commission, was a patient in Wellesley Hospital, Toronto, for a short time in March.

Mrs. Foster, wife of W. F. Foster, K. C., solicitor for Ontario, G.T.R., Montreal, died at St. Petersburg, Florida, recently.

George C. Gahan, who has been appointed General Auditor, C.P.R., Montreal, was born there Dec. 28, 1874, and entered C.P.R. service Apr. 1890, since when he has been, to Oct. 1891, clerk to Auditor of Freight and Telegraph Service; Oct. 1891 to Aug. 1896, clerk to Auditor of Disbursements; Aug. 1896 to Dec. 1, 1916, clerk, bookkeeper, and chief clerk, Comptroller's and General Auditor's offices; Dec. 1, 1916 to Mar. 1, 1921, Assistant General Auditor, all at Montreal.

Wm. Addison Griffiths, who has been appointed Traffic Superintendent, Kailan Mining Administration, Tientsin, North China, was born in Wales, in 1865, served apprenticeship with London & North Western Ry., came to Canada in 1906, and was in service with the G.T.R. and subsequently with the C.P.R., and later in the British Government service on West African Government railways. During the Great War he served with the Royal Engineers and Canadian Railway troops.

Jno. Murray Gibson, General Publicity Agent, C.P.R., has been elected President of the Canadian Authors' Association, which was organized in Montreal recently.

Grant Hall, Vice President, C.P.R., stated recently that he had not been offered a position on the Canadian National Ry. management, and that he would not entertain such an offer.

C. R. Hosmer, director, C.P.R., and Mrs. Hosmer, entertained at dinner, in Montreal, recently, in honor of W. H. Taft, ex-President of the United States, who is one of the arbitrators on G.T.R. stock values.

Major Robert Bernard Jennings, who has been appointed Division Engineer, Canadian National Ry., Ottawa, Ont., was born at Paris, Ont., June 29, 1888, and entered transportation service in Apr. 1906, since when he has been, to Oct. 1906, chairman, Toronto-Sudbury Line, C.P.R.; Oct. 1906 to Oct. 1907, rodman, Saskatoon-Edmonton Line, Grand Trunk Pacific Ry.; Oct. 1907 to Dec. 1908, instrument man and Resident Engineer, Saskatoon-Edmonton Line, same road;

Dec. 1908 to Oct. 1909, leveler, Toronto-Ottawa Line, Canadian Northern Ontario Ry.; Oct. 1909 to Jan. 1916, Resident Engineer, Toronto-Ottawa, Sudbury-Port Arthur and Hawkesbury-Montreal Lines, Canadian Northern Ry.; Apr. 1916 to Jan. 1917, Manager, Jennings & Ross Co., Milwaukee, Wis.; Jan. 1917 to May 1919, Major, 10th Battalion, Canadian Railway Troops, C.E.F., in service in France; July 1919 to Mar. 1921, Division Engineer, Canadian National Ry., Toronto.

C. C. Kirby, District Engineer, New Brunswick District, C.P.R., St. John, N. B., has been elected President, Association of Professional Engineers of New Brunswick.

H. Leslie, station agent, C.P.R., Wakefield, Que., died there Mar. 1, aged 42. He had been in C.P.R. service for about 20 years, and prior to that, was with the Ottawa Northern & Western Ry., now part of the C.P.R.

D. H. McDougall, President, Nova Scotia Steel & Coal Co., New Glasgow, N.S., has been appointed Vice President of the British Empire Steel Corporation, of which Roy M. Wolvin is President.

Sir Geo. McLaren Brown and Lady Brown are spending some weeks in England, according to the Toronto Mail and Empire. No doubt they are, Sir Geo. McLaren Brown being the C.P.R. General European Traffic Manager. Some of these days the Mail and Empire will be giving the startling information that the Dutch have taken Holland.

Samuel Morrison, whose appointment as Assistant Engineer, Maintenance of Way, Canadian National Ry., Vancouver, B.C., was announced in a recent issue, was born at Mount Forest, Ont., Aug. 17, 1882, and entered Canadian Northern Ry. service in May 1906, since when he has been, to Aug. 1906, levelman, Port Arthur, Ont.; Aug. 1906 to Sept. 1909, trainman in Saskatchewan; Sept. 1909 to Dec. 1912, in charge of location party in Saskatchewan and Alberta; Dec. 1912 to Nov. 1915, Resident Engineer, Resplendent, B.C.; Nov. 1915 to Apr. 1919, Resident Engineer on Pacific District; Apr. 1919 to Jan. 1921, acting District Engineer, Pacific District.

L. Mulken, who has been appointed Division Freight Agent, C.P.R., North Bay, Ont., was born at London, Ont., June 18, 1871, and entered C.P.R. service in Mar. 1890, since when he has been, to 1897, operator, Freight Department, Toronto; 1897 to 1901, inward freight clerk, London, Ont.; June 1, 1901, to June 1903, clerk in General Freight Agent's office, Toronto; June 1903 to Apr. 1908, canvassing freight agent, chief clerk to General Freight Agent, and Travelling Freight Agent, Toronto, consecutively; Apr. 1908 to June 1910, chief clerk to General Freight Agent, Through Traffic, Toronto; June 1910 to Jan. 1914, District Freight Agent, London, Ont.; Jan. 1914 to May 15, 1916, District Freight Agent, Toronto; May 1916 to March 1921, Division Freight Agent, St. John, N.B.

Sir Augustus Nanton, director, C.P.R., and President, Winnipeg Electric Ry., Lady Nanton, and daughters, left early in March on a trip to Bermuda.

H. H. Norman, Secretary, G.T.R. Co., London, Eng., who died there recently, aged 71, left an estate with a gross value of \$42,576, and a net personality of \$41,848.

James Norman, chief clerk, to General Auditor, G.T.R., Montreal, was presented with a purse of money, Mar. 15, on retiring from railway service to take up farming.

Chas. A. Phelan, Vice President, Canada Railway News Co., died in Montreal General Hospital, Feb. 26, after a long illness. He was born at Lewiston, N.Y., in 1860, and had been Vice President, Canada Railways News Co., since its incorporation in 1883.

T. P. Phelan, President, Canada Railway News Company, Toronto, and Mrs. Phelan, left Toronto early in March for Hot Springs, Arkansas.

Capt. Kenneth G. Polybank, whose appointment as Division Engineer, Canadian National Ry., Hornepayne, Ont., was mentioned in our last issue, was born at Bristol, Eng., Aug. 17, 1884, and entered railway service in Apr. 1904, since when he has been, to Oct. 1905, in Timiskaming & Northern Ontario Ry. office, North Bay, Ont.; Oct. 1905 to Mar. 1907, in C.P.R. office, Fort William, Ont.; Mar. to Aug. 1907, rodman, Grand Trunk Pacific Ry., Fort William, Ont.; Aug. 1907 to Aug. 1911, rodman, draftsman, instrument man and Resident Engineer, consecutively, National Transcontinental Ry., Kenora, Ont. and Winnipeg; Aug. 1911 to May 1912, Resident Engineer, Canadian Northern Ry., Port Arthur, Ont.; May 1912 to Oct. 1914, Division Engineer, Canadian Northern Ry., Port Arthur, Ont.; 1915 to 1919 in military service overseas as Captain in Canadian Engineers Light Railways Co.; July 1919 to Jan. 1920, Resident Engineer, Canadian National Ry., Winnipeg; June to Nov. 1920, Resident Engineer, C.N.R., Hornepayne, Ont.

Mrs. Geo. M. Pullman, widow of the inventor of the Pullman car, died at Pasadena, California, March 28.

F. E. Shrimpton, General Auditor, C.P.R., Montreal, died there March 1. He was born in England, June 3, 1868, and entered C.P.R. service Sept. 15, 1887, as clerk in the Auditor of Disbursement's office, Montreal, and left the service Sept. 1, 1888. He was for some time in Oregon Short Line Rd., service at Salt Lake City, Utah, and re-entered C.P.R. service May 1, 1903, since when he was to Dec. 1, 1906, chief clerk to Auditor of Disbursements, Montreal; Dec. 1, 1906 to Dec. 1, 1908, Assistant Auditor of Disbursements; Dec. 1, 1908 to Oct. 1, 1914, Auditor of Disbursements; Oct. 1, 1914, until his death, General Auditor.

Miss Marie Vautelet, daughter of H. E. Vautelet, formerly Bridge Engineer, C.P.R., and subsequently Chairman, Board of Engineers, Quebec bridge, is to be married at Montreal, on April 5, to Jules Bauset.

A. E. Warren, General Manager, Western Lines, Canadian National Ry., has returned to Winnipeg, with Mrs. Warren, after a holiday trip to California.

H. Williams, formerly paymaster, G.T.R., Montreal, died at Gananoque, Ont., recently. He entered G.T.R. service about 40 years ago as chief clerk to the then Second Vice President (W. Wainwright), was appointed paymaster in 1897, and retired on superannuation in 1913.

E. R. Wood, one of the Canadian National Ry. directors, returned to Toronto at the end of March, after spending some weeks at his winter house in California.

The Toronto Railway Viaduct Situation.

The Toronto Terminal Ry. Co. through its solicitor, W. H. Curle, K.C., who is also Chief Solicitor, C.P.R., sent the following application to the Board of Railway Commissioners Feb. 17:—"The Toronto Terminal Ry. Co. on behalf of itself, the Grand Trunk Ry. Co. of Canada, and the Canadian Pacific Ry. Co. hereby applies to the Board, under the Railway Act 1919, sec. 41, for an order extending the time for completion of the works authorized and ordered by order 1925, July 31, 1913, and for an order therein referred to, for an order amending the provisions of said orders. The application is founded on financial conditions. The cost of the works originally estimated at \$15,000,000 is now, in consequence of the universal advance in the cost of labor and materials, estimated at \$27,000,000. The financing of such a sum is at present a practical impossibility, or is possible only on the most exorbitant terms. The companies ask that the execution of the works be deferred until these conditions improve, or for such alternative relief as may be proper in the circumstances."

Toronto City Council, Feb. 21, passed a resolution instructing its legal department to take immediate legal proceedings asking for specific performance of the viaduct agreement, but on Feb. 28 a further resolution was passed directing that no action be taken until further orders.

The Alexander Brown Milling & Elevator Co. initiated proceedings in the Ontario High Court, March 15, against the C.P.R. and the G.T.R. companies, for an order to compel the expropriation of its interest in the lands held by it under lease from the City of Toronto, and mentioned in the order of July 31, 1913, directing the building of the viaduct. In the alternative the company asks for a release of the lands from the plan of April 25, 1913, showing the lands to be expropriated for the viaduct; and also asks for \$451,411.87 for damages, business losses, etc., occasioned by the filing of the plans.

E. L. Cousins, General Manager and Chief Engineer, Toronto Harbor Commission, addressed the Toronto Board of Trade recently on the relationship between the projected railway viaduct along the waterfront and the harbor development. He outlined the viaduct works which the Board of Railway Commissioners ordered, and as set out in the agreement of July 29, 1913, and showed the nature of the plans for the development of the Toronto Harbor. He then referred in detail to plans for a temporary solution of the difficulty put forward by the railway companies, which include a bridge at Spadina Ave.; the raising of the York St. bridge; the provision of a temporary overhead bridge at Yonge St. for all traffic, and bridges at Princess St. and Parliament St. for pedestrian and vehicular traffic. The viaduct would then be postponed for 10 years, Bay St. closed, and Trinity and Cherry Sts. closed across the G.T.R. tracks. Commencing at Parliament St., the G.T.R. main lines would be elevated across Trinity and Cherry Sts., through to the Don and carry the main line track elevated beyond the Don to Logan Ave., thus providing subways at Eastern Ave. and Queen Sts. A portion of the Don yard tracks would also be elevated. The tracks at the union station would probably be about 3 ft. above the present level. Mr.

Cousins pointed out the situation which would then be brought about, and claimed that what was suggested by the railways as a solution of the difficulty would menace the development of the inner harbor scheme, upon which so much money has already been expended. In the event of there being 10 years delay in the construction of the viaduct, he would recommend the suspension of the inner harbor work. He claimed that the estimated cost of the viaduct was \$16,000,000, and of this Toronto would, in accordance with the order, have to provide \$3,000,000 to \$4,000,000, so that altogether the railways would not have to provide anything like the sum suggested by them.

The Toronto Board of Trade subsequently passed a resolution calling for the construction of the viaduct in accordance with the order.

It is announced that the application will be heard by the Board of Railway Commissioners at Ottawa, April 4.

Proposed Electrification of G.T.R. Branch Lines.

A movement has been launched in London, Ont., for the electrification of the G.T.R. London, Huron and Bruce and

Stratford branches. P. Pocock, Vice Chairman of the London Railway Commission, is reported to have invited municipal authorities, chambers of commerce and other public bodies in the areas served by these two branch lines to take up the question, and it is stated that considerable interest is being aroused. The London City Council's committee in charge of railway matters is reported to have recommended the appointment of a special committee to co-operate with other public bodies on the matter. Wingham Town Council has passed a resolution asking that the Hydro Electric Power Commission of Ontario be requested to approach the Dominion Government with a view to acquiring the London, Huron & Bruce Ry. and electrifying it. A press report states that the Minister of Railways has announced that the Government cannot give any consideration to the question until after the Grand Trunk Ry is finally vested in the Government.

The Alberta & Great Waterways Ry. has, according to a press report of March 18, carried 1,500 cars of freight since the Alberta Government took over the line, of which 750 have gone north since Nov. 1920. There are, it is stated, about 900 tons of freight lying on the water bank at the end of track, awaiting transportation to the Fort Norman oil fields.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, and Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Traffic Orders by Board of Railway Commissioners.

Surcharges on International Passenger Traffic.

General order 331, March 5.—Re-exchange on passenger charges payable in respect of international traffic between Canada and the United States, and the application of the Railway Association of Canada, for the granting of surcharges on international passenger traffic. Upon hearing the application at Ottawa, March 5, in the presence of the counsel for the applicants, the Toronto, Hamilton & Buffalo Railway, and the Montreal and Toronto Boards of Trade, the arguments addressed to the Board, the data furnished, and what was alleged, and after conference with representatives of the applicants and reading the memoranda filed on behalf of the applicants, setting out in detail the surcharges it is proposed to apply at different points and the principles upon which such surcharges were based, the Board orders as follows:—

1. A surcharge based on the full rate of exchange arrived at in accordance with the provisions of this order may be added to the total through fares and charges as set out in sec. 6 hereof, and collected in Canada on all passenger and baggage car traffic to United States destinations from the following points in Canada, via the routes set out in this section (subject to exemptions provided for in sec. 5 hereof):—

From Rock Island, Stanstead, and Beebe Jet., Que., via Newport, Vt.
From St. Armand, Que., via. Highgate Springs, Vt.
From Lacelle and Lacelle Jet., Que., via Rouss Point, N.Y.
From St. Agnes, Que., via Port Covington, N.Y.
From Athelstan, Que., via Constable, N.Y.
From Cornwall, Ont., via Nyando, N.Y.
From Prescott, Ont., via Ogdensburg, N.Y.
From Niagara Falls, Niagara-on-the-Lake, Victoria Park, and Falls View, Ont., via Suspension Bridge and Buffalo, N.Y.
From Bridgeburg, Ont., via Buffalo, N.Y.
From Windsor and Walkerville, Ont., via Detroit, Mich.
From Sarnia, Ont., via Port Huron, Mich.
From Sault Ste. Marie, Ont., via Sault Ste. Marie, Mich.
From Port Francis and Rainy River, Ont., via Rainier, Minn.
From Emerson, Man., via Pembina, N.D., St. Vincent, and Noyes, Minn.
From Gretna and West Gretna, Man., via Neche, N.D., -
From North Portal, Sask., via Portal, N.D.
From Coutts, Alta., via Great Grass, Montana.
From Kingsgate, B.C., via Eastport, Idaho.
From White Rock, B.C., via Blaine, Wash.

2. A surcharge based on 75% of the rate of exchange so arrived at may be applied in the case of all such traffic to U.S. destinations from the following points in Canada, via the routes set out in this section, subject to the exemptions provided for in sec. 5 hereof:—

(a) From Montreal and St. Hyacinthe, Que., and intermediate points, via Rouss Point, Port Covington, and Maline, N.Y.; Highgate Springs, Newport, and Island Pond, Vt.
(b) From Sherbrooke and Lennoxville, Que., and intermediate points, via Newport, Vt.
(c) From Valleyfield and Huntingden, Que., and intermediate points, via Port Covington, N.Y., Highgate Springs, Vt., and Rouss Point, N.Y.
(d) From Russell, Ont., and intermediate points, via Nyando, N.Y.
(e) From Kempville and Morrisburg, Ont., and intermediate points, via Ogdensburg, N.Y.
(f) From Hamilton, Caledonia, Hagersville and Jarvis, Ont., and intermediate points, via Suspension Bridge and Buffalo, N.Y.
(g) From Smiths Falls, Perth and Westport, Ont., and intermediate points, via Morrisstown, N.Y.
(h) From Chatham, Farzo, Blenheim, Amherstburg and Lexington, Ont., and intermediate points, via Detroit, Mich.
(i) From Petrolia, Strathroy Forest and Albia Craig, Ont., and intermediate points, via Port

Huron, Mich.

(j) From Morris, Man., and intermediate points, via Pembina and St. Vincent, N.D.
(k) Estevan, Sask., and intermediate points, via Portal, N.D.
(l) From Vancouver, New Westminster and Victoria, B.C., and intermediate points, via Everett, or Seattle, Wash., to points west of the direct line of M. St. P. & S.S.M. Ry., via Minor, N.B., to points west of Minneapolis, Minn., St. Paul, Minn., Sioux City, Iowa, Omaha, Neb., Atchinson, Kan., Kansas City, Mo., St. Louis, Mo., St. Paul, Ill., Memphis, Tenn., Vicksburg, Miss., New Orleans, La., and via California to all points.

3. A surcharge based on 50% of the rate of exchange so arrived at may be applied in the case of all such traffic to United States destinations from the following points in Canada, via the routes set out in this section, subject to the exemptions provided for in sec. 5 hereof:—

From St. John, Fredericton and Woodstock, N.B., and intermediate points, via Yaneboon, Me.
From Bedford Mines and St. Ephem, Que., and intermediate stations to but not including Sherbrooke and Mercantile, via Newport, Beecher Falls, and Quebec, Que., and stations to Danville, Que., inclusive, via Island Pond, or Newport, Vt.

From Ottawa, Ont., and intermediate stations to but not including, Russell, Kempville and Smiths Falls, Ont., Valleyfield and Montreal, Que., via Nyando, Ogdensburg, Morrisown and Rouss Point, Vt., Highgate Springs, Newport and Island Pond, Vt.

From Toronto, Georgetown, Guelph, Galt, Paris and Tilsonburg, Ont., and intermediate stations to but not including Hamilton, Caledonia, Hagersville and Jarvis, Ont., via Suspension Bridge and Buffalo, N.Y.
From London, St. Thomas, Stratford and Courtwright, Ont., and intermediate stations to but not including, Strathroy, Albia and Blenheim, Ont., via Detroit and Port Huron, Mich.

From Winnipeg, Man., and intermediate stations to but not including, Neche, N.D., Pembina, N.D., St. Vincent, Minn., Noyes, Minn., to points west of Sault Ste. Marie, Mich., Port Huron, Mich., Detroit, Mich., and Chicago, Ill., and to points east thereof, also to points east of Idaho and California.

From Weyburn, Sask., and intermediate stations to but not including, Estevan, Sask., via Portal, N.D.

4. A surcharge based on 25% of the rate of exchange so arrived at may be applied in the case of all such traffic to U.S. destinations from all other points in Canada subject to the exemptions provided for in sec. 5 hereof:—

5. No exchange surcharge will be collected on such traffic from points in Canada to the following U.S. destinations via the routes set out in this section:—

To Vancouver, Houlton, Presque Isle, Port Huron, Mich., and intermediate points, via C.P.R. from all points.
To Bangor, Me., via C.P.R. from New Brunswick, Nova Scotia and Prince Edward Island.
To Portland, Me., via C.P.R. from and through Megantic, Que.
To Norton Mills, Lake Summit, and Island Pond, Vt., via G.T.R. from all points.
To Beaver Falls, Vt., via Maine Cent. Rd., from all points.
To North Troy, Centre, and Newport, Vt., via C.P.R. from all points.
To Derby Line and Newport, Vt. via R. M. Rd. from all points.
To Highgate Springs, Vt., via C.V.R. from all points.
To Constable, N.Y., via N.Y.C. Rd. from all points.
To Port Covington, N.Y., via G.T.R. from all points.
To Nyando, N.Y., via N.Y.C. Rd. from all points.
To Ogdensburg, N.Y., via all routes via Prescott, Ont., from all points.
To Niagara Falls, Suspension Bridge and Tonawanda, N.Y., via all routes from all points.
To Buffalo and Black Rock, N.Y., via all routes from all points.
To Detroit, Mich., via all routes via Windsor or Sarnia, Ont., from all points.
To Port Huron, Mich., via G.T.R. via Sarnia, Ont., from all points.
To Sault Ste. Marie, Mich., via all routes via Sault Ste. Marie, Ont., from all points.
To Sarnia, Ont., via C.N.R. via Detroit, Mich., via Rainy River, Ont., or Middleboro, Man., from all points.

To Rainier, Minn., via C.N. Rys. via Port Francis, Ont., from all points.
To Noyes, St. Vincent and Pembina, N.D., via all routes, via Emerson, Man., from all points.
To Neche, N.D., via C.P.R., via Gretna, Man., and C.N.R. via West Gretna, Man., from all points.

To Walhalla and St. John's, N.D., via G.N.R. from all points.
To Portal, N.D., via C.P.R. via North Portal, Sask., from all points.

To Graveland, Minn., via C.P.R. via Coats, Alta., from Alberta points.
To Gateway, Minn., via G.N.R. via Baynes, B. C., from British Columbia points.
To Eastport, Idaho, via C.P.R. via Kingsgate, B.C., from all points.

To Northport, Laurier, Danville, Ferry, Molson and Greenville, via G.N.R. from British Columbia points north of stations named.

To Blaine, Wash., to Seattle, Wash., included, via G.N.R. via White Rock, B.C., from Vancouver, B.C., and Canadian stations intermediate between Vancouver, B.C., and Seattle, Wash.

To Seattle, Wash., via C.P.R. B.C. Coast Steamships and G.T.P.R. Coast Steamships from Vancouver and Victoria, B.C.
To Alaska points via C.P.R. B.C. Coast Steamships from all points.

6. The surcharge herein provided for will be calculated at the rate governing at the date of issue of ticket, check, or receipt upon the amount of the through fare or charge from starting point to destination, for (a) passage tickets; (b) sleeping car tickets; (c) parlor car tickets; (d) excess or other revenue baggage car traffic and special baggage cars; (e) collections for transfer or special delivery of baggage in United States cities.

7. In arriving at the surcharge, the rate of exchange quoted for New York funds by the Bank of Montreal in Montreal at noon on the last day of each month will govern from the 1st to the 14th inclusive of the following month; similar quotations at noon on the 15th will govern from the 15th to the last day inclusive of such month. Should the governing date fall on a Sunday or Canadian or United States legal holiday the noon quotation of the preceding day will govern. In determining the rate of exchange and surcharge to be applied, fractions less than one-half will be disregarded, and one-half or over will be counted as one per cent.

8. Telegraphic advice will be sent to railway agents in Canada on the last day of each month, specifying the rate of exchange on which surcharge will be based from the 1st to the 14th inclusive of the following month; and on the 14th day of each month specifying the rate effective from the 15th to the last day inclusive of such month. Agents must file such telegraphic advice with the tariff governing such surcharge.

9. Each railway company shall file with the Board, effective March 15, 1921, a special tariff setting forth the charges to be made in accordance with the provisions of this order and corresponding to the varying rates of exchange, and in such tariffs they will be permitted to arrange the amounts on which the surcharges are to be assessed in groups of not exceeding 50c., provided that the amount to be collected on account of exchange does not exceed the authorized rate on the average of each group.

And the Board further orders that the telegraphic advice as provided in sec. 8 of this order be posted in a conspicuous place at each passenger station in Canada of the railway companies over which the Board has jurisdiction; that the companies instruct their agents to inform the public when purchasing tickets to the U.S. that they have the right to purchase a ticket to the border in Canadian funds, if they so desire; and that a pos-

Stewart & Macdonnell's Harbor and Railway Contract in the Gold Coast Colony.

The firm of Stewart & Macdonnell, with headquarters at Vancouver, B.C., and which is composed of Major General J. W. Stewart, C.B., C.M.G., and the Hon. Angus Macdonnell, has undertaken to build a deep water harbor, with piers, sheds, etc., at Takoradi, Gold Coast Colony, Africa, and a 12-mile railway from Takoradi to Sekondi, where it will connect with the Government railway running from there through Tarkwa, the center of the gold mining district, to Kumasi, 168 miles. The arrangement has been made with the Government of the Gold Coast, a Crown colony, which has appointed Stewart & Macdonnell as consulting and construction engineers, and they will be paid a fee, or percentage, on the work, which will include dredging for a deep water harbor, the erection of piers, sheds, etc., and the building of the 12-mile railway mentioned above, at a total estimated cost of about \$17,000,000.

Major General Stewart's career as a Canadian railway contractor, and his record in the Great War, in building and maintaining railways in Belgium and France, are too well known to Canadian Railway and Marine World readers to need repeating here. Since the war, he and his associates have built over 500 miles of railways through Saskatchewan, Alberta and British Columbia, for the Canadian National Rys., and the Canadian Pacific Ry. Mr. Angus Macdonnell, also well known contractor in Western Canada, is a son of the Earl of Antrim.

Major General Stewart, who returned to Canada, from England, on Feb. 1, will go overseas again about September, and will spend considerable time in London, and also at the Gold Coast. Mr. Macdonnell has already left Canada, accompanied by some of the firm's staff, which will be composed principally of men well known in the Canadian railway and harbor construction field, and will include Lt. Col. J. D. L. Macdonald, of Vancouver, who commanded the third Battalion of Railway Troops at the Front, as Manager of Construction; Jas. McGregor, formerly Superintending Engineer, Halifax-Ocean Terminals, Canadian National Rys., as Chief Engineer; Capt. Richard Williams, who was in the Canadian Light Railway Corps, as Chief Mechanical Engineer; T. H. Thomas, as Chief Accountant; L. Conkey, as Chief Storekeeper, and some 25 others, selected from Stewart & Macdonnell's Canadian organization. Native labor will be employed almost exclusively.

Concrete and steel will be the principal materials to be used in the harbor construction. The dimension timber for the work will be taken from British Columbia, and a considerable portion of the plant will be taken from Canada.

The selection of Major General Stewart for this work is a result of the splendid service he rendered in the Great War, which was noticed by Brig. General F. H. Guggisberg, C.M.G., D.S.O., who is the Governor of the Gold Coast Colony, and who, it is of special interest to note, was born at Oakville, Ontario, July 20, 1869. He was educated privately in England and at the Royal Military Academy, Woolwich. He entered the Royal Engineers in 1889, was appointed Captain in 1900, temporary Major in 1905, and Major in 1908. He served in Singapore, 1893 to 1896; was Instructor in

Fortifications at Woolwich, 1897 to 1902, in special employment, under the Colonial Office, on survey of Gold Coast and Ashanti, as Assistant Director, in 1902, and Director of Surveys, 1905 to 1908. From 1910 to 1914 he was Surveyor General of Nigeria. He has written several stories of West African life, mostly in collaboration with his wife, and some of them have been dramatized. He also wrote a book "Ubique," on modern warfare. His headquarters are at the capital, Accra.

The Gold Coast Colony, which is on the West Coast of Africa, comprises the coast of the Gulf of Guinea, from about 3° 7' W to 1° 14' E of Greenwich, with a protectorate extending inland to an average distance of 440 miles, or the 11° of north latitude, being bounded on the west and north by the French colonies of the Ivory Coast and the French Sudan, and on the east by the former German colony of Togoland, now divided between the British and French. Takoradi is about 150 miles west of Accra, which is some 1,900 miles from Liverpool, the voyage by the Elder Dempster line taking about 14 days.

The Gold Coast Colony proper consists of about 24,200 sq. miles. Ashanti and what are known as the Northern territories, or Protectorate, about 20,000 sq. miles, and 35,800 sq. miles respectively, are governed by commissioners, under the Gold Coast Colony's Governor. The latest available figures of estimated population are about 1,650,000, of which only a little over 1,000 are Europeans. The colony's trade is principally with the United Kingdom, gold is found in considerable quantities, and among the other chief products are cocoa, rubber, palm oil, and palm kernels. The climate is damp, hot, malarious and unhealthy. In addition to the railway already mentioned, there is one from Accra to Mankosse, or Tapo, about 39 miles.

Canadian National Railways Directors' Fees, Etc.

W. C. Kennedy, North Essex, Ont., asked the following questions in the House of Commons recently, the answers being given by the Minister of Railways:

Q. "What are names of the gentlemen who compose the Board of Management of the Canadian National Rys.?" A. "D. B. Hanna, A. J. Mitchell, R. T. Riley, R. Hobson, Major G. A. Bell, Sir Hornhill Laporte, Thos. Cantley, A. P. Barnhill, E. R. Wood."

Q. "What is the salary of each, and what amount did each receive as expenses during the past year?" A. "Directors fees, \$2,000 each, and travelling expenses to and from their homes."

Q. "Are any of these gentlemen directors of joint stock companies doing business in Canada? If so, of what company or companies are they respectively directors?" A. "The Government has no information."

Summer Passenger Rates.

A Toronto paper stated recently that the C.P.R. had announced summer passenger rates, making a reduction from 20 to 25% in the current rates. We are officially advised that there was no foundation for the report.

The Board of Railways Commissioners' authorization of increases in passenger fares effective in September, 1920, provided that those increases would be reduced Jan. 1, 1921, which reduction was made, and that the balance should disappear July 1, 1921, which means that on July 1 the companies will revert to the fare basis in effect prior to the granting of the increases in Sept. 1920. This is the only reduction that is to be made. The railways will this year, as in previous years, have on sale from June 1 to Oct. 31, round trip, summer tourist tickets, on the agreed summer tourist fare basis.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE TO SHAREHOLDERS.

The Fortieth Annual General Meeting of the Shareholders of this Company for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the fourth day of May next, at the principal office of the Company, at Montreal, at Twelve o'clock noon.

SPECIAL MEETING.

The meeting will be made special for the purpose of considering and, if deemed advisable, of authorizing the issue, statutory authority therefor being first obtained, of bonds, debentures or other securities collateral to or in lieu of any consolidated debenture stock which the Company is or may be hereafter authorized to issue, and to the same amount.

The Common Stock Transfer Books will be closed in Montreal, New York and London at 3 p.m. on Tuesday, the fifth day of April. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the fifth day of May.

By order of the Board,

ERNEST ALEXANDER,
Secretary.

Montreal, March 14th, 1921.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Ry.—L. W. BULLER, heretofore Assistant Superintendent, Toronto Division, Toronto, has been appointed Assistant Superintendent, Ottawa Division. Office, Toronto.

G. CANFIELD has been appointed Locomotive Foreman, Hornepayne, Ont. GUY C. DUNN, formerly Engineer of Construction, Grand Trunk Pacific Ry., Winnipeg, who was appointed Office Engineer, Chief Engineer's Office, Eastern Lines, Canadian Northern Ry., Toronto, in Dec. 1920, has been appointed Assistant to Chief Engineer, Eastern Lines, Canadian National Ry. Office, Toronto.

G. R. EDGLEY, heretofore Superintendent, Ottawa Division, Ottawa, Ont., has been appointed Superintendent, Montreal Division, vice W. R. Kelly, transferred to Ottawa Division. Office, Montreal.

W. H. FLETCHER, heretofore Locomotive Foreman, Grand Trunk Pacific Ry., Sioux Lookout, Ont., has been appointed Locomotive Foreman, C.N.R., Brandon, Man., vice H. Williams, transferred.

H. S. GRANGER, heretofore Soliciting Freight Agent, C.N.R., Calgary, Alta., has been appointed Travelling Freight Agent, Canadian National-Grand Trunk Pacific Ry., Moose Jaw, Sask.

T. E. A. HALL, heretofore Division Engineer, Ottawa Division, Ottawa, has been appointed Division Engineer, Montreal Division, vice H. K. Morrison, resigned to go into private business. Office, Montreal.

R. B. JENNINGS, heretofore Division Engineer, Toronto Division, Toronto, has been appointed Division Engineer, Ottawa Division, vice T. E. A. Hall, transferred to Montreal. Office, Ottawa.

W. R. KELLY, heretofore Superintendent, Montreal Division, formerly appointed Superintendent, Ottawa Division, vice G. R. Edgley, transferred to Montreal Division. Office, Ottawa, Ont.

O. KERR, heretofore Bridge and Building Master, Toronto Division, Toronto, has been appointed Bridge and Building Master, Ottawa Division, vice T. J. McGinty, transferred. Office, Ottawa, Ont.

F. T. KNIGHT, heretofore Locomotive Foreman, C.N.R., Port Arthur, Ont., has been appointed Locomotive Foreman, Grand Trunk Pacific Ry., Sioux Lookout, Ont., vice W. H. Fletcher, transferred.

J. M. McRAE, Assistant General Freight Agent, Western Lines, Winnipeg, has taken over the duties of General Freight Agent there, while J. M. HORN is acting as General Freight Agent at Vancouver, during the absence of A. BROSTEDT in the Orient.

T. J. MCGINTY, heretofore Bridge and Building Master, Ottawa Division, Ottawa, Ont., has been appointed Bridge and Building Master, Superior Division, vice W. J. Coughlin, assigned to other duties. Office, Hornepayne, Ont. T. M. McGILLIN, has been appointed Chief Inspector, Refrigerator Service, Office, Toronto.

W. C. MOORE, heretofore Assistant Master Mechanic, Toronto, has been appointed Assistant Master Mechanic, Ottawa, Ont., vice J. Hawkins, assigned to other duties.

HECTOR K. MORRISON, heretofore

Division Engineer, Montreal Division, Montreal, has resigned, to go into private business.

J. J. NAPIER, heretofore Assistant Master Mechanic, Capreol, Ont., has been appointed Superintendent, Superior Division, Ontario District. Office, Hornepayne, Ont.

J. REID has been appointed Roadmaster, Grand Trunk Pacific Ry., with territory from Jasper to McBride, B.C., vice J. Willis, deceased.

J. P. SPEIGLE has been appointed Assistant Master Mechanic, Hornepayne, Ont., vice W. G. Strachan, transferred. W. G. STRACHAN, heretofore Assistant Master Mechanic, Hornepayne, Ont., has been appointed Assistant Master Mechanic, Capreol, Ont., vice J. J. Napier, transferred.

H. WILLIAMS, heretofore Locomotive Foreman, Brandon, Man., has been appointed Locomotive Foreman, Port Arthur, Ont., vice F. T. Knight, transferred.

The Toronto division has been abolished, the territory being divided between the Nipissing and Ottawa Divisions as follows:—Nipissing Division: Muskoka subdivision 137.9 miles, Orillia subdivision 10.2 miles; Ottawa Division: Bessemer branch 4.8 miles, Coehill branch 7.2 miles, Ironton subdivision 51 miles, Marmora branch 9.6 miles, Maynooth subdivision 107.6 miles, Orono subdivision 105 miles, Oshawa branch 2.4 miles, Toronto terminals 20.4 miles.

Canadian Pacific Ocean Services Ltd. See under "C.P.O.S. Traffic Agency," in Marine Department, farther on in this issue.

Canadian Pacific Ry.—W. G. ANNABLE, heretofore General Passenger Agent, Canadian Pacific Ocean Services, Montreal, has been appointed General Passenger Agent, Ocean Traffic, C.P.R. Office, Montreal.

W. BALLANTYNE, heretofore Assistant General Passenger Agent, Canadian Pacific Ocean Services, Montreal, has been appointed Assistant General Passenger Agent, Ocean Traffic, C.P.R. Office, Montreal.

H. B. BEAUMONT, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Montreal, has been appointed General Agent, Ocean Traffic, C.P.R. Office, Montreal.

W. C. CASEY, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Winnipeg, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R., with jurisdiction covering Winnipeg, Manitoba, Saskatchewan and Alberta Districts, and Spokane, Wash., and on the Spokane International Ry. from Spokane to the International Boundary. Office, Winnipeg.

J. R. CLANCY, heretofore General Agent for Ontario, Freight Department, Canadian Pacific Ocean Services, Toronto, has been appointed Assistant Foreign Freight Agent, C.P.R., in charge of solicitation of export and import traffic, Ontario District. Office, Toronto.

H. J. DALTON, heretofore Assistant Auditor of Accounts, Montreal, has been appointed Auditor of Disbursements, vice E. Lloyd, appointed Assistant Comptroller.

C. J. DEW, heretofore Assistant General Agent, Canadian Pacific Ocean Services, Montreal, has been appointed Asiatic Freight Agent, C.P.R., with supervision of Oriental and Australasian traffic, via Pacific ports. Office, Montreal.

W. DIXON, whose appointment as Assistant Superintendent, Woodstock Division, New Brunswick District, was announced in our last issue, has been shifted to Amoscook, N.B., and not at Woodstock, N.B., as then stated.

W. S. ELLIOTT, heretofore Division Freight Agent, North Bay, Ont., has been appointed Division Freight Agent, St. John, N.B., vice L. Malters, transferred to North Bay.

R. S. ELWORTHY, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Chicago, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R. Office, Chicago, Ill.

J. J. FORSTER, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Vancouver, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R. Office, Vancouver, B.C.

F. G. FRIESER, heretofore General Agent, Freight Department, Canadian Pacific Ocean Services, New York, has been appointed Foreign Freight Agent, C.P.R., New York, N.Y.

G. C. GAILLAN, heretofore Assistant General Auditor, has been appointed General Auditor, vice F. E. Shrimston, deceased. Office, Montreal.

C. F. HAWKER has been appointed Yardmaster, Windsor, Ont., vice I. E. Marcus, resigned to enter another company's service.

G. A. HOWARD, heretofore Night Dispatcher, has been appointed Chief Dispatcher, Brownsville Division, New Brunswick District, vice J. H. Todd, transferred. Office, Brownville Jet, Me.

F. J. JONES, heretofore Night Locomotive Foreman, London, Ont., has been appointed Locomotive Foreman, MacTavish, Ont., vice J. J. Day, assigned to other duties.

H. M. MACALLAN, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Toronto, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R. Office, Toronto.

G. G. MCKAY, heretofore General Agent, Passenger Department, Detroit, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R. Office, Detroit, Mich.

J. J. MORTON has been appointed Import Freight Agent, Ocean Traffic, Chicago, Ill.

I. MULKERN, heretofore Division Freight Agent, St. John, N.B., has been appointed Division Freight Agent, North Bay, Ont., vice W. S. Elliot, transferred to St. John.

W. G. ROCHF, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, Chicago, Ill., has resigned.

A. W. SNELL, heretofore Foreign Freight Agent, Canadian Pacific Ocean Services, Montreal, has been appointed Assistant Foreign Freight Agent, C.P.R., Chicago, Ill., with jurisdiction of import and export traffic, via Atlantic ports, Office, Montreal.

G. A. STAPLES, has been appointed City Freight Agent, Vancouver, B.C., vice J. H. Fox, appointed District Freight Agent at Seattle, Wash.

E. T. STEPHENS, heretofore General Agent, Passenger Department, Canadian Pacific Ocean Services, New York, has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R. Office, New York, N.Y.

E. STONE, heretofore General Advertising Agent, Canadian Pacific Ocean Services, Montreal, has been transferred to special work in General Passenger Agent's office, Ocean Traffic, C.P.R., Montreal.

J. H. TODD, heretofore Chief Dispatcher, Brownville Jct., Me., has been appointed Chief Dispatcher, London, Ont., vice W. Killingsworth, transferred.

W. WEBBER, heretofore General

Agent, Passenger Department, in charge of passenger traffic at Atlantic ports, Canadian Pacific Ocean Services, Montreal, has been appointed General Agent, Passenger Department, Ocean Traffic, in charge of embarkation and disembarkation at Atlantic ports. Office, Montreal.

J. G. WEIHOFFEN has been appointed Export Freight Agent, Ocean Traffic, Chicago, Ill.

Michigan Central Rd.—F. McELROY,

heretofore at Detroit, Mich., is reported to have been appointed Trainmaster, St. Thomas, Ont., vice J. Purvis, assigned to other duties.

E. P. MAHONEY, Trainmaster, Montrose, Ont., will, it is reported, also be appointed yardmaster there.

J. PIERCE, formerly yardmaster, St. Thomas, Ont., and latterly at Detroit, Mich., is reported to have been appointed Yardmaster, St. Thomas, Ont.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel & Bridge Co.—The British Columbia Government has been asked to provide \$400,000 towards the cost of a projected railway and general traffic bridge over the Second Narrows of Burrard Inlet. The proposal has been made by the municipalities which own the Burrard Inlet Tunnel & Bridge Co.'s charter. (Mar., pp. 142.)

Calgary & Southwestern Ry. Co.—The Alberta Legislature is being asked to grant an extension of time for two years for the commencement, and five years for the completion of the company's projected railway from Calgary to the Steep Creek coal fields. P. Burns, Calgary, is interested. (Oct., 1919, pp. 536.)

Edmonton, Dunvegan & British Columbia Ry.—The improvement of the line from Edmonton to Peace River crossing, and of the Grande Prairie Branch is being done with under the supervision of the C.P.R. staff in charge. The line is being improved in regard to grading and ballasting in order to bring it into condition to take care of all the traffic offering. C. E. McPherson, Assistant Passenger Traffic Manager, who was in Edmonton recently, is reported to have stated that an extension of the line from the Peace River crossing along the river would open up a large territory, and that such construction of a line is a matter for consideration by the Alberta Government. A press report states that the Alberta Legislature has given favorable consideration to a proposal to extend the line from Peace River Crossing to the Waterhole district. (Feb., pp. 82.)

Fort Smith Ry. Co.—The Dominion Parliament is being asked to incorporate a company with this title, to build a railway from near Smith's Landing on the Slave River, Alta., to near Fort Smith, on the same river, in the Northwest Territories; telegraph and telephone lines; to develop and dispose of electric power; to build and operate ships; to build wharves, docks and warehouses; to build a pipe line of oil for the transportation of oil and natural gas, and to provide for the storage, transportation and marketing of oil. Pringle, Thompson, Burgess & Cote, Ottawa, are solicitors for the applicants. This is another proposition from that referred to in Canadian Railway and Marine World for March, pp. 142.

The Great Northern Paper Co., a press report states, proposes to build a railway from Sebecook to St. John Pond, Me., 18 miles, with branch lines, and from St. John Pond to the International Boundary, to get out the forest products of the valleys along the headwaters of the St. John River in Maine.

Lake Huron & Northern Ontario Ry. The Ontario Legislature has under consideration a bill to grant an extension of time for one year for the completion of this line from the present terminus at Rock Lake, mile 17 from Bruce Mines,

northerly to a junction with the National Transcontinental Ry. (Feb., 1919, pp. 79.)

Maritime Coal, Ry. & Power Co. Ltd. The Dominion Parliament is being asked to declare the company's undertaking, works and railway, as well as those of any railway or railways owned, controlled or operated by it, to be in the general advantage of Canada, and for such other powers as may be necessary or incidental thereto. The company operates 12 miles of railway, from Maccan to Joggins Mines, N.S., and also owns a 3 mile line connecting the Chignecto coal mines with the Canadian National Rys. at Maccan. It has charter powers to extend its line to a port on Northumberland Strait, and it was stated in 1917, when the properties were taken over, that the port which would probably be used would be Tidnish.

Mayo Valley Ry. Ltd.—The applicants to the Dominion Parliament for the incorporation of a company with this title are:—A. J. Gills, Dawson, Yukon; W. A. H. MacBrien, N. J. Robinson, R. B. Young, Toronto, and J. McDonald, Ottawa. The company aspires to build a railway from near the junction of the Mayo and Stewart Rivers, Yukon, northerly, following the Mayo River valley to its junction with Duncan Creek, along Duncan Creek valley to its junction with Lightning Creek, and along Lightning Creek and Crystal valleys to the McQuesten River, and thence to connect with and include the McQuisten, Ladue and Bear Rivers; or in the alternative, from near Gordon's Landing on the Stewart River via Janet Lake to the junction of the Mayo River and Duncan Creek. The applicants also desire power to carry on a general navigation business on rivers and waterways opened up, and other connected businesses. When the bill was before the House of Commons March 22 considerable opposition developed, it being claimed that the promoters had not sufficient visible capital to finance construction. The Minister of Railways said: "Promoters of this railway need not think because the bill passes through this committee that they may come to me and expect a subsidy. The Georgian Bay Canal has been asking for a subsidy ever since it was proposed. I will not recommend any subsidy during this session, and, furthermore, I think it will be several sessions before any will be granted." (March, pp. 142.)

Michigan Central Rd.—A press report states that additional passing tracks and enlargement of sidings on the Canada Standard Ry. are contemplated at an estimated cost of \$600,000. (Nov., 1920, pp. 607.)

Montreal to National Transcontinental Ry.—J. E. Prevost, M.P. for Terrebonne, Que., asked in the House of Commons recently: "Is it the Government's intention to build a railway connecting Mont-

real with the National Transcontinental Ry? If so, has a location been made, and where?" The Minister of Railways replied: "The Government's policy in this respect will be made known by the Finance Minister, when bringing down his estimates."

Slave River Ry. Co.—The following are the provisional directors named in the bill now before the Dominion Parliament for the incorporation of this proposed company:—E. Taylor, J. B. B. Hill, F. M. Stanford, G. Binnie, C. S. M. Pugh, Calgary, Alta. The applicants ask power to build a railway from the westerly bank of Slave River, near Fort Smith southeasterly to Smith's Landing or Fort Fitzgerald, and generally as may be necessary for the purpose of overcoming shoals, rapids, or other obstructions or impediments to navigation on the Slave River. It is also desired to carry on a navigation business, and in connection therewith to build wharves, docks, warehouses, etc.

Sparwood to Kananaskis Pass.—The British Columbia Legislature is being asked to incorporate a company to build a railway, to be operated by any motive power, from Sparwood, on the C.P.R. Crowstest Branch, northerly along the Elk River valley for 55 miles to the British Columbia-Alberta Boundary at Kananaskis Pass. Davis & Co., Vancouver, are solicitors for applicants.

Timiskaming & Northern Ontario Ry. The following are among expenditures provided for year ending Oct. 31, 1921:

To grade, widen cuts and fills, etc.	\$10,000
To replace timber bridges and culverts.	45,178
For additional weight of rail and improved fastenings	22,000
Additional track material	89,304
Right of way fencing	5,199
Snow fences	5,000
Road cuts and bridges	1,400
Water stations	17,362
Fuel stations	60,000
Shop equipment	78,500
Stations and office buildings and miscellaneous structures	128,725
Yard track and material sidings	6,048
Sidings and spur tracks	50,670
Roadway machines and tools	11,094
Shop machinery	57,525
Work equipment	14,338
Telephone line, Cobalt to Porquiss Jct.	24,273
Replacing iron wire, Cobalt to Englehart yards, with copper wire	1,000
Phantom telephone circuit, Cobalt to Porquiss Jct., and new switchboard at Porquiss Jct.	3,311

Cochrane press dispatch, March 24.—G. W. Lee, Chairman, T. & N.O.R. Commission, has stated here that the surveys in connection with plans to extend the railway north from Cochrane toward James Bay will be gone ahead with immediately. It is planned to complete all surveying so as to proceed with the first 70 miles of the extension about next autumn. Among other things, the line will touch Kettle Falls on the Abitibi River, where a large hydro electric plant may be installed for operating pulp and paper mills, as well as providing power for the T. & N.O.R. electrification.

Index to Canadian Railway and Marine World for 1920.

Our March issue contained at the back a very complete index to the contents of the volume for 1920, which as in former years, will doubtless be fully appreciated by the large number of subscribers who bind Canadian Railway and Marine World for reference purposes. We would prefer to issue our annual index in book form and not bind it in with the issue with which it appears, but a Post Office Department ruling for which, in our opinion, there is no justification, prevents us from doing so. However, the index can be detached easily from the rest of the March issue, for binding with the issues for 1920.

Even a casual glance over the pages of closely printed matter in the index will show the tremendous range of subjects covered in the 692 pages of reading matter given in 1920, the thorough manner in which Canadian Railway and Marine World represents the entire transportation interests of the whole Dominion—steam, railway, electric railway and marine—as well as the subsidiary express and telegraph interests, and railway and canal contracting work.

Increased Rates for Railway Transportation of Mails.

The following order in council was passed at Ottawa Feb. 16:—"The committee of the Privy Council have had before them a report, dated Feb. 9, 1921, from the Minister of Railways and Canals stating that the rates for the Pacific, the Grand Trunk and the Canadian National Railways have from time to time represented that they are losing so much money in respect to the carriage of mails that it is impossible to continue on the basis of present rates. That they have for some years been asking for a re-adjustment of said rates. That on March 7, 1917, by order in council 617 the Board of Railway Commissioners for investigation and report. That said investigation has been carried out and completed, and an official report made by said Board; said report being attached hereto. That owing to the very great increase in cost of operation, in so far as wages, coal and other supplies are concerned, it is necessary that some action be taken at the earliest possible moment. That the Minister, therefore, submits the matter for consideration, and recommends that the report aforesaid be accepted, and its provisions be applied and put into effect, for one year from and including March 1, 1921, unless extended beyond that date by order in council. The committee concur in the foregoing recommendation and submit the same for approval."

The Board of Railway Commissioners' report, referred to above, was published in full in Canadian Railway and Marine World for June 1920. The concluding paragraph of the report was as follows: "Giving due consideration to the averages involved, and the element of uncertainty concerned, in dealing with the question as to the proper participation of the mail service in general cost, it would appear not unreasonable that the rate accepted by the Board for the express service in the general average judgment should be adopted, that is a rate of 4.7c. for a full mail on mail. It would appear also not unreasonable that the charges for the other services be

set out in the order in council, as contained in the reference to the Board, should be increased in each case by the same percentage as the 4.7c. rate represents over the 16c. rate." Subsequently the Board recommended that the 4.7c. rate should be the maximum rate and subject to all bonus or statutory reductions.

The Post Office Department put the new rates in effect March 1. Following is a comparison of the old and new rates per mile—

Full length postal car or storage car	Old rate	New rate
1st class	15c.	15c.
2nd class	12c.	12c.
3rd class	10c.	10c.
4th class	8c.	8c.
5th class	6c.	6c.
Special train	5c.	5c.

Another order in council was passed Feb. 19, 1921, requesting the Board of Railway Commissioners to further consider the rates to be paid for the carriage of mails and to make a report and recommendation thereon prior to March 1, 1922, to which date the new rates apply, in order that an extension of time may receive consideration.

Daylight Saving Dates.

In the interests of the travelling public the Railway Association of Canada has appealed to the various municipalities to adopt this year uniform dates on which to begin and terminate the daylight saving plan. Much unnecessary confusion has been caused to travellers during the past few summers by municipalities adopting daylight saving time and reverting to standard time upon conflicting dates. In 1920 Toronto adopted daylight saving time May 2 and reverted to standard time Sept. 12. Montreal adopted it May 2 and reverted Oct. 5. Ottawa dates were May 2 and Sept. 5. Cornwall, May 30 and Sept. 19. Brockville, June 1 and Aug. 31.

The general change of time on the railways this spring will probably take effect on Sunday, May 1, and the autumn general change on Sunday, Oct. 2. The Railway Association of Canada, acting for all Canadian railways, suggests that if municipalities decide to use daylight saving time this year they should make it effective on these dates. This would not only be of material help to travellers, by avoiding some of the past confusion resulting from the conflicting dates, but business people generally would have a better understanding as to when the business day commences and closes in other communities with which they are in constant communication.

Daylight saving time has been adopted and will not be abandoned by Canadian railways this year. It is well known at present. A general Dominion enactment would be a convenient way for railways could make the change in time and such an enactment has been asked for.

The London, Ont., Railway Commission is reported to have considered a new arrangement with the Montreal Central Ry. for the use of M. C. and C. N. Ry. and Port Stanley Ry. It is stated that the Commission is in a position to have the two lines will be operated by the same company.

The St. Paul, Ont., Municipal Board of Health has decided to make the Canadian National Ry. to reduce the express freight service of the Toronto Ry. from 10c. to 5c. which was a great saving.

Railway Mechanical Methods and Devices.

Air Pump Cylinder Boring Machine.

The accompanying illustration shows a type of pump cylinder boring machine which is in use in the air brake department, Canadian National Ry. Leaside shops, Toronto. This machine is used to bore out both the steam and air ends of air compressors, and is equally well suited for the 9½ and 11 in. simple compressors and the 8½ in. cross compound. For work with the simple pumps, the pump is mounted on a support. In boring out the cylinders of the 8½ in. cross compound pump, the pump is stood on the floor of the shop, as shown. The machine is operated by compressed air, the motor being shown in the illustra-

tion. The machine is held rigidly to the work, by four set screws which secure it to the top of the cylinder to be bored, and the feed is automatic.

A special nut at the lower end of the vertical shaft on which the tool holder is secured (the shaft revolving, driven by worm gear) fits into the gland of the pump, and two set screws which hold the upper end of the shaft solid in the horizontal frame, provide for the centering of the device. When the machine is set up and centered, the tool adjusted to the work and the machine started, no

Freight Car Wheel Work.

more attention from the operator is required until the cut is completed. The cylinders are bored out in stages of one sixteenth of an inch.

Such a machine would be of special value in a shop where there is no back shop equipped with the standard types of machinery suitable for this kind of work. All that is needed is a supply of compressed air and the boring bar is ready for operation. We are indebted to E. Brooks, Foreman, Air Brake Department, for this information.

Freight Car Wheel Work.

Freight car wheels are called upon to withstand many severe hammer blows, occasioned by their passage over rail

department, West Toronto shops, C.P.R., is well equipped to handle freight car wheel repair work, and the following is a description of a portion of the facilities there.

A yard track extends to the door of the wheel shop, on which the flat cars containing wheels are spotted. At right angles to the track is another, leading in through the shop door, the rails being depressed so that the top of the rail is even with the surface of the shop floor. The yard outside the shop is provided with storage tracks, with turntables at the intersections. For unloading, or loading, wheels or axles, a hoist, operated by compressed air, is used, greatly facilitating the work. It works through a large range, and has great flexibility in operation.

Air Pump Cylinder Boring Machine.

tion. The machine is held rigidly to the work, by four set screws which secure it to the top of the cylinder to be bored, and the feed is automatic.

A special nut at the lower end of the vertical shaft on which the tool holder is secured (the shaft revolving, driven by worm gear) fits into the gland of the pump, and two set screws which hold the upper end of the shaft solid in the horizontal frame, provide for the centering of the device. When the machine is set up and centered, the tool adjusted to the work and the machine started, no

joints, frogs, switches, and crossings, under varying conditions of speed and load. The safety of the train being dependent on the good condition of wheels and axles, they must meet rigid standardized conditions, to escape condemnation, and the necessity for changing wheels often arises. No freight car repair shop is complete without a well laid out section for taking care of the work on wheels and axles, and the facilities for getting the wheels and axles to and from the machines, if well laid out, can save a lot of time and labor. The car repair

Fig. 1. Placing car wheel in boring mill.

One of the boring mills is shown in the accompanying fig. 1. This illustration shows a wheel, picked up by the air-operated lift arm used to place the wheel in position for boring. The arm A swings horizontally on a strong vertical round iron column; the chain is connected to a

Fig. 2. Detail of grab hook for lifting car wheel

piston operating in a compressed air cylinder. By opening the controlling valve, the wheel is lifted, when the arm is swung round and the wheel is placed in the machine. The device by which the wheel is picked up is simple, but cleverly arranged, and is shown in fig. 2. The greater the weight, the greater the tendency to pull down frame A, and spread the hooks B. The two boring mills are belt driven, from a line shaft, an electric motor being the source of power. Davis expansion car wheel boring tools are used.

The axle lathe, shown in fig. 3, is located near the boring mills, and is also served by an air operated hoist of wide range, greatly facilitating the work of placing the axle in the lathe and taking it out after machining. The way in which the hoisting apparatus takes hold of the axle, to lift it, is clearly shown in the illustration. The hoist gives great flexibility of movement, both horizontally and vertically.

The wheel press is located close to the

forced away from it.

Fig. 5 shows the operation of "pressing on," i.e., securing wheels to an axle. In this operation, the position of the upright casting has been changed, and the ram, equipped with a large sleeve, presses against the wheel center, the far end of the axle being blocked. The wheel press is also fitted up with improved methods of handling the work to and from it. The long hook shown in fig. 4, operated from a vertical air pressure

Fig. 3. Placing car wheel axle in lathe.

boring mills and axle lathe. The hydraulic pumps are operated from a line shaft, with motor drive. Fig. 4 shows the operation of "pressing off," i.e., removing the wheels from an axle. The back

cylinder above, is used to reverse the wheels end for end. In assembling the wheels and axles for pressing on, the wheel shown at the left in fig. 5 is stood in an inverted driver brake shoe, sunk

Freight Car Wheel Work. Fig. 4 Pressing wheel on axle. Fig. 5 Pressing wheels off axle.

of the wheel is supported against the upright casting, which may be moved along the upper horizontal member B, and a lower one to correspond, but which is blocked by steel blocks C. The ram of the hydraulic press, in this operation, presses against the end of the axle. The wheel remains stationary and the axle is

in the shop floor; a hoist picks up the axle, the end of it being guided by a bar into the wheel center; the right wheel is then rolled into place and the right end of the axle guided into its center. The truck is run under the axle, axle nuts, wheels are elevated from the floor by the compressed air connection seen, and

taken by the truck to the wheel press.

In pressing off the gauge is not used, any pressure sufficient to force the axle out of the wheel being satisfactory. In pressing on, however, the gauge on the press is used. With 4 1/2 x 8 wheels the pressure required is 5-50 tons; 5 x 9 wheels, 40-55 tons; and 5 1/2 x 10 wheels, 45-62 tons. Gauging of wheels must also be carefully done in the pressing operation, and it is then seen that diameters must be exact, to conform to specifications of wheel gauge and pressure.

Other machines include the steel turn lathe, journal lathe, etc., and all are served by narrow gauge trucks and hoists, as shown, so that wheels and axles are placed in the machines with the minimum of labor and delay. The feature of speed and facility in handling work is of as much importance in a car wheel shop as in any other, and in this regard the West Toronto shop is admirably equipped. We are indebted to J. Dannon, General Car Foreman, and Frank Taylor, Mill Foreman, West Toronto Shops, C.P.R., for this information.

Alberta Coal Resources and Production.—The Provincial Treasurer is reported to have informed the Alberta Legislature March 11 that the coal resources of the province are 85% of the whole coal resources of Canada, and that the work of extending the markets for Alberta's coal is proceeding successfully. The coal production and value for 1920 were as follows:—

	Prod.	Value
Domestic	2,550,000	\$15,114,000
Export	1,419,021	17,696,500
Anthracite	100,000	1,000,000
Total	4,069,021	\$33,810,500
Bituminous	100,000	600,000

Grand Total \$34,410,500

Motor Freight Traffic has so developed in Switzerland of late that it is reported that 50 of the private railways have requested the cantonal authorities in the French-Swiss cantons to take measures to protect railways and to put difficulties in the way of the extension of motor van traffic.

The U. S. Interstate Commerce Commission has ruled that close and continuous relations be maintained between eastern and southern territory in the southwest. This affects generally all shipments between Atlantic coast states and New England, and Texas, and the bordering territory.

Toronto Board of Trade's Complaint Against Railway Companies' Cartage Tariffs Dismissed by Board of Railway Commissioners.

S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, gave the following judgment recently, which was concurred in by the Chief Commissioner, Hon. F. B. Carvell:—Complaint of Toronto Board of Trade against cartage tariffs of railway companies made effective Sept. 1, 1919. Sec. 284 of the Railway Act, as it existed prior to the revision in 1919, dealt with the question of facilities to be afforded by a railway company. The amendment in the 1919 Act is 312. In so far as the subject matter of the present application is concerned, the section has been amended by adding a sub-clause (e), sub-sec. (1) of sec. 312, reading as follows:

"(e) Furnish such other service incidental to transportation as is customary or usual in connection with the business of a railway company, as may be ordered by the Board."

The construction of this amendment is before the Board in the present application in connection with the question of the Board's powers as to cartage. Under the law, as it stood prior to 1919, it was held by the Board that the charge for cartage was one falling within the definition of "toll" as set out in the interpretation section of the Railway Act, *Stewart v. C.P.R. Co.*, 11 Can. Ry. Cas. 197. The Board also held in *re Cartage Tolls*, 19 Can. Ry. Cas. 389, p. 391, that while the cartage service fell within the toll definition it was not a "railway service or facility" within the meaning of the Act. See also *Port Arthur and Port William Boards of Trade v. Canadian Freight Ass'n*, 24 Can. Ry. Cas. 80. There was thus a clear finding that the cartage service was not a railway facility over which the Board had jurisdiction.

Following the Board's findings that it had no jurisdiction to order cartage as a facility, the cartage service has continued; the full burden of cost being on the users thereof. The tariffs which have been filed, giving the charges to be made for cartage service, have been filed simply for the information of the public, and as indicating the charges at which, under contracts entered into, the cartage companies are prepared to carry on the service. In connection with these cartage tariffs there is a practice of excepting various articles which are light and bulky, or which have other characteristics which it is contended by the cartage companies preclude the possibility of their being covered by a general scale of rates. Where there are such excepted articles, the determination of the charge of the service depends upon individual contracts.

On the Toronto Board of Trade's complaint against cartage tariffs of the railways which became effective Sept. 1, 1919, the matter was spoken of in regard to the rates on excepted articles. The position of Mr. Marshall, Traffic Officer, Toronto Board of Trade, who represented that Board, was that the rates of excepted articles, instead of being left to be quoted on application, should be carried on the tariff sheets; and during this hearing there was raised the question as to the effect of the amendment to sec. 312 of the Railway Act as above set out. It was contended that the amendment to sec. 312 was intended to give the Board jurisdiction over cartage service, or any other service if it was incidental to the railway transportation. In response to

the C.P.R.'s contention that it was not performing the service, it was not a cartage company, Mr. Marshall rejoined that the agent of the railway, that is, the cartage company, was performing the service. The general contention of the railways was that the wording of the amended sub-clause of sec. 312 did not change the Board's finding as to the legislation prior to 1919 as to cartage service; and it was set out by C.P.R. counsel that "once we publish the rates the Board can exercise jurisdiction, and see that we do not discriminate between commodities or localities."

As the result of the position above taken, the matter was set down for hearing in Ottawa, so that the jurisdictional phase of the question might be spoken to. Counsel for the Board of Trade set out that if a railway company could withdraw a tariff as to half a dozen items, it could withdraw any or all of them; and it was set out that the question involved in the present application was whether, under the amendment, the Board had power to instruct the railway companies to continue to give cartage where they used to give it as being part and parcel of, or incidental to, the business of the railway at any particular point. In evidence, the Board of Trade's counsel said in substance that his client's contention was not as to the Board having jurisdiction over cartage companies, but in respect of the Board having jurisdiction over railway companies, and he contended "If this is a service they ought to render . . . you can order them to do it, or it is for them to find a way to do it."

The railways took the position that they and the cartage companies were dealing at arms length, and that the cartage company was a separate entity, over which the railway had no control. The position taken by the applicants was in substance that the cartage company was the agent of the railway. In the course of the argument an analysis was made of the existing cartage contracts, and a written analysis of the salient points relied upon was subsequently filed by the Board of Trade's counsel.

Mr. Watson, for the G.T.R., in his examination by applicant's counsel, testified that as far back as 1882 there had been cartage companies connected with the railways. The G.T.R. employed the Sheddin Co. and the Great Western Co., the Hendrie Co. Both of these companies operated in Toronto. When the amalgamation took place between the Grand Trunk and the Great Western, the City of Toronto was divided for cartage service between the Sheddin Co. and the Hendrie Co., the dividing line being along St. At the time the G.T.R. paid the cartage companies, collected the freight rates, and absorbed the cost of the cartage entirely. Mr. Watson pointed out, however, that the rates at that time included the cost of collection and delivery on a limited list of freight. As far as the G.T.R. is concerned, the cartage companies, in the majority of cases, collect the freight charge from the railway, they receipt for goods and sign bills of lading. In examination by Mr. Chisholm, Mr. Watson stated that there were some 15 places where the G.T.R. had cartage service. He said that the idea of allowing the cartage companies

to sign receipts or bills of lading in the name of the company was to facilitate the handling of business and to allow the shipper to get his receipt at once. This was stated to be for the benefit of the shipper and for the benefit of the public generally; otherwise the shipper would have to go to the freight shed and have the receipt signed by the company's agent. The system of advanced charges was referred to as being absolute in the consignors' interest. The witness was not aware of any case where the railway company had itself done the cartage in Canada.

The C.P.R.'s position as to its relation with the cartage companies was developed in Mr. Lanigan's evidence. Cartage service is performed at some 18 points in Eastern Canada. The company has not cartage contracts with cartage companies west of Port William. It is stated they have not, nor have not had, any contracts east or west since 1912. In response to a question as to the signing of bills of lading by the cartage companies in the name of the railway, it is stated that this is done but under no authority from the railway. Similar evidence was given here as in the case of Mr. Watson, as to this being a matter of convenience for the shipper. It was stated that if the cartage company having signed the bill of lading lost the goods, the cartage company would be liable.

The matter of advanced charges, which has already been discussed in the Board's decision, was referred to, and it was stated by the witness that the railway companies took the position it would not advance the charges of more than one cartage company, and that where the cartage company was chosen by the merchants or the Board of Trade, and this company ensured an efficient and proper cartage service, then the charges would be advanced, but not for any other company. In other words, only one cartage company would be able to have the advantage of the advanced cartage system.

As to the relation with cartage companies, it was testified that the railway company has no contracts with nor proprietary interest in any cartage company anywhere. It was stated by Mr. Lanigan, that the Dominion Transport Co., which does cartage service to and from the C.P.R. sheds, also does a general cartage business. The following discussion took place:—

"Mr. McMaster: I suppose I am right in saying that the Dominion Transport Co. does not cart and will not cart for anybody but the C.P.R.?"

"A. You would be wrong if you said that."

"Q. Would it cart for the G.T.R.?" A. No, but it does a general cartage business.

"Q. I have the name of your company on its trucks and vans. A. I have no doubt it does. Suppose it does?"

"Q. I have the name of your company on its trucks and vans. A. I don't know. We don't own one of its carts or any of its harness, or a bit out of its harness. Moreover, the Dominion Transport Co. could not do the service tomorrow, it could raise its rates or reduce them; it could say that it would carry John Jones' goods or that it would not carry John Smith's."

"Q. I am not sure that the Board would be as helpless as that. A. I am speaking of the railway's helplessness."

"Mr. Flintoff: As far as the C.P.R. is concerned, it would have no power to control the movement of the Dominion Transport Co.?" A. Absolutely none whatever.

"Q. If it wanted to cart for the Grand Trunk or the Canadian National, we could not prevent them?" A. No."

The Canadian Northern Transfer Co. was operated by a subsidiary company of the Canadian Northern Ry. From the evidence, however, it was a subsidiary company of Mackenzie & Mann, who were the sole shareholders. As explained by counsel for the railway company, when the Government took over the Canadian Northern System, the Canadian Northern Transfer Co. was taken over as part of the Mackenzie & Mann assets, and the transfer company did business in Montreal, Toronto and Winnipeg, and as explained by witness J. C. Egan, when the Government secured the Canadian Northern Ry. Co. it also secured the Canadian Northern Transfer Co., and that both the railway and the transfer company are now under one control. No contract existed between the transfer company and the railway company, but it was testified by witness that the relations as to the carrying on of business and the service performed meant the business was carried on practically the same as by other cartage companies. The transfer company does not do business for any outside railway. The practice has been that the transfer company accounts to the railway company, and if there is a deficit the railway meets this; if there is any surplus, it goes to the railway company. Under the Statutes of 1919, chap. 13, an Act taking over the Canadian Northern Ry., the Canadian Northern Transfer Co. was expressly taken over as one of the subsidiary companies of the railway. It was contended by counsel for the railway that the Canadian Northern Transfer Co. is in any different position from other companies.

While as a matter of record the information above set out, in regard to the relations between the railway companies and the cartage companies, has been given, it does not appear to me that it is a conclusive factor. The relations above set out are not showing by the record to vary from those existing at the time when the Board gave its decision prior to the amendment of 1919. If the analysis of the contracts points to the railway being the principal in the matter, it was equally the principal at the time the Board held that cartage was not a railway facility which it could order. The amendment already referred to obligates the railway, in respect to furnishing "such other service incidental to transportation as is customary or usual in connection with the business" of the railway. What is involved is the construction of the legislation as bearing on the intention of the words above quoted, considering, in this connection whether they are concerned with the furnishing of facilities, thereby making the Board's former decision of no avail, or whether they are concerned with a different category. I recognize that the normal rule of construction excludes reference to the discussion which may have taken place in Parliament in connection with the wording of a given section or sections; and I recognize further that the burden is thus normally on the body construing the statute not to look to an extraneous source in so construing the intent and meaning of the statute.

There is, however, high authority to the effect that the report of a special committee, on whose report legislation was introduced, may be looked to in construing the statute, this being set out in a decision of the House of Lords. In the *Eastman Photographic Materials Company, Ltd.*, appellants, and the Comptroller-General of Patents, Designs and

Trade-marks, A.C. 1898, 571, the Earl of Halsbury, L.C.:

"Before dealing with the decision itself I think it desirable, from what occurred in the course of the argument, to say something as to what sources of information are entitled to be consulted in order to construe a statute. Among the things which have passed into canons of construction recent that in Heydon's case we are to see what was the law before the Act was passed, and what was the mischief or defect for which the law had not provided, while remedy Parliament appointed, and the reason of the remedy."

My Lords, I think no more accurate source of information as to what was the law before the act of Parliament now under construction was intended to remedy could be imagined than that of that committee.

It is true that there was not a specific report of a special committee with its findings setting out the reasons for the enactment to sec. 312. The citation above given is, however, I think pertinent. The amendment was introduced by the Toronto Board of Trade. Counsel for that Board was assisted by its traffic expert. The amendment was introduced with a technical traffic knowledge as to the incidents of transportation. I am, therefore, of the opinion that it is justifiable to make reference to the statements made during the committee sessions by Mr. McMaster, counsel for the Board of Trade, in so far as such statements have a bearing upon the scope of the proposed legislation. In the sub-clause as above quoted it may be noted that the words "as may be ordered by the Board," being the 5th to the 11th words inclusive in the sub-clause, were not in the amendment as proposed in the first instance by the Board of Trade, but were added in the Senate. This, however, is not material to the discussion of the content of the bill. At the sittings of the House of Commons special committee on bill 13, an Act to consolidate and Amend the Railway Act, A. C. McMaster, K.C., appearing for the Board of Trade, and referring to the section concerned, then numbered 313, said on May 10, 1917: "The Board of Trade feels that there are now certain services that it gets and certain privileges and conditions that it has that are not covered by these things that perhaps strictly are not traffic. But things such as milling-in-transit, the right to mill-in-transit, the right to stop off to pick up loads, the right to certain things of that sort; and it would like to have a clause added to sec. 313 as sub-clause (e) to read something like this—

"...such such other service incidental to transportation; or to the business of a carrier, as the Board may from time to time order, and shall maintain and continue all such services as are now established, unless discontinued by order of the Board."

The words of the proposed amendment are wide. At the same time I think it is fair, with a view to testing the intention, for the House of Commons, in the *Heydon's Case* attempt to see what was the law before the Act was passed, what was the mischief or defect which the law had not provided, also what remedy Parliament appointed. Presentation by counsel of the amendment in question was done with the support and advice of a technical expert, and it must, therefore, be assumed that the scope of what was sought had been fully thought out. When the amendment was introduced it was known that the Board had held that it had no power to order cartage service as a facility. Is there any evidence that this was intended as the mischief or defect which the law had not provided for, and which it was desired to remedy by the amendment? The introduction by counsel, already quoted, would seem to point out the desire to have legislation so framed as to ensure the

continuance of milling-in-transit and similar arrangements which were not covered by the words of the existing law.

At the committee's meeting on May 10, 1917, Mr. McMaster stated in answer to a question: "This clause is aimed entirely at things we enjoy now, such as the right to mill-in-transit, and cattle-men's right to put a car off to complete load, and a whole lot of things like that with which the Board of Trade representative of course is more familiar than I am, but he tells me that this is an instance of what we want to secure." Again he said: "Just at present we have a lot of incidental privileges which may or may not be under any other definition of the act. Any incidental privilege which we have which has been customary and usual for us to have, and which we now enjoy, should not be taken from us, in our opinion, unless the Board decrees. . . . If it is something we now have it should not be taken from us unless the Board says so, whether it is traffic or accommodation, or falls under any of these expressions. . . . I will illustrate it by a number of things we now enjoy, for instance, the right to mill-in-transit if it becomes necessary, and the right to stop the peak load (to complete load?), and a number of things over which discussion might arise, rightly or wrongly, as to whether they were included in any of these other clauses. The words, 'whether it is traffic or accommodation,' might seem as to the word 'accommodation' to open up the way to the consideration of 'facilities.' But it seems to me that considering the context and the subsequent reference to milling-in-transit, the scope is not so widened.

Again referring to a question which was raised by one of the members of the committee, as to it being customary to carry a car off to allow it to be taken off the train for the purpose of dressing, Mr. McMaster said: "That is one of the matters we have in view."

In the sitting of the special committee appointed to consider a bill 19, entitled "A" of the Senate, an Act to Consolidate and Amend the Railway Act, sec. 312, which in bill 19 dealt with the subject matter discussed, the matter was before the House of Commons committee on May 8, 1919. In the discussion, Mr. McMaster, in querying the necessity of adding to the end of the sub-clause the words "as may be ordered by the Board," went on to say: "If it is something which is already usual and customary, we should not have to go to the Board about it at this stage; for instance, milling in transit is a customary service, and so is pigging. . . . Further, in the same hearing, he used the following language: "We want to make it clear that the railway companies have to seek a decision of the Board to discontinue. We do not want to wake up over night, after midnight, and find that we have in fact been having the Board to restrict it, and that the Board is restricting it to a complete extent at different points, first that we have to go to the Board to seek little business privileges. There is something interesting to a technologist in connection with taking timber off to a mill and planing it, reloading it, and various things of that kind. . . . We suggest that the responsibility be left to the Board and ask it to have these privileges given to them. We have them now. We have enjoyed them for years."

I am of the opinion that Mr. McMaster's language shows that, as the member presenting itself, the evidence generally

of construction must be applied, and that the examples given by him indicate the scope of what the sub-clause was intended to cover. The intention of the Toronto Board of Trade, possessed of an expert fully in touch with the existing traffic conditions, was it seems to me, that the amendment should safeguard to the public, milling-in-transit, stop-over for completion of loads, stop-over to dress lumber, and other arrangements of the same kind, which in rate terminology are spoken of as "privileges." The Board has held that in a case of a "privilege," e.g., milling-in-

transit, it has no power to direct in the first instance the installation of such a privilege, but that its power arose only where a case of discrimination existed. "Application of the Montreal Board of Trade . . . for an order directing the P. & C. Co. to publish tariffs covering milling-in-transit arrangements on corn received at Montreal by rail . . . the product of which is reshipped to points east . . . for domestic consumption and also for furtherance by water . . ." Board's file 12,384, oral Judgment Evid. vol. 98, p. 15,244. The Board held that there being no discrimination it was without

power to direct that there should be a stop-over for completion of carloads of fruit in transit. *Simcoe Fruits Ltd. and Ontario Fruit Growers' Ass'n v. Grand Trunk and Canadian Pacific Ry. Cos.* 14 Can. Ry. Cas. 370.

As I read the statute, the intention of the sub-clause in question is to make clear the status of "privileges" and the rights of shippers in regard thereto, and that the question of cartage service does not fall within the scope of the sub-clause in question.

The Board issued order 30,735, March 9, dismissing the complaint.

Railway Department Estimates for 1921-1922.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:

Chargeable to Capital, \$6,154,127.

Canadian Government Ry.s.—Construction and betterments to be expended under the direction of and upon such terms and conditions as the Governor in council may from time to time provide, \$4,117,994, against \$6,611,624 for 1920-1921.

To pay claims for right of way (revote), \$35,000. Miscellaneous railway equipment.—Amount required during current fiscal year for railway equipment ordered in 1920 under vote 115, and for improvements to existing equipment, and for the purchase of new work equipment for the purposes and upon the same terms (save as hereinafter varied) mentioned in the Statutes of 1918, chap. 38. The assistance herein provided may be by way of advances to the Canadian National Rolling Stock Co. or to any company comprised in the Canadian Northern Ry. System, or the Grand Trunk Pacific Ry. System, or by way of equipment or materials acquired by the Minister, \$1,903,133, against \$1,925,501 in 1920-1921.

Hudson Bay Railway.—Port Nelson terminals, \$100,000, of which \$50,000 is a revote.

Chargeable to Income, \$167,117,792.

Arbitrations and awards and costs of litigation, \$2,000.

Board of Railway Commissioners for Canada, maintenance and operation of, \$206,000.

Board of Railway Commissioners for Canada, to pay expenses in connection with cases before the Board, \$5,000.

Contribution to International Association of Railways Congress, \$97,331.

Commissioner of Highways, to provide for organization and payment of staff of Commission of Highways, including A. W. Campbell, C.E., as Commissioner, at \$7,000 a year, \$53,000. Governor General's cars, attendance, repairs and alterations, \$10,000.

Loan, not exceeding \$50,000,000, repayable on demand with interest at 4½ per annum, payable half-yearly, to be used (where amounts available from net operating earnings may be insufficient) to meet expenditures made or indebtedness incurred at any time by or on behalf of the Canadian Northern Ry. Co., the Canadian National Ry. Co., or any company comprised in the Canadian Northern Ry. System, or the Grand Trunk Pacific Ry. System, on any of the following accounts: (a) operating deficits; (b) acquisition of property, materials and supplies; (c) interest on notes, securities or obligations; (d) principal and interest of maturing or matured loans, secured or unsecured, and (e) construction and betterments.

Such loan to be secured by mortgage or mortgages upon the undertaking of the Canadian Northern Ry. Co. or the Canadian National Ry. Co., or on such terms and conditions as the Governor in council may approve. The loan or assistance herein authorized may be made in cash, or by way of guarantee, or partly in cash and partly by guarantee, in the discretion of the Governor in council. Any guarantee from time to time given under the authority herein may be of the principal and interest of the notes, obligations or securities of the Canadian Northern Ry. Co., or the Canadian National Ry. Co., or any company comprised in the Canadian Northern Ry. System, or the Grand Trunk Pacific Ry. System, in such form and on such terms and conditions as the Governor in council may approve, \$50,000,000.

Loan not exceeding \$89,687,633.39, repayable on demand with interest at 4½ per annum, payable half-yearly, to be used (where amounts available from net operating earnings may be insufficient) to meet expenditures made or indebtedness incurred at any time by or on behalf of the Grand Trunk Pacific Ry. Co. of Canada or any company comprised in the Grand Trunk Ry. System (excluding hereon, however, expenditures or

indebtedness incurred by or on behalf of the Grand Trunk Pacific Ry. Co., except as specifically provided in item (f) hereof, on any of the following accounts: (a) operating deficits; (b) acquisition of property, materials and supplies; (c) interest on notes, securities or obligations; (d) principal and interest of maturing or matured loans, secured or unsecured, and (e) construction and betterments. (f) guarantees by the said G.T.P. Co. of securities of the G.T.P. Pacific Ry. Co. of Canada on such terms and conditions as the Governor in council may approve. The loan or assistance herein authorized may be made in cash, or by way of guarantee, or partly in cash and partly by guarantee, in the discretion of the Governor in council. Any guarantee from time to time given under the authority herein may be of the principal and interest of the notes, obligations or securities of the G.T.P. Co. of Canada, and may be signed by the Minister of Finance, on behalf of His Majesty, in such form and on such terms and conditions as the Governor in council may approve, \$89,687,633.39.

Loan, not exceeding \$25,000,000, repayable on demand with interest at 4½ per annum, payable half-yearly, to be used (where amounts available from net operating earnings may be insufficient) to meet expenditures made or indebtedness incurred at any time by or on behalf of the Grand Trunk Pacific Ry. Co., or any company comprised in the G.T.P. Ry. System, including hereon the expenditures made or incurred by the Co., which are provided for in item (f) of the next preceding vote, on any of the following accounts: (a) operating deficits; (b) acquisition of property, materials and supplies; (c) interest on notes, securities or obligations; (d) principal and interest of maturing or matured loans, secured or unsecured, (e) construction and betterments; such loan to be secured by mortgage or mortgages upon the undertaking of the G.T.P. Co. on such terms and conditions as the Governor in council may approve. The loan or assistance herein authorized may be made in cash, or by way of guarantee, or partly in cash and partly by guarantee, in the discretion of the Governor in council. Any guarantee from time to time given under the authority herein may be of the principal and interest of the notes, obligations or securities of the G.T.P. Co., and may be signed by the Minister of Finance, on behalf of His Majesty, in such form and on such terms and conditions as the Governor in council may approve, \$25,000,000.

Miscellaneous works not provided for, \$2,000. Printing and stationery, outside service, \$7,000. Surveys, inspections and general expenditures, railways, including salaries and expenses of experts employed temporarily, \$75,000.

To provide for payment of expenses in connection with acquisition of Grand Trunk and associated railway systems and arbitration proceedings in connection therewith, \$1,000,000. Salaries and expenses of members of Board of Railway Commissioners, \$58,500.

Chargeable to Collection of Revenue.

Canadian Government Railways, Toward any deficiency in receipts and revenues necessary to meet working expenses of the railways ending Dec. 31, 1921, the management of the railway is hereby authorized to apply receipts and revenues to the payment of said working expenditures, \$7,000,000.

Under the head of "Civil Government" the Department has given an estimate of salaries, against \$208,804.91 for the previous year, and \$2,000 for contingencies, the same as the previous year.

The Finance Minister supplied the following to the press on the day the estimates were submitted:—"The railway es-

timates are large. The Grand Trunk's are greater than those of any of the other systems. The requirements are, however, not as great as would appear on their face, as a certain portion of the vote is required for the purpose of providing funds owing to the Government, and is, therefore, in the nature of a book-keeping transaction. In so far as the estimates themselves are concerned, although constituting a real liability of the Grand Trunk, the analysis of the Grand Trunk situation indicates that some \$57,000,000 will be required. This is not, however, merely attributable to operating deficits, as the Grand Trunk is faced with current and overdue liabilities amounting to \$20,000,000, as well as substantial payments which will have to be made for sinking fund and for refunding purposes. In addition to this, the Grand Trunk operating officers estimate that a new capital expenditure of \$12,000,000 should be made.

"The estimates provide \$26,000,000 for the Grand Trunk Pacific, of which \$11,250,000 is for operating deficit, and some \$8,000,000 for interest requirements and fixed charges. Some \$6,000,000 is provided for betterment.

"The Canadian National requirements are made up of operating deficit of \$7,000,000 on the Intercolonial and National Transcontinental Railways, and \$23,000,000 for operating deficit and fixed charges on the Canadian Northern. The operating deficit in this case, amounting to between \$4,000,000 and \$5,000,000, of interest and fixed charges, constituting the balance. The vote is swollen by betterments, new construction on western lines and stock requirements.

"The net result is that the total railway obligations requiring cash are some \$140,000,000, as against the \$178,000,000 for which an appropriation is asked."

Freight cars available on Canadian National Ry.s.—The Minister of Railways stated in the House of Commons March 4, in answer to T. Vien, M.P., for Lotbinière, Que., that the following empty freight cars were available on Jan. 15, estimates, for the year ending March 31, at the places named, viz., Quebec bridge, 236; Hervey Jct., 39; La Tuque, 66; Parent, 85; Doucet, 141; Amos, 9.

Rowdiness on Trains.—For creating a disturbance on a Canadian National passenger train between La Tuque and Quebec recently, one man was fined \$10 and costs, and two others were sentenced to 15 days imprisonment by a Quebec Court of Sessions recently. It is said that during the last few months C.N.R. authorities have apprehended over 100 offenders on the line between Quebec and the Abitibi district.

The Minister of Railway's Annual Statement Respecting the Canadian National Railways.

Following is the official report of the speech in the House of Commons on March 17, by the Minister of Railways, Hon. J. D. Reid:—Mr. Speaker, before you leave the chair and the House is in committee of supply, I wish to submit my annual statement in connection with the Canadian National Rys. I wish to follow the usual custom and make a statement in connection with the operation of our Canadian government-owned and controlled railway systems for the year 1920. The statement I intend to submit is compiled from statistical information which I will submit to the House before I close, and which was supplied me by the board of management which has charge of the operation of the national railway system. Before going into the matter it would be well perhaps to explain how the operation of our national railway system is being carried on. When the Government took over the Canadian Northern System and consolidated it up with the Intercolonial and National Transcontinental Railways, a policy had to be decided on as to how the roads would be managed, and the then Prime Minister, Sir Robert Borden, announced to the house and to the public what that policy would be. In speaking in the House of Commons on May 15, 1918, he said:—

"As to the immediate future, I have already said that we do not intend to operate the Canadian Northern Ry. System directly under a department of the Government; it is our intention to operate it for the present through the corporate machinery by which it has been operated in the past. There will be a reconstituted board of directors. We shall endeavor to get the best men we can and we shall not interfere with them. We shall leave the administration and operation of that road to be carried on absolutely free of board of directors. We shall use every means available to the Government (and if necessary, we shall come to Parliament for that purpose) in order that anything like political influence, political patronage, or political interference—I am using the word political in its narrow sense—shall be absolutely eliminated from the administration of that road."

That was the policy laid down by the Prime Minister, and in accordance with it a board was constituted and has been in charge of the management of Canadian National Rys. from its organization up to the present time, and the operation has been carried on quite independent of the Railways and Canals Department.

I regret they were not able to submit a statement as satisfactory as I would like. A year ago I announced the deficit for 1919 as \$47,993,312. When final figures were available the actual loss in operation and fixed charges was found to have been \$48,242,436. When I made my annual statement of the operation of these roads a year ago I believed from discussions I had with the management I would be able to advise the house this year that the deficit of 1919 had been reduced in 1920. Instead of a reduction, the loss in operation alone for the year ended Dec. 31, 1920, is much larger, and is as follows:—

Canadian Northern \$16,258,579.80
Canadian Government 10,419,876.43

Total operating deficit of the Canadian National Rys. \$26,708,456.23

Operating deficit of the Grand Trunk Pac. which was Aug. 1, 1920, to Aug. 1, 1921, has last been under management of Canadian National directors 10,131,513.91

Total operating deficit \$36,839,970.17

To this must be added interest on bonds, etc., and what are called fixed charges and which have been paid or assumed by the Government, as follows:

Canadian Northern \$24,155,984.48
Grand Trunk Pacific 9,382,776.23

Total deficit for operation, and fixed charges \$70,331,734.88

And this does not take into consideration any interest or fixed charges on National Transcontinental or Intercolonial Railways. A Canadian National income credit, which will be shown in the statement of detail, reduces this sum to \$69,593,441, which is the loss on operation and fixed charges for 1920, as against \$48,000,000 in 1919. The management explains this increased loss of \$20,000,000 chiefly by increased expenditure in payrolls and fuel. The management explains that the cost of many materials and supplies increased very much over 1919. It also states that prices of locomotives and cars advanced very greatly, all of which have added, and will continue to add, to the cost of operation. In a word, out of every dollar earned we had to pay 75c. for operating wages, and 20c. for fuel, leaving 5c. for all other requirements which totalled 29c.

The mileage operated by the Canadian National management in 1920 was as follows:—

Canadian Northern 9,859.78
Intercolonial and branches 2,221.86
National Transcontinental 2,006.58
Quebec & Saguenay and St. John & 231.07
Grand Trunk Pacific 2,732.40

Total at end of 1920 17,054.69

There were added during 1920, 140 miles by purchase of 236 miles on completion of new construction.

To put in simplest form possible the earnings and operating expenses I submit the following statement, referring to the Canadian Northern System, Canadian Government Rys., and Grand Trunk Pacific Ry.:—

	1920	1919
C.N.R.	\$66,965,808.48	\$53,562,177.57
C.G.R.	44,537,803.85	40,179,380.93
G.T.P.	14,408,549.66	11,294,617.87

\$125,141,752.31 \$105,036,176.37

	Operating Expenses.	
C.N.R.	\$82,953,978.60	\$60,034,023.92
C.G.R.	51,987,680.28	47,728,205.73
G.T.P.	24,543,063.60	17,587,567.37

\$162,484,722.48 \$125,349,797.02

	Operating Deficit.	
C.N.R.	\$16,258,579.80	\$ 6,471,846.35
C.G.R.	10,419,876.43	7,548,234.80
G.T.P.	10,131,513.91	6,322,495.50

\$36,812,970.17 \$20,331,620.65

Fixed Charges.

C.N.R.	\$13,837,118.51	\$12,693,581.00
Interest due Govt.	10,318,869.97	7,276,126.00

C.N.R.	6,048,950.60	6,048,950.60
Interest due Govt.	2,475,474.00	1,910,265.00

Interest on certificates for 1920 808,351.63

\$38,488,764.71 \$27,928,925.00

Total Deficit, Operating and Fixed Charges.

C.N.R.	\$10,411,568.28	\$26,441,556.35
C.G.R.	10,419,876.43	14,866,469.60
G.T.P.R.	19,167,290.17	16,252,151.15

\$70,331,734.88 \$18,242,556.63

The figures for 1920, while subject to minor changes, are practically complete. The management emphasizes the fact that maintenance deferred during the war made it absolutely necessary to as far as possible overtake this work at increased cost during 1920, to protect the property. It was also found necessary to improve to a large extent terminal facilities and main lines to take care of the traffic satisfactorily to the public and

be in a position to compete with other lines operating throughout the country.

Coming now to the year 1921, or the estimates before you, the management figures on considerable reduction in the deficit in operation owing to curtailment of train services, reduction of maintenance forces and other economies. It also expects a re-adjustment in the price of materials, also in the wage schedules and working conditions, which should have a substantial effect in reduction of operating costs. The estimates as submitted to the house were those submitted by the Canadian National Rys. officials, and in detail show the following for 1921:—

Loss on Canadian Northern, including fixed charges	\$28,074,847
Canadian Government Rys. operating deficit	7,000,000
Grand Trunk Pacific deficit on operating and fixed charges	19,817,873
	\$49,822,720

To this should be added \$11,000,000 interest payable to the Finance Department for advances made to the Canadian Northern System by the Government, or a total of \$60,822,720

The votes passed by Parliament last session, to acquire additional rolling stock and motive power, to enable the system to properly handle its proportion of the traffic of the country was expended in the purchase of the following equipment:—

Locomotives.
20 medium Pacific, 10 heavy Pacific and 25 Santa Fe, from Montreal Locomotive Works.
20 switchers, from Canadian Locomotive Co.

Freight.
650 general service cars, from Eastern Car Co.
500 box cars, from Eastern Car Co.
1,500 box cars, from National Steel Car Co.
1,000 box cars, from Canadian Car & Foundry Co.
500 refrigerator cars, from Canadian Car & Foundry Co.
350 ballast cars, from Hart-Otis Car Co.
150 stock cars, from Canadian Car & Foundry Co.
80 cabooses, from Canadian Car & Foundry Co.
20 cabooses, from Preston Car & Coach Co.
6 snow ploughs, from Eastern Car Co.

Passenger.
18 sleeping, 12 dining, and 20 baggage cars, from Canadian Car & Foundry Co.
20 express refrigerator, from National Steel Car Co.

1,901 Total.

All of this has been delivered with the exception of the passenger train equipment. The sleeping cars are now arriving, and will be completed by the end of March.

Baggage car deliveries commenced March 9, and completion is promised commencing April 8, and completion of the express refrigerators has definitely been promised during May. Prices of locomotives, cars and rolling stock in general, have been increased very much. I submit the following statement for the information of the house, showing some of the increases, caused by increased cost and heavier power and steel construction:—

	1914-15	1920
Locomotives	\$21,000	\$61,250 to \$122,500
Standard sleeping cars	28,250	49,000
Pulling cars	5,000	6,000
Baggage cars (wooden)	6,165	(Steel) 21,000
Freight refrigerators	1,610	8,025
Express refrigerators	4,642	12,540
General service (freight) cars	1,346	3,270
Box cars	1,150	2,000
Stock cars	846	2,840

These figures show what the railways are up against.

Freight tonnage increased 16% over 1919 and passenger traffic by about a million, but while the quantity of freight and number of passengers increased, the haul in each case was shorter and re-

turns not as great as expected.

Rate increases have been given from time to time in an effort to meet increased cost of operation under the McAdams and United States Labor Board awards, under which the average wage per employee of the Canadian National System is now \$1,850 as compared with \$700 before the war. The result is the operating pay roll in 1920 was \$83,505,072, against \$40,606,170 in 1917. In addition, wages on capital works required \$12,222,045, making a total pay roll of \$95,727,117. These figures justify immediate discussion between employees and management.

Of course, the railway situation in Canada, as elsewhere, is a product of the war. Every country in the world had to stand behind its railways during the war. We had no alternative but to follow suit and I am satisfied that, without the powerful support of the Government in the crisis which the war developed, the railway situation would have been such that we would not have been able to carry on necessary war transportation facilities, and a collapse of our whole transportation system would have followed.

Let me refer briefly to the general railway situation throughout the United States. The total operating revenues for 1920, as reported by the Interstate Commerce Commission, were \$6,225,000,000, the largest in the history of U.S. railways, and \$1,014,000,000 greater than for 1919. Operating expenses, however, consumed \$5,826,197,000 of this, or \$1,406,000,000 more than in 1919. The net operating income was only \$62,264,421, compared with an average of over \$900,000,000 for the three years preceding the war. It is less than the roads should earn in one month to receive the 6% which the U.S. Transportation Act prescribes as the measure of fair return on the investment; it is less than one-fourth of the various taxes payable by the roads, and represents a profit of almost exactly 1% on the gross business done during the year, when the railways handled more freight and passengers than ever before in their history. The \$62,000,000 of net operating income was earned by about half of the class 1 roads, the other half having deficits for the year. The U.S. Government has had to come to the rescue by a guarantee of about \$600,000,000 for the six months period following de-control. Of this, about \$200,000,000 has, it is stated, already been paid out for back wages under the Railroad Labor Board award. Only a special act of Congress authorizing partial payments pending final settlement of the award has made it possible for many of these roads to avoid bankruptcy.

In England, passenger fares are 75% above pre-war figures, and freight rates, from Sept. 1, 1920, 112%. Costs of materials have increased 200%, and wages have increased 250%. Further rate increases are contemplated, though short-haul freight has already been permitted to move over the highways. In 20 months the Government has had to provide about \$350,000,000 under its guarantee, and claims are being made by the railways, totalling \$750,000,000, for arrears of maintenance, abnormal wear and tear, and replacement of stores. The British Government, therefore, faces a tremendous loss of a billion dollars. I hope I have made it clear that the result of the operation of Canadian National Rys. was not worse than obtained generally on the other side of the line and overseas. But

that does not mean we should not take action to try and prevent these losses. At present the country is faced with permanent fixed charges as follows:—

Interest public debt (including sinking fund)	\$132,800,000
Pensions	31,816,000
Public expenditure for carrying on the affairs of the Government	127,000,000
about	
Total, about	\$301,616,000

This without one dollar for carrying on public works, expenditures in connection with soldier settlement and re-establishment, and many other expenditures that must be provided for. This means very heavy taxation for many years, and it would be a very serious matter to have increased taxation for railways to the extent of fifty, sixty or seventy million of dollars a year to meet the cost of operation of railways. As regards these heavy losses I must frankly admit I cannot see much hope of any management materially reducing the loss on Grand Trunk Pacific and National Transcontinental Railways for some years, but I do feel the losses on the other portions of the road can be reduced, and must be, very materially, every year.

Grand Trunk Railway. — Members should have a full statement with reference to the operations of the Grand Trunk Ry., and when I say Grand Trunk Ry. I refer to the G.T.R. System now being taken over by the Government, the valuation of which is being decided by the board of arbitration. I have not been able to get the annual operating statement from the G.T.R. management up to the present. Its staff is busy in connection with the arbitration proceedings. I had to send one of our expert auditors to secure from its books, and submit, a statement as to results of operations for 1919 and 1920, and he gives me the following report as approximately correct. After providing for operating expenses, tax accruals, income deductions, etc., the amount available for interest and dividends was, for 1919, \$11,164,035.53; for 1920, \$5,692,300.74. These amounts were available to meet fixed charges on the following: 4% and 5% G.T.R. debenture stocks, interest on all G.T.R. mortgage bonds, interest on all mortgage bonds of Grand Trunk Western, interest on all mortgage bonds of Central Vermont, interest on G.T.R. secured notes, interest on equipment notes of the three companies, interest on guaranteed stock, first preference stock, second preference stock, third preference stock. Out of the above amounts, the railway was able to meet in 1919 the interest on its fixed charges, but not on the share capital, which includes the 4% guaranteed stock, first, second and third preference stock, and ordinary stock. In 1920 the company fell short \$5,653,091.33 of meeting interest on fixed charges. In justice, however, to the G.T.R. management I should add that it had to pay \$3,635,000 to employees for back pay between May 1 and Sept. 1, when no increases for freight rates had been allowed.

It must be remembered that I am not taking into account the loss of \$19,817,870 on the Grand Trunk Pacific Ry., a subsidiary of the G.T.R., which the G.T.R. Co. is responsible for, an amount sufficient to wipe out at any time all of the excess earnings as shown in the above statement. Later on in the session I hope to have from the management, further information in order to give more details.

Conclusion.—What is the best way to

improve the situation? I am ready to take, in fact I seek, advice from any or every member of this house, or whoever may be able to make any suggestion of value. Our present system of administration by a board entirely free from interference by any minister, by any department, or by the Government, is one which public opinion has demanded, and which, if we can carry it on and make the railways a success, is no doubt better for all concerned. The press and public opinion are very critical over our railway problem, and rightly so. Notwithstanding the dark side I have shown, I am still a firm believer in the ultimate success of our national railways. But, as in all other large institutions, success depends on how they are managed. This question is too big to be a political football. Might I ask the house to discuss it in its larger aspect rather than in some minor detail? Let us have instead a frank discussion of the whole railway policy.

The solution of the problem is one which will require joint action by the management and employees. Not only as employees, as operators of the road, but as citizens of Canada, their interests are identical, and I feel sure that if they, the management and employees, meet and take up the whole railway problem, they can deal with it in such a way as to preserve the good relations which have so far existed between them. Unless some action is taken, not only will the annual loss occurring each year, but also to place the railways in a position to reduce freight rates, I am satisfied the future advancement of the country will be seriously interfered with. Our railways were built to develop our natural resources, to build up our country, and to connect the east with the west in interprovincial trade. Good work has been done and it must not stop. Let me give you one or two illustrations of what high freight rates are doing. We in Ontario have for many years required, in fact used, timber grown and manufactured in the province of British Columbia. Today this trade is absolutely cut off, owing to high freight rates, thus injuring British Columbia, and Ontario and our country as a whole. British Columbia requires the markets of the western provinces and even the eastern provinces for its products. It is impossible for British Columbia to grow and ship fruit and lumber at the present high rates of freight. The prairie provinces must live from the products of the soil. They cannot produce wheat and other products of their farms and ship it to foreign markets, if these high freight rates are to continue indefinitely, and vice versa, things that are manufactured in the east that the people of the prairie and British Columbia require, cannot be produced and shipped to the western provinces at these high rates of freight any more than we. We are hindered in the production and manufacture of our natural products which improve our financial condition and add to the wealth of our country, does it not mean that the development of the country will be delayed until we are in a position to produce and manufacture on a basis equal to that of other countries? Surely, this is a fair statement of the situation.

I cannot conclude without repeating my honest opinion that our railways are a great asset for the future of Canada. If well and properly managed, and the press and public will only boost and not knock, it will be possible in a few years to show

to the world just what a magnificent country we have in Canada. With the permission of the house I would like to place on Hansard certain statistical and detailed information concerning last year's operations which has been supplied me by the management and which will be found of great value by members. These statements include comparative summaries of operating results and traffic statistics; a statement with regard to betterments and new construction during 1920, a comparative statement of equipment and some useful detailed information as to increased costs of rolling stock, material and supplies.

Equipment, Leaside Shops, Canadian National Railways.

The illustrated article on the Leaside Shops, which appeared in Canadian Railway and Marine World for March, contained the following paragraph:

"Transfer Table.—As shown by the accompanying plan, the transfer table is located to serve both the locomotive shop and the passenger car shop. It is of 80 ft. span, and operates on 5 rails laid on concrete supports. The pit is of concrete construction and 372 ft. long. The table is electrically operated, current being taken from an overhead trolley wire, supported on arms extending from poles embedded in concrete at the west side of the pit, and used with a 50 h.p. Fairbanks-Morse motor. One track at the north end, and two at the south, provide for movement on and off the table."

It was omitted to mention that the transfer table was manufactured by Geo. F. Nichols & Brother, Chicago, who, in calling our attention to this, speak of the illustration as one of the best ever given of one of their transfer tables, and also refer to the article as one of the best shop descriptions they have seen.

Electric Locomotive Screw Jack Hoist. The portion of the same article describing the locomotive shop contained the following sentence: "There are 12 tracks in the erection shop portion of it, all equipped with pits, one of which is fitted with an electric pit jack of 200 tons capacity, operated by a 25 h.p. Canadian General Electric motor, and which has a maximum lift of 90 in." This appliance should have been referred to as an electric locomotive screw jack hoist for wheeling locomotives, which was manufactured by Whiting Foundry Equipment Co., now Whiting Corporation, Harvey, Ill.

Halifax-Dartmouth Bridge.—A committee formed for the purpose of promoting the construction of a bridge across the narrows of Halifax harbor to connect Halifax and Dartmouth, N.S., is arranging to bring the matter before the Nova Scotia Government. The projected bridge would be designed for railway and general traffic purposes, and would be of steel on concrete piers and abutments. The estimated cost is from \$2,000,000 to \$2,500,000.

The Canadian National Railways Athletic Association, Winnipeg, has organized a provincial board of directors for Manitoba, D. O. Owens, of Winnipeg Territorials, is Chairman; T. Smith, Transcona, Vice Chairman; and J. K. McLeod, Secretary.

The Canadian National Rys. ticket office at Halifax Station, N.S., was broken into March 14, and about \$900 stolen.

Grain Inspected at Western Points.

The following figures compiled by the Dominion Bureau of Statistics, Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division during February and for six months ended Feb. 28, 1921, and Feb. 29, 1920, respectively:

	6 mos. to Feb. 28, 1921	Feb. 29, 1920
Canadian National Rys.	7,074	48,199
Canadian Pacific Ry.	3,815	84,557
Grand Trunk Pacific Ry.	1,930	17,437
Great Northern Ry. (Duluth)	161	478
Totals	12,823	150,754

Post Office Department's Mail Estimates.

The Post Office Department's estimates, for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:

Mail service by railway	\$3,519,932.00
Mail service by steamship	666,132.50
Mail service by ordinary land conveyances, including rural mail delivery	5,704,000.00
These items are precisely the same as for the year ended March 31, 1921.	
Railway Mail service	\$2,087,356.75
Salaries	600,000.00
Mileage allowance	200,000.00
For temporary assistance	308,200.00
Provisional allowance	\$3,195,556.75

Valve Handles of Water Gauge Mountings on Locomotives.—The Railway Association of Canada has issued the following circular:—Attention has been called to the desirability of having valve handles of water gauge mountings on locomotives so located as to permit of manipulation, without danger of operator being scalded in event of water glass breaking. This matter has been given consideration by the Association, and it is recommended to member lines that where top mounting of water gauge is located on top of boiler, instead of in face plate, the valve handle should be extended beyond the face plate, so as to be easy of access in case of water gauge breaking.

The Interstate Commerce Commission announces it has approved the loan of \$26,775,000 chiefly to Michigan Central R.R., Cleveland, Cincinnati, Chicago & St. Louis Ry., Cincinnati Northern R.R., Toledo & Ohio Central Ry., Zanesville & Western Ry., Kanawha & Michigan Ry. and Lake Erie & Western R.R. Co., which are subsidiaries of New York Central R.R. Co., and New York Central R.R. Co. to aid the carriers named in providing new equipment and additions and betterments to existing equipment, and to permanent way and structures at a total estimated cost of \$56,625,000. The carriers are required to finance about \$30,000,000 to meet the Government loan.

C.P.R. First Aid Work.—The Shaughnessy shield, offered for competition to C.P.R. employees in first aid work, in connection with the St. John Ambulance Association, and won by the police team of the C.P.R. Angus shops, Montreal, was presented by Lord Shaughnessy, recently. A. D. MacTier, Vice President, Eastern Lines, C.P.R., accepted the shield on behalf of the winning team.

Terminal Elevators Maintenance. Etc. The Trade and Commerce Department's 1922, contain an item of \$10,000 for maintenance of terminal elevators and necessary equipment.

Telegraph and Telephone Lines Estimates.

The Public Works Department's estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:—

Chargeable to Income.	
NOVA SCOTIA.	
Cape Breton telegraph system, reconstruction of telephone line between Harford lake and N.E. Margrave	\$1,000
Pictou Island, telephone cable	14,000
QUEBEC.	
Grosse Ile quarantine, telephone line, renewal of poles, etc.	400
SASKATCHEWAN AND ALBERTA.	
Peace River line, office and dwelling at Grande Prairie	7,000

Working expenses, etc., chargeable to collection of revenue \$20,700

Prince Edward Island and mainland	\$7,000
Land and cable telegraph lines of Lower Lawrence and the Northwest Territories, including working expense of ships required for cable service	223,000
Saskatchewan	78,400
Alberta	121,500
British Columbia, mainland	85,500
British Columbia, Vancouver Island district	126,000

Telegraph, Telephone and Cable Matters.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain an item of \$40,000 for the Pacific cable, the same as for the previous year.

The Trade and Commerce Department's estimates for the year ending March 31, 1922, submitted to the House of Commons recently contain an item of \$38,933.33 for the West India cable.

W. Murdock, operator, Dominion Government Telegraphs, at the sixth cabin north of Hazelton, B.C., was found dead in his bed by one of the linemen March 11. It is believed that death occurred from natural causes.

The Post Office Department's estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:—Telegraphic news service for Magdalen Islands, during winter, \$700. Salary of Canadian Government representative on Pacific Cable Board, \$1,000.

Edith S. Stickle, telegraph operator, of slight build, with soft voice, fair, and about 25 years of age, is reported to have come to Canada about a year ago to secure employment. Her father, Homer Miller, of Ancram Lend Mines, N.Y., died recently, and left her a bequest. C. J. Drake, counsel at law, 45 Market St., Poughkeepsie, N.Y., desires to learn her whereabouts.

Reports from Miami, Florida, state that the Western Union Telegraph Co.'s cable ship Robert C. Clowry, attempted to connect its Barbadoes cable with its land lines at Miami, Mar. 4, but was prevented from doing so by a U.S. ship. The U.S. Government has refused its consent to the connection on the ground that should it be made, there would be a possibility of a cable monopoly of certain cable traffic, under British control.

The Canadian Pacific Telegraphs will, it is reported, on completion of a new copper wire being erected between Mont-

real and Winnipeg, have a total of 6,752 miles of new copper wire, in addition to 1,073 miles of iron wire, which have been replaced by copper. It is stated that 4,099 miles of copper wire and 346 miles of iron wire were strung during 1920, between Halifax and Montreal, Montreal and Toronto, and Toronto and Winnipeg.

The British Assistant Postmaster General announced in the House of Commons, March 14, that the Government had bought a direct cable to the United States, with cable stations at Ballinakellig, Ireland; Harbor Grace, Nfld., and Rye Beach, N.Y., for \$570,000. This cable is intended as a reserve for the existing Imperial cable, and has been leased for a short time to the Western Union Telegraph Co., for \$57,000 a year.

The Montreal Underground Conduits Commission, consisting of R. S. Kelsch, L. A. Herdt and DeG. Beaubien, has submitted plans to the Quebec Public Services Commission, and to the telegraph, power and light companies operating in the Montreal district, for the placing of all overhead wires under ground. It is estimated that the work will extend over three years, and will cost approximately \$200,000. The conduits, which will be owned by the city, will be rented to companies using them.

The Canadian Marconi Co. is reported to have decided to build a series of wireless telegraph stations at Montreal, Toronto and Winnipeg, connecting with the company's trans-Atlantic station at Glace Bay, N.S. Senator F. Nicholls, President, Canadian General Electric Co., which controls the Marconi business in Canada, is reported to have stated that while the present plans are confined to the three cities named, the system will be extended later to the Pacific coast, and take in all centers in the Dominion, with a station in the oil district at Fort Norman, where ordinary telegraph service is at present impracticable.

Experimental work which is being carried out by the Marconi Co. in the employment of wireless telegraphy between Euston station, London, Eng., and Crewe is of more than merely technical interest. It is a subject which has been receiving attention for some years past. Even before the last railway strike it had been decided by the managements of several of the principal railways that to avoid the manerous of telegraph services during times of strike, use should be made of wireless telephony for signalling and other purposes. Sections of the Midland Ry. were the first to be equipped and installations of the necessary plant were made at St. Pancras, Wellingborough, Leicester, Birmingham, Derby, Rotherham and Leeds. What is now being done on the London & North Western Ry. in connection with wireless telegraphy is a continuance of the same policy, and it is said that as soon as a license for operation has been granted by the Post Office, extended trials under commercial conditions will be carried out.

Esquimalt & Nanaimo Ry. Land Grants.—A press report states that the Consolidated Mining & Smelting Co., a C.P.R. subsidiary, is about to make a thorough survey of the mineral lands contained in the area on Vancouver Island granted to the Esquimalt & Nanaimo Ry. Co., which is also a C.P.R. subsidiary. The lands are stated to comprise about 2,000,000 acres, and the object of the survey is to obtain information as to their mineral resources with a view to development.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Tilney and Ardill, Sask., and has closed its offices at St. Sophie, Que., and Bears Pass, Ont.

C. Grasley, agent, Canadian National Ex. Co., Toronto, was presented with a clock, March 10, by the local staff, on completing 14 years service with the company.

The Canadian National Ex. Co. has discontinued its service to Guelph, Ont., and Spruce Grove and Stony Plains, Alta. The first named station is now Canadian and Dominion Ex. Cos. only, the others being exclusive Canadian Ex. Co. stations.

P. J. Blanchard, a boy employed by the Dominion Ex. Co. at Belleville, Ont., was sentenced March 10 to an indeterminate period of not less than three months, and not more than two years, less one day, in the Ontario Reformatory for the theft of \$219.98 belonging to the company. He appears to have received a receipt for a package from the company's messenger, and it is presumed that the messenger, being busy, signed without checking what he received.

Charles Leonard Bowles, whose appointment as Assistant Superintendent, Canadian National Ex. Co., Winnipeg, was announced in a recent issue, was born at Brooklyn, Ont., Oct. 13, 1874, and entered transportation service in Sept. 1897, since when he has been, to Feb. 1898, operator and relieving agent, C.P.R., at various points on Thunder Bay Division, Ont.; Feb. 1898 to May 1905, operator and agent, Canada Atlantic Ry., at various points; May 1905 to Sept. 1908, operator and agent, G.T.R., at various points on Northern Division; Sept. 1908 to Nov. 1912, Travelling Auditor, Canadian Northern Ry., Saskatoon, Sask.; Nov. 1912 to Dec. 1920, Inspector of Agencies, Canadian National Ex. Co., Winnipeg.

The American Ex. Co. was sued in the Superior Court at Montreal, recently, by H. M. Meyer, for \$112.61, for damage to a shipment of woollen yarn from Philadelphia to Montreal, in Feb. 1918. It was shown that the goods were in good condition when delivered to the company for shipment, but upon arrival at Malone, N.Y., were held up by the U.S. Government, owing to the lack of war trade export license, then necessary, and the damage complained of was caused during this delay. The court found that when the goods were damaged they were in the company's warehouse awaiting documents, that the company acted as warehouseman only, and its liability was not that of a common carrier. There was, however, no claim damage for which the company must be held responsible, and judgment was given for \$50.88.

The Brunswick-Balke-Collender Co. of Canada sued the Dominion Ex. Co. in the Superior Court, Montreal, recently, for \$262 for the express company's failure to deliver three phonographs which it undertook to forward to Moncton, N.B., in Nov. 1918. The express company denied that the goods were delivered to it, and in the alternative, if a shipment contract was duly executed. The express company also pleaded, however, that in any event no liability could attach to it, as under the contract of carriage it was agreed that it should not be liable for non-delivery or loss or destruction of shipments in Canada, unless written notice thereof was given within four months

from the time delivery should, in the ordinary course of transit, have been made. As it was alleged that the goods were shipped Nov. 8, 1918, and notice of loss was not given until June 11, 1919, it was submitted that the claim failed. The action was dismissed with costs.

Preventing Express Shipments' from Going Bad.

The American Railway Ex. Co.'s Educational Service Bureau has issued the following:—A campaign has been started in the express business, to keep down the number of shipments which find their way to "on hand" departments, because the addresses are inaccurate, or incomplete, or because of cancellation of orders, or some other disagreement between shipper and consignee. An energetic effort is being made to clear up the undeliverable matter found in the "on hand" rooms and at express employees' right way meetings throughout the country, the subject is receiving special attention. It is the opinion of operating heads in the express business that the growth of "on hand" freight is a handicap to improvement in the express service. Practically every industry is interested in prompt delivery of goods, and the carrier is seeking the co-operation of the shipping public to remove the heavy burden which the storing and care of "on hand" freight involve. It is found that a large number of claims and annoying controversies are directly chargeable to the abuse of the "on hand" privilege. While it is a decided advantage to the transient shipper to have the express carrier hold his goods for him until he arrives, and to do this without added expense, it was not intended that regular express patrons would ask or expect the carrier to store their goods while some argument between shipper and consignee was being worked out. The express company does not generally charge for storing shipments, but some such step may be taken unless the situation improves. In seeking the co-operation of the shippers, the transportation company lays emphasis upon the importance of every shipper having the consignee's full name and address, street and number, plainly stenciled or otherwise marked, on each piece he sends by express. It is equally important, the carrier points out, that each shipper shows his name and address clearly on each piece of a shipment. That consignees should accept delivery of shipments tendered and not leave them on the carrier's hands is the contention of the express company in this campaign.

This should be done, even if shipments are offered in bad order, for then the consignee can dispose of them to the best advantage, and thereby reduce the loss to the lowest possible figure. Shippers and consignees are urged to give special attention to postal notices sent out by the carriers to both of them, when a shipment cannot be delivered by an express driver, for any reason. When a shipper is informed by the express company, through the usual postal notices, that the consignee to whom he sent his goods has refused to accept them, it will facilitate matters if he will give prompt and definite instructions for the disposal of the shipment in question.

Bridge over Burlington Channel.—The Public Works Department has let a contract for the superstructure of the bascule bridge over Burlington channel, Lake Ontario, to Hamilton Bridge Works. This bridge was fully described in Canadian Railway and Marine World for February, pg. 84.

Electric Railway Department

Accident Prevention is Everybody's Business.

By R. Mayne-Read, Superintendent, Quebec Railway, Light & Power Co.

I suppose there is not one here who has not thought more or less about the subject of accident prevention. For the past generation, utility men have been talking about it, and thinking about it; and some have had their minds made up about it, and doubtless some have not, and although all these years have rolled away, this question comes up, addressed to each of us today. "Do you realize that accident prevention is everybody's business?"

Accident prevention—what meaning do these words convey to us? I shall try and define them as we understand and feel them. Accident prevention is a duty of Christian honor. To believe in it not only because it seeks to save life, save money and promote efficiency, but because we think we see within it, or underneath it, the effort to stimulate fundamental spiritual ideals of better human co-operation, more thoughtfulness for the welfare of other people, and sounder mental and moral discipline.

Every industry, including electric railways, pays for but two things, matter and motion. Anything that occupies space is matter. The cost of materials and supplies is fairly well fixed, and approximately the same with all of us. The difference in cost of using the product depends on what is paid for motion, and how carefully and efficiently this motion is done. In our efforts to obtain the best results, we generally find them hampered in the quality of the service rendered by the human element, who, under the cloak of selling capacity, have shown that human weakness in their make up by being what is commonly known as time servers.

Probably you are going to offer a lot of excuses and arguments as reasons for your conditions and costs of motion, but that will not lower the costs or stop the extravagance. There is just one unpardonable business sin; making explanation why you failed to get better results. There's a reason. First, efforts have only been spasmodic; second, because this great humanitarian work has not been seriously taken by the majority of the people, they having failed to realize the fact that accident prevention for the safety of life and limb is everybody's business.

If I were to ask you what you think of any prominent man, you would already have your mind made up about him. If I were to ask you what you thought of prohibition, you would speak right out and tell me your opinion in a minute. Then why dodge the issue? Why should people throughout this great Dominion of ours not make up their minds about the safety first movement and take their stand for or against it, before the crepe appears on their door.

If I were to ask you to think of the amount of effort and money already expended on the safety first movement, including the great war just fought, with the loss of many millions of lives, to make the world safe for democracy and democracy safe for the world, the many volumes that have already been written covering this subject for the benefit of mankind, the continual work of the National Safety Council, the American

Museum of Safety, the Red Cross and other kindred organizations, you would be ready to say that every man, woman and child, every public utility, traction company, industry and corporation, both great and small, every civic and provincial organization, had been educated and stimulated by these efforts to the gospel of self preservation, that recklessness and carelessness in the human element had been eradicated, and that this movement had become an established order in the routine of our daily life.

Now, let us look on the other side of the picture, and see what it reveals? Pick up your daily newspaper, every day in the year, and as you read through the pages you are appalled at the horrible selfishness displayed there in cold type,

on which hangs the health and well being of the Canadian nation? Let us travel in the middle of the road, with our efforts hitched to a purpose, and get after that element of our population that belongs to the procrastinating class, the "let George do it" kind. We find this attitude in all classes of the people, even among our most educated and cultured business men and women, on down through all walks of life and varied vocations, who waste precious effort in antagonizing the liberty of the citizen on the most trivial matters, instead of devoting such time and service to educate by example and precept the principles of safety first on our streets with the rigid enforcement of traffic regulations, so that each and every citizen may travel in safety along our public highways, and to ensure this safety insist that the law be obeyed which has been enacted for the general good and welfare of the people. There are some ready at all times to find fault, censure and criticize, but seldom willing to lend a helping hand; some may donate money to the cause, but their personal efforts and personal sacrifices are also necessary as well as their gold. Not that these people are antagonistic to the movement or not in sympathy with the ideals of safety first, but its importance to the welfare and prosperity of the nation has not been seriously considered by them. Oh, what a difference if safety first was less scandal, everybody would be out pushing it along, but we have arrived at that stage in the life of this movement to realize that it will take more than a slogan to convert the public to a spirit of brotherhood.

Sir John Lubbock, the first Lord Avebury, said: "Life is a great gift. As we reach years of discretion, we most of us naturally ask ourselves what should be the main object of our existence? Even those who do not accept 'the greatest good of the greatest number,' as an absolute rule, yet admit that we should all endeavor to contribute as far as we may to the happiness of others." To accomplish this end, there must be a process of continuous weakening of selfishness, and the continuous strengthening of sympathy within the individual, by the inoculation of that spirit of brotherly love, that universal spirit which the human heart needs more effectively than any other interest known, except possibly the present day craze for the almighty dollar.

I am going to quote Theodore Roosevelt. Listen to what he said. "This country will not be a good place for any of us to live in unless we make it a good place for all aristocrats to live in." He was speaking of the United States, but his message is just as applicable to Canada today as when he delivered this call to his own country.

We have all more or less conducted safety first campaigns, beginning with our own employees, and in our educational work it has been found necessary to sensitize it with a certain amount of discipline. Have we not found that the ratio of effort to the results obtained by education has been greater than the ratio of effort by the discipline method, be-

at the awful toll of accidents and deaths happening on our streets, in our industrial establishments, even in the homes of the people, and you wonder how these things can be, how they could happen in a so called Christian country. Suddenly you begin to realize there is one thing we, as conscientious reasoning beings, can do, which must tend to the further development and security of human well-being, that we must be imbued with that moral sense of our responsibilities as sincere thinking men, throw down the gauntlet of safety to fight this selfishness so much in evidence in every walk of life, to help men to educate themselves, to help men to save themselves; that all our efforts along these lines must be persistent and systematic in driving out this recklessness and carelessness, by devoting our services, not of time, but of thought and action, in that spirit of brotherhood, and "Am I my brother's keeper?"

We have to admit that some progress has been made, but there is more to be done and can be done, as we have only scratched the surface as yet. My pussy-foot about this all important matter, up-

cause the former carried with it a spirit of co-operation, while the latter was less humanitarian and suggested something of the strong arm method? The object sought being to make the employees, as well as the public, realize that safety first is just as important to them as to their employer and to the community as any work they undertake. Experience has taught us that owing to man's tendency to exercise what he calls his personal liberty and take chances, assuming risk of danger, acts of negligence, this so called other element in human nature, has made it imperative that education and discipline must go hand in hand, for neither alone will suffice. We have consistently supported regulations, ordinances and legislation for the protection of the many and punishment of the recalcitrant few. We have worked in harmony with our municipal councils, and have co-operated with public authorities to carry out these disciplinary measures as effectively as possible. We have continuously circularized automobile clubs, and individual owners of cars in the interest of safety. We have and are carrying safety slogans around posted up in our street cars as an ever reminder to the car riders and the general public to "Watch their step." We have had erected at the company's expense "Danger" signs at important street intersections, and have equipped our rolling stock with the latest safety devices, yet politics more than anything else has increased our difficulties from the Atlantic to the Pacific.

Compensation laws have been enacted by our legislatures in the different provinces, the government having recognized the necessity of disciplinary measures, not only for the great moral objects of accident prevention, to preserve the life and limb of man, but for the proper control and supervision of the assumption of risk, indifference and thoughtlessness, negligence and weaknesses of human nature. We have installed safety devices in our workshops for the protection of our workmen around the machinery wherever necessary, shop cleaning and sanitation have been inaugurated and carried out systematically, proper lighting arranged efficiently, and fire protection apparatus, all have their effect in demonstrating our sincerity and frankness in safety work, and while it is corrective education, largely for the employees, it is most helpful in the seeking of co-operation rather than attempting to educate the public. Some companies may have progressed faster in this work, but taken on a fair average that is about where we stand today. But we cannot stop there. We must continue to tune up our minds, which draw their food from the medium of intelligence and thought, for this nourishment is necessary to give body to our work, in action as in reasoning, when in quest of new ideas. The popularity of the safety movement should grow as more of us begin to appreciate that its benefits are individual as well as general. For we must always remember the greatest asset in Canada is the Canadian people.

Ten years ago the steam railways headed the list in the number of fatal accidents, followed by electric railways, industrial establishments and others. Today it is known that automobile accidents not only are at the top of the list in the United States and Canada, but the total fatal ones credited to them is more than the combined total of all other classes of accidents on the calendar. This fact most assuredly indicates that there

is a something radically wrong in the administration and regulation of our traffic laws throughout the country. It is quite patent to all that the seriousness of our street hazards has been brought about largely by the increase in the number of automobiles in use. "Permit laxity in traffic law enforcement and accident death tolls will continue to grow. Regulate traffic, enforce the traffic laws, and the accident death toll will drop." This, briefly, is the opinion of the heads of police traffic of twelve of the largest cities on this continent, visited recently by L. J. Smith, Director of the National Safety Council, in a study of traffic methods, the object being to find, from the experience of other cities, more effective ways of meeting the serious accident situation in Kansas City, which shows an alarming increase in traffic accidents.

Are our present traffic laws adequate? Is traffic law enforcement efficient? The answer in both cases is no! It is just as well to call a spade a spade, to ar-

R. Mayne-Read.

Superintendent, City Division, and Quebec County Ry., Quebec Railway, Light & Power Co., and member of Executive Committee, Canadian Electric Railway Association.

rive at the truth, for the proof of the answer is in the fact that in almost all large cities the automobile death toll is increasing, and while traffic law and enforcement are not entirely responsible, the fact remains that they are the foundation of the solution of the accident problem. Analysis of traffic laws shows their purpose is to safeguard the masses of the people, restrain the reckless, avoid congestion and confusion, and give equal rights to all on the streets.

I have said that traffic laws are inadequate. This applies to all cities, not because the laws in themselves are not sufficiently regulatory, but because one law primarily needed to make all traffic laws enforceable is missing in most cases, and when it is found it needs strengthening. The missing statute is the driver or operators license law, providing for the mental and physical examination of the applicants before licenses are granted to

drive a car or vehicle, a law which should be enacted by every province in the Dominion. In the city, where the traffic laws are inadequate or unjust, where enforcement of the laws is unfair, where the motorist or driver with influence can escape punishment, the result is that the citizens as a whole do not take seriously the police or courts, readily blame the traction company if in any kind of collision with a street car, oftentimes procuring doubtful witnesses to substantiate their alleged claims, and violations increase, bringing an increase in accidents, and additional financial burdens on the treasury of the utility. There are many drivers on our streets whose utter disregard of the principles of safety is a constant menace, not only to pedestrians, but to other drivers as well. Many of them wealthy, with political influence, consider the police court fine as a joke to them. Sometimes they pay the fine or dodge it through influence, going out to continue their spree and recklessness. This class of drivers would be reached through a drivers license law.

We have the beginner, another menace, and the physically incompetent. Why should the former be allowed to guide an engine of destruction through crowded streets, or the latter permitted to face situations constantly that require physical as well as mental competency? Too drastic, some will say; not a bit of it. Every careful, competent driver, and all pedestrians, should welcome such a law. Motorists driving street cars should also come under the same requirements of the law, procuring their own licenses to have the right to operate a street car on the community's busy thoroughfares. It is in the interest of the inexperienced driver to make him safe before he may drive. The physically and mentally incompetent, particularly those with political pull, must not be permitted to drive under any circumstances. There is too much at stake when human life is at price.

The law should not only set the fine, but require the judge to assess the fine on proof of guilt, and in this case the penalty should be jail instead of a fine. A judge who has his own ideas is not safe in a traffic court, the laws should fix his decision and compel penalties fitting the offence. Every city in every province of the Dominion should have its traffic court; there should be no mixing of cases, as the court would be able to give its individual attention to traffic problems, and not be distracted by other kinds of troubles and tangles.

Our government during the war spent millions of dollars in publicity to enlist men for our armies, for raising victory loans to carry on successfully to win; let them now carry on, if they are sufficiently interested in the preservation of humanity and the reduction of accidents and the conservation of its crippled man power, be it city, province or Dominion, let them enact a law similar to the publishers of newspapers and periodicals, upon solicitation, voluntarily and gratuitously to give up a sufficient amount of space according to the size of the periodical, and devote this space for humanity's sake.

Our Dominion, provincial and local health agencies should now realize that accident prevention which is everybody's business may be developed to a level in keeping with other standards of modern business establishments. It is their duty to the country to lead the way on a much larger scale than at present and reduce the "if" in life, by planting the seeds of

safety in every city, town and hamlet in Canada, for life indeed must be measured by thought and action, not by time. I suggest that every theater curtain, programme and billboard throughout the Dominion be made a Canadian safety billboard—every business card, every letter head should carry a line or two on safety. The regular postage stamp of the three cent variety should carry the safety message on every letter posted in Canada. Our provincial governments should add a safety section to their education departments, and introduce safety instruction in all the public and private schools to reach the workmen and the grown ups through the child, for the best insurance policy is a careful person.

I further suggest that the electric railways of the country, as a part of their safety campaigns, appreciating the value of making safety a community proposition, might during the annual exhibitions in their respective provinces, stage an exhibit on both traffic and public safety. I believe that interesting exhibits of this kind would be instrumental in bringing home to all of the people in their community a sense of responsibility and a recognition of the principles of safety and precaution which are so important today for the well being and security of all mankind.

It makes no difference whether a drowning man is pulled out of the water just in time to save him, or whether, in a less spectacular way, through a system of training and education, he is kept from falling under the wheels of a street car, or whether, by the application of approved safety devices, he is kept from being ground up in the gears of a machine. The result is the same. It is a life saved. And it is because hundreds of big men, employers in industry, have responded to the call of humanity, that many lives have already been saved. For every reduction that has been made in an accident record on any railway or in any industrial plant means that lives have been saved, just as truly as if they had been snatched from a watery grave a few seconds before life would have become extinct.

In every community, from the largest city to the smallest hamlet, there leads a road to destiny; as we come to the end of the long, long trail, we arrive at a silent city. On the finest hill in the cemetery, where lots are expensive, we read on a great mausoleum of stone:—"Youth: In memory of our Beloved Son, aged 23." The family history includes also a line omitted from the monument, "Killed by carelessness." And in these graveyards, with youth and middle age so hurried success, opportunity, joy, home, genius, wealth and happiness. This is the price of carelessness. This is the why of the safety movement—everybody's business.

There are men enough here this morning, there are men enough sitting here within the sound of my voice today, if they were inspired by the spirit of brotherly love, and counted it the great privilege of their life to do this work of the Anarchy: there are men enough here to save this country to make it the best and safest place on God's earth to live in.

You remember the days of the war, and how ashamed of himself a man felt who never touched with the finger the great struggle in which Canada was engaged. Oh, to go through this life and never touch with our own fingers this war and Christian work, the first, the last, and when the cry of triumph rises at the end, to stand there, not having done

one little, unknown, unnoticed thing to bring about that which is the true life of the men in this great cause, that is awful. And I dare believe there are some men here this morning who, failing to be touched by every appeal, will still lift themselves up and take upon them the duty of men, and be soldiers of safety first, and have a part in this humanitarian battle, and have a part somewhere in the victory which is sure to come, and which depends so much upon nobility of purpose, persistence of effort and unselfish service.

In conclusion, I want to emphasize that we need our clergy to help along this good work, by preaching safety sermons, and holding safety revivals. When we have done all these things we can point with a pride and a clear conscience to a useful life and when the grim reaper calls us, the Ruler of the Universe can justly say: "Well done, good and faithful servant, enter thou in."

The foregoing paper was read at the Canadian Electric Railway Association's annual meeting in Ottawa recently.

Electric Railway Employees Wages, Working Conditions, Etc.

British Columbia Electric Ry.'s electrical workers, including linemen and substation operators, at Vancouver and Victoria, returned to work, after a 16 days strike over wages. The company rejected the conciliation board's award on the ground that its decision was based on conditions as of Aug. 1920, and offered a 10% reduction. The deadlock was broken by the company granting the men their requests and signing an agreement on the basis of the award. During the strike, the light, power and railway service was maintained by the substations being operated by the company's other employees.

Regina Municipal Ry.—The Regina, Sask., City Council is reported to have under consideration a recommendation of the Street Railway Department to fix the rate of remuneration of the motor-conductors on one-man cars at 10c. an hour over the present rate of 55c. for motors and conductors, and that they be given two weeks holidays yearly.

Toronto & York Radial Ry.—Negotiations are in progress between the company and its electrical workers as to wage schedules.

Toronto Suburban Ry.—The electrical workers met recently to discuss wages and labor conditions.

Nipissing Central Railway Operating Results, Etc.

The Timiskaming & Northern Ontario Ry. Commission, which operates the Nipissing Central Ry. for the Ontario Government, has reported on the results for the year ended Oct. 31, 1920. The N.C.R. has 20,223 miles of electric railway track, of which 15.37 miles are main track, and 4.86 miles are sidings and spurs. Of the main track, 14.42 miles are owned and maintained by the railway, 5.28 miles are leased from the T. & N.O.R., and are maintained by the T. & N.O.R., and the remaining 5.17 miles are leased from and maintained by the T. & N.O.R. Commission. The rolling stock comprises 10 electric motor passenger cars, 1 combination switching locomotive, express car and snow plough, 1 motor driven snow plough, and 2 freight cars. No additions to rolling stock were

made during the year. Following is a comparative statement of earnings and expenditures:—

	1919-1920	1918-1919
Revenue from transportation	\$116,568.88	\$106,700.74
Other revenue	1919-1920 3,781.60	1918-1919 2,177.40
Total	\$120,350.48	\$108,878.14

Transportation of Postmen on Electric Railways.

The question of the remuneration to be paid by the Post Office Department to street railways for carrying postmen is about to be decided in Regina, Sask. The present contract, under which postmen are carried at \$35 a year each, was entered into in 1917, and expires July 3. A press report states that the City Council is considering the price to be fixed in a future contract, and that it is contemplated to ask \$50 a man per year.

It is pointed out that the \$35 a year per man works out at a rate which would only pay for 1.8 rides per man a day, if regular fares were charged. In 1917, when this rate was agreed to, the council considered it inadequate, it being estimated that the 34 postmen then employed made on an average three trips a day each. The regular fare at that time was 6 tickets for 25c, now it is 4 tickets for 25c. The suggested rate of \$50 a year a man would be paying on a basis of 2.6 rides a man per day.

British Columbia Public Utilities Commission.—The B.C. Legislature has a special committee investigating a claim of Major Retallack, for compensation in connection with the abolition of the Public Utilities Commission, of which he was Commissioner, a few months after it had been instituted. His salary was \$7,000 a year, and he is asking for additional compensation because of having had to give up certain appointments, and to incur expenses to accept the position.

Transfer Frauds.—Emile Roy and H. Adore Lemieux were each fined \$40 and costs in the Montreal Recorder's Court recently for defrauding the Montreal Tramways Co. by the illegal use of transfers. The evidence showed that Roy, on his way home, took transfers, which he did not need, and handed them to Lemieux, when the latter boarded the car. A similar transaction was admitted that he and Roy divided the fare saved.

Increases in Electric Railway Freight and Passenger Rates.

The British Columbia Electric Ry. has opened negotiations for new franchises with the cities of Vancouver, North Vancouver and New Westminster, and the municipalities of Point Grey, South Vancouver and North Vancouver District. A temporary agreement, permitting the present fares to be charged until June 30, 1922, has been signed, and the company has withdrawn its application for a Dominion charter which would have removed it from provincial to Dominion control. Under the temporary agreement, new franchises must be signed before Aug. 31, 1921, otherwise the company will be at liberty to renew its application for a Dominion charter. The company is charging 6c. on its city lines, with a 7c. commutation rate to suburban zones.

Fort William Municipal Ry.-Port Arthur Civic Ry.—A bill now before the Ontario Legislature contains the following preamble:—"Whereas petitions have been presented by the corporations of the cities of Port Arthur and Fort William praying that it may be enacted as hereinafter set forth; and whereas by their petitions the municipalities have represented that they each own and operate an electric street railway, and that the fare of the said railway has, up to Sept. 1, 1920, never exceeded in each city 5c., but on or about that date the municipalities, by bylaw, increased the said fare to an amount exceeding 5c. in each city, and doubt has arisen as to whether or not the said municipalities have power to collect and take such increased fare; and whereas it has been further represented that the fare of 5c. is inadequate; and that the traffic on the railways at that rate is not sufficient to pay the expenses of the railways; and that each year a large deficit results which has to be borne out of the general funds of the municipalities; and whereas it is expedient to grant the prayer of the said petitions."

The single clause of the bill, as introduced, is as follows:—"Notwithstanding the provisions of clause 6 of schedule A, to an Act respecting the Town of Port Arthur, passed in the 56th year of the reign of Her late Majesty Queen Victoria, chapter 78, and notwithstanding anything contained to the contrary in The Ontario Railway and Municipalities Act, the municipalities of Port Arthur and Fort William, may collect and take such fare over and above the sum of 5c. from passengers on its street railway as may from time to time be fixed by bylaw to be passed by such municipalities."

The private bills committee added to the above section the words:—"Provided that no such bylaw or bylaws shall come into force or have effect until same have been approved by a vote of the electors qualified to vote on money bylaws of the said municipalities and have also been approved by the Ontario Railway and Municipal Board."

Hamilton St. Ry.—The Dominion Power & Transmission Co.'s President is reported to have said at the recent annual meeting that fares on the Hamilton St. Ry. will have to be increased if the public is to have the accommodation required, and added that it is not reasonable, while companies in other cities had secured increased fares, to expect the Hamilton company to continue with no reasonable return for its investment. A later report states that the company has

decided to ask the city council to approve of an increase in fares.

Ottawa Electric Ry.—The Ottawa City Solicitor has been instructed by the board of control to enquire whether or not the O.E.R. has authority to apply to the Board of Railway Commissioners for an increase in fares above the maximum fare of 5c., as provided in the franchise agreement.

Winnipeg Electric Ry.—The Manitoba Court of Appeal commenced on March 22 the hearing of Winnipeg City Council's appeal against the Manitoba Public Utilities Commissioner's order granting an increase of fares to the Winnipeg Electric Ry. The city has raised the question of the Commissioner's powers in the matter, and the arguments on this point were of an elaborate character. The hearing was concluded March 14, judgment being reserved. It is expected that judgment will be delivered early in April.

Winnipeg Electric Railway and the City Council.

Winnipeg City Council, on Feb. 23, passed a resolution setting out conditions on which all litigation between the city and the Winnipeg Electric Ry. Co. could be put a stop to. These conditions were the company's consent to a Court of Appeal order setting aside the Manitoba Public Utilities Commissioner's order of Aug. 23, 1920, granting an increase of fares; the preparation of an agreement providing for certain rates of fares, that the Commissioner should not have any jurisdiction over the company's fares; to assist the city in the obtaining of any agreement reached as the result of negotiations; and to fix fares at 40% increase over those fixed in the original bylaw. A. W. McLimont, Vice President, wrote the Mayor March 1, giving reasons why the company could not agree to the conditions proposed and saying that the company would agree to a temporary setting aside of the order and to negotiate all matters of difference.

The company had previously suggested an agreement on a service at cost basis. The city council, on March 14, reaffirmed its resolution of Feb. 23, which is the position of affairs at the time of writing.

Ontario Hydro Electric Railways Enquiry.—The Commission, appointed by the Ontario Government, to investigate the system of hydro electric radial railways proposed by the Hydro Electric Power Commission of Ontario, and of which Mr. Justice Sutherland is Chairman, resumed its sittings at Toronto, on March 2, the first witness being L. A. Herdt, D.Sc., E.E., Macdell Professor of Electrical Engineering at McGill University, and Vice Chairman, Montreal Tramways Commission. Other witnesses were R. M. Fuestel, President, Indiana Service Corporation, and C. E. Bailey, of J. G. White Engineering Corporation, New York. The hearing was adjourned on March 9, to enable R. McKay, K.C., representing pro hydro municipalities, to arrange for witnesses. On the resumption on March 28, H. T. Foster, fruit grower, Burlington, gave evidence, being followed by J. E. Richards, Manager and Treasurer, London & Port Stanley Ry.

Electric Railway Statistics for Year ended June 30, 1919.

Following are extracts from the electric railways statistics for the year ended June 30, 1919, as prepared by the Dominion Bureau of Statistics, Transportation Division.

Length of lines, miles.		
1st main track	1918-19	1917-18
2nd main track	1,896.32	1,816.36
Sidings and turnouts	482.36	453.11
Total	2,229.92	2,067.87
Capitalization.		
Stocks	1918-19	1917-18
Funded debt	\$93,042,368	\$73,864,820
Total	\$75,852,188	\$9,385,275
Earnings, operating expenses, etc.		
Passenger earnings	\$22,829,609.79	\$21,248,644.94
Freight earnings	2,045,303.31	1,575,408.67
Mails and express	162,703.74	129,317.96
Other car earnings	106,548.39	139,104.86
Miscellaneous earnings	545,417.11	132,424.26
Gross earnings from operation	\$35,696,532.34	\$24,299,889.69
Maintenance of way and structures	\$2,792,258.13	\$1,684,561.97
Maintenance of equipment	3,868,378.71	2,204,875.57
Operation of power plant	4,435.96	3,083,383.47
Operating expenses	11,801,071.50	7,816,063.13
General, traffic, superintendence, etc.	3,945,298.47	2,753,690.49
Total operating expenses	\$26,839,070.77	\$17,533,974.63
Net operating earnings	\$8,857,461.57	\$6,765,915.06
Miscellaneous income	2,725,512.62	2,311,176.60
Total corporate income	\$11,582,974.19	\$9,077,091.66
Taxes, interest, etc.	10,114,426.86	6,166,074.21
Total net income	\$1,468,547.33	\$2,925,021.45
Appropriated to reserve	\$1,394,921.52	\$1,466,339.35
Appropriated to dividends	1,508,716.00	1,671,358.93
Deficit	\$1,437,091.79	\$212,680.83
Ratio of operating expenses to gross earnings	75.18%	72.16%
Fare passengers carried	686,124,263	487,865,456
Tons of freight hauled	2,474,892	2,497,539
Passenger car mileage	108,995,809	81,746,198
Other car mileage	2,962,798	2,849,125
Total car mileage	106,961,607	84,435,323
Equipment of all kinds	5,719	4,314
Employees, all grades	17,242	11,621
Salaries and wages	\$7,210,851.72	\$11,840,864.56
Accidents, all kinds	94	77
Killed	94	77
Injured	3,611	2,596

Grand Valley Ry. Liquidation.—An appeal by bondholders of the Grand Valley Ry. Co., the affairs of which are being closed out by the courts against an order of the master in chambers, who allowed the Standard Reliance Mortgage Corporation to rank as a creditor on the money in court, was granted by Mr. Justice Rose at Toronto, March 11. The Grand Valley Ry. Co. owned the electric railway in Brantford, and a line from Brantford to Galt, which on the company's assignment were sold to Brantford City Council. Part of the suburban line has since been dismantled.

The British Columbia Electric Ry. is reported to have started recently to operate on the skip-stop plan on its Kerrisdale line, 12 streets having been designated as non-stop points. A saving of three or four minutes in the running time of each trip is expected to be made.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—Brantford, Ont., Street Railway Commissioners have recommended to the city's advisory board of control the following betterments for this year:—

Mohawk Park, construction	\$3,291
West Hill St.	23,111
St. Oxford St.	5,311
Holmesdale and Ferrace Hill	\$8,742
Eagle Place, construction	9,297

\$79,832

(Aug. 1920, pg. 450.)

Hamilton St. Ry.—The Hamilton Board of Control has been considering the questions of paving on streets where the Hamilton St. Ry. operates. It is stated that the company had cancelled orders for rails to be laid on certain streets, and that it has no money to do its part of the repaving work. The City Engineer is reported to have advised that a decision be made by the Ontario Railway and Municipal Board.

The extension of the King Street west line from Margaret Street to Paradise Road, one mile, is reported to have been opened for traffic recently as far as the McKittrick bridge. The track is laid as far as Paradise Road, but owing to the difficulty in getting cement last autumn the completion of the extension was postponed. The work will now be completed, and it is expected to have the whole extension opened shortly. (Jan., pg. 36.)

Hydro Electric Ry.-Essex Division.—Plans for extensions and improvements of the electric railway in Windsor, Ont., which include some second track work, in addition to other betterments, are under consideration by the Windsor City Council in connection with the repavement of the streets. It is said that the percentages paid to the city by the old Sandwich, Windsor & Amherstburg Ry. Co. were used in connection with the paving on the streets on which the rails are laid, and it is claimed that the cost should be borne by the users of the cars and not by the ratepayers generally. (Feb., pg. 92.)

Lethbridge Municipal Ry.—We are officially advised that automatic reclosing circuit breakers are being installed on the feeders on this line, with totalizing breakers of the same design between feeders and generators. These breakers may be set to throw out on any desired overload and to automatically throw in on any time limit. They will also throw out and stay out in the event of a ground until it is removed. This installation, together with bearing indicators, will enable the station to be run without operators except to start up the units and is particularly suitable to situations such as obtain at Lethbridge, where the substation is in conjunction with car barns and there is always someone who can be used to do the starting up. (Feb., pg. 92.)

London & Port Stanley Ry.—A press report states that consideration is being given to a proposal to install wireless telegraphy for the operation of cars as an auxiliary to the present system. Each car would be equipped with a receiving apparatus, the aerials being placed on the top of the car in front, while the receivers would be placed in the front baggage compartment in view of the motorman. (Jan., pg. 36.)

London St. Ry.—A press report states that the company is stringing new cop-

per wires on its Springbank line to provide for an improved service. (Jan., pg. 36.)

Montreal Tramways Co.—We are officially advised that the new power station under construction at Cote St. is laid out for an ultimate capacity of 10,000 k.w. There will be 4 rotary converters installed, making the capacity of each 2,500 k.w. The alternating current to operate them will be delivered by the Montreal Public Service Corporation and the Montreal Light, Heat & Power Co. from their hydraulic plants. The building is completed and one unit has been completed and is in operation. The other units will be installed as soon as they can be taken care of.

The Montreal Tramways Commission is reported to have prescribed an extensive programme of extensions and renewals on the Montreal Tramways Co.'s line for this year, to include a new car line on Park Ave., from Atlantic Ave. to Ball St., the Kelly Ave. extension in Bordeaux ward, and a new line from Cote de Neige Road, along Shakespeare Road, to the park ranger house on the side of Mount Royal. The renewal work will, it is stated, be on St. Catherine St., from St. Lawrence Boulevard to Atwater Ave.; St. Denis Ave., between Carrières and Isabeau Sts., and two sections on Ontario St., from Champlain St. to Frontenac St., and from St. Lawrence St. to Pavet St.

The Montreal Administrative Commission is reported to have directed the Montreal Tramways Commission to proceed with the construction of the projected electric railway on Mount Royal early in the spring. The route will, it is stated, be along the west side of Shakespeare Rd., skirting the cemetery wall, and linking up the Outremont line with the Guy St. line. By the construction of the line, it is said, a double track service over the mountain will be possible between the north and the south sections of the city. The Montreal Tramways Co. is reported to have objected to the construction of the line this spring on the ground that certain paving and sewer work has to be done, but the Administrative Commission states that by placing the line on the west side of the road by the cemetery wall no obstruction will be caused to the roadwork. (Mar., pg. 159.)

Ottawa Electric Ry.—The question of the construction of a loop for the company's lines in Hull, Que., is, according to a press report, likely to be considered at an early meeting of the Hull Chamber of Commerce. (Dec., 1920, pg. 672.)

Ottawa Electric Railway Franchise.—The Ottawa City Council is reported to have given some consideration recently to a motion submitted by Controller Ellis to the board of control, requesting the Hydro Electric Power Commission of Ontario to estimate the value of the Ottawa Electric Ry. Co.'s property, to advise the council regarding the cost of improving the service, and whether it is worth the city's outlay to acquire the railway pursuant to the franchise terms or to enter into an agreement with the company for service at cost. The council referred the matter back to the Board of Control to find out whether the company would consent to allow such an enquiry into its financial condition.

Toronto City Estimates for Street Railways.

The Toronto Works Department estimates for 1921, submitted recently to the City Council contain the following items:—

Maintenance.

Street railway lines owned, but not operated by city	\$3,000
Civic Railway (maintenance and operation)	125,876
Danforth Ave. and Gerrard St.	247,885
St. Clair and Lansdowne Aves.	88,880
Floor St.	10,000
Claims for damages	10,000
Taxes on land, 1919, 1920, 1921	10,074

Capital expenditures.

Reconstruction Gerrard St. bridge and erection of temporary wooden trestle for street car traffic	\$200,000
Reconstruction of north Glen Road bridge	100,000
Reconstruction of south Glen Road bridge	450,000
Reconstruction of Main St. bridge, city's proportion	182,200
Construction of street railway line—Prince Edward Avenue from Sherbourne St. to Broadview Ave.	187,200
Civic Railway, installation of insulated negative feeder cable, Danforth Ave. line, to prevent electrolysis	31,340

\$2,273,866

The estimates for the Civic Ry. maintenance and operation are for eight months, Jan. to Aug. 31, and it is contemplated that the Transportation Commission will assume control on the latter date. The estimate of expenditure on these lines is exclusive of estimate debt charges for the eight months amounting to \$133,303. The estimated revenue for the eight months is \$419,455.

Canadian Electric Railway Association's Activities.

The Association's active membership has been added to by the admission of the Kitchener & Waterloo St. Ry., owned and operated by the City of Kitchener, Ont.; the London & Port Stanley Ry., operated by the London Railway Commission, London, Ont.; and the Toronto Transportation Commission, which will operate the Toronto Ry., when it is taken over by the City of Toronto, on the expiry of the Toronto Ry. Co.'s franchise in a few months.

The following have been admitted to associate membership in the Association: Don M. Campbell, Canadian Cleveland Farebox Co., Canadian National Carbon Co., Canadian Steel Foundries, Canadian Westinghouse & Co., C. E. A. Carr Co., Dawson & Co., Equipment Specialties, Lyman Tube & Supply Co., Ohio Brass Co., Ontario Safety League, Ottawa Car Manufacturing Co., Railway & Power Engineering Corp., Southam Press, and United States Steel Products Co.

C.P.R. Westminster Branch Electrification.—Proposals have been made for the electrification of the C.P.R. line between New Westminster and Westminster Jct., B.C., 8.85 miles, and the operation of this branch by the British Columbia Electric Ry. Overtures made by the New Westminster Board of Trade have been rejected by the B.C.E.R. Co. on the ground that it cannot undertake further capital expenditures at present, and owing to the fact that other interurban lines operated by it do not indicate that the venture would be profitable. The C.P.R. is required to meet all main line trains at Westminster Jct., and even this service is unsatisfactory to New Westminster people. There is a considerable mileage of freight yards in New Westminster which would come under an electrification scheme.

London Street Railway Operating Results and Position.

The Ontario Railway and Municipal Board, which has been operating the London St. Ry., since June 16, 1920, has furnished the city council with monthly reports of the results, and recently presented a report giving details of the results from June 16 to Dec. 31, 1920, also for the calendar year 1920 and comparative statement from 1915 to 1919. The report says in part:—"It is not contemplated by the act under which the Board is in possession of the railway, that the Board's possession and operation would be a permanent solution of the difficulties under which the city's transportation system labors. In the very nature of things, in view of the statutory limitations on the powers of the Board, and its inability to properly finance such an undertaking, the Board is unable to provide adequately for the inevitable wear and tear and depreciation of the plant, much less is it able to meet the probable demands for the improved service and extensions certain to arise in a growing community like London. The Board feels that it need not further emphasize these features of the situation which are plain and obvious, and it mentions them merely to remind the council of the urgent need for prompt action looking to some workable solution of the transportation difficulties which will meet the city's present and future requirements."

Statement for Year 1920.

	Operation by Transm. Com. from June 15, 1920	Operation by O.R. & M. Board, June 16- Dec. 31, 1920	Total for Year 1920
Earnings:			
Transm. Com.	\$225,265.06	\$299,523.24	\$524,788.30
Other sources	2,956.06	4,444.67	7,400.74
Gross earnings	\$225,265.06	\$299,523.24	\$524,788.30
Maintenance—			
Wages and salaries	\$15,751.18	\$24,302.97	\$40,054.15
Equipment	26,182.58	36,996.97	63,089.55
Transportation			
Power	15,423.61	18,951.66	\$34,375.27
Car service	112,436.27	154,888.26	267,324.53
General and miscellaneous	25,310.59	24,403.26	49,713.85
Total operating expenses	\$195,104.23	\$259,453.12	\$454,557.35
Net earnings	\$30,160.83	\$140,070.12	\$170,230.95
Deductions from net earnings—			
Interest on bonds \$12,120.36	\$14,435.68	\$26,556.04	
Interest on loans	539.58	820.81	1,360.39
Taxes	4,875.00	5,129.69	9,994.69
Total	\$17,031.92	\$20,386.18	\$37,418.10
Net income before providing for depreciation or bond redemption	\$13,068.91	\$119,683.94	\$232,749.83
Depreciation of road and equipment invested in bond redemption	13,768.48	19,500.00	33,268.48
Net deficit of company	\$702.59		\$702.59
Net income of O.R. & M.B.		\$183.94	183.94
Net deficit of company for 1920			\$702.59

Following are extracts from the company's Secretary's report to A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, who is acting as Operating Manager:

On May 1, 1920, the company's employees went on strike due to the company's inability to accede to their demands as to wages for the year com-

mencing May 1, 1920. On May 5, the Ontario Railway and Municipal Board took possession of the railway and arranged with the employees for a resumption of service on May 6, an audit of the books to be made and a report to be submitted to the city council. On May 18, the Board submitted its report to the city council. On June 8, the employees again went on strike, as the council was unable to determine on a policy of relief, whereby the Board could meet the increase in wages demanded. The second strike continued for eight days, service being again resumed on June 16 under agreement with the Board whereby the employees received an increase of 4c. an hour, to be increased as revenues warranted, to a maximum increase of 8c. an hour. The two strikes were costly to company and employees alike. The direct loss to the company, due to 13 days non-operation, was \$27,717.00, and to the employees in wages \$12,870.00, an average of \$913.54 each day, or \$511.48 in wages to each employee on strike.

Figures presented herewith for 1915 to 1919 inclusive show that while the earnings increased, the operating expenses increased in a much greater amount yearly. The following statement shows a division of the operating expenses each year as to wages paid and other operating expenses:—

	Wages	Other operating charges	Total operating charges	Total earnings
1915	\$181,799.38	\$112,866.11	\$294,665.49	\$398,858.00
1916	186,098.51	108,075.11	294,173.62	426,314.77
1917	216,217.55	117,825.85	334,043.40	458,822.91
1918	235,125.73	126,564.37	361,690.10	456,355.91
1919	300,670.21	131,935.12	432,605.33	532,469.77
1920	328,925.32	124,644.09	453,569.41	574,700.00

In comparing 1920 with 1915, the following condition is noted:—

Increase in wages, 1920 over 1915	\$147,133.94
Increase in other operating expenses	12,757.92
Total increase in expenses 1920, compared with 1915	\$159,891.86
Total increase in earnings in 1920, compared with 1915	125,870.30
Increase in expenses above increase in earnings	\$34,021.56

Such statements show conclusively the difficulty in operation to be a question of wages.

The following statement shows the improvements to the road and equipment in 1915 to 1920 and the capital secured for improvements:—

	Improvements	Capital secured
1915	\$46,245.76	\$50,000.00
1916	52,603.97	16,680.00
1917	46,892.98	61,800.00
1918	41,537.22	None
1919	8,763.44	None
1920	None	None
Deficiency of capital	\$189,813.37	\$131,480.00
		\$58,363.37
		\$189,813.37

Improvements were made to the road and equipment in each year to 1919. The company was unable to secure any new capital after 1915, due to discontinuance of dividends. During 1918, however, the policy of improvements was continued, the work being financed by bank loans. Five cars contracted for were delivered in 1918 and air brake equipment was installed on part of the equipment in 1918 and 1919. It became necessary to repay the loans made for such improvements and the net income earned by the company in the last three years, which should have been available to the share-

holders as a return on capital invested, was, of necessity, used to repay such loans. The surplus therefore represents an investment in improvements to the road and equipment.

The important item for consideration now entering into the operation of the railway is that of securing the necessary new capital to continue improvements to the property both as to paving and equipment. Paving, of course, does not produce earnings for the company, and while an asset, is at the same time an indirect tax. The paving of the track allowance will not produce adequate car service. It is necessary to have cars. At present the railway is operating all its available equipment during rush hours, and if an improvement in car service is required, it will become necessary to secure new equipment both for additional car service and to replace some old cars in service. Where is this money to come from unless the company is placed on a basis where it can secure securities to furnish such equipment? There is no doubt that this is now the most important item for consideration in the solution of the street railway transportation problem in London. Delay in this matter only means that it will require more capital later to accomplish the same result. Whether the road is privately or municipally operated in the future, the question of securing new capital will be an ever present one.

Street railways throughout the country, like steam railways, have been placed in a critical position, over which the management has no control. The rates in effect, prior to the war, while sufficient to at least pay expenses, were found woefully inadequate, after 1916, to provide for the service the public demanded, and maintain their property in anything like proper condition. Conditions have tended to break down the credit and stability of the electric railway industry. Unless the confidence of investors in the securities of public utilities is restored, the public must, in some way, assume the responsibility and provide funds for the carrying on of an essential public service. Lack of confidence in public utilities investments, at present, is very serious, embarrassing the companies and depriving the public of adequate or satisfactory service.

The question then is, whether the need for local transportation can best be met by public ownership and operation, or by private ownership and management with public control. If the public was qualified to carry out the management of public utilities, it would probably ask that this be done, and I would say that there should be no objection provided a fair valuation of the property is allowed. Municipal ownership is urged by some as a panacea against increased fares. It does not matter by which plan the street railway is managed, the cost of the service must be found, either from those who use the cars or by taxation. It is plainly evident that whether the public shall decide to operate its railways, whether it assumes greater control over them, or whether it allows them to remain in the hands of private individuals, the revenue must be such as to provide for the full cost of service.

London has grown in the six years 1915 to 1920, and will no doubt continue to do so. The figures submitted clearly indicate such a growth. If London is to

enjoy an industrial expansion as expected, and car service is to be adequate for the future needs of such an expansion, then it becomes necessary to adopt a policy covering a permanent solution of the transportation problem in the city.

The question of the future operations of the railway is undecided. It is said that the employees have intimated to the Ontario Railway and Municipal Board that they will continue working under the existing arrangements until May 1, when a new understanding will have to be arrived at. The Board, no doubt, desires to relinquish its control, but no definite action has been taken. The question of what will be done is under consideration and the latest report is that a definite proposal by the company to the city council for operating the line on the service at cost plan will be made on an early date.

British Columbia Electric Railway's Application to Dominion Parliament.

In connection with the application of the Vancouver, Fraser Valley & Southern Ry. Co., a subsidiary of the British Columbia Electric Ry. Co., to the Dominion Parliament for legislation to permit it to take over the B.C.E. Ry. Co.'s railway and other properties, and to declare them to be for the general advantage of Canada, we are officially advised that the application for a federal charter, which would place the company's railway, light and power lines in Vancouver and Victoria under the Board of Railway Commissioners, has been withdrawn temporarily by the company, pending a settlement with the municipalities. The various municipal councils have tentatively agreed to permit the present fares to be charged until July 1, 1922, and not to press for a return to the franchise fares. Provided bylaws to this effect are passed by each city and municipality served, the company agrees to withdraw its application for a federal charter, but within six months new agreements must be entered into with the view of adjusting the company's rates and fares on a stable basis. Failing such agreements, the company may reinstate its application for a Dominion charter.

A press report states that the mainland municipalities interested have all signed an agreement granting the company the right to continue to charge the existing rate of fares until July 1, 1922.

Quebec Public Service Commission.—A press report states that A. Beaudry, K.C., of the resignation of the Quebec Legislature, presided over the position of Deputy Speaker, and has been appointed Chairman of the Quebec Public Service Commission, succeeding the late F. W. Hibbard, K.C. Another report of March 21 stated that he would continue to act as a commissioner for a few weeks, when he would resign, the state of his health being given as the cause. J. Ahern, who has been Secretary of the Commission since its formation, will, it is reported, be appointed to succeed Sir George Garneau. The third member of the Commission is F. C. Laberge, C.E.

A New Safety First Maxim.—"Never run after a street car, or a woman; there will be another along in a few minutes. There aren't so many after midnight, but they go faster." The Gobl.

Preparations for Taking Over the Toronto Railway.

The Toronto City Council put through all its stages recently a bylaw providing for the issue of \$5,000,000 city consolidated loan debentures, to provide funds on account to acquire and take over the Toronto Ry. Co.'s property and to provide plant, equipment and facilities for operating the railway when acquired.

Some matters connected with this projected loan and the Transportation Commission's work, etc., are under consideration in connection with a bill before the Ontario Legislature. Some of the things desired are that the Commission be given power to build subways, and operate busses without the assent of the electors, but on the initiative of the city council; provision for three arbitrators instead of one to fix the value of the Toronto Ry.; power to postpone for three years payment of sinking fund charges on account of the purchase of the Toronto Ry. and to fix the period of the debentures to be issued in payment therefor at 40 years.

The Toronto Transportation Commission has authorized the purchase of steel rails for from 20 to 65 miles of single track, together with ties, bolts, overhead work, etc., for the same. Details in connection with this matter, we are officially advised, have not yet been settled.

The question of the purchase of cars for the railway is being considered, and some discussion has taken place on the advisability of the city providing its own car building plant.

The Levis County Railway's Fire and its Future.

The fire at the Levis County Ry.'s car barns at Levis, Que., Feb. 23, which was mentioned in our last issue, started at the back of the barns, in or around a double truck car which had not been in service since Feb. 19. An alarm was sent in to the fire station immediately, and three of the company's employees, who were on duty, coupled up the hose to the hydrants inside the barn and endeavored to extinguish the flames. Owing to the lack of water pressure they were unable to do anything effective and within 10 minutes the whole barn and shops were in a blaze. All the company's equipment was destroyed, together with the shops and stores, except four new safety cars, and 2 rebuilt one-man single truck cars. The equipment destroyed consisted of 5 double truck cars, 8 safety cars, 3 rebuilt one-man cars, 2 rotary ploughs and 4 sweepers. The company was therefore left without any snow fighting equipment and only 6 cars to continue operations. All the property destroyed was insured at purchase value, but not at replacement value. The estimated total loss is placed at \$300,000, and a press report states that the actual loss to the company will be \$200,000.

C. Blonin, Vice President, is reported to have stated that the fire was probably caused by a short circuit, also that the directors are not very keen on replacing the buildings and rolling stock, as the railway has not been a paying proposition for the last few years, and further that the company's attitude towards reconstruction will depend largely upon the municipalities served by the line. The Manager, H. E. Weyman, is also reported to have made a very similar statement.

A press report of March 10 stated that the Levis Board of Trade has appointed

a special committee to take the matter up with the interested municipalities. This committee was stated to have concluded its work, and to have arranged for a meeting of representatives of all the municipalities interested at an early date to discuss the question.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	6 mos. to Dec. 31, 1920	6 mos. to Dec. 31, 1919
Gross	\$868,677	\$783,324
Expenses	\$641,978	\$522,079
Net	\$226,719	\$261,245

Cape Breton Electric Co.:—

	Jan. 1921	Jan. 1920
Gross	\$59,409	\$49,982
Expenses	\$4,566	\$4,117
Net	\$54,843	\$45,865

Dominion Power & Transmission Co.—A press summary of the Dominion Power & Transmission Co.'s report for 1920 states that the gross earnings were \$3,803,723.15, and the operating expenses \$2,771,875.79, and that after sundry deductions had been made there remained \$940,525.91, compared with \$1,000,119.45 for 1919. The properties are valued at \$23,481,327.79.

London St. Ry.—A press report gives the following particulars of operations for January:—

Total income	\$45,792.81
Operating expenses	\$9,232.68
Net earnings	\$6,560.13
Interest on bonds	\$2,202.34
Bond redemption	\$3,000.00
Interest on current account, taxes, etc.	\$50.22

Total deductions	\$6,061.56
Net income	\$494.59
Car mileage	\$14,949
Net income per car mile	3.4 mills

Munton Tramways, Electricity & Gas Co.—The following were elected directors re-elected:—R. Law, Jr., E. B. Rogers, F. N. Minard, E. O. Bartlett, T. O. Sullivan, E. A. Cummings, and Dr. J. A. S. Henderson.

Toronto Civic Railway:—

	1921	1920
Revenue Passengers	\$50,392	\$48,989
Revenue Freight	\$3,025,700	\$2,081,296
Feb. 1 to 15, 1921	\$46,000	\$2,788,696
Feb. 1 to 15, 1920	\$39,351	\$2,834,181

Toronto Ry.—The annual meeting of shareholders, which had been adjourned to Mar. 2, was further adjourned to Mar. 30, and then again to a later date. A special meeting of shareholders was also postponed to the same date. The reason for the postponements is that the agreements in connection with the sale of the company's outside properties to the Hydro Electric Power Commission of Ontario and the City of Toronto are not completed.

Winnipeg Electric Ry. and allied companies:—

	Jan. 1921	Jan. 1920
Gross	\$406,295	\$498,800
Expenses	\$360,355	\$365,051
Net	\$45,940	\$133,749

The surplus for January 1921, after allowing for fixed charges, was \$80,202.85.

An additional \$2,000,000 of the company's common stock has been listed on Toronto Stock Exchange.

The company is reported to be offering to investors in Winnipeg and neighborhood a portion of the \$3,000,000 of preference share put on the market recently. The price is \$90 per \$100 share, payments to be made in monthly instalments of \$10, interest on the unpaid balance being charged at 6½%, and adjusted together with the dividend when final payment is made.

Mainly About Electric Railway People.

Charles W. Carson, heretofore Inspector of Reliefs, has been appointed Assistant Superintendent, Ottawa Electric Ry., Ottawa, Ont. He was born there Sept. 15, 1877, and entered Ottawa Electric Ry. service June 22, 1897, since when he has been, to March 1909, conductor; March 1909 to Jan. 1920, inspector, and from Jan. 1920 to Feb. 1921, Inspector of Reliefs.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association, took part in a skating carnival, given by the Governor General and the Duchess of Devonshire, at Rideau Hall, recently, appearing as a Chinaman, and Mrs. Gale as a pink and black pierrette.

L. E. Marcus, heretofore Yardmaster, C.P.R., Windsor, Ont., has been appointed Superintendent, Grand River Ry., and Lake Erie & Northern Ry., Preston, Ont.

John Allan Olive, whose appointment as Secretary-Treasurer, New Brunswick Power Co., St. John, N.B., was announced in our last issue, was born there Aug. 4, 1887, and entered transportation service in Aug. 1901, since when he has been, to Feb. 14, 1921, in various positions as follows: Clerk and accountant, Secretary-Treasurer, William Thomson & Co. Ltd.; chief accountant, Furness Withy & Co. Ltd., St. John, N.B., resigning Feb. 14 to accept his present appointment.

J. R. Ong, who, for the past two years, was Transportation Engineer of the Winnipeg Electric Ry., was, on March 7, presented with a gold combination fountain pen and pencil by the company's traffic department employees, on leaving the company's service for Atlanta, Ga., to take a similar position with the Georgian Ry. & Power Co.

Frank Phripp, who for several years was Toronto & York Radial Ry. Agent at Newmarket, Ont., died in the Weston Sanitarium, at Weston, Ont., March 4, after a long illness.

It. Col. G. C. Royce, General Manager, Toronto Suburban Ry., has retired from command of the Queen's Own Rifles of Canada, owing to ill health.

Charles McD. Smyth, whose appointment as Superintendent, Light and Power Department, Cape Breton Electric Co., Sydney, N.S., was announced in our last issue, was born at Woking, Eng., Apr. 24, 1890, and prior to his present appointment was, from Mar. 1920 to Feb. 8, 1921, Assistant to Superintendent, Light and Power Department, Nova Scotia Tramways & Power Co., Halifax, N.S.

John Whitsell, heretofore General Superintendent, Chicago & Interurban Traction Co., Chicago, Ill., has been appointed Manager, Winnipeg Electric Ry., Winnipeg, vice F. L. Butler, who resigned recently, as announced in a previous issue. He began his electric railway service in 1881, in the Sioux City Traction Co.'s car service department. In 1897 he transferred to the Suburban Railway Co., Chicago, and was later appointed Master Mechanic, and then General Superintendent. On the meeting of that company with the County Traction Co., Chicago, he was appointed General Superintendent of Transportation and Shops, and in 1913 on the reorganization of the properties, as the Chicago & West Towns Ry., he was appointed General Superin-

tendent, and on May 5, 1920, was appointed General Superintendent, Chicago & Interurban Traction Co.

C. J. Yorath, formerly City Commissioner, Saskatoon, Sask., has been appointed Commissioner of Utilities and Public Works, Edmonton, Alta., as reported in our last issue, and assumed his new duties March 1. The Edmonton Radial Ry., which is owned by the city, comes under his jurisdiction.

Winnipeg Electric Railway's Snow Fighting Equipment.

The Winnipeg Electric Ry.'s snow fighting equipment consists of one rotary snow plough, one large double end sweeper and nine double end single truck sweepers, all of which were manufactured in the United States. In addition to this equipment, the company has a 14 work car, which is equipped with a 14 ft. wing operated by air control for clearing back the snow. This wing was attached to a flat car in the company's shops.

Cars operating on the suburban lines are equipped with a 14 in. nose plough attached to the trucks, which can be lowered or lifted by the motorman from his cabin. All of these ploughs were manufactured and attached to the cars in the company's shops.

Snow conditions in Winnipeg are not unusually heavy, due to the dryness of the climate, but on account of the extreme low temperature, and heavy winds which usually accompany such temperatures, it is very difficult to keep the tracks clear of snow, which, being light and dry, is easily blown about. As a result it is necessary to operate the sweepers more miles per year than is the case in cities where climatic conditions are different. While the snowfall in Winnipeg is not so heavy as at other points in Canada, the sweeper miles are considerably greater.

Electric Railway Notes.

The Fort William, Ont., Utilities Commission is, a press report states, considering adoption of one-man cars on the municipal railway.

The Regina, Sask., Municipal Ry. will, it is reported, completely equip the Blue line with one-man cars before converting any for the other lines.

The Lake Erie & Northern Ry. station at Brantford, Ont., was robbed March 2 by two young men who, a press report states, held up the agent and took \$25 from the till.

The Hydro Electric Power Commission of Ontario has received 2 four-wheel (0-4-0T) switching locomotives, with cylinders 16 in. diam. by 24 in. stroke, from Montreal Locomotive Works.

The British Columbia Electric Ry. is reported to be introducing the skip-stop plan on its lines on Vancouver Island. An experiment will, it is stated, be made on the Fowl Bay line, Victoria.

The cost of snow removal from Montreal streets for the winter of 1920-21 is reported to have been \$157,347 up to March 5. The Montreal Tramways Co. is responsible for half of this.

The Interurban Rapid Transit Co., operating suburban and elevated lines in Manhattan, N.Y., is reported to have had a net deficit of \$2,682,760, for the six months ended Dec. 31, 1920.

The Toronto Transportation Commis-

sion, which is to take over and operate the Toronto Ry., on the expiry of the company's franchise, in a few months, is in the market for some 25 to 100 cars.

The Montreal Tramways Commission and the Montreal Administration Commission are reported to have practically reached an agreement with regard to the carrying of freight in the city by the Montreal Tramways Co.

The Montreal Tramways Co. is reported to have advised the Montreal Association for the Blind that it will issue certificates entitling blind persons to ride free on the company's cars, but a fare will be collected for an accompanying guide.

The Regina, Sask., Municipal Ry., in starting the operation of one-man cars recently put a second man on board to assist the man in charge until he became thoroughly familiar with the operation of his car under the new system.

C. Morden and H. Brooker, ticket clerks, Niagara Falls, Ont., have been arrested for the theft of \$1,000 from the company, and it is reported that they have confessed that they set fire to the station there, March 7.

The Calgary, Alta., City Council's finance committee is reported to have passed a resolution expressing the opinion that altogether too many passes have been supplied to city employees and that all passes should be eliminated except for reputation cases and policemen and carmen in uniform.

The Western Canada Power Co.'s offices are reported to have been removed to the British Columbia Electric Ry.'s head office building in Vancouver, and the business is being conducted under the direction of George Kidd, General Manager, B.C.E.R. Wm. McNeill, former head of the power company, has left for England.

St. Thomas, Ont., Municipal Railway was authorized by the Board of Railway Commissioners on Feb. 23 to operate pay-go, one-man cars, for three months, over London & Port Stanley Ry., on Wellington St. and on Elm St., and on Feb. 26 it was given similar authority for three months to operate over the L. & P.S.R. on Talbot St.

Port Arthur, Ont., city employees are reported to have used 31,950 car tickets during 1920, which, figured at 64c, a ticket, represents a total of \$1,966,872. A suggestion has been made that these tickets, which are issued to employees in books of 50, on the order of the heads of departments, are being used rather freely during non-working hours.

Edmonton, Alta., City Commissioners are reported to be arranging a reorganization of the street railway department. The report states that it is intended to appoint a Superintendent of the Edmonton Radial Ry., and that an outside man will be appointed as W. J. Brownlee, acting Superintendent, is reported to have intimated that he does not desire the appointment.

The Niagara, St. Catharines & Toronto Ry. is reported to have settled an action brought against it by the Town of Thorold, in the Ontario Supreme Court, for damages to water mains by electrolysis. The amount claimed was \$1,300 for repairs to pipes and \$5,000 for restoring brick pavement on Front St. The action was to have been heard at St. Catharines, but it is said to have been settled out of court, the company to pay \$3,000 and undertaking to rebond its lines.

Vancouver Harbor and Marine Matters.

From a Correspondent.

The Harbor Commissioners are considering the construction of lumber assembly and coal handling wharves, and it is expected that a decision will be arrived at very soon.

The C.P.R. has completed the dredging and filling for its new pier B.C. The fill is 800 ft. long, the filling exceeding 1,000,000 cu. yd. The design for the pier has not yet been decided upon, and its construction will not proceed with at present.

At the Ballantyne pier, which is being built by the Harbor Commissioners, the shore quay fill has been completed, and the dredging and filling for the pier are about 50% completed. The material consists of soft sandstone, with occasional pockets of conglomerate.

Construction of the Harbor Commissioners' terminal railway, on Burrard Inlet, has not been begun, as details in connection with the Board of Railway Commissioners' order 30,430 have not been completely agreed upon, between the Commissioners and the Canadian Pacific and Great Northern Railways.

The Harbor Commissioners received tenders to March 5 for dredging, filling, bulk heading, pile driving and other steel construction for a car ferry terminal on the foreshore of Mission No. 1 Indian Reserve, North Vancouver, and also for an eight car ferry or timber float. It is hoped that, eventually, North Vancouver will have the same through freight rates as the south shore of Burrard Inlet has. The Canadian National Ryrs. are filling in behind the concrete wharf construction at Main St., in accordance with the agreement with the city. The China Creek drainage water is being carried under Main St., and through the wharf, by the construction of a large concrete conduit, the foundation of which is being piled. The Pacific Construction Co. has the contract.

The Harbor Commissioners propose to extend Gore Ave. wharf, for the use of the local tug boat fleet, the Commissioners to bear all the cost. The city has not yet been able to arrange for this, with the tenants, who lease a certain amount of wharf space. The accommodation is badly needed, as Heatley Ave. wharf, now used by the Ballantyne pier contractors is not available.

C.P.O.S. Cabin Class Steamships.—It is announced that the third of the cabin class steamships being built for Canadian Pacific Ocean Services will be named Montclair, instead of Metapedia, as intended originally. Of these three, two, Montclair and Montrose, the latter of which was intended originally to be named Montmorency, have been launched, the Montclair by John Brown & Co., and the Montrose by Fairfield Shipbuilding & Engineering Co. The Montclair is being built by John Brown & Co., and it is hoped to launch her about July, if there are no further labor troubles. The three ships referred to are to supplement the service of similar ones in the C.P.O.S. trans-Atlantic service.

Canal Estimates for 1921-1922.

The Railways and Canals Department estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:—

Chargeable to Capital, \$5,329,000.	
Welland Ship Canal, construction.....	\$5,000,000
Trent Canal, construction and betterments	329,000
Chargeable to Income, \$833,500.	
Chambly, improvements	\$26,000
Carillon and Grenville, improvements	25,000
Lachine, improvements	50,000
Soulanges, improvements	9,500
Quebec drawing fleet, new the	25,000
St. Anne's lock, improvements	3,500
St. Ours lock, improvements	4,500
Trent, improvements	115,000
Trent, to rebuild wharf at Lindsay.....	10,000
Welland, improvements	165,000
Chargeable to Collection of Revenue Staff and repairs, \$2,270,000.	

St. Lawrence Channel Dredges and Tugs.

The following questions were asked in the House of Commons March 4, by P. J. A. Cardin, M.P. for Richelieu, Que., the answers being given by the Minister of Marine.

Q.—"Is it the Government's intention to make necessary repairs during this winter to the dredges and tugs of the fleet organized for the dredging of the St. Lawrence Channels?" A.—"Yes, to the equipment required for this season's operations."

Q.—"Is the Government aware that several ships of this fleet have suffered serious damage for a number of years, through lack of necessary maintenance and repairs, and that any delay in the carrying on of said repair works impairs all the more the value of said ships?" A.—"The Government is aware of the usual deterioration which is consequent on the ships being tied up."

Q.—"Is the Government aware that a considerable number of said ships are practically discarded or abandoned along the shore on the St. Lawrence, in the vicinity of Sorel, and that they are liable to complete destruction?" A.—"No ship of the channel fleet has been discarded or abandoned."

Canada Steamship Lines' Prospects.

J. W. Norcross, President and Managing Director, who returned to Canada, Mar. 21, after a business visit to Great Britain, is reported to have stated that he had been successful in arranging considerable shipping contracts, and that financial arrangements were being completed which would further improve the company's position. The bulk of the company's profits are derived from land traffic rates, which are not affected by the depression in ocean rates. Among the agreements concluded, one is stated to be with Scandinavian interests for a freight and passenger service between Canadian and Scandinavian ports, and it is also stated that the company will extend its service to other European ports.

Atlantic Ship Chandlery Ltd. has been incorporated under the New Brunswick Companies Act with \$24,000 authorized capital and office at St. John, N.B., to carry on a general ship chandlery business, and in connection therewith to own and operate ships and carry on a general importing and navigation business. The incorporators are F. A. McFadden, J. U. Seely and R. A. Jamieson, St. John, N.B.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Dates of Laying Keels.—In the table published in Canadian Railway and Marine World monthly, headed "Orders for Steel Cargo Steamships, Canadian Government Merchant Marine Ltd.," and which appears in this issue on page 222, giving details of steel cargo steamships ordered for Canadian Government Merchant Marine, we have published for some months the dates for the laying of three keels by J. Coughlin & Sons Ltd., Vancouver, B.C., as follows:—Canadian Importer, Marine Department contract 34, builder's yard no. 11, deadweight tonnage, 8,391, April 26, 1919; Canadian Exporter, Marine Department contract 35, builder's yard no. 12, deadweight tonnage 8,380, May 3, 1919; Canadian Inventor, Marine Department contract 36, builder's yard no. 13, deadweight tonnage, 8,350, July 24, 1919. These dates were given us in letters from the company's then Secretary, but we are now informed by the President that they are

will not be assigned to any of the existing C.G.M.M. routes.

Feb. 26, s.s. Canadian Forester, Marine Department contract 16, builder's yard no. 8, approximately 5,100 d.w. tons. This ship was built by Tidewater Shipbuilders Ltd. at Three Rivers, Que., with the exception of the interior fittings for passenger accommodation, etc., which were put in by Halifax Shipyards Ltd. at Halifax, N.S. She is the second of the ships with passenger accommodation to be delivered. She sailed from Halifax, March 2, with a full passenger list and cargo, for Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras, and return.

Deadweights of Steamships.—The following table shows the approximate weights mentioned in the contracts for the steel cargo steamships referred to, which have been built for Canadian Government Merchant Marine, and the finally ascertained deadweights, as settled

Steel Cargo Steamship Canadian Explorer, approximately 8,390 d.w. tons, built for Canadian Government Merchant Marine, by Halifax Shipyards Ltd.

incorrect, and that the keels were actually laid as follows:—Canadian Importer, July 25, 1919; Canadian Exporter, Aug. 8, 1919; and Canadian Inventor, Aug. 19, 1919.

Launchings of Steamships.—We have been advised of the launching of the following steel cargo steamships for Canadian Government Merchant Marine, in addition to those mentioned in previous issues:—

March 17, s.s. Canadian Skirmisher, Marine Department contract 56, builder's yard no. 104, approximately 8,390 d.w. tons, Wallace Shipbuilding & Drydock Co., Vancouver, B.C.

March 24, s.s. Canadian Conqueror, Marine Department contract 58, builder's yard no. 16, approximately 3,890 d.w. tons, Collingwood Shipbuilding Co., Kingston, Ont.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Feb. 24, s.s. Canadian Explorer, Marine Department contract 22, builder's yard no. 2, approximately 8,390 d.w. tons, Halifax Shipyards Ltd., Halifax, N.S. She sailed March 10 for Galveston, Texas, to load a full cargo of grain for Greece. It is reported that she is on charter and that, for a time at least, she

between the Marine Department and the builders:—

Contract Ship	Deadweight.	Ascertained
17 Canadian Trapper	4,992	5,654.45
29 Canadian Winner	8,390	8,407.50
37 Canadian Prospector	8,350	8,367.00
57 Canadian Rover	8,390	3,919.75
59 Canadian Sapper	2,800	2,751.00

Officers of Steamships.—In addition to the officers of steamships, whose appointments have been mentioned in previous issues, the following captains and chief engineers have been appointed:—Canadian Explorer, Capt. W. Wynan, heretofore on s.s. Canadian Runner; chief engineer, J. McMillan; Canadian Fisher, Capt. F. Ferguson, heretofore on s.s. Canadian Planter, vice Capt. J. T. Randall; Canadian Forester, Capt. T. R. Coffin; Canadian Gunner, Capt. J. B. Mills; vice Capt. C. Wallace, transferred to s.s. Canadian Runner; Canadian Importer, Capt. C. R. Bissett, heretofore on s.s. Canadian Volunteer, vice Capt. A. O. Cooper, chief engineer, F. C. Brown; Canadian Navigator, Capt. R. V. Bennett, heretofore on s.s. Canadian Trader, vice Capt. W. H. Millar, transferred to Canadian Planter; Canadian Planter, Capt. W. H. Millar, heretofore on s.s. Canadian Navigator, vice Capt. F. Ferguson, transferred to s.s. Canadian Fisher; Canadian Runner, Capt. C. Wallace, heretofore on s.s. Canadian Gunner, vice Capt. W. Wynan, transferred to s.s. Canadian Explorer; Canadian Sapper, chief engineer, A. Brown; Canadian

Settler, chief engineer, Wm. McNicol; Canadian Sower, Capt. E. E. Manning, vice Capt. F. Nelson; Canadian Squatter, Capt. G. B. Leonard, vice Capt. C. L. Hunter; Canadian Trader, Capt. G. W. Melroy, vice Capt. R. V. Bennett, transferred to s.s. Canadian Navigator; Canadian Traveller, Capt. E. S. Wilson; Canadian Volunteer, Capt. J. E. Koon, vice Capt. C. R. Bissett, transferred to s.s. Canadian Importer; Canadian Warrior, chief engineer, L. C. Lamoureux.

Home Ports of Ships.—The Halifax Board of Trade has, in response to a protest, been informed by the Minister of Marine, that all Canadian Government Merchant Marine ships will be registered at Montreal, irrespective of the place at which they are built, thus following the procedure of shipowners in general. He points out that the port of registry is largely a matter of convenience, and it would be highly inconvenient, for a company, with its head office in one place, to have to register ships at various ports between Halifax, N.S., and Victoria, B.C.

Ships in Service.—The Minister of Railways gave the following information in the House of Commons, March 4, in answer to questions by T. Vien, M.P. for Lotbiniere, Que.:—The Canadian Government Merchant Marine now has 48 steamships in service, sailing between Canada and United Kingdom, West Indies, South America, British India Australia and Newfoundland, on regular routes. They are managed by the directors of Canadian Government Merchant Marine Ltd., all of whom are directors of Canadian National Ry., and the ships are operated in conjunction therewith.

Service from the Atlantic to the Pacific.—The s.s. Canadian Carrier sailed from Halifax, N.S., March 4, for Vancouver, B.C., on a special trip, and it is said that similar trips will probably be made as occasion offers. The Carrier arrived at Baltimore, Md., March 12, and left there March 18, for the Panama Canal. After passing through the canal, she will run down the west coast of South America to Callao, Peru, and from there proceed direct to Vancouver, B.C.

Sailings of Steamships.—The following dates have been announced:—

Atlantic Service.
 London service, from St. John, N.B., Canadian Aviator, Apr. 13.
 Liverpool service, from St. John, N.B., Canadian Hunter, Apr. 13.
 Glasgow service, from Halifax, N.S., Canadian Rover, Apr. 9.
 Cardiff and Swansea service, from St. John, N.B., Canadian Aviator, Apr. 14.
 St. John's, Nfld., service, from Halifax N.S. Canadian Sapper, Apr. 7.
 Havana, Cuba, service, from Halifax N.S. Canadian Miner, Apr. 9.
 Barbados, Trinidad and Demerara service from Halifax, N.S., Canadian Runner, Apr. 11.
 Nassau, Kingston and Belize service, from Halifax, N.S., Canadian Forester, Apr. 13.
 Rio de Janeiro, Santos, Montevideo and Buenos Aires service, from Halifax, N.S., Canadian Volunteer, Apr. 20.
Pacific Sailings, from Vancouver, B.C.
 To Auckland, Wellington and Lyttelton, Canadian Aviator, May 13.
 To Sydney and Melbourne, Canadian Highlander, May 13.
 To Auckland, Wellington and Lyttelton, Canadian Exporter, June 13.
 To Singapore and Calcutta, Canadian Inventor, May 10.
 To Kobe, Taku Bar and Shanghai, Canadian Importer, May 15.
General Carrying Trade.—A London, Eng., copyright cable of March 16, to the Montreal Gazette, says:—The Canadian Government Merchant Marine ships

which were built to develop Canadian trade have been forced to enter into the general carrying trade of the world as a result of the commercial depression. Wm. Phillips, the European Manager, said today that the vessels were being sent from British to Scandinavian ports, and also to Holland and Germany, with a view to keeping them employed until the Canadian export trade revives. Now that the Swedish liner Buenos Aires has successfully completed a shipment of western wheat from Vancouver via the Panama canal, the Canadian Government ships will be put into this service. It is also intended to develop Canadian business with Southern Ireland through Cork, to which port Canadian Government ships have not as yet sailed, though there is a service to Belfast and Dublin.

No Sales to Norwegian Government.—W. Duff, M.P. for Lunenburg, N.S., asked in the House of Commons March 4: Has the Government been negotiating with the Norwegian Government for the

Canadian Government Merchant Marine ships entered at Montreal since May 1918: Canadian Adventurer, Canadian Aviator, Canadian Beaver, Canadian Carrier, Canadian Conqueror, Canadian Farmer, Canadian Gunner, Canadian Miller, Canadian Observer, Canadian Otter, Canadian Pioneer, Canadian Planter, Canadian Rallier, Canadian Rancher, Canadian Ranger, Canadian Recruit, Canadian Rover, Canadian Runner, Canadian Sailor, Canadian Sealer, Canadian Seigneur, Canadian Settler, Canadian Signaller, Canadian Sower, Canadian Spinner, Canadian Squatter, Canadian Trader, Canadian Trapper, Canadian Trooper, Canadian Victor, Canadian Volunteer, Canadian Voyageur, Canadian Warrior, Thos. J. Drummond, J. A. McKee. No reports are filed at Ottawa as to work performed on Government steamships, as these are matters in connection with operation and under the board of management of the Canadian Government

insurance payable by underwriters would be approximately \$540,000.

Q. "What amount of the adjustment has been paid by or collected from the marine insurance companies?" A. "\$350,023.79."

The s.s. Canadian Signaller arrived at Boston, Mass., towards the end of February from Fowey, Eng., about a week overdue, having encountered very severe storms on the Atlantic. A press telegram states that all food on board had been used and the coal supply practically exhausted. During the final days of the voyage navigation was carried out on dead reckoning, and it was only on the day before arriving at Boston that she knew her exact position, having been acquainted with it by radiotelegraph. While about half way across the Atlantic her engines broke down, but repairs were undertaken and she proceeded to complete her voyage without assistance.

Canadian Sapper.—J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S., asked the following questions in the House of Commons recently, the answers being given by the Minister of Marine:

Q. "Did the s.s. Canadian Sapper arrive in Halifax from St. John's, Nfld., on or about Jan. 22, 1921?" A. "Customs at Halifax reports the arrival of Canadian Sapper at that port on or about Jan. 22, 1921."

Q. "What is her d.w. tonnage?" A. "Approximately 2,800 tons."

Q. "How many tons of cargo did she carry on the trip in question from St. John's to Halifax?" A. "The board of management of Canadian Government Merchant Marine has made no report respecting the cargo carried."

Q. "How many tons of coal a day does this ship consume?" A. "About 18 tons." **Q.** "What rate of wages was paid to the able bodied seamen on this ship during the sail voyage?" A. "No information in the Department, the matter being one entirely under the direction of the board of management."

Collingwood Shipbuilding Co., Kingston, Ont., launched the steel cargo steamship Canadian Coaster, Marine Department contract 58, builder's yard no. 16, approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, on March 24.

The christening was performed by Miss Kay, niece of H. C. Welch, Manager of the Kingston shipyard. The Canadian Coaster was launched in a very advanced condition, the boilers and engines having been installed and all connections made, and the cabin and other interior work being well towards completion.

J. Coughlan & Sons, Vancouver, B.C. The Minister of Marine gave the following information in the House of Commons, March 4, in answer to questions by W. Duff, M.P. for Lunenburg, N.S. The two steel steamships are being built at Vancouver for the Government, by J. Coughlan & Sons. Their deadweight tonnage will be about 8,390 tons each. The contract price is \$167.50 per d.w. ton, and it will cost about \$65,000 each in addition to fit them ready for sea. The contracts were entered into April 7, 1920.

J. Coughlan & Sons Ltd., which is building two steel cargo steamships, for Canadian Government Merchant Marine, viz., Canadian Transporter and Canadian Freighter, Marine Department contracts 62 and 63, builder's yard nos. 20 and 21, each approximately 8,390 d.w. tons, the keels of which were laid on Jan. 6, advised us recently that it could not then

Steel Cargo and Passenger Steamship, Canadian Forester, approximately 5,100 d.w. tons, built for Canadian Government Merchant Marine by Tidewater Shipbuilders Ltd.

said of 35 ships of the Canadian Government Merchant Marine? What were the terms of said arrangement or negotiations? What has been the result of said negotiations? The Minister of Railways replied: I have not the answer with me, but I may reply at once "No." to each one of the questions.

Work on Steamships at Montreal.—W. Duff, M.P. for Lunenburg, asked in the House of Commons recently: "What are the names of Canadian Government Merchant Marine ships which entered at the port of Montreal since May 1918? On which of them was work performed by Hall Engineering Co. of Montreal? What is the total amount paid the Hall Engineering Co. for work on the ships? What work performed after tenders were asked for and contracts granted, or was the company allowed to charge its own rates? What other engineering firms, if any, made repairs and performed work on Canadian Government Merchant Marine ships, and what amounts were paid each such firm?" The Minister of Railways replied: "From Customs reports, the following

Merchant Marine, who are responsible for all matters in connection with operation."

Salvaging s.s. Canadian Recruit.—W. Duff, M.P. for Lunenburg, N.S., asked the following questions in the House of Commons recently, the answers being given by the Minister of Marine:—

Q. "What was the total cost of floating, repairing, and making ready for sea, the Canadian Government steamship Canadian Recruit?" A. "Approximately \$545,000."

Q. "What was the amount of insurance on the ship?" A. "Annual premium \$4,497.19 and \$5,824.78. 6d.; total paid, currency, \$20,034.07."

Q. "What was her value as appeared in the insurance policies?" A. "Hull insured value \$578,571; disbursements, etc., \$231,429; total insurance on ship, \$810,000."

Q. "What is the amount which the marine adjusters found that the marine underwriters should pay toward the floating, repairs, etc.?" A. "Adjustment is not yet complete, but on approximate cost of sea voyages, repairs, etc., the

state approximate dates for the launches.

Halifax Shipyards Ltd., Halifax, N.S., delivered the steel cargo steamship Canadian Explorer, Marine Department contract 22, builder's yard no. 2, approximately 8,390 d.w. tons, to the Marine Department Feb. 24. She sailed March 10 for Galveston, Texas, to load a full cargo of grain for Greece.

The steel cargo steamship Canadian Forester, Marine Department contract 16, builder's yard no. 8, approximately 5,100 d.w. tons, which was built by Tidewater Shipbuilders Ltd., with the exception of the interior fittings for the passenger accommodation, which was put in by Halifax Shipyards Ltd., at Halifax, was delivered to the Marine Department Feb. 26, and sailed from Halifax, March 2, with a full passenger list and general cargo, for Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras, and return.

Harbour March Co., Victoria, B.C.—The s.s. Canadian Traveller, Marine Department contract no. 30, builder's yard no. 2, 8,390 d.w. tons, was, at the time of our last advice, expected to be handed over to Canadian Government Merchant Marine Ltd. for operation during March, and she was to load cargo at Vancouver for Calcutta and Bombay. This is the second of the two ships built by this company, the first one, s.s. Canadian Winner, Marine Department contract 29, builder's yard no. 1, approximately 8,390 d.w. tons, having been delivered Nov. 29, 1920. As stated in a previous issue, the company's plant is being dismantled.

Prince Rupert Drydock & Engineering Co.—The Minister of Marine gave the following information in the House of Commons, March 4, in answer to questions by W. Duff, M.P. for Lunenburg, N.S. Two steel ships are being built at Prince Rupert for the Government, the contract having been entered into with Prince Rupert Drydock & Engineering Co. The deadweight tonnage of each ship is approximately 8,390 tons. The contract price is \$198 per d.w. ton. The contract was negotiated with the John L. Mullen Construction Co., which assigned its interests to Prince Rupert Drydock & Engineering Co. in Nov. 1918. The order in council authorizing the construction of the ships was passed Dec. 12, 1918. The contract was signed Feb. 21, 1919. The following amounts have been advanced to the contractors on progress estimates, ship 1, Canadian Reaper, \$968,204.07; ship 2, Canadian Thrasher, \$882,090. Wallace Shipbuilding & Drydock Co. has contract to finish the ships, on the basis of cost of labor and material, plus 8% for profit.

The completion of the ships, when gone on, will be done under the supervision of Henry A. Butt, overseer for the Marine Department. H. Turney will be in charge for the Wallace Shipbuilding Co., with T. Allen as hull superintendent.

Reference was made in our last issue to a Prince Rupert press dispatch which stated that Mr. Justice Murphy had delivered a judgment interpreting a clause in the agreement between the Dominion Government and the company, which gave the Government a lien, not only on the two ships in process of construction at the time of the bankruptcy, but also the shipyard's plant and equipment, and under this judgment, W. E. Hodges, trustee in bankruptcy, would be required to return nearly \$100,000 worth of material, which he had seized on behalf of

the creditors, and removed to a private warehouse in Prince Rupert. What really occurred was that Mr. Justice Murphy, after hearing the application on behalf of the Dominion Government, gave his opinion that the real question for decision was to construe the contract properly and for this purpose, the trustee should be regarded as standing in the shoes of the company. Admittedly there had been a breach justifying the Crown in exercising remedial measures. Although under one of the clauses of the contract the wording was that the lien was to be "for all monies paid to contractors on account of purchase price," yet the whole object of the lien was to enable the Government to take possession of the ships, yards and necessary material to finish the work. Such appeared to be the clear intent of the parties to the contract. He concluded by giving his opinion that the Dominion Government was entitled to succeed in so far as the goods set out in part of clause 15 of the agreement are concerned. The clause referred to "the hulls of the ships and materials, their engines, boilers, auxiliaries and fittings, whether such shall be on board the ships or in the building yards, and whether wrought or in the rough state, until the ships are completed and delivered."

A further dispatch stated that an order of the Court reserves to the trustee the plant, for which the Dominion Government will have to pay such rent as may be agreed on, and it is said, that he may be able to obtain sufficient from this source to enable preferred creditors to be paid in full, the remainder to receive 60c. on the dollar.

Tidewater Shipbuilders Ltd., Three Rivers, Que.—The steel cargo steamship Canadian Forester, Marine Department contract 16, builder's yard no. 8, approximately 5,100 d.w. tons, which was built by this company at Three Rivers, with the exception of interior fittings for passenger accommodation, which were put in by Halifax Shipyards Ltd., at Halifax, N.S., was delivered there on Feb. 26 to the Marine Department, was transferred to Canadian Government Merchant Marine for operation, and sailed Mar. 2, with a full passenger list and general cargo, for Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras, and return.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—It was announced recently that a representative of the company had left North Vancouver for Ottawa, in order to sign the contract for the completion of the steel cargo steamships Canadian Reaper and Canadian Thrasher, Marine Department contract 22 and 23, builder's yard nos. 1 and 2, and from the Prince Rupert Drydock & Engineering Co., and partially completed at the time of its failure. See also Prince Rupert Drydock & Engineering Co.

Wallace Drydock & Shipbuilding Co., launched the s.s. Canadian Skirmisher, Marine Department contract 56, builder's yard no. 104, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, March 17, the christening being performed by Miss Dorothy Langford, niece of F. W. Peters, General Superintendent, British Columbia District, C.P. R.

United States President Harding, in his inaugural address, on Mar. 4, urged the development of the U.S. Merchant Marine, so that it might carry all U.S. products in foreign commerce.

Esquimalt Drydock Contract.

The following questions were asked in the House of Commons March 4, by W. Duff, M.P. for Lunenburg, N.S., the answers being given by the Minister of Public Works:—

Q. "Has the Government entered into a contract to build a drydock at Victoria, B.C., and if so what is the contractor's name, and what was the amount of the tender?" A. "Tenders were invited by public advertisement on Sept. 14, 1920, due Dec. 9, 1920; and on Dec. 30, 1920, an order in council was passed accepting P. Lyall & Sons Construction Co.'s tender, at schedule prices, approximating \$4,217,400, but the contract is not yet signed."

Q. "What are the names of the other persons or firms who submitted tenders, and what were the amounts of their tenders?" A. "Sir John Jackson (Canada) Ltd., tendered to construct at cost, plus a fixed sum, the estimated value of work being placed by that company at \$5,021,000, and based on this the company offered to carry out the work for a fixed fee of \$750,000. If completed for less than the estimate, the company to receive 50% of the saving in cost, but if the cost exceeded the above estimate 5% of the above fee to be deducted for every 10% increase in cost, but in no case was fee to be less than \$400,000."

Q. "What was the amount paid for the land where the drydock will be built?" A. "About 17 acres were expropriated, and \$34,000 was tendered, and refused, and the compensation to be paid will be fixed by the Exchequer Court. Two smaller parcels of 0.57 acre, for which \$28,000 and another of 0.36 acre, for which \$800 was offered."

Q. "From whom was the land purchased?" A. "The Hudson's Bay Co. owns the larger area. The Puget Sound Agricultural Co. and the Esquimalt & Nanaimo Ry. the smaller lots."

Q. "What will be the capacity of the drydock when completed?" A. "Length 1,150 ft.; width 125 ft.; depth 40 ft."

It is reported that the contractors, P. Lyall & Sons Construction Co. have ordered 7,000,000 ft. of lumber to be used in the construction of the drydock. The greater portion of this lumber will, it is stated, be 12 x 12 x 40 and 60 ft.

Ship Plates Contract Cancelled.—The Minister of Marine, in replying to a question in the House of Commons recently, said: "The Government has rescinded the contract with the Dominion Iron & Steel Co. for the supply of steel plates. The contract provided for the construction by the company of a modern 110 in. plate mill at Sydney, N.S., and for the purchase by the Government from the company of a minimum quantity of 50,000 tons of plates a year for five years."

H.M.C.S. Canada has, it is announced, been given by the Dominion Government for a training ship for the Boys' Naval Brigade, and it is stated that she will be placed on the Great Lakes, where training cruises for the different brigades will be made during the summer.

W. T. Clarke, a former lake captain, died in Toronto, March 23, aged 68. He was born at Port Hope, Ont., and after retiring from sailing, about 16 years ago, had a coal and oil business there for some years before removing to Toronto.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons" and "Deadweight" are the total deadweight capacities as determined after the ships have been completed. The other figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as may be above or below the figures given and as may be ascertained after the ships are completed. The prices are given in dollars and cents, and are very accordingly. Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for changes from specifications, additional equipment, accommodation, etc.

Contract	Contract date	Name	Builder	Yard	Price per ton	Total price	Type	Classification	Speed knots	Keel laid	Launched	Delivered.
1	Mar. 4, 1918	Canadian Voyager	Canadian Vickers Ltd.	66	\$4,575	\$297.	S.d., p. b. and f.c'le	Ltys's	11	June 11, 1918	Nov. 28, 1918	Feb. 22, 1919

General Shipbuilding Matters Throughout Canada.

B.C. Yacht & Boat Builders Ltd., Victoria, B.C.—The two 75 ft. motor patrol boats under construction by this company for the Marine Department's B.C. coast patrol service have not been completed, some changes in the specifications having been made, which necessitated a supplementary agreement, which, we were advised on March 12, had not then been signed. The first of these boats was launched Jan. 4 and the second Jan. 17. It is reported that the work remaining to be done is mainly on the superstructure and installation of fittings.

Canadian Vickers Ltd., Montreal, announces that its first launching for 1921 will take place early in May. The ship, which will be named Idefjord, will be about 6,400 d.w. tons, and is for Norwegian interests. She will be followed shortly after, by a sister ship, to be named Topdalsfjord, for similar ownership.

Montreal.—With further reference to the report as to the laying out of a shipbuilding yard on the south shore of the St. Lawrence River, near St. Lambert, Que., as mentioned in Canadian Railway and Marine World for January, it is reported that the ground has been surveyed, and that plans are being prepared for the construction of the yard and buildings, at an approximate cost of \$1,000,000. The promoters are stated to have secured the co-operation of several British shipbuilding experts, conversant with Canadian conditions.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—Fire destroyed the machine and forging shops and boiler house of this company's shipbuilding plant, at the end of February, the damage being estimated at \$60,000, partially covered by insurance. A large amount of construction material and machinery was lost. The company is building a yacht

at this plant, with the addition of some repairs necessitated by her striking an uncharted rock in Canimewa Inlet in the autumn. The company's s.s. Prince John was docked during the first week in March for overhaul. The work in both cases has been done by Wallace Shipbuilding & Drydock Co., North Vancouver, which is operating the plant in connection with the completion of the two steel cargo steamships Canadian Reaper and Canadian Trasher, under construction there, when the Prince Rupert Drydock & Engineering Co. failed.

Smith & Rhuland, Lunenburg, N.S.—The schooner Bluenose, being built at this yard for the International schooner races off Halifax this year, was scheduled to be launched March 26.

Sorel Government Shipyard.—The following questions were asked in the House of Commons, March 4, by P. J. A. Cardin, M.P. for Richelieu, Que., the answers being given by the Minister of Marine: Q. "Why were a number of working men in the Sorel shipyards discharged recently?" A. "On account of the lack of authorized work." Q. "Is it the Government's intention to have former activities resumed in the Sorel shipyards, and if so when?" A. "The spring activities are starting and men are being re-engaged gradually."

Victoria (B.C.) Ship Owners Ltd., Victoria, B.C.—A meeting of shareholders was held March 1, to consider the company's position in connection with its agreement to build four barquentines under special aid from the Dominion Government. After considerable discussion a committee of five shareholders was appointed to confer with Government representatives and go over the facts and figures showing the reason for the present condition of affairs. This action was taken on the motion that the Dominion Government be advised that the company is financially embarrassed, and calling on the directors to resign, and also requesting the Government to advance money so that the other three ships may be completed. The yards where the ships are under construction is leased by the company from Cholberg Shipyards Ltd., and covers the period required for the construction of the four ships which it was agreed to build under Dominion Government aid. Considerable difficulty has been experienced in obtaining payment for shares subscribed, the amount outstanding at present being approximately \$44,000, and the company's solicitors have been instructed to take legal proceedings to obtain payment of the amounts due, of which it is stated about \$30,000 is collectible. The first ship, named S. F. Tolmie, is sufficiently advanced to allow a close estimate of the cost of construction to be made, and it is stated that the cost completed will exceed the original estimate by \$10,000.

The following questions were asked in the House of Commons recently, by W. Duff, M.P. for Lunenburg, N.S., the answers being given by the Finance Minister.

Q. "How many wooden ships have been built or are being built at Victoria, B.C., on which the Government has advanced or will advance money?" A. "Four."

Q. "What is the name of the company building the ships?" A. "Cholberg Shipyard."

Q. "What will be the deadweight tonnage of the ships?" A. "Calculated

Docks at Cape Town, South Africa. Canadian steamship in foreground. Table Mountain in background.

Halifax Shipyards Ltd., Halifax, N.S. Montreal press dispatch March 21.—Directors of the Dominion Steel Corporation and the Nova Scotia Steel & Coal Co. met here today to discuss the proposed amalgamation of the two companies and the Halifax Shipyards in the British Empire Steel Corporation. After the meetings of the two boards it was announced that both had approved of the contracts covering the consolidation and that special meetings of both the Steel Corporation and Scotia common shareholders would be called for April 7 next to pass upon the directors' recommendations. The basis of exchange of the common stocks of the three companies to constitute the British Empire Steel Corporation is as follows: Each fully paid ordinary or common share of the Dominion Steel Corporation will be exchangeable for 95 of fully paid 7½ cumulative second preference shares and \$40 fully paid common stock in the British Empire Steel Corporation. Each fully paid common share of Nova Scotia Steel & Coal Co. will be exchangeable for \$90 fully paid 7½ cumulative second preference shares and \$40 common shares of the new corporation. Each \$100 fully paid common share of Halifax Shipyards will be exchangeable for \$60 7½ cumulative second preference shares and \$25 common stock of British Empire Steel Corporation.

to be named Sea King, which was ordered last year, and is of steel, for exploring purposes, for Baron Bliss, Bahamas, British West Indies. She will be 137 ft. between perpendiculars, with a moulded depth of 28½ ft., and will be equipped with two 250 h.p. Vickers-Peters semi-Diesel oil engines. All the auxiliaries will be electrically driven, including the anchor windlass and capstan. It is expected that she will be launched during May.

The company's report for 1920 states that during the year the company completed and delivered two steamships, Canadian Miner and Canadian Sapper, each 2,800 d.w. tons, for Canadian Government Merchant Marine, and a steamship of similar type, s.s. Volunda, which has been retained for its own business, and that at present, shipyard operations are restricted to finishing the hull of the yacht Sea King mentioned above.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—A Port Arthur paper stated recently that this company had received an order from Mathews Steamship Co., Toronto, for a large lake freight steamship. We are officially advised by the shipbuilding company that the report was incorrect.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—As mentioned in our last issue, the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Albert has undergone her annual overhaul

deadweight cargo capacity 2,400 tons."

Q. "What amount of money has the Government advanced to the builders, and what further amount will be advanced?" A. "Advanced to date, \$600,000."

Q. "Under what authority or what statute is money being paid, advanced, or loaned to the builders or owners of the ships?" A. "Appropriation Act, 1920, item 549. Supplementary estimates year ending March 31, 1921."

Q. "On what date was the arrangement between the builders or owners and the Government entered into?" A. "Agreement between owners and builders Jan. 19, 1920; agreement between owners and Government March 16, 1920."

Q. "Who are the owners of the ships?" A. "Victoria, B.C., Shipowners Ltd."

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—Work is proceeding satisfactorily on the steamship being built by Wallace Shipbuilding & Drydock Co. for the C.P.R. British Columbia Coast Service.

See also Prince Rupert Drydock & Engineering Co.

Yarrows, Ltd., Victoria, B.C.—Work was completed recently on the Canadian Government Merchant Marine's s.s. Canadian Exporter, consisting of considerable engine room repairs, and damage to hull caused by heavy weather. British Canadian Steamships' s.s. City of Vancouver has been cleaned, painted and some minor repairs carried out. The Pacific Salvage Co.'s s.s. Algerine, which was docked for repairs, and also to be equipped with oil burning apparatus, has been completed. Repair work on the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert is proceeding rapidly. The L.P.R. British Columbia Coast Service s.s. Princess Beatrice is undergoing repairs to her bow, and bottom of her hull, after having been aground on Steep Island.

Stranding of Car Ferry Ontario No. 2.

An enquiry into the cause of the stranding of the Ontario Car Ferry Co.'s car ferry Ontario No. 2, near Cobourg, Ont., Jan. 23, while en route from Charlottetown, N.Y., was held at Cobourg, March 15, 1921, by Mr. A. Demers, Dominion Wreck-Commissioner, assisted by Capt. J. B. Foote and G. D. Frewer, Toronto, as nautical assessors. After hearing the evidence, the court reprimanded the master, Capt. F. D. Forrest, for leaving the bridge in charge of an inefficient man, during a temporary absence of the second officer, but on account of his long and unblemished record his certificate was not interfered with. The certificate of first officer Kirk was suspended for three months, for failing to keep a proper lookout, for not reducing speed and for not calling the master at the allotted time, before entering for. The court criticized the method of keeping the chief engineer's log and advised that accurate entries of essential events are necessary. The remainder of the crew were exonerated from blame.

Had to Raise the Wind.

An ex-sea captain, expostulating with his daughter, exclaimed: "This is a fine time to be coming home, after automobiling with that lubber."

"But, daddy," exclaimed his daughter, "we were becalmed. The wind died down in one of the tides and we had to wait for it to spring up again."

Dominion Marine Association's Activities.

Wm. Livingston, President of the Lake Carriers Association, Detroit, Mich., has been elected an honorary life member of the Dominion Marine Association.

W. B. Elsworth, Marine Superintendent, Imperial Oil Ltd., Toronto, has been elected a member of the Association's executive committee, succeeding that company's former Marine Superintendent, John Wilkie, deceased.

The Association has been informed that there was no foundation for the recent report that tolls on the Dominion canals were to be re-imposed.

The question of a new bill of lading for grain continues to be a subject of friendly discussion between shippers and carriers, but the proposal for the establishment of a new bill is in abeyance.

The Association's committee on aids to navigation, consisting of the President, A. A. Wright, T. R. Enderby and W. H. Smith, has been consulting with masters of steamships of the various companies, and 82 proposals have been prepared, endorsed by the executive committee, and submitted to the Lighthouse Board.

The Association having been consulted as to the desirability of enacting legislation in Canada for the installation of radiotelegraph apparatus on all ships, in accordance with legislation in Great Britain, has, after investigation of the English statute and consideration of the Canadian statute, which applies to passenger ships only, and also in regard to the number of passengers they carry and the distance travelled from shore, recommend that the present statute covers all requirements. The Association has been advised that it will be consulted before any proposals in this connection are presented to Parliament.

The Association has sent strong protests to the Dominion Prime Minister and to other members of the Government particularly interested, with reference to the continued withdrawal of water through the Chicago Drainage Canal, and action is promised, with a view to securing adherence to the limitation placed by the U.S. Secretary of War in 1912, at 3,167 cu. ft. a second. Mr. Justice Lang, in the pending proceedings at Chicago, between the U.S. Government and the Chicago Sanitary District, delivered an informal judgment recently, granting an injunction against the withdrawal of any amount above that fixed by the War Secretary. This judgment is not yet final, as an appeal is expected. In the meantime a much larger quantity, probably more than double that allowed, is being withdrawn, with serious results in levels in the lower lakes and St. Lawrence, and great loss of carrying capacity.

Halifax Drydock Expropriation.—The Minister of Public Works gave the following information in the House of Commons, March 4, in answering questions by W. Duff, M.P. for Lunenburg, N.S.: The Government expropriated the Halifax Graving Dock Ltd. property, but did not buy or expropriate the Dartmouth Marine Railway. The Halifax Graving Dock property was taken over June 7, 1918, the price paid by the Government on Oct. 7, 1920, being \$1,545,337.35, including interest, under the Exchequer Court's award. The property is leased to the Halifax Shipyards Ltd., which paid rent of \$156,250 to Dec. 24, 1920.

Sales of Cruisers Niobe and Rainbow.

The following questions were asked in the House of Commons recently by W. Duff, M.P. for Lunenburg, N.S., the answers being given by the Minister of Marine:—

Q. "Has the Government disposed of or sold the navy cruisers Niobe and Rainbow? If so, when?" A. "Yes; Niobe in Oct. 1920; Rainbow in Sept. 1920."

Q. "Was the disposition or sale made after tenders were called for, or otherwise?" A. "Sale of the Niobe and Rainbow was effected as the result of tenders invited by advertisements published in the press of Canada, United States and England, and of succeeding negotiations."

Q. "What are the names of the parties who submitted offers and the respective amounts of each tender?" A. "For the Niobe—John Simon, Halifax, \$20,000; J. Lipsitz Co., Chelsea, Mass., \$56,000; Baker & Betcherman, Ottawa, \$75,000; J. Lipsitz Co., Chelsea, Mass., \$80,000; Baker & Betcherman, Ottawa, \$88,000; Baker & Betcherman, Ottawa, \$100,500; A. Garson & Co., St. John, \$112,000; New Brunswick Rolling Mills, St. John, \$130,000; New Brunswick Rolling Mills, St. John, \$135,000. The offers of the New Brunswick Rolling Mills included the submarines C.C. 1 and C.C. 2. The highest offer previously received for these ships was \$17,000 for the two."

For the Rainbow—C. S. Sutherland, Edmonton, \$5,000; Yarrows Ltd., Vancouver, \$8,000; A. Lee, Zevee, Seattle, Wash., \$34,565; Evans, Coleman & Evans, Vancouver, \$36,855; Nieder & Marcus Seattle, \$67,777; A. Lee, Zevee, Seattle, \$35,565; A. Lee, Zevee, Seattle, \$40,000."

Q. "To whom were the ships transferred?" A. "Niobe, sold to New Brunswick Rolling Mills, St. John, but not yet transferred pending receipt of final payment. Rainbow, sold to Nieder & Marcus, Seattle, Wash."

Q. "Have the monies been paid to the Receiver General, and when?" A. "The first instalment of \$20,000 on the sale of the Niobe and the two submarines was paid to the Receiver General on Nov. 16, 1920."

Canadian Navigators Federation.—Some details of the organization of the Canadian Navigators Federation, an amalgamation of the Canadian Merchant Service Guild, Great Lakes and British Columbia Divisions, the National Association of Masters, Mates and Pilots of America (as far as Canadian members are concerned), and the Masters, Mates and Pilots of the Atlantic Coast, were given in our last issue. At a meeting of the last named organization, at Halifax, N.S., March 15, amalgamation with the Federation was adopted, and the Atlantic Division formed. The officers are: President, Capt. Wm. Matthews; Vice President, Capt. L. A. Doyle; Secretary, Capt. W. A. Innes; Treasurer, Capt. M. T. Murphy; board of management: Capt. T. R. Coffin, representing ocean going members; Capt. P. Cooper, coastwise; Capt. T. Ormiston, towboats; Capt. J. Blois, Canadian Government marine and fishery boats, and H. Latter, pilots. Capt. W. Rowe, and W. MacLeod, and Pilot W. Gorman, are trustees.

Steamboat Inspection Estimates.—The estimates for the year ending March 31, 1921, presented to the House of Commons recently, contain an item of \$108,810 for steamboat inspection.

Mainly About Marine People.

Sir Montagu Allan, formerly of the Allan Line Steamship Co., has been appointed honorary Lieutenant-Colonel of the Royal Highlanders of Canada.

Hon. C. B. Ballantyne, Minister of Marine and Fisheries, and of the Naval Service, was confined to his house in Montreal recently, suffering from la grippe, but was able to return to his official duties in Ottawa at the end of March.

Senator A. B. Crosby, who died at Ottawa, Ont., Mar. 10, was born at Belfast, Ireland, May 5, 1858. He was founder of A. B. Crosby & Co., shipbrokers, etc., Halifax, N.S. While serving in the House of Commons as a member for Halifax, and since his appointment to the Senate in 1917, he was chiefly concerned with the improvement of transportation facilities, by rail and water, and was a strong supporter of the Water Carriage of Goods Act.

Frank Turner Cuttle, whose appointment as Insurance Agent, Canada Steamship Lines Ltd., Montreal, was announced in our last issue, was born at Montreal, Mar. 20, 1891, and entered navigation service in 1909, since when he has been, to 1914, clerk, Montreal Transportation Co.; 1915 to 1916, accountant, same company; 1917, Superintendent, same company; 1918 and 1919, in military service overseas; 1920 to Feb. 1921, Secretary, Montreal Transportation Co., Montreal.

James Henry Edwards, whose appointment as Freight Claims Agent, Canada Steamship Lines, Montreal, was announced in our last issue, was born at Birmingham, Eng., Oct. 4, 1890, and entered Canada Steamship Lines service Feb. 1, 1915, since when he has been, to June 15, 1915, record clerk; June 16, 1915 to Apr. 30, 1916, clerk; May 1, 1916 to Nov. 15, 1918, claims investigator; Nov. 16, 1918 to Feb. 1, 1920, chief clerk, Freight Claims Department; Feb. 2, 1920 to Feb. 6, 1921, Assistant Freight Claims Agent, Montreal.

Capt. W. A. Glass, a well known pilot on the Great Lakes, died at Sarnia, Ont., recently, aged 63.

Capt. J. A. Irving, who died at Hamilton, Ont., March 3, aged 74, spent practically the whole of his life on the Great Lakes, and is said to have piloted the latter through the present Welland Canal. He had been master of the steamships Strathcona, Macassa and Modasca.

Lt. Col. G. H. Kirkpatrick, Chairman, Vancouver Harbor Commissioners, was in Ottawa and Montreal during March, to confer with the Minister of Marine, regarding the Ballantyne pier construction and the proposed North Vancouver ferry, and also for dealing with other matters connected with Vancouver harbor.

Capt. Alex. McPhee, said to be the oldest mariner in the Georgian Bay district, died at Owen Sound, Ont., Mar. 1, aged 88, after a short illness. He was born at Islay, Scotland, in 1833, and went to sea at an early age. He sailed with the old S.s. Canada, out of Owen Sound, as far back as 1856, and later served on the steamships Clifton and Silver Spray, the latter being burnt over 40 years ago. He was later on the C.F.R. s.s. Algoma, when she sank off Isle Royale in 1884. He served as master on several steamships operating on the Great Lakes up to 20 years ago, when he retired from active service.

Thos. Franklin McVeigh, who has been appointed Assistant Deputy Minister of the Naval Service, Ottawa, Ont., was born June 22, 1874. He was for five years with the Quebec, Montreal and Southern Ry. (Delaware & Hudson Co.) and for 12 years with the Canada Atlantic Ry., and the G.T.R. He entered Dominion Government service as Assistant to the Director of Stores May 31, 1912, and was appointed Director of Stores, Naval Service Department, Apr. 1, 1919, which position he held at the date of his present appointment.

J. W. Norcross, President and Managing Director, Canadian Steamship Lines Ltd., returned to Montreal, Mar. 21, after a business trip to Great Britain. While in England, he was received by the King, on his appointment as a member of the Foreign Commonwealth Commission, which has for its object, the rehabilitation of the world's trade.

Sir Frederick Orr-Lewis, President, Canadian Packers Ltd., Montreal, and Lady Orr-Lewis, are occupying the Villa Beaulieu, at Cannes, France.

Joseph Nordman has been appointed Travelling Passenger Agent, White Star-Dominion Line, in charge of the company's Canadian interests in Poland, with headquarters at Danzig.

Commander A. H. Reed, R.N.R., harbor master, Vancouver, B.C., has been elected chairman of executive committee, Vancouver Branch, Navy League of Canada.

Capt. H. N. Smith, for many years in the Calvin Co.'s service, Garden Island, Ont., and latterly employed by Collingwood Shipbuilding Co., Kingston, died at Kingston recently, aged 59, after about two years illness.

Hon. E. K. Spinney, M.P. for Yarmouth and Clare, N.S., and minister without portfolio, has been elected chairman of the House of Commons' Marine and Fisheries Committee.

Capt. F. H. Spinney, a well known master mariner of Yarmouth, N.S., died at sea, on his ship Lake Leden, recently, en route to Bermuda. He was for some years in Quebec Steamship Co.'s service, but latterly had been engaged by the U. S. Shipping Board.

W. J. Stewart, Chief Hydrographer, Naval Service Department, is to be voted \$10,000 for the year ending March 31, 1922, for services performed in relation to questions under consideration by the International Joint Commission, this vote being the same as the previous year.

Reue A. Wiallard, Agent, Marine Department, Montreal has been appointed Acting Superintendent of Pilots, Montreal and Quebec Division. He was born Aug. 10, 1879, received his permanent appointment in the civil service, Jan. 19, 1904, and was appointed Agent, Marine Department, Montreal, May 4, 1909. He was an active military service overseas with the French army during the war.

Dominion Government Aid for Shipbuilding.—The Finance Minister submitted in the House of Commons recently a statement showing that no endorsements had been made, to aid shipbuilders to build ships, under the provisions of the Act Respecting the Shipbuilding Industry, passed by the Dominion Parliament in 1920, and which was published in full in Canadian Railway and Marine World for Aug. 1920.

Ice Report for the Great Lakes.

The following report was issued by the U. S. Agriculture Department's Weather Bureau at Detroit, Mich., March 15:—Reports from the regular and display stations of the Weather Bureau and Canadian Meteorological Service of Canada furnish the data for the following summary of the several lakes.

Lake Ontario.—The harbors are open and there is no ice reported over the western, central or eastern portions, except at Kingston, where it is rapidly softening and breaking up. Reports from Cape Vincent and Ogdensburg indicate that the ice has run out of the St. Lawrence River at those points. Some ice is in the bays at Ogdensburg.

Lake Erie.—No ice reported in Lake Erie; the field off Erie has disappeared and the harbor is open.

Lake St. Clair and Detroit River.—Lake St. Clair is apparently free of ice and the ice stopped running down the Detroit River on March 12.

Lake Huron.—The ice in the eastern portion of the straits is broken up, and considerable of it has moved out into the lake. The reports from Parry Sound indicate that the ice is softening and has decreased to 5 in. Practically no ice is reported from Detroit south to Port Huron. There is some ice in Tawas Bay, but it is breaking up rapidly and disappearing. The field reported last week at Port Huron has disappeared and St. Clair River is reported open to Lake St. Clair.

Lake Michigan.—In Green Bay, there has been no material change over the northern portion. The ice at Gladstone is 12 in. thick and 15.5 in. at Escanaba. At Menominee, the ice is broken up. The Ann Arbor car ferry arrived March 8, having had little difficulty with the ice. Over the southern portion, the ice is rotten and unsafe. In Lake Michigan, no ice is reported along the west shore south of Chicago or east shore northward to Beaver Island. The ice fields at Charlevoix and Beaver Island have disappeared during the week. The straits are filled with packed ice, which moves about with shifting winds; the harbor ice has decreased to 8 in. thick.

Lake Superior.—No reports from Duluth or Houghton. There was no ice visible at Two Harbors. In Chequamegon Bay, the ice ranges from 10 to 15 in. thick, with no change. At Port Arthur, the ice inside the breakwater is 15 in. thick, through which the tug has no difficulty in passing. There is open water outside of Silver Islet. No ice fields are reported over the eastern portion of the lake. At Whitefish Point, on March 8, there were no ice fields visible to the north or northwest, and on March 9 no ice fields in the lower bay. At Sault Ste. Marie, the ice continues 14 in. thick, with no change during the past week in the lower river.

Wireless Sets for Motor Lifeboats.—The Marconi Co. has designed a wireless set for the motor lifeboats which are being gradually installed at all the Royal National Lifeboat Institution's stations. The new set, which has a radius of about 50 miles, has little difficulty on very simple lines and can, it is said, be operated by a comparatively unskilled man. It has, moreover, been specially designed to work under rough weather conditions and to remain in good order even if it is only used at comparatively rare intervals.

Canadian Notices to Mariners.

British Columbia, Malaspina Strait.—The light on Cyril rock, off Grise Point, Texada Island, has been fixed at an elevation of 15 ft.

Seaford Channel.—The black gas and whistle buoy, in lat. n. 52, 13 min. 9 sec., long. w. 128 deg. 11 min., will be moved without further notice, to a position off the north extreme of Dull Patch, outside the wreck of the barge Drummond, a red conical buoy being established on the old site. It will no longer be considered as a fairway buoy.

New Brunswick, Bay of Fundy.—On the re-opening of navigation, the gas and whistling buoy at Quaco Ledge will be replaced by a gas and bell buoy, the bell being rung by the action of the waves.

Bay of Fundy, St. John Harbor.—The attention of masters of all ships fitted with radiotelegraph apparatus is called to the fact that a new radiotelegraph direction finding station has been established, named St. John, N.B., Direction Finding Station. It is placed near Red Head, on the east side of the entrance to the harbor, and 1.93 miles 67 deg. 25 min. from Partridge Island lighthouse. The call sign is VAR, and the wave length, to be used in transmitting and receiving, is 800 meters.

Nova Scotia, Bay of Fundy.—The range lights near the west corner of Amherst Basin will be discontinued without further notice.

Cape Breton Island.—On or about Apr. 1, the fog bell at the lighthouse, on the west extremity of the southeast bar, Sydney harbor, will be discontinued.

Cape Breton Island.—A new edition of the chart of Sydney Harbor, no. 415 of the Canadian Hydrographic Survey, corrected to Jan. 1921, has been published. Price 15c.

North Coast, Pictou River.—On the re-opening of navigation the occulting white lights, near the outer end of the east pier, by the entrance to Stonehouse Point lock, at Trenton, will be replaced by occulting red lights.

Pictou Harbor.—During 1920, the Public Works Department dredged berths, as follows:—Burnham, Morrill & Co.'s wharf, on the west side covering an area 120 x 80 ft., to a least depth of 10 ft.; Canadian National Ry. wharf, on the west side of the east wharf, an area of 75 ft., from a point 40 ft. inside, to the outer end of the wharf, shoreward for 350 ft., to a least depth of 25 ft. The east side of the dredged area is 15 ft. west of the wharf.

South coast.—Lightship 15 has been replaced on her station on Sambro outer bank, at Halifax harbor entrance, and will be maintained there until about June 1, when she will resume her station off Heath Point, Anticosti.

South Coast, Jordan.—The fixed red light, on the breakwater, on the east side of Jordan River, will be discontinued about March 31.

West coast.—The black and white vertical striped gas and whistle buoy will be replaced on its former position in 16 fathoms, 6 miles from Pubnico lighthouse, about Apr. 1, and its characteristic will be changed to an occulting white light. The St. John's ledge red steel

conical buoy will be re-established on its former position, southwestward of the ledge.

Ontario, Lake Ontario.—The Public Works Department has dredged the channel at the entrance to, and inside the piers at, Oakville, to a depth of 14 ft. below zero of the gauge, which is 245 ft. above mean sea level at New York; the east extreme of the channel begins 2,700 ft. from the southwest corner of the east pier, the channel being 100 ft. wide, gradually narrowing to 50 ft. nearly opposite, and 25 ft. from, the lighthouse on the east pier. Between the piers, the dredged channel is 50 ft. wide, the east side of the channel being parallel to, and 25 ft. from, the east pier. From the inside end of the piers the channel is 50 ft. wide and 600 ft. long, extending northerly to the mouth of Oakville Creek.

Port Maitland.—A new back range light has been established at the angle of the west pier, 900 ft. from the front light, consisting of a fixed white electric light shown from a reflector lantern at an elevation of 75 ft., enclosed in a square steel skeleton tower surmounted by a small lantern. A fog bell has also been established on the balcony of the front range lighthouse; it is operated by electricity, and rings continuously during excessively thick weather.

St. Marys River.—About May 14, the front range light will be moved eastward of its present position, about 436 ft. 314 deg. 16 min. from the back light. The new bearing of this range will be in the same alignment as the new bearing of the Point of the Woods (U.S.) range.

Ships Registered in Canada During December, 1920.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 10 tons register.

141798	S. L. C. No. 3	New Westminster	"	Barge New Westminster, B.C. 1920	82.2	29.1	7.3	155	155	Straits Lumber Co., Red Gap, B.C.

St. Marys River.—As a result of dredging carried out by the Public Works Department in 1919, and 1920, the Canadian side of St. Marys River, in front of Sault Ste. Marie, south of a line connecting the outer ends of the wharves, from the Algoma Central & Hudson Bay Ry. coal wharf, to the Government wharf, easterly to its intersection with the west side of Church St. produced southerly into the river, and thence southeasterly to the west end of Bayfield shoal, is now clear of all obstructions to a depth of 21.5 ft. below the elevation 582.57 ft. above mean sea level at New York, with the exception of a small shoal spot 300 ft. from the southwest corner of Government wharf, which has a depth of 21 ft. below the same elevation, and which is 1 ft. below the lower sill of the Canadian lock. The depth of the U.S. channel in this locality is 2 ft. below the lower sill of the Canadian lock.

Quebec, Gulf of St. Lawrence.—On the re-opening of navigation the black steel buoy on the edge of the shoal, 600 ft. off the wharf at the mouth of the St. Anne des Monts River, will be replaced by a red wooden spar buoy.

Lake St. Francis, St. Anicet.—About May 1, the fixed white light, on the bar, on the south side of the channel, will be replaced by an occulting white acetylene gas light. This light will be unwatched, and the fog horn will be discontinued.

River St. Lawrence, Escumains.—Owing to the total destruction, by storms, of the Government wharf, the light and fog horn, on the west side of the entrance to the bay, have been discontinued. On the re-opening of navigation, a red wooden spar buoy will be established, immediately south of the ruined wharf.

United States, St. Marys River.—Light 6, on the east side of the West Neeshib channel, has been re-established, in 3 ft. of water, off Moon Island, and the gas buoy has been discontinued.

Montreal Dock Accommodation.—It is stated that all the dock accommodation at Montreal has been leased for this year. Sheds 18 and 19, at Victoria pier, which were completed last year, have been leased to Canada Steamship Lines, and sheds 16 and 17 will be used by Furness Withy & Co. and Manchester Liners. Shed 19, the last to be completed, is 900 x 100 ft., 2 stories high, with a floor load on top of 600 lb. per sq. ft. and with a flat roof for cargo and other purposes, this having a floor load of 250 lb. a sq. ft. Shed 44 will be used by Hudson's Bay Co., shed 45 by Elder Dempster & Co., shed 46 by New Zealand Shipping Co., and shed 47 by Ellerman & Bucknall Steamship Lines for their Indian and Java service. Other sheds will be occupied as heretofore by Robert Ford Co., for the Cunard, Anchor-Donaldson and Cairn Lines; by the White Star Dominion Line; Canadian Pacific Ocean Services; Canadian Government Merchant Marine; and McLean Kennedy & Co. for Head & Houston Lines.

Kirkwood Steamship Co., and Patrol Boats.—J. Archambault, M.P. for Chambly and Verchères, Que., asked in the House of Commons recently, whether the Government had sold any patrol boats to the Kirkwood Steamship Co., if so, how many, and at what prices, whether the sale was advertised, and in what manner, and what was the price paid by the Government for the boats? The Finance Minister, Sir Henry Drayton, replied that the Government had not sold any patrol boats to the company.

Reconditioning the White Star-Dominion Line s.s. Regina.

The large triple screw 16,600 ton s.s. Regina, for the White Star-Dominion Line Canadian service, is in the hands of the builders, Harland & Wolff, Ltd., of Belfast, Ireland, for reconditioning. The original intention was that she should be the pioneer of a new class of passenger ship, but the need which existed when she was approaching completion during the war, for cargo carrying tonnage, was such that she was immediately equipped for carrying large numbers of troops and stores, and having satisfactorily accomplished this work for the Government she has now been returned to her builders to be completed in accordance with the original design.

The alterations and additions involved are considerable. All temporary cabins used for housing the troops have been removed, public rooms and extensive promenades have been substituted, and she is to emerge a splendid specimen of the "cabin and third class" type. She will have accommodation for 2,300 passengers, 600 cabin and 1,700 third class. For cabin passengers there will be a large dining saloon extending the whole width of the middle deck, a smoking room and a decorated reading and writing room, whose furnishings and embellishments will be in perfect harmony with the present tendency toward simplicity and dignity of design. The third class appointments will include three commodious dining saloons, a general room, a smoking room, and a barber's shop. The idea has been to embody different color schemes for the several public rooms, yet to preserve a harmonic whole.

Hudson's Bay Co.'s Water Transport in Mackenzie River District.

It was reported recently from Vancouver that 11 boats, ranging in size from gasoline launches to stern wheelers over 200 ft. long, would be built in Vancouver this year for the Hudson's Bay Co., for operation on the Mackenzie River route. The company's Fur Trade Commissioner states that the construction of a river steamboat to replace the one now in use is unavoidably delayed, but that two gasoline tugs and three freight barges will be ready for this year's trade, and it is expected that these auxiliaries to the company's fleet will take care of its requirements, and such outside freight and passenger traffic as it has previously been in the habit of carrying. The company's improvements to its transport system in the Mackenzie

district, as in others, are for the purpose of its own trade requirements, and not due to any outside influence, and therefore it wishes to warn travellers and prospectors, who contemplate using the company's transport to the Norman oil fields, that it cannot guarantee to carry passengers or freight, unless previously accepted by the company's transport department at Edmonton.

Canadian Pacific Ocean Services Traffic Agency.

The Liverpool Journal of Commerce stated recently that the Canadian Pacific Ocean Services Ltd. had announced that it had appointed the Canadian Pacific Ry. as its sole traffic manager and that as soon as the necessary arrangements could be completed the C.P.R. would take over the C.P.O.S. traffic organization.

Canadian Railway and Marine World is officially advised that the C.P.R. has been appointed Traffic Agent, not Traffic Manager, for the C.P.O.S., and will secure both freight and passenger business for its ships, the arrangement covering Canada as well as abroad.

G. M. Bosworth, Chairman, C.P.O.S., issued the following circular March 15: "This company has appointed the Canadian Pacific Ry. Co. its Traffic Agents, effective April 1."

We are officially advised that all the C.P.O.S. officials and staffs, in its freight and passenger departments, will be absorbed by the C.P.R., except C. E. Benjamin, Passenger Traffic Manager, and W. T. Marlow, General Freight Agent, who will remain with the C.P.O.S.

Shipping Losses During the War.—A British Board of Trade return dealing with shipping casualties and loss of life amongst merchant ships registered in the United Kingdom, British dominions, colonies, and protectorates, and in India, occurring in or near United Kingdom coasts between July 1, 1914 and Dec. 31, 1918, show the number of ships lost was 915, with a gross tonnage of 1,048,488. Those lost by enemy action were 3,781 ships, with a gross tonnage of 8,363,777, a total of 4,696 ships and 9,412,275 gross tons. The number of deaths in connection with those other than due to enemy action was 18,900, and the number of deaths due to acts of war was 21,886. Those of seamen were 4 killed by bombs from enemy aircraft, 1 executed; 67 died as prisoners of war in enemy countries, and 2 died in Holland after being released from German prisons. The total number of deaths of seamen, fishermen and officers was 40,860.

Ships Added to and Deducted From the Canadian Register During December, 1920.

Atlantic and Pacific Ocean.

The Williams Steamship Co., New York, is reported to be arranging for the inauguration of a steamship service between Montreal and Vancouver, via the Panama canal.

The Jamaica Legislative Council is reported to be considering a bill to make Kingston a free port of call, and it is hoped to obtain considerable traffic from ships routed through the Panama Canal.

United States steamship companies have increased their first class passenger rates to Europe by 10%. The new rates do not apply to passages booked and paid for prior to Feb. 24, and second and third class rates are not affected.

The Italian Government's s.s. Monte San Michele, 1,000 d.w. tons, which sailed from New York, Feb. 2, for Italy, has not, according to an advice from the Italian Government to its shipping agents, J. T. Knight & Co., St. John, N. B., been heard from, and shipmasters have been requested to keep a lookout for the ship, or news of her.

The Thomson Line's s.s. Cairndhu, from Genoa, Italy, will open the company's St. Lawrence sailings for this year, leaving Genoa about Apr. 11, and arriving at Montreal during the first week in May. On the way out calls will be made at Leghorn, Cadiz, Malaga, Taragona, Messina, Palermo and Valencia. Robert Reford Co., Montreal, are agents.

Elder Dempster & Co.'s s.s. Kaduna, which touched bottom on Bad Neighbors Reef, near Fourchu, towards the end of February, underwent temporary repairs at Louisburg, N.S., and then proceeded to Halifax, where she was drydocked for a thorough overhauling. The damage included several holes in the port tank, and some punctures in the hull farther astern.

The former German steamship Kurland, which, as stated in our last issue, has been bought by Canadian Robert Dollar Co., Vancouver, is to be renamed Robert Dollar, and was expected to leave England, early in March, for the Pacific coast. She was built at Bremen in 1918, and has a deadweight capacity of 16,500 tons. She is equipped with twin reciprocating engines for a speed of 13 knots.

Furness Withy & Co. are reported to have bought the Fraser Building and site at the corner of St. Sacrament and St. Alexis Sts., Montreal, which they intend to remodel, or to rebuild, for offices. The building will be known as Furness House, the company's office buildings in other places being similarly named. It is stated that the amount paid for the property was approximately \$100,000, that building operations will be commenced about May 1, and that the first two floors will be reserved for the company's purposes.

The Cunard Steamship Co.'s s.s. Antonia was launched at Barrow-in-Furness, Eng., by Vickers Ltd., Mar. 12. She is stated to be the first of a series of six ships which the company is having built, for cabin and third class passengers. On the conclusion of the war, the company commenced a shipbuilding programme, covering 13 steamships of different types, and this is the fifth to be launched. The Antonia's dimensions are, length over all 538 ft., beam 65 ft., depth 43 ft., gross tonnage 13,000. She will have accommodation for 1,700 passengers.

A fire occurred on the Canadian Pa-

cific Ocean Services' s.s. Grampian at Antwerp, Belgium, recently, and, according to reports, did considerable damage. The temporary loss of the ship at the opening of the traffic season, is stated to have caused several changes in the sailing schedules. It is announced that the steamships Corsican, Scotian and Sicilian have had their sailings changed to meet the emergency, arrangements having been made to run the Sicilian from Glasgow and Antwerp alternately, instead of from Glasgow alone. The Corsican will sail from Glasgow, and the Scotian, which has been delayed in the drydock at Antwerp, will sail from Antwerp about May 31.

The Canadian Robert Dollar Co. is reported to be making a number of changes in the routing of its steamships between New York and the Orient. The six steamships operated on this service are being divided into two units, one comprising the steamships Bessie Dollar, Harold Dollar and Melville Dollar, and the other the Esther Dollar, Grace Dollar and N.S. Dollar. Those of the second unit will sail from New York and proceed, via the Panama Canal, to Vancouver and the Orient, and return by the same route. Those of the second unit will sail from New York, via the Panama Canal, to San Francisco, and thence to the Orient, and return to New York, via Calcutta, the Suez Canal and the Atlantic.

The Cunard Steamship Co. has taken over the former German s.s. Imperator, which it has been operating on behalf of the British Government. This is the largest steamship under the British flag, and the largest in the world actually in service. Her dimensions are, length 919 ft., breadth 98 ft., depth 63 ft.; tonnage, 52,200 gross. It is reported that the company has also bought from the Reparations Commission, the s.s. Bismarck, which, according to the peace terms, is to be completed and handed over to the British Government. Details of this ship are not available, but it is stated that she will be the largest ship in the world, and will have accommodation for 3,500 passengers, of four classes, and a crew of about 1,250.

The White Star-Dominion Line's s.s. Vedic will open that company's St. Lawrence service this year, sailing from Liverpool, Eng., Apr. 28, and arriving at Montreal about May 8. She will be operated on this route in conjunction with the company's steamships Megantic and Canada, a sailing being provided every week. She is of 9,322 gross tons, and was built at Belfast, Ireland, in 1915. Her dimensions are, length 480 ft., breadth 58 ft. She has three decks, running the full length of the ship, dining accommodation for 555 passengers, is equipped with wireless and submarine signal systems and has a speed of 12 knots. There is accommodation for 1,178 third class passengers and a total cargo capacity of 605,960 cu. ft. She was built as a freight carrier, was operated as such during the war and has been recently rearranged for passenger traffic.

Maritime Provinces and Newfoundland.

The Naval Service Department has announced the opening of a fourth direction finding station on the Atlantic coast, at Red Head, on the east side of the St. John, N.B., harbor.

The Cape Steamship Co.'s s.s. Turret Cape struck heavy ice floes off Canso,

N.S., March 6, and put back to Louisburg, with several plates sprung, and her forward tanks filled with water.

A bill is to be submitted to the New Brunswick Legislature at the instance of the St. John City Council, to provide for taking a plebiscite on the question of placing St. John harbor under a commission.

The Minister of Marine, in reply to an application by the Halifax Board of Trade recently, stated that the maintaining of a lighthouse at Sambro throughout the year, would receive his favorable consideration.

We have been officially advised that the proposed extension to Negropont breakwater, in St. John, N.B., harbor, will not be proceeded with at present, and that the invitation for tenders has been withdrawn.

The Boston & Yarmouth Steamship Co.'s s.s. Prince Arthur arrived at Yarmouth, N.S., March 8, from Boston, Mass., on her first trip this year. She underwent extensive repairs and general overhauling during the winter.

Hillcrest Shipping Co., Ltd., Annapolis Ship Co., Ltd., Clair Shipping Co., Ltd., Cornwallis Shipping Co., Ltd., Port Wade Shipbuilding Co., Ltd., and Globe Steamship Co., Ltd., have had their Nova Scotia certificates of registration revoked.

The Reid Newfoundland Co.'s s.s. Portia was reported to be ashore at St. Jacques, Nfld., Mar. 20, the company's s.s. Kyle went from Port aux Basques to her assistance, and she was refloated on the following day without serious damage.

A press report states that the Sydney Foundry & Machine Co. has awarded contracts for lumber for construction of a marine railway to be built at Andersons Point, Sydney, and that considerable work has been done in the company's own plant on machinery necessary for the marine railway's operation.

The work in connection with the excavation of the drydock at the extension of the breakwater at Courtenay Bay, St. John, N.B., is reported to have been practically completed, nothing remaining but the general cleaning up, which has been suspended until more favorable weather. The sub-contractor for this work was the Bedford Construction Co. The St. John Drydock & Shipbuilding Co., which has the general contract, will, it is said, probably resume dredging and other work during May.

The concrete ship Permanencia, which sailed from Belloram, Nfld., for Boston, Mass., with a cargo of fish, put in at St. Pierre, Miquelon, at the end of February during a storm, and left again, March 6. A few hours after sailing, she stranded at the southwestern extremity of Little Miquelon Island, where she was abandoned, the crew returning to St. Pierre. A report from Sydney, N.S., states that it had not been ascertained whether she would be a total loss or not, but little hope was held that she could be salvaged. She was built by Canadian Concrete Shipbuilding Co., North Sydney, N.S., for W. N. McDonald, Sydney, at an approximate cost of \$75,000. Her dimensions are,—length 120 ft., breadth 22 ft., depth 12.7 ft., tonnage 2,200. She was the first concrete hull under Lloyd's survey for the highest rating, with a deadweight capacity of about 500 tons, and there is accommodation for 10 passengers in addition to the crew. The propelling machinery consists of a Bolinder crude oil engine, of 240 h.p., for a speed of from 9 to 10 knots.

Province of Quebec.

The Canadian Export Co., Montreal, is reported to have arranged for operating steamships between Quebec and Chesapeake Bay ports this year.

The St. Lawrence Stevedoring Co. Ltd. has been granted supplementary letters patent, under the Quebec Companies Act, increasing its capital from \$100,000 to \$500,000.

The s.s. Edward Pyke, bought from British owners by Price Bros. & Co., Que., recently, has been transferred to the Canadian register. She is an iron steamship, screw driven by engine of 70 h.p., and has the following dimensions,—length 100 ft., breadth 21.5 ft., depth 7.9 ft.; tonnage, 124 gross, 44 net. She was built at Birkenhead, Eng., in 1880, and was originally named George Stanton, and had her name changed in 1906, when she was acquired by the Port of Chicoutimi Co., Liverpool, Eng.

The Quebec Harbor Commissioners will, it is reported, expend about \$250,000 on harbor improvements during this year and it is expected that a similar amount will be included in the Government's estimates each year until the proposed improvements are completed, the total cost of which is estimated at approximately \$1,000,000. The most important work to be undertaken this year is the erection of a fixed fender, to replace the floating fenders, along the embankment near Beauport Flats.

Ontario and the Great Lakes.

The Toronto Works Department estimates for 1921 include \$38,368 for the operation and maintenance of the tugs, G. R. Geary, National and Queen and 10 scows.

The s.s. Brockville, owned formerly by Canada Steamship Lines, is reported to have been secured, through the Belleville Chamber of Commerce, for navigation on the Bay, of Quinte this year.

The Columbia Steamship Co., Cleveland, Ohio, is reported to have acquired the steamships owned and operated by W. C. Richardson, also of Cleveland. It is stated that 11 steamships are included in the deal.

The International Ferry Co., Bridgeburg, Ont., purposes asking the Dominion Government for authority to increase its fares. It is stated that the company proposes to double the commutation fares, practically double the cash fares, and increase the charges on automobile motor trucks, etc., considerably.

The Port Arthur City Council has been informed that the Dominion Government has agreed to extend the breakwater 300 ft. southerly from the end of the work completed recently. It is expected that the work will be done by Chambers, McQuigge and McCaffrey, who had the contract for the main breakwater.

It was reported from Detroit, Mich., recently that in the near future the United States Weather Bureau will distribute weather forecasts throughout the Great Lakes by a radiophone, supplanting the use of both telegraph and telephone for this purpose.

The s.s. Iona will be offered for sale by public auction, under an order of the Exchequer Court, Apr. 2, at Port Stanley. She is screw driven, with Stearns compound engine of 9 h.p. She was built at Meaford in 1904 and has the following dimensions, length 52.8 ft., breadth

13.2 ft., depth 5.6 ft.; tonnage, 29 gross, 20 net.

Canada Steamship Lines' freight officials held their annual conference at Montreal, early in March, to discuss prospects for the ensuing season. It is stated that the company has decided to transfer some of its steamships, which have been operating on the ocean, since the early days of the war, back to the Great Lakes. Those mentioned for transfer are, Beaverton, Canadian, Edmonton, Glenellah and Kenora. The majority of the steamships which the company transferred from Great Lakes to ocean service, during the war, were sunk by enemy action.

The Montreal & Cornwall Navigation Co.'s s.s. Britannic, which was moored in the Cornwall Canal for the winter, stranded and turned on her side March 12 owing to the receding of the water in the canal about 4 ft. The Britannic underwent repairs during the winter, costing about \$20,000, covering the installation of a new boiler, etc. It is stated that the only method by which she can be raised is to tow her to the center of the canal, allow her to sink, withdraw the water from the level, and when the water is returned it is expected that she will right herself.

Manitoba, Saskatchewan and Alberta.

The Mandy Mining Co., Pas, Man., which owns the steamboats City of Prince Albert, Minasin, Notin, Sam Brisbin and Tonopah, has advised us that they will not be operated by the company this year, and that they have been offered for sale. The company's product will, it is expected, be handled in future by the proposed railway between Pas and Flin-flon.

The Dominion Minister of Public Works wrote the United Farmers of Alberta recently, in response to a recommendation by that organization, that there is no intention at present of developing water transportation service in the west. It had been suggested that the North Saskatchewan River might be so improved as to permit of traffic from Edmonton to Lake Winnipeg, but the Minister stated that at the present rates of wages this work would cost approximately \$45,000. He also stated that when conditions were more favorable the Government would probably give the matter further consideration.

British Columbia and Pacific Coast.

Tenders for repairs and general overhaul of the Dominion Public Works Department dredge No. 303 (Frühling) were received by the Superintendent of Dredges, at Vancouver, up to March 21.

The Coastwise Steamship & Barge Co.'s s.s. Anyox, which ran ashore near Lady-smith, early in February, was hauled out at the Victoria Machinery Depot Co.'s plant, later in the month, for overhaul and repairs, the work being completed Mar. 2.

Vancouver Harbor Commissioners are reported to be asking tenders for the construction of a car float for operation between Vancouver and North Vancouver. It is said that the float, which is to be of wood, and the building of a slip on the north shore, will cost approximately \$200,000.

The C.P.R. British Columbia Coast Service, in arranging its schedule for the Alaska touring season of this year, has assigned the steamships Princess Alice and Princess Royal to the service. The tourist season will open June 10, with the sailing of the s.s. Princess Royal from Victoria, to be followed June 17, by the s.s. Princess Alice, and a weekly service will be given until Sept. 2.

The C.P.R. s.s. Princess Mary, which sailed from Victoria for Alaska, March 5, carried the White Pass and Yukon Route employees on their return to the north for the reopening of transportation there. It is stated that owing to the loss last year of the steamships Selkirk and Washburn, the White Pass and Yukon Route is compelled to cancel the usual Midnight Sun excursion this year. The auxiliary engines of the s.s. Selkirk have been saved, but it has not been decided whether any attempt will be made to save the main engines and boilers, as it is said that new engines could be bought for less than the cost of salvaging.

A North Vancouver press dispatch states that after making an inspection of ferry No. 2, a report was issued by the inspector that, owing to general depreciation of the hull, and the strained condition of the deck, the loads carried in one unit have had to be reduced to a maximum of three tons, and the maximum number of passengers to be carried has been fixed at 600. It is also stated that upon the completion of repairs a certificate for six months will be granted, on the expiration of which a further inspection of the hull will be necessary. The North Vancouver City Council is considering the advisability of obtaining a new ferry to replace No. 2.

Great Lakes Levels.

The U.S. Lake Survey reports the mean stages of the Great Lakes for Feb. in feet above mean sea level as follows: Superior, 601.76; Michigan and Huron, 579.84; St. Clair, 573.52; Erie, 571.85; Ontario, 245.46.

Lake Superior was 0.32 ft. lower than in January, 0.14 ft. lower than in Feb. 1920, 0.07 ft. below the average February stage of the last 10 years, 0.72 ft. below the high stage of Feb. 1901, and 1 ft. above the low stage of Feb. 1871.

Lakes Michigan and Huron were 0.08 ft. lower than in January, 0.14 ft. lower than Feb. 1920, 0.11 ft. below the average February stage of the last 10 years, 2.88 ft. below the high stage of Feb. 1886, and 0.68 ft. above the low stage of Feb. 1896. During the last 10 years the February level has averaged about the same as the January level, and 0.1 ft. lower than the March level.

Lake Erie was 0.14 ft. lower than in January, 1.07 ft. higher than in Feb. 1920, 0.29 ft. above the average February stage of the last 10 years, 1.90 ft. below the high stage of Feb. 1863, and 1.22 ft. above the low stage of Feb. 1902. During the last 10 years the February level has averaged 0.1 ft. lower than the January level, and 0.1 ft. lower than the March level.

Lake Ontario was 0.08 ft. lower than in January, 0.45 ft. higher than in Jan. 1920, 0.01 ft. below the average February stage of the last 10 years, 2.21 ft. below the high stage of Feb. 1885, and 1.63 ft. above the low stage of Feb. 1897. During the last 10 years the February level has averaged 0.1 ft. higher than the January level, and 0.1 ft. lower than the March level.

Stikine and Dease Rivers Navigation.

Lt. Col. C. W. Peck, M.P. for Skeena, B.C., asked the following questions in the House of Commons recently, the answers being given by the Minister of Public Works:—

Q. "Did two Public Works Department employees proceed up the Stikine River and down the Dease River to the lower port on the Liard last summer?" A. "Yes."

Q. "What was the expense of the trip, including wages of employees during the period they were engaged in same?" A. "\$1,065.08."

Q. "For what purpose was the trip made?" A. "Reconnaissance was made and data secured as to requirements to improve the waterway for the handling of supplies, etc., to the mining district north of Dease Lake."

Q. "Was the purpose accomplished?" A. "A report has been submitted and is receiving the Department's consideration."

Welland Ship Canal Contracts.

The Railways and Canals Department, Ottawa, will receive tenders to April 5, for work on section 5 of the Welland Ship Canal, the bulk of which will consist of dredging. It is provided that dredges and other plant to be employed in this work, shall have been registered in Canada at the time of the filing of the tenders, or shall be built in Canada after the filing of the tenders.

Sec. 5 covers 2 1/2 miles, from just above bridge 12 to just above bridge 13. The original contract for this work was given to Canadian Dredging Co., Midland, Ont., Dec. 22, 1913, the work to be completed by April 1, 1918, and the amount of the contract, based on schedule rates, was \$1,945,788. A subcontract for dry excavation was let to J. H. Corbett & Co., Moncton, N.B., in Oct. 1914. It was stated in 1916, in reply to questions in the House of Commons, that the work was then about 50% completed, and that the Government had paid to the contractors \$903,789. On account of the war, all work on the Welland Ship Canal was suspended May 2, 1917, and at that date, the contract on sec. 5 was reported to be about 64% completed.

On Dec. 9, 1918, an order in council was passed authorizing the resumption of work on secs. 1, 2, 3 and 5, and contracts were entered into with the respective contractors, to proceed with the work on the basis of actual cost, plus a percentage not to exceed 8%, with materials, supplies and plant furnished by the Department to be excluded in computing the cost. A further order was passed Dec. 2, 1918, authorizing, among other things, that the contract so entered into should not extend later than Dec. 31, 1919.

It was estimated that the amount which could be expended on sec. 5, during 1919, would not exceed \$500,000.

The contract with the Canadian Dredging Co. for sec. 5 was further renewed, on a basis of cost plus 8%, early in 1920, and work was continued throughout the year. As the Canadian Dredging Co. owns its own dredging plant, the clause in the contract relating to the exclusion of plant loaned by the Government, in computing costs, does not apply to that company.

The following questions were asked in

the House of Commons recently, by E. Proulx, M.P. for Prescott, Ont., the answers being given by the Minister of Railways and Canals:—

Q. "Who has the contract for supplying sand to the various contractors engaged in construction work on the new Welland Ship Canal?" A. "National Sand & Material Co., Welland, Ont."

Q. "What are the names of the parties interested in the sand contract?" A. "Their contract bears signatures, D. Dick, Jr., President; L. M. Stapf, Secretary-Treasurer."

Q. "What is the date of the sand contract?" A. "Sept. 16, 1919; Aug. 20, 1920, supplementary agreement."

Q. "Since the contract was made has it been varied in any way, and if so by what authority and in what respect?"

A. "Yes, by order in council of June 18, 1920, an additional charge of 27c. per cu. yd. was allowed, for extra work in transferring sand from bins at points of delivery to stock piles or contractors' cars."

Q. "Was the contract let by tender?"

A. "Yes, public tenders were called for."

Q. "Are the monies earned under the contract payable under power of attorney to any bank?" A. "Yes, Imperial Bank of Canada, Welland, Ont."

Steamboat Waubie Sold.—The Northern Navigation Co. has sold its s.s. Waubie. She was built at Collingwood in 1909, and has a steel hull with 4 water-tight and 2 non watertight bulkheads, and steam pump wells. Her dimensions are,—length 86 ft., breadth moulded 25 ft., depth moulded 9 ft.; tonnage, 504 gross, 244 net. She is classed 100 on the Great Lakes Register for Georgian Bay and adjacent waters. She is equipped with triple expansion engines, having six cylinders, two 10 in., two 16 1/2 in., and two 27 in. dia. by 15 in. stroke, 650 h.p., at 15 r.p.m., supplied with steam by a single Scotch boiler 12 1/2 ft. dia. by 10 1/2 ft. long, at 180 lb. A press report states that she has been bought by the Rockport Navigation Co., Kingston, Ont., for the route between Kingston, Ont., and Cape Vincent, N.Y., with R. Carnegie as master.

Ice Conditions and Navigation.—Reports as to ice in navigable waters indicate that the prospect for early navigation between the head of the Great Lakes and Montreal is good, but between Montreal and the Atlantic much will depend on the wind currents, which generally predominate over the strongest water currents in drifting ice. It is, however, expected that there will be in all probability an early opening of navigation on the St. Lawrence River and upper Gulf, probably about Apr. 10.

Geo. E. Bunting, Manager in Australasia, for Canadian Government Merchant Marine, Auckland, New Zealand, in permitting his renewal subscription for Canadian Railway and Marine World, writes: "Needless to say, I look forward to the receipt of Canadian Railway and Marine World each month, and keep it on file here for reference. I find it very useful, not only to myself, but also to many of the New Zealanders who call upon me, and who are anxious to contemplate travelling to Canada."

Steamship Mail Services.—The Post Office Department's estimates for the year ending March 31, 1921, contain an item of \$66,152.50 for mail service by steamships, which is precisely the same amount as for the year ended March 31, 1921.

Government Contract for Steel Plates for Ships.

W. Duff, M.P. for Lunenburg, N.S., asked the following questions in the House of Commons recently, which were answered by the Minister of Marine:—

Q. "When did the Government make a contract with the Dominion Iron & Steel Co. to supply steel plates for ships? What was the total quantity contained in the contract and which were to be delivered by the company to the Government? What was the price per ton agreed upon?" A. "The original contract with the Dominion Iron & Steel Co. was authorized by order in council of March 26, 1918, and was dated April 2, 1918. It provided for the erection of a modern 110 in. steel plate mill by the company, the Government undertaking to buy 50,000 gross tons of plates a year for five years at \$4.15 per 100 lb. base f.o.b. cars Sydney, or f.o.b. steamships Sydney or Louisburg. A modification of this contract was authorized by order in council of July 26, 1919, and the modified agreement under the terms of that order was dated Dec. 10, 1919. This agreement provided for a reduction of the price to be paid the company, from \$4.15 per 100 lb. to \$3.65."

Q. "How many tons have been delivered so far and where delivered?" A. "40,000 gross tons delivered f.o.b. Sydney."

Q. "Has the contract since been cancelled?" A. "Yes."

Q. "If so, what damages did the Government have to pay the company?" A. "None."

Q. "If not, has the company made any claim against the Government? If so, how much?" A. "No."

Bay of Fundy Navigation Aids.—The St. John, N.B., Board of Trade's harbor and transportation committee has recommended the following aids to navigation:—A steamship buoy and a life-saving service, capable of going to sea at any time, under all conditions; the establishment of a light at Cape Sable, with a 25 mile range of visibility; that the Lurcher light ship be provided with oil burning equipment, and equipped with occulting instead of fixed lights; that a spare light ship be provided, for use either at Sable or Lurcher, as occasion may require; and that a survey be made of the anchorage ground of the Blonde rock buoy, to obtain a smoother anchorage area.

Wireless Guide for Ships.—At the British shipmasters annual dinner at Liverpool, Eng., March 2, W. Marconi, G.C. V.O., announced the discovery of a wireless invention for the guiding of ships through dense fog, which he said had not yet been in operation anywhere. It is based on a principle by which electric waves may be directed in any definite direction, like flashes from a lighthouse, and he stated that these waves would take the place of leading lights, in thick weather, and would prevent collisions of ships during fogs.

Uniform Shipping Legislation.—A London, Eng., press dispatch states that the Imperial Shipping Committee has unanimously recommended the adoption of uniform legislation throughout the Empire, regarding the limitation of shipowners' liability under bills of lading. These recommendations, it is said, are based on the Water Carriage of Goods Act of Canada.

The Renaissance of the Windjammer.

By A. H. Morse, Managing Director, Marconi Wireless Telegraph Co. of Canada.

Seldom in the history of the world has the march of progress involved such a severance of sentimental ties as was caused by the passing of the sailing ship. Such a grand old institution, appealing, as it did, equally to artists, poets, adventurers and merchants, to dreamers and doers, was bound to find in its lives an anchorage that had no relation to its merits as a means of transport. Nevertheless it departed almost entirely. Its parting was speeded by a wide range of economic changes, some of which materialized only in the British Isles, or earlier there than elsewhere; hence few of the sailing ships which survive are of British register.

And, alas! the survivors; how little they can be reconciled with some of the romantic seascapes of two generations ago. The jaunty square-sails have mostly given place to schooner-rig, and the real old sailor—these twenty years "on the beach"—goes aboard for a breath of the old atmosphere, only to be disappointed. New "gadgets" confront him on every side, and his hairy old nostrils dilate to the spirituous odor of petrol. But let him be grateful that he is spared the sight, in some Pacific port, of the Glory of the Seas or The Two Brothers, with their lower masts alone standing. Grimy and inglorious, these and many such, are now mere derrick-crowded hulks, for hoarding the black wind of their snorting successors.

They were manned by real sailors, and their captains were navigators in the most complete sense. Few people realize what little advantage, in the matter of knots, the average tramp of today enjoys over their best performances, or even over the average performances of the crack ships, such as the Cutty Sark and the Falls of Garry of the sailing era. Then, the personal factor was everything; the daily run turned very largely on the judgment, foresight and resource of the commander; whereas now it turns almost entirely on the quality of the coal and the efficiency of the chief engineer, who, albeit a fine fellow and a good master of his craft, is essentially a sailor only in that he has "sea legs".

"He that will use all winds must shift his sail" and it was all in the time and the manner of the shifting. Other things being equal, she was the fastest ship which had the smartest captain. Hence there was an aura of dignity about the skipper of a crack sailer that owed nothing to plentitude of braid and buttons of brass. Obviously, then, the passing of the sailing ship is not regretted without proper cause, and the question naturally arises, Why did it go? It was not on account of its speed limitations, because transport time is of little importance with many cargoes, nor was it entirely because the introduction of steam and a greater cargo capacity, made it unremunerative and uncommercial. Rather, it was the fact that "The fortune is insecure that is at the mercy of wind and wave." Every sailor knows, and many have felt, the might of the underwind and the might of the underwriter who does more than any other to influence the trend of development in the merchant marine; he is, above all, responsible for the passing of the dear old windjammer. Propitiate him, and many a now deserted harbor will be re-forested with masts.

As to the why and wherefore of his propitiation, let us consider the well-fond sailing ship as she might be today. Built probably of steel and with fine lines, she, like the Sunbeam, Valhalla and other present day sailers, would be fitted with an auxiliary engine, so that she could "outfly the nimble sail and leave the lagging wind," and so never be becalmed nor need a tow to port. She would also have power for working her sails, steering gear and electric light plant, and, of course, she would be fitted with radiotelegraph apparatus. By radiotelegraphy, she could establish communication with other ships, and the shore, up to a distance of, approximately 300 miles by day, and 1,000 miles by night, and could, in any part of the world, check her chronometer by Greenwich time. The voyage of such a ship might be protracted for a month, during which time she might never be sighted, and yet there would be no cause for alarm, aboard or ashore. Should her wireless fail, and there need be no reason why it should, while she was overdue and becalmed, she would steam into the proximity of a trade route and speak, and perhaps get assistance from a passing ship. Should her auxiliary power fail during a spell of calm, she would report by wireless the cause of delay. In making port in a fog, she would have all the benefits of the wireless direction finder and the improvements in submarine signalling which have been developed for anti-submarine warfare, and if she were a pampered ship, she would be provided with a compact, inexpensive and dependable wireless telephone installation, by means of which her captain could converse with any similarly favored colleague up to a distance of 200 miles.

Contrast this with the experience and practice of two generations ago, when often, her anchor once casted, the windjammer disappeared into utter oblivion for perhaps five months, during which her owners, underwriters and others, including the relatives of her crew, were the victims of waves of hope, anxiety and, perhaps, despair. That these were often begotten of rumors with no more foundation than that penumbra of spookery which clothed so many of the thoughts and acts of those, and their kind, who went down to the sea in ships, made their effect none the less real. Consignees were jumpy and the effect on insurance and cargo markets was unsettling to a degree. Dr. Johnson was not very wide of the mark when he wrote: "No man will be a sailor who has contrivance enough to get himself into a jail; for being in a ship is being in a jail with a chance of being drowned. . . . A man in a jail has more room, better food, and commonly better company."

But nevertheless the sailing ship will probably come back. All the spas and hydros in the world cannot compete with her in giving that utter peace and detachment from those health wracking cares which, sooner or later, and with ever-increasing certainty, lay every land-lubber to rest. The sailor has no room, no hotel about, and entirely lacks that poetic peace which moved Byron to say:—

"This quiet sail is, as a noiseless wing.

To waft me from distraction."

Those two lines point almost the only road to recovery for many an over-

wrought victim of our dog-eat-dog civilization. It was probably a similar inspiration which influenced the more boisterous Burns to sing

"Then top the maintop, crowd the sail,

Heave care off the side

And large, before enjoyment's gale,

Let's tak' the tide."

A few weeks aboard a sailing ship, well found according to modern ideas, and well and plainly victualled (preferably in bare feet in favorable weather) would do worlds for the brain-weary, especially if, towards the end, manual labor or strenuous physical exercise were to form a part of the daily round. Fears as to safety would soon be overcome, and the demand for passages would probably become sufficient to warrant each of the big steamship companies maintaining one or more sailing ships, fitted with passenger accommodation. These craft, moreover, could be used as training ships.

Does it not seem, therefore, that the essential disabilities of the sailing ship have gone, and that we have now only to await a realization of the fact, before we may celebrate its renaissance? With her will return, with his chancies, the old type of sailor to leaven our comfort-ridden community. He who, according to Wordsworth,

"By strength of heart . . . fights with roaring seas,"

The Deputy Ministership of Marine and Fisheries.

Alex. Johnston, who resigned his position as Deputy Minister of Marine and Fisheries, in Ottawa, in Oct. 1920, to enter the British Empire Steel Corporation's service, presumably as Assistant to the President, R. M. Wolvin, has returned to his former position in the Department, having been reappointed Deputy Minister from March 1. H. E. A. Hawken, Assistant Deputy Minister, who acted as Deputy Minister after Mr. Johnston's resignation, has resumed his former duties.

The matter was referred to in the House of Commons March 8, when W. Duff, M.P. for Lunenburg, N.S., said:—

"I would like to ask the Government whether the statement appearing in the newspapers that Alex. Johnston has returned to the public service is correct, and, if so, what his status will be in the Marine and Fisheries Department?" The Minister of Marine and Fisheries said:—"I desire to state that Mr. Johnston has been reinstated in his former position as Deputy Minister of Marine and Fisheries."

H.M.C.S. Aurora, which, with other ships recently given by the British Government to form the nucleus of a Canadian Navy, arrived at Esquimalt, B.C., recently, from Halifax, N.S., and was expected to go to Prince Rupert, B.C., to be drydocked, but it is reported to have been announced by the Director of the Naval Service, Capt. W. H. Rose, R.N.R., that the drydocking will not take place, and that the ships will leave Esquimalt, Apr. 13, on the return trip to the Atlantic coast.

Canada Steamship Lines, Ltd. has declared a quarterly dividend of 1½%, on preference stock, payable Apr. 1, to shareholders of record March 15.

Drydock Estimates for 1921-1922.

The Public Works Department Estimates for the year ending Mar. 31, 1922, submitted to the House of Commons recently, contain the following items:—

Subsidies authorized by statute.	
Collingwood drydock No. 1	\$15,000.00
Collingwood drydock No. 2	9,208.96
Montreal floating dock	105,000.00
Port Arthur drydock	37,741.50
Prince Rupert floating dock	76,970.88
	\$243,921.34
Chargeable to Capital.	
Esquimaux, B.C., new dry dock	\$1,390,000
Working expenses, chargeable to collection of revenue.	
Champlain graving dock	\$47,400
Lorne graving dock	33,000
Esquimaux graving dock	20,000
	\$100,400

Mail Subsidies and Steamship Subventions Estimates.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items for steamship services between the points named:—

ATLANTIC OCEAN.	
Canada and Newfoundland	\$35,000.00
Canada and the West Indies or South America or both	340,666.66
Canada and South Africa	146,000.00
PACIFIC OCEAN.	
Canada and Australia or New Zealand	130,509.00
Prince Rupert, B.C., and Queen Charlotte Islands	21,000.00
Victoria and San Francisco	3,000.00
Victoria, Vancouver, way ports, and Skagway	25,000.00
Victoria and west coast Vancouver Island	15,000.00
Vancouver and northern ports of British Columbia	24,800.00
Vancouver and ports on Howe Sound	5,000.00
LOCAL SERVICES.	
Baddeck and Iona	\$8,225.00
Charlottetown, Pictou and Yarmouth	2,000.00
Charlottetown, Victoria and Holliday's wharf	2,500.00
Grand Manan and the mainland	2,500.00
Halifax, Canoe and Guysboro	7,000.00
Halifax, LaHave and LaHave River	4,000.00
Halifax and Newfoundland, via Cape Breton ports	5,000.00
Halifax and Sydney Bay and ports in Cape Breton	6,000.00
Halifax, South Cape Breton and Bras d'Or Lake	6,000.00
Halifax and west coast Cape Breton, calling at way ports	4,000.00
Mulgrave and Canoe	15,500.00
Mulgrave and Guysboro, calling at intermediate ports	7,500.00
Newcastle, Nereau and Esquimaux, calling at intermediate points on Miramichi River and Miramichi Bay	4,000.00
Pellet Island and mainland	8,000.00
Mulgrave, Arichat and Petit de Grat	9,000.00
Pictou, Montague, Murray Harbor, and Georgetown	6,000.00
Pictou, Mulgrave and Cheticamp	7,500.00
Pictou, New Glasgow and Antigonish County ports (schooner service)	1,500.00
Port Mulgrave, St. Peter's, and Grand Marble Mountain, and other ports on Bras d'Or Lakes	6,500.00
Pictou, Souris, and the Magdalen Islands	20,000.00
Quebec, Natashquan and Harrington, and other ports on the North shore of the Gulf of St. Lawrence	50,000.00

Quebec, Montreal, and Paspébiac, and ports on south shore of Gulf of St. Lawrence	30,000.00
St. John and St. Andrews, N.B., calling at intermediate ports	4,000.00
St. John and Bridgetown	2,000.00
St. John and Digby	10,000.00
St. John, Digby, Annapolis and Granville, along west coast of Annapolis Basin	2,000.00
St. John and ports on Bay of Fundy and Minas Basin	5,000.00
St. John, Westport and Yarmouth and other ports	10,000.00
Sydney and Bay St. Lawrence, calling at way ports	9,000.00
Sydney and Bras d'Or Lake ports and ports on east and west coasts of Cape Breton	4,000.00
Supervision of subsidized steamship services, expenses in connection with	4,000.00
	\$1,033,300.66

Lighthouse and Coast Service Estimates.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items:—

Agencies, rents and contingencies	\$215,000
Salaries and allowances to lightkeepers	650,000
Maintenance and repairs to lighthouses	800,000
Construction of lights and aids to navigation, including regulation of traffic in Detroit River and such other places as may be found necessary	40,000
Administration of pilotage	75,000
Signal service	250,000
Maintenance and repairs to wharves	10,000
Breaking ice in Thunder Bay, Lake Superior and other points deemed advisable for road of navigation	40,000
Pensions to pilots	9,000
Telephones at different points in connection with aids to navigation	300
Allowance to harbor master at Amherstburg for supervision of light and buoys on St. Clair River and Lake Erie; and other services in connection with lighthouse service for season of 1921	600
Two motor patrol vessels for buoy and lighthouse service in British Columbia	15,000
	\$2,465,100

Grain Shipments from Vancouver to Great Britain via Panama Canal.

A London, Eng., press dispatch of March 7 announced the arrival of the motor ship Buenos Aires, with "the first cargo of Canadian wheat ever shipped to Europe via the Pacific Ocean and the Panama Canal." The ship sailed from Vancouver, B.C., towards the end of December, and called at San Francisco, San Pedro de Macoris, New York, where additional cargo was taken on.

The statement that this is the first cargo of Canadian wheat to be shipped from Vancouver to Great Britain by the Pacific and Panama Canal route, is incorrect, as on Dec. 3, 1917, the s.s. War Viceroy sailed from Vancouver, with a cargo of Canadian wheat, called at Portland, Ore., and Norfolk, Va., for additional cargo, and docked at London, Eng., Feb. 16, 1918. This voyage was carried out while the war was at its height, and navigation in general was conducted un-

der grave risks, and, in spite of this, the ship was safely docked at London. The s.s. War Viceroy is a steel cargo steamer, built at Vancouver, B.C., by J. Coughlan & Sons, for the British Government, under orders from the Imperial Munitions Board. Full details of the trip and of the composition and arrangement of the cargo, with the results of tests carried out by the Trade and Commerce Department's Dominion Grain Research Laboratory, were published in Canadian Railway and Marine World, for Jan. 1919.

Naval Service Department Estimates.

The estimates submitted to the House of Commons recently for the year ending March 31, 1922, contain the following items:—

Naval Service, maintenance of Royal Canadian Navy	\$2,500,000
Hydrographic Survey and maintenance and repairs of hydrographic steamships	315,000
Fisheries Protection Service and for repairs and maintenance of the fishery protection steamships	370,000
Radiotelegraph service and for the building and maintenance of radio stations and general administration of radiotelegraphy throughout Canada	456,480
Tidal and Current Survey	15,000
Patrol of northern waters of Canada	500
Customs duties	40,000
Pay of temporary officers and clerks at headquarters, Halifax and Esquimaux	40,000
mail dockyards	\$3,726,980

Shipbuilding and Ship Channel Estimates.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items, under Public Works, chargeable to capital, Marine Department:—

River St. Lawrence Ship Channel, maintenance and operating dredging fleet	\$528,000.00
Maintenance and improvements of Sorel Shipyard, shops and offices, as well as operating expenses	75,000.00
Government shipbuilding programme for construction of vessels in accordance with Government programme	\$330,000.00
Icebreaker to be used in St. Lawrence, including maintenance of same (re-vote)	2,000,000.00
	\$1,033,000.00

Marine Employees' Wages in the U.S.
A New York press dispatch of March 14, stated that men employed on ferries, tugs and barges, etc., in New York harbor, controlled by railway unions, were being asked to take wage reductions ranging from 15 to 25%. It was stated that such reductions as may be decided upon will become effective Apr. 15 or May 1, the increase given by the U.S. War Labor Board in May, 1920, being wiped out.

The Marine and Fisheries Department's Salaries provided in the estimates for the year ending March 31, 1922, as submitted to the House of Commons recently, are \$360,810, against \$318,750 for the year ended March 31, 1921. The contingencies are \$68,870 for 1921-1922, against \$69,000 for the previous year.

Pollution of Harbor Waters.—Hon. A. K. Maclean, Halifax, N.S., has introduced a bill in the House of Commons to amend the Canada Shipping Act (Public Harbors). The purpose of the bill is to enable the Governor in council to increase existing penalties for the pollution of harbor waters by the discharge of waste oil from oil-burning steamships.

Ships Built in 1920 and Exported without being Registered in Canada.

Canadian Railway and Marine World

May, 1921

Medium Pacific Type Locomotives, Canadian National Railways.

The Canadian National Railways programme for motive power for delivery in 1920 and 1921 provided for the following additions:—32 Pacific type locomotives, designated as medium, of 38,100 lb. tractive power, from Montreal Locomotive Works, 20 to be equipped with Walschaert valve gear, and the other 12 with Young valve gear, both groups being otherwise identical with the exception of differences in coal and water capacity of tanks; 10 Pacific type locomotives, designated as heavy, of 39,700 lb. tractive power, from Montreal Locomotive Works; 25 Santa Fe locomotives, of 64,500 lb. tractive power, from Montreal Locomotive Works; 15 mikado locomotives, of 53,100 lb. tractive power, from Canadian Locomotive Co., and 30 six-wheel switching locomotives from Canadian Locomotive Co.

The several types of locomotives ordered followed Canadian National stand-

ard of adhesion is therefore 4.32. Cylinder diameter is $23\frac{1}{2}$ in.; cylinder stroke, 28 in.; driving wheel diam., 69 in., and boiler pressure 200 lb.

The boiler is of the straight top, radial stayed, type, the dimensions and details of construction of which are shown in the accompanying plans. In design, all details were planned with factors affecting maintenance constantly in view. Boiler h.p. in percent. of cylinder h.p. is 90%. The tube length is 20½ ft.; there are 182 tubes of 2 in. diam., and 28 flues of 5½ in. diam.; the flues being electric welded into the back sheet. All boilers are equipped with the standard C.N.R. syphon valve, shown in the plan, between dome and sandbox, to facilitate boiler washing, and for blowing off. The mud ring is of cast steel ends, and mild steel sides, and double riveted to sheets with ¾ in. rivets. A feature of the crown sheet staying is that the button-head

in. diam. These locomotives are hand fired, are equipped with the latest style Franklin butterfly door, and all fireboxes are equipped with the O'Connor fire door flange. The grates, 9 in. centers, 32 in. long over shoulders, are supported on a center carrier of strong rigid design, and notched side bearers, and are operated by Franklin power grate shakers.

The superheater used is the Hungerford-Cameron standard type, the return bends being welded around the pipe joints.

The ash pans are of the C.N.R. standard hopper type, the location of the door hinges being such that the doors close of their own weight. The sections of the ash pan coping are hinged, to facilitate the work of cleaning fires, etc., at terminals. An attachment worthy of note consists of a 1½ in. pipe, from the delivery pipe of the non-lifting injector on the left side, to the ash pans, with

Medium Pacific Type Locomotive, Canadian National Railways.

ards of design closely, with the exception of such modifications and minor changes as were demonstrated by previous experience to be desirable. The power for passenger service embodies all the features characteristic of late design, and the mikados and Santa Fes are representative of modern freight hauling units of high tractive power. While there are no details of design which may be said to be radical departures from the accepted principles of modern practice, every detail has been carefully studied, and worked out in such a way as to give the maximum in efficiency in the class of service for which each locomotive is intended.

Canadian Railway and Marine World, for Sept. 1920 contained specifications of the heavy and medium Pacific type locomotives referred to above, with an illustration of one of the medium Pacific type locomotives, equipped with the Walschaert valve gear. A more detailed description of the 20 locomotives of this class will now be given, and the same description will apply to the 12 equipped with the Young valve gear, with the minor exception mentioned.

These medium Pacific type locomotives have a total weight of 260,000 lb., the weight on drivers being 164,600 lb. The tractive power is 38,100 lb., and the fac-

tor of adhesion is therefore 4.32. Cylinder diameter is $23\frac{1}{2}$ in.; cylinder stroke, 28 in.; driving wheel diam., 69 in., and boiler pressure 200 lb. The boiler is of the straight top, radial stayed, type, the dimensions and details of construction of which are shown in the accompanying plans. In design, all details were planned with factors affecting maintenance constantly in view. Boiler h.p. in percent. of cylinder h.p. is 90%. The tube length is 20½ ft.; there are 182 tubes of 2 in. diam., and 28 flues of 5½ in. diam.; the flues being electric welded into the back sheet. All boilers are equipped with the standard C.N.R. syphon valve, shown in the plan, between dome and sandbox, to facilitate boiler washing, and for blowing off. The mud ring is of cast steel ends, and mild steel sides, and double riveted to sheets with ¾ in. rivets. A feature of the crown sheet staying is that the button-head

crown bolts have parallel threads, where they screw through the crown sheet, instead of tapered as is the usual practice. Another notable feature in crown sheet construction is the alternation of successive groups of four transverse rows of crown bolts, i.e., four rows of button-head crown bolts are succeeded by four rows of bolts with plain heads, and so on alternately. This arrangement is being adopted as standard C.N.R. practice, and the point worthy of note is, that in case of a burnt crown sheet, the possibility of boiler explosion is guarded against, by the sheet giving first at a point where stayed with plain head bolts, and pulling down over some of these bolts, but held on either side by the button head bolts, the pressure being relieved through the bolt holes. Lagging specifications call for 2 in. overall thickness of 41W Johns-Manville asbestos fire felt.

The boiler-feed apparatus consists of a Hancock type H-N-L non-lifting injector on the left, and a Hancock type E.A. lifting injector on the right, both equipped with 3,500 gal. tubes, and includes the C.N.R. standard top check, in combination with bell stand.

The firebox is 108 by 75½ in., and is equipped with American Arch, or brick arch, supported on four arch tubes of 3

valve operated from the cab, with a branch extending into each hopper. Such an arrangement is specially valuable, owing to the ability to direct hot water into the pans, to thaw them out, when the locomotive arrives at terminal, in freezing weather, with pans partly filled.

The front end is fitted up with the C.N.R. standard draft appliances, the exhaust pipe is secured to saddle with 1 in. studs, and all joints surfaced to a surface plate. The exhaust tip is 57 1/6 in. diam.

The frames, made of thoroughly annealed Vanadium cast steel, selected as affording the maximum in strength and resistance to the effects of vibration, have single forward sections. Driving box shoes are of bronze, and the pedestal binders, of extra heavy section, are of mild steel. The frames are 5 in. wide, the minimum depth of top rail between pedestals is 5½ in., minimum depth of bottom rail between pedestals 4 in., and depth of section at top of pedestals 6½ in.

The driving springs are of carbon steel, the equalizers of mild steel; the hangers, of 2-piece type, are of mild steel also, and all pins and bushings are case-hardened. The engine truck is cross equalized and forms one system of equalization, while the three pairs of

Elevation and Sections, Medium Pacific Type Locomotives, Canadian National Railways.

drivers are equalized with the trailing truck. The equalization places 46,900 lb. on the leading truck, 164,600 lb. on drivers, and 48,500 lb. on the trailing truck.

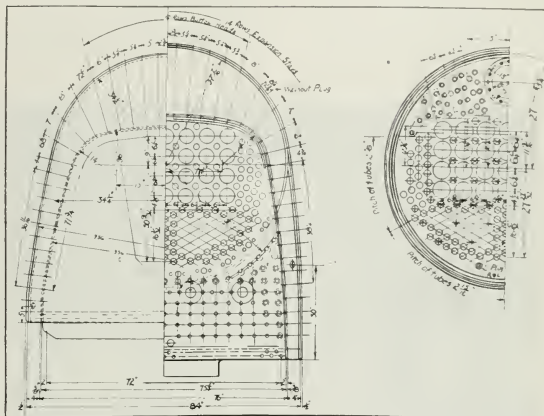

Wheels, Boxes, Rods, etc.—The driving wheel centers, 62 in. diam., are of cast steel; the driving boxes are of cast steel with bronze bearings, the main driving boxes being of the Cole long type. Franklin adjustable driving box wedges are used with all driving boxes. Brass hub liners are used, and Franklin hard grease cellars are applied throughout. All rods are of hammered open hearth steel. The main rod big ends follow closely the specifications for the U. S. Railroad Administration standard Pacific type locomotives. The crossheads are of the C.N.R. standard alligator type, with removable side plates, and having the top and bottom brass gibs in two pieces, a dividing strip between at center, and a lip at each end. The crosshead keys are of chrome Vanadium steel, and have a taper of $\frac{1}{2}$ in. in 12. The crosshead guides, and piston rods, are of such length that the piston may be pushed out clear of front cylinder head studs, without disconnecting piston rod from crosshead. The engine truck is of the American Locomotive Co. constant resistance 4-wheel type, equipped with Preston hub liners. The wheels are $34\frac{1}{4}$ in. diam., and have spoked steel centers, 28 in. diam. The trailing truck is of the standard radial type, having 48 in. diam. wheels, with 41 in. cast steel centers.

Steam distribution is provided for by Walschaert valve gear of modern design, a feature of the application being that union link connection is provided for by a Ripken-Kingan main rod arm, in place of the usual crosshead connection. Maximum cut-off is 85%. The diameter of the piston valves used is 14 in., and the prescribed valve setting provides for front and back lead of $\frac{3}{16}$ in. at 25% cutoff, and $\frac{1}{16}$ in. in full gear forward, with an exhaust clearance of $\frac{1}{8}$ in. C. N. R. standard relief valves are applied.

Lubrication of main valves and cylin-

6 E.T., with $8\frac{1}{4}$ in. cross compound compressor, and S-5 governor. The pump is on the left side; the three main reservoirs, one on left and two on right, below running boards, have a total capacity of 74,000 cu. in., with 110 ft. of $1\frac{1}{4}$ in. radiating pipe connecting them and the compressor. The crossover pipe from the first to second reservoir is brought over the boiler. The radiation feature was established to overcome condensa-

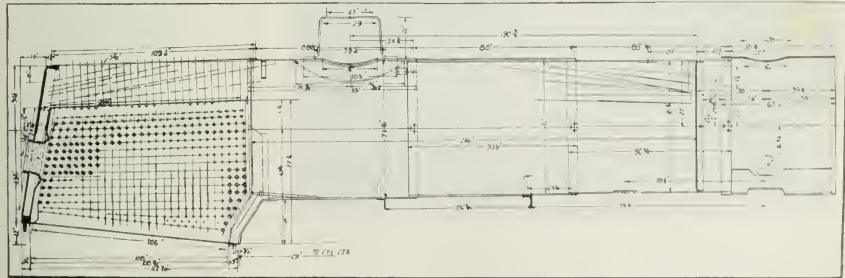

The cab, of vestibule type, is of steel construction, wood lined, with asbestos insulation between wood and steel. The front windows have double glass, and the side windows are fitted for double glass. A Hancock cold water sprinkler is provided, ample lockers are installed in both sides, and a case for flags, fuses, etc., is provided at back of cab, overhead. No effort has been spared to make the cab interiors convenient in every way.

Half Sections, through front and back Tube Sheets, Medium Pacific Type Locomotives, Canadian National Railways.

tion and consequent freezing conditions in low temperatures, and results have fully justified the continuance of this arrangement. The tender brake gear has been revised, so that the bottom truck brake rod passes through cast steel bol-

Other features.—The sand box is fitted with Hanlon sanders, in conjunction with hand sanding attachment. World type safety valves are used, mounted on an auxiliary dome, just head of cab. The lighting equipment is Pyle-National type

Boiler, Medium Pacific Type Locomotives, Canadian National Railways.

ders, and steam end of air compressor, is by means of a Detroit no. 42 five-feed hydrostatic lubricator. A feature is the auxiliary oil cups, adopted as C.N.R. standard practice, are provided in the outside steam pipes above cylinders, for use in case the main lubricator becomes inoperative. Rods are equipped with C. N. R. standard grease cups and plugs, and Henry grease cups, and guides are equipped with Hancock guide bar cups.

The air brakes are Westinghouse no.

ster, cored for this purpose, instead of passing underneath as heretofore. This change, with the safety bars which are used instead of safety chains, precludes the possibility of brake beams falling. A system of installing piping on locomotives by the use of cast brackets secured to the running board, has been adopted by the C.N.R. as standard practice, and makes a job which is characterized by simplicity in piping arrangement and rigidity, and good appearance.

K2, and the use of a separate number lamp case, with the sides oblique, adopted as C.N.R. standard, makes for greater safety in operation, through the easier and more certain identification of locomotive numbers. Water level indication is given by standard C.N.R. try cocks and water glass fittings, the water glass being equipped with the special guard used by the C.N.R. The back head of boiler is also provided with standard crown sheet marker. King metallic piston rod

and valve stem packing, and Vapor steam heat equipment, with Gold reducing valves on some locomotives, and Leslie on others, are used.

The Franklin radial buffer, and unit safety bar, are used between engine and tender, and between engine and tender, on the steam heat line, Barco flexible joints are used. The small ladder, used in connection with oiling the motion work, as shown at back end of guide bars in the illustration of the locomotive, is notable. The front buffer beam is of cast steel, and the front coupler of the Sharon pocket type.

The tender is of the water bottom type, with design modified somewhat to per-

are used. The outside sills are provided with strong hooks, for hanging car replacers; tool boxes are applied below frame between trucks, convenient hand railing is provided on top of tender, and the rear ladder extends 18 in. above the coping.

The locomotives were built by the Montreal Locomotive Works according to specifications furnished by the C.N.R., and approved by S. J. Hungerford, Vice President, Operation and Maintenance. Twelve locomotives are in service on the Western Lines, three on the Ontario District, and five in the Maritime Provinces, and all have given highly satisfactory service and are meeting expectations in every way.

Heating surface, tubes	1,945 sq. ft.
Heating surface, firebox	304 sq. ft.
Heating surface, arch tubes	188 sq. ft.
Heating surface, total	27 sq. ft.
Superheating surface	2,964 sq. ft.

C.N.R. standard, 10 and 13 in. channels	
Tender truck diam.	34 1/2 in.
Tender truck journals	11 in.
Tank, type	Water bottom
Water capacity	6,500 imp. gal.
Coal capacity	10 tons

Intercolonial Railway Employees' Superannuation.

C. A. Gauvreau, Temiscouata, Que., asked in the House of Commons recently:—“Is the Railways Department aware that the old superannuated employees of the I.R.C. have never received any increase in the rate of their pension, neither before the war, nor during the period of stress when the cost of living was soaring to an excessive level; that the present rate of pension is a minimum of \$15 a month and does not exceed \$52.50 as a maximum in the case of the oldest employees; that all the employees were willing to pay a higher due to the general funds so that such older employees may be given a pension that would enable them to live fittingly? Is the Railways Department or the National Railways Commission willing to accede to the fair demand of those old employees and grant them a pension such as will protect them from want in their old age?” The Minister of Railways replied:—“A revision of the present plan of superannuation is contemplated and under consideration by the management. It is the intention to submit any such proposals to consideration of employees before adoption.”

Grand Trunk Railway Employees' Pensions.

E. W. Tobin, Richmond and Wolfe, Que., asked the following questions in the House of Commons recently, which were answered by the Minister of Railways:—

Q. “Has the arbitrator representing the Government, in connection with the arbitration to determine the value of the G.T.R. System, received instructions to take into consideration, or make any allowance for the pensions due by the G.T.R. Co. to the employees of that system prior to the general strike of employees in 1910?” A. “The solicitor representing the Government has received instructions to bring before the Board of Arbitrators the matter of the striking employees of 1910.”

Q. “Has the Government decided to re-establish for the said employees the pensions from which they were deprived at the time of the strike?” A. “The Government cannot consider this matter until it takes possession of the road after the arbitrators' decision.”

Geo. Pepall, Assistant Foreign Freight Agent, Canadian National-Grand Trunk Railways, Toronto, writes: “I have been a subscriber to Canadian Railway and Marine World for a number of years, and have noted its development with pleasure. You certainly have a most instructive and interesting publication.”

Back End, Medium Pacific Type Locomotive, Canadian National Railways.

mit of the application of the Locomotive Stoker Co.'s horizontal coal pusher, and has a water capacity of 6,500 imp. gals. and coal capacity of 10 tons. The frame is all metal, with steel sills, and built up bolsters. Trucks are of pedestal type, with flat side bearings, spaced 40 in. centers on front truck, and 50 in. centers on rear truck. Cardwell friction draft gear is applied to the rear of the tender. Truck equalization is by semi-elliptic and helical springs. The wheels, of 34 1/2 in. diam, have cast steel centers; journals are 6 x 11 in., replacing the 5 1/2 x 10 standard used formerly with similar axle loads, and McCord journal boxes and M.C.B. Canadian Bronze Co. brasses

The chief details of these locomotives are as follows:—

Weight, total	260,000 lb.
Weight on drivers	164,600 lb.
Wheel base, drivers	13 ft.
Wheel base, engine and tender	66 ft. 4 1/2 in.
Cylinders, diam. and stroke	23 1/2 x 28 in.
Driving wheel diam.	69 in.
Driving wheel centers	62 in.
Driving journals, main	10 1/2 x 21 in.
Driving journals, other	10 x 13 in.
Trailing truck wheels, diam.	48 in.
Trailing truck journals	9 x 14 in.
Engine truck wheels, diam.	34 1/2 in.
Engine truck journals	6 1/2 x 12 in.
Boiler, type	Straight top, radial stay
Boiler pressure	200 lb.
Boiler, diam., inside first ring	70 1/2 in.
Firebox, length and width	108 x 72 1/2 in.
Tubes, no. and diam.	182—2 in.; 28—5 1/2 in.
Tube length	20 ft. 6 in.

Canadian Pacific Railway Company's Annual Report.

Following is the directors' 40th annual report, issued over the signature of E. W. Beatty, K.C., President:—The accounts for the year ended Dec. 31, 1920, show the following results:—

Gross earnings	\$216,641,349.30
Working expenses (including all taxes)	183,488,304.70
Net earnings	\$33,153,044.60
Deduct fixed charges	10,775,408.99
Surplus	\$22,377,635.61
Contribution to pension fund	600,000.00

From this there has been charged a half-yearly dividend on preference stock of 2%, paid Oct. 1, 1920

And three quarterly dividends on ordinary stock of 1½% each, paid June 30, Oct. 1 and Dec. 1, 1920

And a fourth quarterly dividend on ordinary stock of 1½%, payable April 1, 1921

From this there has declared a second half-yearly dividend on preference stock of 2%, payable April 1, 1921

And a fourth quarterly dividend on ordinary stock of 1½%, payable April 1, 1921

Leaving net surplus for the year

In addition to the above dividends on ordinary stock, 3% was paid from special income.

Special Income for Year Ended Dec. 31, 1920.

Balance, Dec. 31, 1919

Less dividend paid April 1, 1920

Net revenue from investments and available resources

Interest on deposits, and interest and dividends on other securities

Net exchange

Net earnings ocean and coastal steamship lines

Net earnings commercial telegraph and news department, rentals and miscellaneous

Less payments to shareholders in dividends in 1920

From this a dividend has been declared payable April 1, 1921

The working expenses for the year, including all taxes, were \$4,400,000 of the gross earnings, and the net earnings 15.30%, compared with 13.39% and 18.61% respectively in 1919.

The gross earnings of your transportation system during 1920 exceeded those of 1919 by \$39,712,289, and the net earnings \$220,000. This large addition of \$39,492,281 in working expenses is due to the enforced application in Canada of the Chicago Wage Award, which added approximately \$12,000,000 to the pay rolls for the year; the increase in the cost of fuel and materials and the charging of the year's Dominion taxes into operating expenses, where they properly belong. The heavy and rapid movement of freight during October and November and the first half of December under the tariffs prescribed by the Board of Railway Commissioners and effective on Sept. 13 enabled your company to absorb these expenses and earn its usual charges, dividends and a modest surplus. While, for the reasons mentioned, the net earnings are not commensurate with the volume of business transacted, still

in the opinion of your directors the year's operations must be regarded as satisfactory and compare most favorably with those of any other system on the American continent.

The sales of agricultural land in the year were 468,390 acres for \$9,592,706.95, an average of \$20.48 an acre. Included in this area were 47,848 acres of irrigated land which brought \$50.43 an acre, so that the average price of the balance was \$17.07 an acre.

During the year your directors disposed of \$8,000,000 4% consolidated debenture stock to the British Government, pursuant to arrangements previously made at the time of the deposit of \$40,000,000 of the stock with the British Treasurer in 1917. The balance of the stock deposited, namely, \$32,000,000, has been returned to the company and is available for sale or other disposition as circumstances warrant.

Your directors during the year issued \$12,000,000 of equipment trust notes for acquiring necessary additions to rolling stock.

Your approval was obtained in 1919 and 1920 to the construction, as conditions warranted, of branch line mileage in Western Canada, amounting in the aggregate to 822 miles, and during 1920 100 miles of track of this authorized mileage were laid. While extensive new construction is not under the present conditions advisable, your directors are of the opinion that a moderate amount of construction should be proceeded with during the coming year, in order that the full value of the lines already under construction should be realized, and that the settlers in the districts to be served should obtain the railway facilities so necessary to their prosperity. The branch lines approved heretofore are in good territory and well located to become revenue producing. Your approval will be asked to the construction of an extension of the Suffield Southwesterly Branch from Lomond, a distance not exceeding 30 miles, and for the issuance and sale of a sufficient amount of 4% consolidated debenture stock to meet the expenditure. Four steamships for Atlantic and Pacific service contracted for previously are being built for the company, viz., Empress of Canada, Montrose, Montcalm, Montclare, and the Koenig Friedrich August has been bought. An additional ship for British Columbia Coast Service is required because of the loss of the Princess Sophia and Princess Irene, and the sale of the Princess May and Princess Margaret, is under construction. The estimated cost of these six ships is \$31,175,000, of which \$18,733,138 was paid up to Dec. 31, 1920. The estimated capital requirements on this account for the year, including the amount required for the completion of the payments on the Koenig Friedrich August brought the amount to approximately \$12,200,000. Your approval will be asked to the issuance and sale of a sufficient amount of consolidated debenture stock to meet the expenditure for these ships. During the year, the s.s. Sardinian, built in 1875, was sold.

In anticipation of your confirmation your directors authorized capital appropriations, in addition to those approved at the last annual meeting, aggregating, for the year 1920, \$3,246,318, and, subject to your approval, have authorized

expenditures on capital account during the present year of \$4,316,236. Of this amount the principal items are:—

Replacement and enlargement of structures in permanent form	\$509,624
Additional stations, locomotive houses, freight sheds and shops and extensions to existing buildings	398,158
Tie plates, rail anchors, ballasting, ditching and miscellaneous betterments	35,700
Replacement of rail in main and branch line tracks with heavier section	1,000,000
Additional sidings and side track accommodation	377,292
Extension work on Chateau Frontenac hotel	873,000
Lining of Connaught tunnel	400,000
Improvements in connection with telegraph service	55,033
Mechanical department, machinery at various shops	30,950

The balance of the amount is required for miscellaneous works to improve facilities over the whole system and effect proper economies.

In view of the importance to the company in its personnel, and the value to Canada in the development of its resources and industry through the increase in the number of trained technical men, your directors authorized a subscription to McGill University endowment of \$250,000, and to the University of Montreal of \$50,000, payable in annual instalments. Contributions of \$10,000 to the Salvation Army and \$5,000 to the Y.M.C.A. were also authorized. The value of the work of the Salvation Army and the Y.M.C.A. to the company and its employees is of direct and indirect importance.

At the request of the Alberta Government, and in order to ensure proper railway service in the districts served by the Edmonton, Dunvegan & British Columbia and Central Canada Railway Companies, your directors have entered into an agreement with these companies, their stockholders, the Union Bank of Canada, and the Province of Alberta, for the operation, for five years from July 21, 1920, of the properties of the Edmonton, Dunvegan & British Columbia and Central Canada Railway Companies. The remuneration is the payment to your company of 15% of the revenues in excess of working expenses, payable out of the profits after payment of fixed charges, and an agreement giving your company an option to purchase the capital stock on the terms set out in the agreement, at any time during the period of five years. The agreement provides that the necessary capital for improvements and betterments to the lines shall be loaned by the Government to the companies to be operated, and it is estimated that \$2,500,000 will be required for this purpose, of which \$1,000,000 has already been provided. The value of the arrangement to your company is that it enables an accurate appreciation to be obtained of the probable development of the country, and the present and prospective value of the properties as traffic contributors to your company's system. The arrangement is likewise equally desirable from the standpoint of the people of Alberta in that it enables the benefit of a proper railway organization to be obtained and proper railway economies to be effected under the direction of your company's officers, and at the same time permits the development of the north-western territory to be aided to the fullest extent, and to give to present and incoming settlers the railway facilities so essential to their success.

In order to ensure the development of that portion of the Province of Quebec situated south and east of Lake Timiskaming, your directors have entered into an agreement with the province for the construction by your subsidiary, the Interprovincial & James Bay Ry. Co., of a railway extending from Kipawa to Des Quinze River, with a branch to Ville Marie, 76 miles in all. Subsidies of \$8,000 a mile in cash for 66 miles, and 4,000 acres of land per mile of the entire railway, have been voted, which will, of course, substantially reduce the cost of construction to the company. A productive agricultural area of large extent and valuable timber lands will be opened and served through the construction of this railway.

The preference stock deposited with the British Treasury was returned to the owners on Oct. 1, 1920, and the common stock on Dec. 31, 1920.

The position of the holdings of common stock as of March 1, 1921, was as follows:—

	Shares	Percentages
United Kingdom	1,242,837	47.80
Canada	460,838	17.73
United States	629,244	24.38
France	79,123	3.04
Other holdings	190,692	7.33
	2,360,000	

During the last six and a half years the company has expended on capital account, \$88,000,000; and during the same period the proceeds of the sale of capital issues amounted to \$26,282,000, exclusive of the recent equipment issue of \$12,000,000, the proceeds of which have not yet been received in full, because of the non-completion of the milling stock under contract for construction. In consequence of these large expenditures, the demands upon the company's cash reserves have been extensive, while the surpluses from railway operations during the past three years, for reasons with which the shareholders are entirely familiar, have been merely nominal. The capital requirements for 1921, exclusive of payments on steamships and the continuance of branch line construction, will be very moderate. No extensive works are contemplated in the east, save the commencement of the Interprovincial & James Bay Ry., referred to previously, and the continuance of the work on the extensions to the Chateau Frontenac, which it is expected will involve the expenditure of \$853,000 during this year.

The amount of unissued consolidated debenture stock for the issuance of which your authority has already been given, is \$36,000,000, and the amount issued and undeposited of is \$32,000,000, a total of \$68,000,000. The capitalization of the company is conservative and even low, and this has been accomplished largely through the utilization of surpluses in betterments and improvements which would normally have been paid for out of the proceeds of capital issue. While capital expenditures for the immediate future will be curtailed and the resumption of works requiring large amounts of money will be deferred until a decided improvement in business conditions furnishes warrant for incurring them, your directors consider that it will be desirable that a portion of the cash reserves expended on capital account should be restored within a short time and, to this end, in order to implement and extend the company's powers to issue forms of securities other than those it is already empowered to issue and which are more appropriate to present market conditions, have made application for an

amendment to the company's charter permitting the issuance of bonds, debentures or other securities, collateral to or in lieu of any consolidated debenture stock which the company is or may hereafter be empowered to issue and for the same amount, such securities to be payable in such currency, at such times and places, and bearing such interest as your directors may think proper. As mentioned in the notice to shareholders, the annual general meeting will be made special, for the purpose of authorizing, if approved, the issuance of such securities.

The company's note certificates issued in 1914 for \$52,000,000 will fall due on March 2, 1924. Your directors are glad to be able to advise the shareholders that ample provision has been made for the retirement of the notes at maturity.

Your directors desire to express their appreciation of the loyal and efficient services of the company's officers and men, which have permitted it to perform its functions as a common carrier with credit to itself and satisfaction to the public, and have resulted in returns from the year's operations which, under the difficult conditions existing, cannot but be regarded as highly gratifying to the shareholders.

The undermentioned directors will retire from office at the approaching annual meeting. They are eligible for reelection:—E. W. Beatty, K.C., Hon. F. L. Beique, K.C., C. R. Hosmer, Hon. W. J. Shaughnessy, K.C.

						Total mileage	19,662.7	

Chilled Iron Car Wheels.

At the St. Louis Car Foremen's Association's meeting, in St. Louis, Mo., recently, Geo. W. Lyndon, President, Association of Manufacturers of Chilled Car Wheels, said: — I would like to say something to you about the special characteristics of the chilled iron wheel, so little known, and still performing such a wonderful function in the transportation of the world's commerce. I think I may say that the chilled iron wheel is the standard vehicle of transportation for rail borne traffic. I wonder if we all appreciate what a marvelous piece of mechanism the chilled iron wheel is. I used to hear from one of the men well versed in chilled iron wheel manufacture, the statement that very few people recognized the importance of the car wheel; they described it as a large round piece of iron with a hole in it. But at the present time we have studied the manufacture of the car wheel and we know something more about it than we used to. We must first remember that the manufacturer, in order to produce what is commonly known as the chilled iron wheel, is limited to certain elements in his mixture. He may have, if you please, first in mind the carbon content of the wheel; this carbon content is one of the essential features of the chilled iron car wheel. The manufacturer is limited in other elements, he must have a low percentage of sulphur, he must have a low percentage of phosphorus, he is limited in the manipulation of his mixture as far as the elements are concerned in the silicon and manganese, but he strives to produce a wheel that has about 3½% carbon content. The carbon is what makes the chilled iron wheel so serviceable and so adequate for the purpose for which it is intended.

I do not know whether all of you know how a wheel is poured. A 750 lb. wheel is poured in about 12 seconds. In order to pour this wheel, the mould has to be prepared, and one part of the mould is what is termed the "chiller." This is nothing but a piece of iron, with which the molten iron comes in contact when it is poured into the mould, and the chiller produces chilled iron, by sudden and almost instantaneous cooling, and the name implies exactly what it is—chilled iron.

When we take a mixture from the cupola that has a carbon content of 3½%, we pour the molten metal into the

mould, and as soon as it strikes the iron chiller we are producing what we call a white metal, which is harder than tempered steel, and this metal is composed of the whole or full content of combined carbon. Three and a half per cent. of the combined carbon content is right next to the tread, and gives the wearing or running surface. This depth of chill is from ½ to ¾ of an inch. Not so with the balance of the wheel. As soon as the wheel is poured against the cold iron chiller, there is, of course, a sudden cooling. The rest of the mould is provided with dry sand cores, and tempered sand, consequently the cooling will not be so rapid as when poured against the cold iron chiller. The result is that instead of having 3½% of combined carbon in the balance of the wheel, this is separated into graphitic carbon, through the slow cooling process, which makes a tough structure for the plates and the hub of the wheel. Consequently, where we have a 3½% combined carbon content in the tread of the wheel, we have about six-tenths of 1% combined carbon content in the balance of the wheel, and 2.9% graphitic carbon for the plates and the hub.

The chilled iron wheel has been, for 70 years, the leader in the transportation world, so far as the carrying of the contents of the cars is concerned. It has never been superseded by any other material. There are other materials that have been produced, but I may say safely that 95% of the freight moved in this country today is moved on chilled iron wheels, and we may safely say that we have a volume of wheels running that will astound you when I mention the number. The American Railroad Association at its last meeting gave us two new standard patterns; these two with those previously given us by that Association, make four standard patterns for wheels carrying the commerce of the country—a 650 lb. wheel for 30 ton cars, a 700 lb. wheel for 40 ton cars, a 750 lb. wheel for 50 ton cars, and an 850 lb. wheel for 70 ton cars.

Our Association was formed in 1909, and the trend of our work has been toward uniformizing, or standardizing, the car wheel pattern, and we have now succeeded in establishing four standard patterns. Previous to our organization, we had as many patterns as there were car wheel manufacturers throughout the

country, including some of the railways which manufactured their own car wheels. I presume I can say without any question of doubt that 10 or 12 years ago there were hundreds of patterns extant in the production of chilled iron car wheels; today we have four standard patterns, and you can see what this means to the car wheel industry. The men who are working on the Pacific coast are working on the same general line patterns as those on the Atlantic coast and from Canada to the Gulf of Mexico. Today the chilled iron wheel stands out pre-eminent and without a peer.

I wonder if you realize the severity of the service of the chilled iron wheel. After having passed through this process of manufacture, the wheel is sent to the pits, and cooled gradually, and in the course of four or five days it is removed from the pits, the wheel is bored for fit, pressed on its axle and sent on its way. It will traverse any part of the country, and it is guaranteed for a certain service, and that is all the machine work necessary on this wonderful piece of mechanism. Now, when the wheel goes into service, we may say that the average mileage of the freight car is about 10,000 miles a year. We know that a 33 ft. freight car wheel will make about 611 revolutions in a mile; so that every car wheel under every freight car that makes 10,000 miles a year will make 610,000 revolutions in a year, and there are about 160 rail joint contacts that it has to travel in a mile. And when I say off-hand, without consulting by notes, which I left at some place, that there are about 1,600,000 rail joints that the wheel itself has to go over in a year in performing the function of carrying commerce, you can see the tremendous importance of the wheel and the wonderful work that it performs, all tending toward introducing to you the severity of the service.

The American Railroad Association claims to control about 2,600,000 cars. I think the Official Railway Equipment Register lists will measure up about 2,818,000 cars; all the users are not members of the American Railroad Association. If 95% of these wheels are chilled iron wheels, and I do not think there is any question about it, we must have under the freight cars alone about 20,000,000 car wheels; and if we add the wheels

that are owned by private car lines, under locomotive tenders, passenger cars, street car lines, etc., 25,000 wheels running today is a reasonable estimate. I wonder if you ever tried to visualize what 25,000 chilled iron wheels mean in volume? If you could pile them one on top of the other, you would make a pile 2,762 miles high; and if you could sit on top of the pile in St. Louis and should happen to tip over, without hurting yourself, you would land in California.

If you could put these wheels edge to edge on a single track, you would make a line of track covered with car wheels that would be about 14,200 miles long, or over half the circumference of the earth. It shows you what a wonderful development there has been in the car wheel industry throughout the country. If you took these car wheels out of service you could not move much freight. But supposing that you could take them out and you wanted to ship them, it would represent about 8,750,000 tons of metal. And if you wanted to move them by a single train, or by several trains, and would use cars of 50 tons capacity, the train would extend from St. Louis to Boston and would take 2,912 mikado locomotives to pull them, each locomotive pulling 4,000 tons.

We recognize no limit to the carrying capacity of the chilled iron wheel. That may make some of you think that we are boasting, but when I say that I mean it, by reason of the fact that we have the chilled iron wheel in service where four or five times the railway requirements of the carrying capacity of the wheel is demanded, and still the chilled iron wheel stands up, I refer to car service, and transfer service, where we

are carrying on the chilled iron wheel at least 100,000 lb. a wheel. In the American Railroad Association standards there is a requirement of from 20,000 to 25,000 lb. a wheel, so you see what I mean when I say that the carrying capacity of the chilled iron wheel has not been reached. We can carry any load that the steel rail supports and, in fact, we can carry a heavier load than the steel rail carries at present.

We have gone into fields that are beyond the recommendations of the American Railroad Association, we have put wheels under cars that are much heavier than the maximum car wheel recommended by that Association. The 850 lb. wheel, which carries the 70 ton car, is a maximum wheel in weight, as recommended by the American Railroad Association. Nevertheless we have wheels in use that weigh 950 lb. In the ore service in the west, on the Verde Tunnel & Smelter Rd. they are carrying 75 to 95 tons of ore down a 4% grade, and they have found that the chilled iron wheel will do work in that character of service that other kinds of wheels will not do.

Representing as I do, about 50 foundries, scattered from ocean to ocean and from Canada to the Gulf of Mexico, I believe that I can say, without any fear of contradiction, that the chilled iron wheel today is one of the most important parts of the car structure and is the standard of freight traffic and without it the nation's commerce would be paralyzed.

The address was followed by moving pictures showing the manufacture of car wheels.

Birthdays of Transportation Men in May.

Many happy returns of the day to: J. F. Aitchison, Auditor of Disbursements, G.T.R., Montreal, born at Edinburgh, Scotland, May 28, 1880.

Jas. Bain, Superintendent, Bridgewater Division, Maritime District, Canadian National Rys., Bridgewater N.S., born at Pictou, N.S., May 24, 1860.

B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

E. F. Chappell, General Superintendent, Prairie District, Western Line, Canadian National Rys. and Grand Trunk Pacific Rys., Saskatoon, Sask., born at Charlottetown, P.E.I., May 1, 1878.

N. R. DeBrisay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18, 1888.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Assistant to Chief Engineer, Eastern Lines, Canadian National Rys., Toronto, born at Quebec, May 13, 1862.

C. S. Gzowski, Jr., Assistant to Vice President, Construction, Canadian National Rys. and Grand Trunk Pacific Rys., Toronto, born there, May 1, 1876.

G. H. Hedder, Works Manager, Canadian National Rys., Winnipeg, born at Neath, Wales, May 26, 1865.

G. A. Hoag, Superintendent of Transportation, Ontario District, Canadian National Rys., Toronto, born at Walters Falls, Ont., May 31, 1866.

J. Irwin, Superintendent, Edmonton Division, Western District, Canadian Na-

tional Rys., Edmonton, Alta., born at Clinton, Ont., May 28, 1866.

H. E. Kane, Port Agent, Canadian Government Merchant Marine, St. John, N.B., born there, May 20, 1895.
